Research briefings for the Office of Science and Technology Policy, the National Science Foundation and selected federal departments and agencies, 1985
[PB86-148582] N86-26240

SUPERCOOLING
Radiation supercooling of bulk-ionized plasma of multiply charged ions N86-26143

SUPERCRITICAL FLUIDS
Supercritical fluid methods for the analysis of complex fuel and environmental samples
[DE86-004868] N86-25725

SUPERHIGH FREQUENCIES
SIR-B (Shuttle Imaging Radar) images
[AD-A163012] N86-25855
Construction of a high energy linear accelerator for research in free electron lasers, beam-wave interactions, spectroscopy and microcircuitry fabrication
[AD-A164250] N86-25775

SUPERLATTICES
Coherent short wave radiation from a solid state free electron laser
[DE86-003055] N86-25786
Elastic properties of metallic superlattices
[DE86-003071] N86-25859

SUPERNOVAE
Research in nuclear astrophysics: Stellar collapse and supernovae
[DE86-004411] N86-26265

SUPERSATURATION
Diffusion processes in solid-phase welding of materials
[PB86-155025] N86-25801

SUPERSONIC BOUNDARY LAYERS
Stability characteristics of supersonic boundary layer and their relation to transition point between laminar and turbulent flow N86-25530
Numerical prediction of supersonic boundary-layer transition N86-25552

SUPERSONIC FLOW
Estimating water vapor condensation effects for transonic and supersonic flow fields
[AD-A163146] N86-25330
Wave drag of solids of revolution with frontal separation zone in supersonic stream N86-25532
Specifics of flow near stagnation point with supersonic flow around exponentially shaped bodies N86-25536
Supersonic flow around blunt perforated shields N86-25558
Oscillations in jet striking barrier N86-25563
Supersonic flow about cone eith ijection of gas through its surface described by power law N86-25584

SUPERSONIC NOZZLES
Estimating water vapor condensation effects for transonic and supersonic flow fields
[AD-A163146] N86-25330

SUPERSONIC WAKES
Circulation flow at forward surface of a sphere in a supersonic wake-type stream N86-25535

SUPPORTS
Mounting device
[AD-D012110] N86-25517

SUPPRESSORS
Pulse compression sidelobe suppressor
[AD-D012115] N86-25679

SURFACE CRACKS
Reconstruction of the geometry of a surface-breaking crack
[DE86-003229] N86-25860

SURFACE DISTORTION
Stability of shells of revolution with small deviations from cylindrical shape N86-25641
Natural vibration modes of imperfect conical shells N86-25642

SURFACE ENERGY
Non-local screening in metal surfaces
[AD-A164340] N86-25460

SURFACE FINISHING
Sputtered cadmium oxide as a surface pretreatment for graphite solid lubricant films
[NASA-TM-87300] N86-25473
Bis(Pentafluorosulfur)Diacetylene polymer therefrom and preparations thereof
[AD-D012124] N86-25487

SURFACE GEOMETRY
Structural characterization of silica aerogel using specific surface area measurements
[DE86-003884] N86-25479
Representation of median shell surfaces by Monge surfaces N86-25838

SURFACE LAYERS
Variation of friction velocity across the surface marginal ice zone in the East Greenland Sea
[AD-A164497] N86-25954

SURFACE NAVIGATION
Autonomous mobile robots
[AD-A164404] N86-25797

SURFACE PROPERTIES
Turbulent flow over rough turbine airfoils
[AD-A163005] N86-25358
Strength of new window glass plates using surface characteristics
[PB86-140100] N86-25490
Characteristics of solar cells with Schottky barrier and currents through surface states N86-25610
GaAs solar cell with low surface recombination
[DE85-016879] N86-25876
The nature and origin of mineral coatings on volcanic rocks of the Black Mountain, Stonewall Mountain and Kane Springs Wash volcanic centers in southern Nevada
[NASA-CR-176805] N86-25912

SURFACE REACTIONS
Development of a model for hot-surface ignition of combustible liquids
[AD-A164057] N86-25437
Plastic instability of aluminide and platinum modified diffusion coatings during 1100 C cyclic testing
[AD-A164506] N86-25485
Theory of surface damage to nontransparent materials by laser radiation N86-26121
Application of scintallation detectors for X-ray diagnosis of laser plasma N86-26133
Analysis of experimental data for neutralization of low-energy ions at a surface
[AD-A163205] N86-26176

SURFACE ROUGHNESS
Turbulent flow over rough turbine airfoils
[AD-A163005] N86-25358
Prediction of turbulent skin friction for two-dimensional, rib-type surface roughness using a discrete element approach
[AD-A163165] N86-25746
Field tests of the kinetic friction coefficient of sea ice
[AD-A163170] N86-25965

SURFACE TEMPERATURE
Development of a model for hot-surface ignition of combustible liquids
[AD-A164057] N86-25437
Stability of subsonic boundary layer upon heating of a surface of a flat plate near the leading edge N86-25537

SURFACE TO AIR MISSILES
Spin Stabilized Impulsively Controlled Missile (SSICM)
[AD-D012103] N86-25397

SURFACE TO SURFACE MISSILES
Boost control design for spinning missile
[AD-A164505] N86-25411

SURFACE VEHICLES
USSR report: Engineering and equipment
[JPRS-UEQ-86-006] N86-25525
Ground vehicle classification using multifrequency multipolarization resonance radar
[AD-A163026] N86-25656
Autonomous mobile robots
[AD-A164404] N86-25797

SURFACE WAVES
On the two-dimensional periodic surface waves occurring in rectangular vessels: Theory versus experiment
[AD-A163708] N86-25736
Thin superconducting film characterization by surface acoustic waves
[AD-A164004] N86-26221

SWAZILAND
Synsedimentary deformation and thrusting on the eatern margin of the Barberton Greenstone belt, Swaziland N86-25910

SWEEP FREQUENCY
Automated system for resolving the position of solar radio bursts
[AD-A164425] N86-26271

SWITCHES
Temperature dependent electron transport studies for diffuse discharge switching applications
[DE86-004213] N86-25691
Investigation of opening switch mechanisms based on chemically reactive plasmas
[AD-A163171] N86-25705
Battery tester
[AD-D012083] N86-25707

SWITCHING
Pi-section digital phase shifter apparatus
[AD-D012090] N86-25708
T-section digital phase shifter apparatus
[AD-D012091] N86-25709
Low pass pi section digital phase shifter apparatus
[AD-D012093] N86-25710
A low pass T-section digital shifter apperatus
[AD-D012097] N86-25712

SWITCHING CIRCUITS
Investigation of opening switch mechanisms based on chemically reactive plasmas
[AD-A163171] N86-25705

SYMMETRY
The structure of ZSM-5 molecular sieves at high temperature N86-25645
NBS LATTICE: A program to analyze lattice relationships, version of summer, 1985
[PB86-166774] N86-26233

SYNCHRONISM
Distributed FIFO allocation of identical resources using small shared space
[AD-A163988] N86-25389
Synchronization system for pulsed power laser with optoelectronic control N86-25631
Autonomous synchronization of a bistatic Synthetic Aperture Radar (SAR) system
[AD-D012094] N86-25676
Applique rate converter
[AD-D012111] N86-25678
Lairts pixel data formatter
[AD-A164512] N86-26016

SYNCHRONOUS PLATFORMS
Geostationary satellite analyses of precipitation and cloud parameters
[AD-A164441] N86-25932

SYNCHRONOUS SATELLITES
Technical basis for the Geostationary Satellite Orbit Analysis Program (GSOAP), version 2
[PB86-151750] N86-25391
Geostationary satellite analyses of precipitation and cloud parameters
[AD-A164441] N86-25932

SYNCHROTRON RADIATION
Metallurgy technical activities, 1985
[PB86-165032] N86-25469

SYNCHROTRONS
Time-slicing subsystem of the biology small-angle X-ray scattering station at the National Synchrotron Light Source
[DE86-004354] N86-26093
Polarization characteristics of a secondary gamma-ray during light scattering by relativistic electrons N86-26126

SYNOPTIC METEOROLOGY
Description of data on the Nimbus 7 LIMS map archive tape: Temperature and geopotential height
[NASA-TP-2553] N86-25924

SYNTHESIS (CHEMISTRY)
The synthesis and organic chemistry of the boron-silicon bond
[AD-A164073] N86-25414
Method for producing tetraphenoxide-n-anilioxy cyclo phosphazotriene
[NASA-TM-88430] N86-25432
The study of some early transition metals in oxidation state 4 using the potassium poly(pyrazolyl)borates as ligands
[AD-A164074] N86-25438
Synthesis and examination of new catalytic polymers
[AD-A164069] N86-25483

SYNTHETIC APERTURE RADAR
Autonomous synchronization of a bistatic Synthetic Aperture Radar (SAR) system
[AD-D012094] N86-25676

SYSTEM FAILURES
Portable minicomputer for testing memories
[AD-D012130] N86-26017
The measurement and statistical modeling of computer reliability
[AD-A164249] N86-26035

SYSTEM GENERATED ELECTROMAGNETIC PULSES
China report: Science and technology
[JPRS-CST-86-001] N86-25539
Electrical exciting techniques for simulating system-generated EMP N86-25543

SYSTEM IDENTIFICATION
Evaluation of a frequency response technique for aircraft system identification
[AD-A164367] N86-25339

SYSTEMS ANALYSIS
Technical basis for the Geostationary Satellite Orbit Analysis Program (GSOAP), version 2
[PB86-151750] N86-25391

The measurement and statistical modeling of computer reliability
[AD-A164249] N86-26035
Application of some new artificial neural system processing principles to pattern classification
[AD-A163780] N86-26058

SYSTEMS ENGINEERING
The development of the AFIT Communications Laboratory and experiments for communications students
[AD-A163948] N86-25653
Program for Regional Observing and Forecasting Services (PROFS), fiscal year 1985
[PB86-158110] N86-25947
Hardware feasibility of INFOPLEX design strategy. Revision
[AD-A163506] N86-26009
Design and implementation of high performance content-addressable memories
[AD-A163995] N86-26010
Automated design of real-time, microprocessor-based controllers, volume 1
[AD-A164326] N86-26015
Software Technology for Adaptable Reliable Systems (STARS) Workshop
[AD-A163463] N86-26023
Research investigation directed toward extending the useful range of the electromagnetic spectrum
[AD-A163482] N86-26194
Information systems in ADOT (Arizona Department of Transportation): Analysis of intra-function flow, decision support needs, existing systems utility and user attitudes. Volume 2: Manual for evaluation of needs and attitudes of EDP users
[PB86-148699] N86-26250

SYSTEMS INTEGRATION
Intelligent gateway processors as integrators of CAD/CAM networks
[AD-A163036] N86-26029

SYSTEMS MANAGEMENT
Software reporting metrics, revision 2
[AD-A163756] N86-26025

T

TABLES (DATA)
Tide tables 1986, high and low water predictions, central and western Pacific Ocean and Indian Ocean
[PB86-148434] N86-25967
Sunrise/sunset and moonrise/moonset, revised
[PB86-157229] N86-26264

TACTILE DISCRIMINATION
MIT (Massachusetts Institute of Technology) underwater technology research: Telemanipulator developments (revised edition)
[PB86-157302] N86-25800

TANTALUM COMPOUNDS
Piezoelectric resonators using lateral field excitation
[AD-D012165] N86-25763

TAPERING
Active circulator gyrotron traveling-wave amplifier
[AD-D012128] N86-25769

TARGET ACQUISITION
Automatic feature extraction/algorithm testing
[AD-A164325] N86-26038

TECHNOLOGY ASSESSMENT
Optical fiber production
[PB86-140084] N86-25519
Modern ultrasonic flowmeters N86-25566
Research and Development on Heat Pumps for Space Conditioning Applications: Proceedings of the DOE/ORNL Heat Pump Conference
[DE86-002984] N86-25750
Industrial rotary engine development: Application opportunities
[PB86-153673] N86-25806
Computer-based training: Implementation and system
[AD-A164283] N86-26014

TECHNOLOGY TRANSFER
Control technology for future aircraft propulsion systems
[PAPER-14] N86-25356
Optical fiber production
[PB86-140084] N86-25519
USSR report: Science and technology policy
[JPRS-UST-86-011] N86-26061
Technology transfer at the Defense Advanced Research Projects Agency: A diagnostic analysis
[AD-A164457] N86-26238
NAS (National Academy of Sciences) exchanges with the academies of sciences of the USSR and Eastern Europe
[PB86-141827] N86-26252
Use of broker organizations in technology transfer and research utilization for the buildings industry
[DE86-004674] N86-26262

TECHNOLOGY UTILIZATION
Research and Development on Heat Pumps for Space Conditioning Applications: Proceedings of the DOE/ORNL Heat Pump Conference
[DE86-002984] N86-25750

TECTONICS
Geological evolution and analysis of confirmed or suspected gas hydrate localities. Volume 1: Blake-Bahama Outer Ridge, US East Coast
[DE86-001006] N86-25864
Greenstone belt tectonics: Thermal constraints N86-25902
The rock components and structures of Archean greenstone belts: An overview N86-25903
A simple tectonic model for crustal accretion in the Slave Province: A 2.7-2.5 Ga granite greenstone terrane N86-25908
Synsedimentary deformation and thrusting on the eastern margin of the Barberton Greenstone belt, Swaziland N86-25910

TELECOMMUNICATION
The development of the AFIT Communications Laboratory and experiments for communications students
[AD-A163948] N86-25653
Multi-user real-time speech processing facility
[AD-A164005] N86-25659
Reduction in bandwidth by using variable length codes
[AD-A164356] N86-25664
An optical fiber communication system based on coherent modulation, part 2
[AD-A163169] N86-25673
ISDN (Integrated Services Digital Network): Numbering, addressing and interworking
[PB86-143617] N86-25685
Telecommunications alternatives for federal users: Market trends and decisionmaking criteria
[PB86-153764] N86-25687
Promoting competition between international telecommunication cables and satellites
[PB86-156288] N86-25688
Planning and conducting an international seismic data exchange experiment at the center for seismic studies
[AD-A164281] N86-25914
Multichannel collision resolution algorithm
[AD-A164496] N86-26042

TELEMETRY
Design and performance analysis of digital acoustic underwater telemetry system
[PB86-156510] N86-25399

TELEOPERATORS
MIT (Massachusetts Institute of Technology) underwater technology research: Telemanipulator developments (revised edition)
[PB86-157302] N86-25800

TEMPERATURE
Monthly and seasonal weather outlook for mid-February to mid-March 1986, volume 40, number 4, February 14, 1986
[PB86-162229] N86-25943
Technical activities 1983, Center for Basic Standards
[PB86-140043] N86-26239

TEMPERATURE DEPENDENCE
Harmonic vibrations of viscoelastic shells of piezoceramic material with attendant heating N86-25622
Temperature dependent electron transport studies for diffuse discharge switching applications
[DE86-004213] N86-25691
Application of scintillation detectors for X-ray diagnosis of laser plasma N86-26133

TEMPERATURE DISTRIBUTION
Limits of heat transfer intensification in compact heat exchangers N86-25564
Thermal calculation of a thermogenerator at changing temperatures along thermocontact surfaces
[AD-A164320] N86-26235

TEMPERATURE EFFECTS
Characterisation by Raman spectroscopy of oxide scales formed on a 20%Cr/25%Ni/niobium stabilised stainless steel
[AERE-R-11816] N86-25449
Elevated temperature properties of cast aluminum alloys A201-T7 and A357-T6
[AD-A163487] N86-25456
Electrochemical evaluation of the effect of heat treatment and stress on the corrosion characteristics of 7050 aluminum in 3.5 percent NaCl solution
[DE86-004181] N86-25467
Emission FTIR analyses of thin microscopic patches of jet fuel residues deposited on heated metal surfaces
[NASA-CR-176786] N86-25502
Influence of the temperature of electrode material on its disintegration under the action of an arc discharge in hydrogen
[NASA-TM-77893] N86-25695
Greenstone belt tectonics: Thermal constraints N86-25902
Impact deformation of metals taking into account bulk modulus and temperature N86-26104
Influence of perturbations of the spectra of polariton Raman scattering of light in nonlinear crystals N86-26134

TEMPERATURE GRADIENTS
Computer simulations of processes in solid-state laser radiators and amplifiers with phototube pumping: Electric-discharge pumping sources. Arc discharges N86-26106

TEMPERATURE MEASUREMENT
Picosecond photoconductivity in trans-polyacetylene
[AD-A164373] N86-25440
Semiconductor temperature and strain gauges N86-25565
Thermometer calibration: A model for state calibration laboratories
[NBS-MONO-174] N86-25756
IRIG standards for range meteorological data reduction. Part 2. Rocketsonde
[AD-A163634] N86-25929
Fiber optic pyrometry with large dynamic range
[AD-D012100] N86-26206

TEMPERATURE PROFILES
Small and mesoscale processes in the marginal ice zone experiment
[AD-A164297] N86-25961

TEMPERING
A study into the mechanism(s) for the electroplastic effect in metals and its application to metalworking
[AD-A163785] N86-25457
Metallographic examination of response of 3 Cr-1.5 Mo steel to heat treatment
[DE86-004589] N86-25486

TENSILE DEFORMATION
Cylindrical shell with slit under tension N86-25648

TENSILE PROPERTIES
Tensile behavior of Fe-40Al alloys with B and Zr additions
[NASA-TM-87290] N86-25453
Void/pore distributions and ductile fracture
[AD-A163508] N86-25852
Development of an experimental technique and related analyses to study the dynamic tensile failure of concrete
[AD-A164261] N86-25854

TENSILE STRENGTH
A comparison of two methods for fiber diameter measurement and a system design for the study of composite reliability
[AD-A164355] N86-25421
Development of an experimental technique and related analyses to study the dynamic tensile failure of concrete
[AD-A164261] N86-25854

TENSILE STRESS
Nonlinear vibrations of flexible circular plates under bending and tension or compression loads N86-25592
Development of an experimental technique and related analyses to study the dynamic tensile failure of concrete
[AD-A164261] N86-25854

TENSILE TESTS
Yielding and deformation behavior of the single crystal nickel-base superalloy PWA 1480
[NASA-CR-175100] N86-25455

TERMINAL BALLISTICS
Autonomous synchronization of a bistatic Synthetic Aperture Radar (SAR) system
[AD-D012094] N86-25676

TERRAIN
Site influences on the
[AD-A164291] N86-25392
Greenstone belts: Their boundaries, surrounding rock terrains and interrelationships N86-25904
Studies of complex terrain wind flows using acoustic sounder and optical cross-wind remote sensors
[DE86-002993] N86-25925

TERRAIN ANALYSIS
A knowledge based system for the design of mobile subscriber equipment communications networks
[AD-A163994] N86-25658
Digital terrain elevation model analysis
[AD-A164305] N86-25867
CITPUFF: A Gaussian puff model for estimating pollutant concentration in complex terrain
[PB86-150885] N86-25952

TEST FACILITIES
Evaluation of alternate-fuels performance in an external combustion system
[DE86-004901] N86-25501

Test facility for the evaluation of microwave transmission components
[DE86-003891] N86-25690
Site attenuation
[PB86-169083] N86-25719
Development of near-field test procedures for communication satellite antennas, phase 1, part 1
[PB86-164357] N86-25720
Diamond anvil cells: A new tool for high pressure studies
[DE86-002384] N86-25771
The library system of the DFVLR: Present status, planned reorganization, user possibilities
[NASA-TM-77674] N86-26246

TETHERED SATELLITES
System engineering study of electrodynamic tether as a spaceborne generator and radiator of electromagnetic waves in the ULF/ELF frequency band
[NASA-CR-176749] N86-25689

TETHERING
System engineering study of electrodynamic tether as a spaceborne generator and radiator of electromagnetic waves in the ULF/ELF frequency band
[NASA-CR-176749] N86-25689

TETRAHYDROFURAN
Infrared and ultrasonic spectra of sodium thiocyanate and lithium thiocyanate in tetrahydrofuran
[AD-A163765] N86-25434

TEXAS
Minimum temperature forecast aid for radiational cooling situations in the lower Rio Grande Valley of Texas
[PB86-154242] N86-25948

THEORETICAL PHYSICS
USSR report: Physics and mathematics
[JPRS-UPM-86-001] N86-26108

THERMAL BOUNDARY LAYER
Stability of subsonic boundary layer upon heating of a surface of a flat plate near the leading edge
N86-25537
Greenstone belt tectonics: Thermal constraints
N86-25902

THERMAL CONDUCTIVITY
Lightweight polymer concrete composites
[DE86-001734] N86-25418
Two-dimensional heat conduction in metal, fluid composites
[AD-A164127] N86-25742
Low-temperature heat transfer by contact in vacuo and thermal conductivity of kapton
[DE86-002393] N86-25749
Review of electron cyclotron heating experiments in toroidal devices
[DE86-004851] N86-26214

THERMAL CYCLING TESTS
Plastic instability of aluminide and platinum modified diffusion coatings during 1100 C cyclic testing
[AD-A164506] N86-25485

THERMAL DIFFUSIVITY
Improved perfluoroalkylether fluid development
[NASA-TM-87276] N86-25474

THERMAL ENERGY
Plasma-emission energy conversion N86-26139

THERMAL EXPANSION
Plastic instability of aluminide and platinum modified diffusion coatings during 1100 C cyclic testing
[AD-A164506] N86-25485

THERMAL INSULATION
Lightweight polymer concrete composites
[DE86-001734] N86-25418

THERMAL PLASMAS
Branches of thermal physics and applications discussed N86-26145

THERMAL STABILITY
Plastic instability of aluminide and platinum modified diffusion coatings during 1100 C cyclic testing
[AD-A164506] N86-25485
Method of forming thermally stable high resistivity regions in n-type indium phosphide by oxygen implantation
[AD-D012159] N86-26225

THERMAL STRESSES
The role of thermal and stress analyses in the application of damage tolerant design N86-25366
Plastic instability of aluminide and platinum modified diffusion coatings during 1100 C cyclic testing
[AD-A164506] N86-25485
Computer simulation of processes in solid-state laser radiators and amplifiers with glow-tube pumping: Electric-discharge pumping sources. Thermophysical processes in envelope and electrodes of pulse pumps
N86-26105

THERMIONIC EMISSION
The radiation effects of high energy electrons upon thermionic integrated circuits
[AD-A164124] N86-25701

THERMOCHEMISTRY
Plasma joining of metal matrix composites
[AD-A164095] N86-25795

THERMODYNAMIC CYCLES
Cyclic creep analysis from elastic finite-element solutions
[NASA-TM-87213] N86-25822

THERMODYNAMIC PROPERTIES
Development of a model for hot-surface ignition of combustible liquids
[AD-A164057] N86-25437
Thermodynamics and heat transfer in fire fighting
[PB86-155181] N86-25524
Failure analysis of a sodium heat pipe with integral lithium fluoride thermal energy storage
[AD-A163184] N86-25748
Comparison among various thermodynamic parameters for the prediction of convective activity, part 2
[PB86-142353] N86-25942

THERMODYNAMICS
Improved perfluoroalkylether fluid development
[NASA-TM-87276] N86-25474
Propagation of detonations in hydrazine vapor
[NASA-TM-77922] N86-25727
Fracture toughness of materials
[DE86-004545] N86-25847
Impact deformation of metals taking into account bulk modulus and temperature N86-26104
USSR report: Physics and mathematics
[JPRS-UPM-86-001] N86-26108
Thermodynamics of high temperature materials
[AD-A164253] N86-26234
An investigation of the energy balance of solar active regions using the ACRIM irradiance data
[NASA-CR-176788] N86-26270

THERMOELECTRIC GENERATORS
Predicting nitride fuel performance for SP-100 conditions
[DE86-000796] N86-26181

THERMOELECTRIC POWER GENERATION
Thermal calculation of a thermogenerator at changing temperatures along thermocontact surfaces
[AD-A164320] N86-26235

THERMOLUMINESCENCE
Study of off-axis radiation exposure from relativistic electrons traversing through matter
[AD-A164523] N86-26175

THERMOMECHANICAL TREATMENT
Multiaxial and thermomechanical fatigue considerations in damage tolerant design N86-25375
Thermomechanical design criteria for ceramic-coated surfaces
[NASA-TM-87328] N86-25726

THERMOMETERS
Thermometer calibration: A model for state calibration laboratories
[NBS-MONO-174] N86-25756

THERMONUCLEAR POWER GENERATION
Progress in controlled fusion research described
N86-26151

THERMOPHYSICAL PROPERTIES
Computer simulation of processes in solid-state laser radiators and amplifiers with glow-tube pumping: Electric-discharge pumping sources. Thermophysical processes in envelope and electrodes of pulse pumps
N86-26105
Thermodynamics of high temperature materials
[AD-A164253] N86-26234

THERMOPLASTIC RESINS
Process for crosslinking and extending conjugated diene-containing polymers
[NASA-CASE-LAR-13452-1] N86-25477

THESAURI
Semantic modules in machine translation system
N86-26257

THICK PLATES
A high-order laminated plate theory with improved in-plane responses
[AD-A164396] N86-25425
Large plate CdTe synthesis by sealed vessel transport
AD-A164117 HC A03/MF A01
[AD-A164117] N86-25796

THICKNESS
Special reverse problem for cylindrical shell of variable thickness N86-25639

THICKNESS RATIO
Two-dimensional heat conduction in metal, fluid composites
[AD-A164127] N86-25742

THIN FILMS
Sputtered cadmium oxide as a surface pretreatment for graphite solid lubricant films
[NASA-TM-87300] N86-25473
Epitaxial (100) GaAs thin films on sapphire for surface acoustic wave/electronic devices
[AD-A164252] N86-26223

THIN WALLED SHELLS
Theory of nonlinearly elastic multilayer shells with transverse shear strain N86-25598
Natural vibration modes of imperfect conical shells
N86-25642
Nonaxisymmetric deformation of flexible toroidal shell with elliptic cross-section N86-25643
Cylindrical shell with slit under tension N86-25648

THIN WALLS
Motion of thin metal walls and the equation of state of detonation products. Revision 1
[DE86-004237] N86-25856

THREE DIMENSIONAL BODIES
Representation of median shell surfaces by Monge surfaces N86-25638

THREE DIMENSIONAL BOUNDARY LAYER
Temporal and spatial growth of subharmonic disturbances in Falkner-Skan flows
[AD-A163512] N86-25729
A statistical analysis of the effect of freestream turbulence of the Blasius boundary layer
[AD-A163606] N86-25730

THREE DIMENSIONAL FLOW
Estimating water vapor condensation effects for transonic and supersonic flow fields
[AD-A163146] N86-25330
A statistical analysis of the effect of freestream turbulence of the Blasius boundary layer
[AD-A163606] N86-25730

THREE DIMENSIONAL MOTION
Autonomous mobile robots
[AD-A164404] N86-25797

THROTTLING
Flight testing the digital electronic engine control in the F-15 airplane
[PAPER-6] N86-25348

THRUST AUGMENTATION
Control technology for future aircraft propulsion systems
[PAPER-14] N86-25356
Experimental investigation of a thrust augmenting ejector
[AD-A164473] N86-25744

THRUST CHAMBERS
Thermomechanical design criteria for ceramic-coated surfaces
[NASA-TM-87328] N86-25726

THRUST CONTROL
Digital Electronic Engine Control (DEEC) Flight Evaluation in an F-15 Airplane
[NASA-CP-2298] N86-25342

THRUST MEASUREMENT
Real-time in-flight thrust calculation on a digital electronic engine control-equipped F100 engine in an F-15 airplane
[PAPER-13] N86-25355

THRUST VECTOR CONTROL
Spin Stabilized Impulsively Controlled Missile (SSICM)
[AD-D012103] N86-25397
Boost control design for spinning missile
[AD-A164505] N86-25411

TIDES
Tide tables 1986, high and low water predictions, central and western Pacific Ocean and Indian Ocean
[PB86-148434] N86-25967

TIMBER INVENTORY
Timber Resources Inventory and Monitoring Joint Research Project
[NASA-TM-88754] N86-25863

TIME
An examination of models of relaxation in complex systems. 1. Continuous time random walk (CTRW) models
[AD-A164462] N86-26081
Fast method of growing crystals for nonlinear optics
N86-26109
Technical activities 1983, Center for Basic Standards
[PB86-140043] N86-26239

TIME DEPENDENCE
Abstract time-dependent transport equation
[DE86-002450] N86-26092

TIME FUNCTIONS
Development and evaluation of math library routines for a 1750A airborne microcomputer
[AD-A164050] N86-26030

TIME LAG
Reduction in bandwidth by using variable length codes
[AD-A164356] N86-25664

TIME MEASUREMENT
Design and analysis of discrete lateral autopilots for coordinated Bank-To-Turn missiles
[AD-A164518] N86-25396
Electron irradiation of N channel silicon on sapphire Insulated Gate Field Effect Transistors (IGFET)
[AD-A164520] N86-25704

TIME SERIES ANALYSIS
Research in some methodological and modelling aspects of reliability theory
[AD-A164007] N86-25815
TIME SHARING
Distributed FIFO allocation of identical resources using small shared space
[AD-A163968] N86-25389
TIMING DEVICES
Time-slicing subsystem of the biology small-angle X-ray scattering station at the National Synchrotron Light Source
[DE86-004354] N86-26093
TISSUES (BIOLOGY)
Biosensors from membrane proteins reconstituted in polymerized lipid bilayers
[AD-D012160] N86-25974
TITANIUM
Influence of atmosphere on titanium oxidation losses during alloying of stainless steel with titanium
[BLLD-5828.4-M-36640] N86-25452
Basic and strategic metals industries: Threats and opportunities
[PB86-154499] N86-25471
TITANIUM ALLOYS
AGARD Cooperative Test Progamme on titanium alloy engine disc material N86-25369
Crack growth in near-alpha titanium alloys N86-25371
Fracture mechanics and LCF-properties of engine discs of Ti 6Al-4V, Inconel 718 and Udimet 700 F/M-HIP N86-25378
TITANIUM BORIDES
Plasma-sprayed iron-base wear-resistant coatings containing titanium diboride, report of investigations/1985
[PB86-150901] N86-25498
TOKAMAK DEVICES
Investigation of current generation by lower hybrid waves in a T-7 tokamak N86-26149
Mechanical configuration for a superconducting ignition tokamak (TIBER) A02/MF A01
[DE86-002965] N86-26218
TOLERANCES (MECHANICS)
Damage Tolerance Concepts for Critical Engine Components
[AGARD-CP-393] N86-25360
Damage tolerance concepts for critical engine components N86-25361
Damage tolerance design concepts for military engines N86-25363
Parameters that input to application of damage tolerance concepts to critical engine components N86-25364
The role of thermal and stress analyses in the application of damage tolerant design N86-25366
Damage tolerance acceptance methods in structural components of a medium carbon steel and a medium strength Al-Mg alloy N86-25367
AGARD Cooperative Test Progamme on titanium alloy engine disc material N86-25369
Multiaxial and thermomechanical fatigue considerations in damage tolerant design N86-25375
Evaluation of cyclic spin pit tests for the damage tolerance of disks N86-25379
Contribution of turbine blade service failures to a damage tolerance approach N86-25382
Practical experience with damage tolerance based life extention of turbine engine components N86-25383
TOLERANCES (PHYSIOLOGY)
Acute toxicity studies on 2 Air Force hydraulic fluids (MLO 82-233 and MLO 82-585)
[AD-A163174] N86-25984
The experimental determination of safe atmospheric exposure concentrations of JP-10 jet fuel
[AD-A163179] N86-25985
TOLUENE
Ignition delay times of benzene and toluene with oxygen in argon mixtures
[NASA-TM-87312] N86-25431
TOMOGRAPHY
Computer code for calculating acoustic ray paths with application to the Straits of Florida
[PB86-158391] N86-25968
TOOLS
Hardening treatment of machine parts with CO2 power lasers N86-25576
TOPOGRAPHY
Thematic mapper studies of Andean volcanoes
[NASA-CR-176807] N86-25886
The nature and origin of mineral coatings on volcanic rocks of the Black Mountain, Stonewall Mountain and Kane Springs Wash volcanic centers in southern Nevada
[NASA-CR-176805] N86-25912
TOPOLOGY
Metal cluster topology. Part 4: Rhodium carbonyl clusters having fused polyhedra
[AD-A164218] N86-25458
Metal cluster topology. 2: Gold clusters
[AD-A164395] N86-25462
Quasicrystalline structures of transition metal/metalloid glasses
[DE86-002932] N86-25464
A system dynamics model for communications networks
[AD-A163748] N86-25652
Computational techniques for shock wave diffraction problems
[AD-A163776] N86-25738
Extensions to polychain: Nonseparability testing and factoring algorithm
[AD-A164242] N86-26034
Topology of local atomic environments: Implications for magnetism and superconductivity
[DE86-002933] N86-26229
TOROIDAL PLASMAS
Transport theory of axisymmetric toroidal plasma with RF wave source in the Pfirsch-Schrueter regime
[IPPJ-765] N86-26211
TOROIDAL SHELLS
Nonaxisymmetric deformation of flexible toroidal shell with elliptic cross-section N86-25643
TORSION
Torsion and geometrostasis in covariant superstrings
[DE86-001793] N86-26188
TOWERS
Site influences on the
[AD-A164291] N86-25392
TOXICITY
Literature review of the chemical nature and toxicity of the decomposition products of polyethylenes
[PB86-163409] N86-25447
Acute toxicity studies on 2 Air Force hydraulic fluids (MLO 82-233 and MLO 82-585)
[AD-A163174] N86-25984
The experimental determination of safe atmospheric exposure concentrations of JP-10 jet fuel
[AD-A163179] N86-25985
Toxicological study of NTO
[DE86-003296] N86-25986
Proceedings of the 34th Wire and Cable Symposium held at Cherry Hill, New Jersey on 19-21 November 1985
[AD-A164384] N86-26200
TRACE ELEMENTS
Vertical transport by cumulus clouds
[PB86-144607] N86-25917
Trace element geochemistry of the South Atlantic bight
[DE86-004004] N86-25957
Trace element geochemistry of the South Atlantic Bight
[DE86-004921] N86-25958
TRACKING (POSITION)
An LQG up-and away flight control design for the STOL F-15 aircraft
[AD-A164108] N86-25384
Particle beam tracker for an accelerating target
[AD-A163945] N86-26182
TRAJECTORIES
The effect of atmospheric turbulence on the dispersion of unguided missiles
[CAR-8613] N86-25393
TRAJECTORY ANALYSIS
Abstract time-dependent transport equation
[DE86-002450] N86-26092
TRAJECTORY MEASUREMENT
Investigation of ice dynamics in the marginal ice zone
[AD-A164364] N86-25962
TRANSDUCERS
Fatigue defect transducer and validation of its usability
[REPT-1] N86-25613
A static analysis of errors in transducer calibration techniques used for blast phenomena tests
[AD-A163172] N86-25764
Fiber optic pyrometry with large dynamic range
[AD-D012100] N86-26206
TRANSFER FUNCTIONS
Feedforward control of waves in lattice elements
[AD-A164009] N86-26222
TRANSFORMATIONS (MATHEMATICS)
Modal assignment effects on decentralized control of a large space structure
[AD-A163977] N86-25402
TRANSFORMERS
Amplitudinal angle-to-code converter with rotating sine-cosine transformer N86-25574
TRANSIENT LOADS
Development of an experimental technique and related analyses to study the dynamic tensile failure of concrete
[AD-A164261] N86-25854
TRANSIENT PRESSURES
Development of an experimental technique and related analyses to study the dynamic tensile failure of concrete
[AD-A164261] N86-25854
TRANSIENT RESPONSE
Augmentor transient capability of an F100 engine equipped with a digital electronic engine control
[PAPER-11] N86-25353
TRANSISTOR AMPLIFIERS
Data acquisition channel apparatus
[AD-D011969] N86-25696
TRANSITION METALS
The study of some early transition metals in oxidation state 4 using the potassium poly(pyrazolyl)borates as ligands
[AD-A164074] N86-25438
Semiconducting transition metal silicides for electro-optic VSLI interconnects
[AD-A164303] N86-25703
Topology of local atomic environments: Implications for magnetism and superconductivity
[DE86-002933] N86-26229
TRANSITION TEMPERATURE
Radiative coupled nonequilibrium flow fields associated with aeroassisted orbital transfer
[NASA-CR-176790] N86-25327
TRANSMISSION
Narrowband integrated voice data system based on the 2400-b/s LPC (Linear Predictive Coder)
[AD-A163158] N86-25671
TRANSMISSION LINES
High-speed high-voltage amplifier N86-25605
An optical fiber communication system based on coherent modulation, part 2
[AD-A163169] N86-25673
Promoting competition between international telecommunication cables and satellites
[PB86-156288] N86-25688
Proceedings of the 34th Wire and Cable Symposium held at Cherry Hill, New Jersey on 19-21 November 1985
[AD-A164384] N86-26200
Hybrid single crystal optic fibers
[AD-D012089] N86-26204
TRANSMISSION LOSS
Trends in infrared optical fibers discussed N86-25500
Impurity absorption by chalcogenide glasses in CO laser emission region N86-26113
TRANSMISSIONS (MACHINE ELEMENTS)
Generation of spiral bevel gears with zero kinematical errors and computer aided tooth contact analysis
[NASA-TM-87273] N86-25793
TRANSMITTER RECEIVERS
Microwave and millimeter wave phase shifter
[AD-D012082] N86-25706
Wide angle optical Transmitter/Receiver
[AD-D012133] N86-25770
TRANSMITTERS
Advanced LPI (Low-Probability-of-Intercept) intercept detector research
[AD-A164485] N86-25867
Large plate CdTe synthesis by sealed vessel transport AD-A164117 HC A03/MF A01
[AD-A164117] N86-25796
Multichannel collision resolution algorithm
[AD-A164496] N86-26042
Design of a low-noise fiber-optic transmitter module
[DE86-004976] N86-26192
TRANSONIC FLOW
Transonic airfoil analysis and design in nonuniform flow
[NASA-CR-3991] N86-25329
Estimating water vapor condensation effects for transonic and supersonic flow fields
[AD-A163146] N86-25330
Kernel function method for unsteady transonic flow past low-frequency oscillating bodies of revolution N86-25554
Normal force characteristics of sharp nosed bodies of revolution at high angles of attack in subsonic and transonic flow N86-25555
Research on turbine flowfield analysis methods
[AD-A164070] N86-25740
TRANSPARENCE
Apparatus with transparent anvils-windows for optical and X-ray analysis under high pressure N86-25632
TRANSPORT AIRCRAFT
KRASH dynamics analysis modeling: Transport airplane controlled impact demonstration test
[DOT/FAA/CT-85/9-REV] N86-25331

AN-124 airplane's cargo-handling and automation equipment N86-25600

TRANSPORT PROPERTIES
Experimental and theoretical studies on transport processes in laser welding
[DE86-002953] N86-25880
Vertical transport by cumulus clouds
[PB86-144607] N86-25917
FORTRAN program for modeling steady laminar one-dimensional premixed flames
[DE86-004485] N86-26021

TRANSPORT THEORY
Abstract time-dependent transport equation
[DE86-002450] N86-26092
Branches of thermal physics and applications discussed N86-26145
Transport theory of axisymmetric toroidal plasma with RF wave source in the Pfirsch-Schrueter regime
[IPPJ-765] N86-26211

TRANSPORTATION
Information systems in ADOT (Arizona Department ofTransportation): Analysis of intra-function flow, decision support needs, existing systems utility and user attitudes, volume 1
[PB86-148681] N86-26251

TRANSVERSE WAVES
Nonlinear propagation of spatially bounded transverse waves through isotropic solid medium N86-26154

TRAVELING WAVE TUBES
Active circulator gyrotron traveling-wave amplifier
[AD-D012128] N86-25769

TRAVELING WAVES
On the two-dimensional periodic surface waves occurring in rectangular vessels: Theory versus experiment
[AD-A163708] N86-25736

TREES (PLANTS)
Timber Resources Inventory and Monitoring Joint Research Project
[NASA-TM-88754] N86-25863

TRIAXIAL STRESSES
Development of an experimental technique and related analyses to study the dynamic tensile failure of concrete
[AD-A164261] N86-25854

TRIBOLOGY
Tribolgy of selected ceramics at temperatures to 900 deg C
[NASA-TM-87267] N86-25476
Effect of undercoating by heat and air blast treatment on tribological characteristics of solid lubricant in steel friction pairs N86-25583

TRIGGER CIRCUITS
Manchester decoder clock multiplier
[AD-D012127] N86-25768

TROPICAL METEOROLOGY
Tropical cyclones, 1983, central North Pacific
[PB86-158185] N86-25944
Atlantic Oceanographic and Meteorological Laboratory Fiscal Year 1985 report
[PB86-150091] N86-25953

TROPICAL REGIONS
Radiation climate and turbulence structure of a tropical dry evergreen forest
[AD-A164079] N86-25930
National hurricane operations plan, May 1985
[PB86-148384] N86-25936
Tropical cyclones, 1983, central North Pacific
[PB86-158185] N86-25944

TROPICAL STORMS
Tropical cyclones, 1983, central North Pacific
[PB86-158185] N86-25944

TROPOSPHERE
Role of the oceans in the atmospheric cycle of carbonyl sulfide
[PB86-144078] N86-25918

TROUGHS
Geological evolution and analysis of confirmed or suspected gas hydrate localities. Volume 2: Baltimore Canyon Trough and environs, US East Coast
[DE86-001029] N86-25865

TRUSSES
Synchronously deployable truss structure
[NASA-CASE-LAR-13117-1] N86-25789

TSUNAMI WAVES
Earthquake and tsunami data services and publications
[PB86-156254] N86-25919

TUNABLE LASERS
Laser exercise remote control system developed N86-25542
Investigation of plasma processes in electronic transition lasers
[AD-A163141] N86-25780
Generation of frequency-tunable ultrashort pulses in a dynamic distributed feedback laser N86-26120
Chlorine monofluoride-hydrogen electric discharge chemical laser N86-26124

TUNGSTEN
Influence of the temperature of electrode material on its disintegration under the action of an arc discharge in hydrogen
[NASA-TM-77893] N86-25695

TURBINE BLADES
Turbulent flow over rough turbine airfoils
[AD-A163005] N86-25358
Contribution of turbine blade service failures to a damage tolerance approach N86-25382
Plastic instability of aluminide and platinum modified diffusion coatings during 1100 C cyclic testing
[AD-A164506] N86-25485

TURBINE ENGINES
USSR report: Engineering and equipment
[JPRS-UEQ-86-001] N86-25556

TURBINE WHEELS
Statistical analysis of spin pit failure data to predict inservice B.1 lives of gas turbine disks N86-25377
Fracture mechanics and LCF-properties of engine discs of Ti 6Al-4V, Inconel 718 and Udimet 700 P/M-HIP N86-25378
Evaluation of cyclic spin pit tests for the damage tolerance of disks N86-25379
TURBISTAN: A standard load sequence for aircraft engine discs N86-25380
An analysis of rig test disc failures N86-25381

TURBOCOMPRESSORS
TURBISTAN: A standard load sequence for aircraft engine discs N86-25380
An analysis of rig test disc failures N86-25381
Extending range of stable operation of axial compressors by means of self-rotating inlet guide vanes N86-25617

TURBOFAN ENGINES
Digital Electronic Engine Control (DEEC) Flight Evaluation in an F-15 Airplane
[NASA-CP-2298] N86-25342
F-15 digital electronic engine control system description
[PAPER-3] N86-25345
NASA Lewis F100 engine testing
[PAPER-4] N86-25346
Airstart performance of a digital electronic engine control system on an F100 engine
[PAPER-8] N86-25350
Flight evaluation of a hydromechanical backup control for the digital electronic engine control system in an F100 engine
[PAPER-9] N86-25351
Backup control airstart performance on a digital electronic engine control-equipped F100-engine
[PAPER-10] N86-25352
Augmentor transient capability of an F100 engine equipped with a digital electronic engine control
[PAPER-11] N86-25353
Investigation of a nozzle instability on an F100 engine equipped with a digital electronic engine control
[PAPER-12] N86-25354
Turbofan aft duct suppressor study program listing and user's guide
[NASA-CR-175067] N86-25357

TURBOMACHINE BLADES
Effectiveness of structural countermeasures for reducing blade vibrations excited by random flow fluctuations N86-25616
Research on turbine flowfield analysis methods
[AD-A164070] N86-25740

TURBOMACHINERY
Dynamic and aeroelastic analyses of turbosystems in NASTRAN N86-25826

TURBOSHAFTS
Thermomechanical design criteria for ceramic-coated surfaces
[NASA-TM-87328] N86-25726

TURBULENCE
Site influences on the
[AD-A164291] N86-25392
Note on loss of regularity for solutions of the 3-D incompressible Euler and related equations
[AD-A163632] N86-25733
Analytic moment method calculations of the drift wave spectrum
[DE86-003750] N86-26212

TURBULENCE EFFECTS
The effect of atmospheric turbulence on the dispersion of unguided missiles
[CAR-8613] N86-25393
Statistical model to estimate the refractivity turbulence structure constant carbon sup 2 sub n in the free atmosphere
[PB86-148749] N86-25921

TURBULENT BOUNDARY LAYER
Turbulent flow over rough turbine airfoils
[AD-A163005] N86-25358

TURBULENT FLOW
Turbulent flow over rough turbine airfoils
[AD-A163005] N86-25358
Stability characteristics of supersonic boundary layer and their relation to transition point between laminar and turbulent flow N86-25530
On the two-dimensional periodic surface waves occurring in rectangular vessels: Theory versus experiment
[AD-A163708] N86-25736
Dynamic response of fluid transmission lines
[AD-A164354] N86-25743
Prediction of turbulent skin friction for two-dimensional, rib-type surface roughness using a discrete element approach
[AD-A163165] N86-25746

TURBULENT MIXING
Vertical transport by cumulus clouds
[PB86-144607] N86-25917

TURBULENT WAKES
Final stage of degeneracy of turbulent velocity field in wake stream N86-26100

TURNING FLIGHT
The effects of digital control on longitudinal autopilots for bank-to-turn and skid-turn missiles
[AD-A164507] N86-25395

TWO DIMENSIONAL BOUNDARY LAYER
Stability of subsonic boundary layer upon heating of a surface of a flat plate near the leading edge N86-25537

TWO DIMENSIONAL FLOW
Estimating water vapor condensation effects for transonic and supersonic flow fields
[AD-A163146] N86-25330
Limits of heat transfer intensification in compact heat exchangers N86-25564
Two-dimensional MHD-turbulence: Hierarchical model N86-26128
Two-dimensional plasma flows in a current layer according to results of spectral measurements N86-26142

[PB86-141827] N86-26252

ULLAGE
Surface tension screen failure detection method and apparatus
[AD-D012104] N86-25766

ULTRAHIGH FREQUENCIES
Construction of a high energy linear accelerator for research in free electron lasers, beam-wave interactions, spectroscopy and microcircuitry fabrication
[AD-A164250] N86-25775

ULTRASONIC FLAW DETECTION
Manufacturing technology for nondestructive evaluation (NDE) system to implement Retirement For Cause (RFC) procedures for gas turbine engine components N86-25368
Advanced quantitative methods for nondestructive evaluation N86-25376
Universal instrument for acoustic inspection N86-25629
Five-channel instrument for acoustic flaw detection by method of acoustic emission N86-25630

ULTRASONIC RADIATION
Surface tension screen failure detection method and apparatus
[AD-D012104] N86-25766

ULTRASONIC SPECTROSCOPY
Infrared and ultrasonic spectra of sodium thiocyanate and lithium thiocyanate in tetrahydrofuran
[AD-A163765] N86-25434

ULTRASONICS
Modern ultrasonic flowmeters N86-25566
Concepts for interrelating ultrasnic attenuation, microstrucutre and fracture toughness in polycrystalline solids
[NASA-TM-87339] N86-25812
Ultrasonic quantification of blood volume redistribution under hypergravity
[AD-A164379] N86-25982
European Science Notes, volume 40, number 2
[AD-A163008] N86-26096

ULTRAVIOLET LASERS
Recent advances in ultraviolet laser technology
[DE86-002404] N86-25787

ULTRAVIOLET RADIATION
Spectroscopic observations of the line stark broadening in the ultraviolet vacuum in laser-produced plasmas N86-25546

ULTRAVIOLET SPECTRA
Highly ionized atoms in cooling gas [NASA-CR-176819] N86-26266

ULTRAVIOLET SPECTROSCOPY
A search for metal lines in the spectra of DA white dwarfs [NASA-CR-178825] N86-26263

UNDERWATER ACOUSTICS
Design and performance analysis of digital acoustic underwater telemetry system [PB86-156510] N86-25399
Measurement of the acoustic pressure everywhere over a modeled continental slope [AD-A164126] N86-26164

UNDERWATER COMMUNICATION
Automated recognition of helium speech. Phase I: Investigation of microprocessor based analysis/synthesis system [AD-A164113] N86-25663

UNDERWATER VEHICLES
Wide bandwidth positioning systems for space and underwater vehicles [PB86-157310] N86-25799

UNIQUENESS
The equation c(z)t = Phi(zx))x: The free boundary induced by a discontinuity in the derivative of c [AD-A163630] N86-26091

UNITED STATES
NAS (National Academy of Sciences) exchanges with the academies of sciences of the USSR and Eastern Europe [PB86-141627] N86-26252

UNMANNED SPACECRAFT
Wide bandwidth positioning systems for space and underwater vehicles [PB86-157310] N86-25799

UNSTEADY FLOW
Unsteady MHD flow in annular channel of a radial magnetic field N86-26129
Experimental study of the effects of installation on singleand counter-rotation propeller noise [NASA-TP-2541] N86-26162

UPPER STAGE ROCKET ENGINES
Minuteman stage 3 operational surveillance program 7-year testing bondline aging study [AD-A164268] N86-25503

URANIUM 238
Separation of U-238 and Np-237 nuclei by gamma-quanta intermediate energies N86-26131

USER MANUALS (COMPUTER PROGRAMS)
Turbofan aft duct suppressor study program listing and user's guide [NASA-CR-175067] N86-25357
Ground Software Maintenance Facility (GSMF) user's manual [NASA-CR-178805] N86-26018
The OZDRAW User's Manual AD-A163633 NPS52-86-005 HC A05/MF A01 [AD-A163633] N86-26024
UNIX word processing at HAO (for use with the 4.2 BSD version and -me macro package) [PB86-155801] N86-26053
Information systems in ADOT (Arizona Department of Transportation): Analysis of intra-function flow, decision support needs, existing systems utility and user attitudes. Volume 2: Manual for evaluation of needs and attitudes of EDP users [PB86-148699] N86-26250

USER REQUIREMENTS
Perfecting economic methods of controlling the quality of metal for important applications [BLLD-5828.4-M-36674] N86-25450
Microcomputer programs for particulate control: Documentation [PB86-148529] N86-25899
A unified method for delay analysis of random multiple access algorithms [AD-A164407] N86-26041
The library system of the DFVLR: Present status, planned reorganization, user possibilities [NASA-TM-77674] N86-26246
Information systems in ADOT (Arizona Department ofTransportation): Analysis of intra-function flow, decision support needs, existing systems utility and user attitudes, volume 1 [PB86-148681] N86-26251

V

VACUUM
Method for vacuum baking indium in-situ [AD-D012113] N86-25518

VACUUM SPECTROSCOPY
Optical multiple sample vacuum integrating sphere [NASA-CASE-GSC-12849-1] N86-26190
Thermodynamics of high temperature materials [AD-A164253] N86-26234

VACUUM SYSTEMS
Low-temperature heat transfer by contact in vacuo and thermal conductivity of kapton [DE86-002393] N86-25749
Measurement of partial pressures in vacuum technology and vacuum physics [NASA-TM-88438] N86-26094
Report on artificially structured materials [PB86-144102] N86-26232

VALENCE
Theoretical calculations supporting investigation of metal contacts to ultra-small semiconductor structures [AD-A163160] N86-26227

VAPOR DEPOSITION
Epitaxial (100) GaAs thin films on sapphire for surface acoustic wave/electronic devices [AD-A164252] N86-26223

VAPOR PHASES
Molten carbonates: Microwave studies of the vapor state [DE86-004504] N86-25481
Current distribution in ESD (Electron Stimulated Desorption) diodes. Cross section corrections [AD-A163646] N86-25696
Propagation of detonations in hydrazine vapor [NASA-TM-77922] N86-25727
Effect of diffusion constraints on composition of vapor phase during growth of CdS and ZnSe crystals N86-26116

VAPORIZING
Plasma joining of metal matrix composites [AD-A164095] N86-25795
Exploratory studies on deep Earth sources of methane: Hg as a diagnostic and prospecting tool [PB86-156148] N86-25871
Experimental and theoretical studies on transport processes in laser welding [DE86-002953] N86-25880
Thermodynamics of high temperature materials [AD-A164253] N86-26234

VARIABLE MASS SYSTEMS
Optimization of cylindrical shells with variable thickness for axisymmetric load N86-25595

VARIANCE (STATISTICS)
Maximum likelihood recursion and stochastic approximation in sequential designs [AD-A163628] N86-26073

VARIATIONAL PRINCIPLES
A composite plate theory for arbitrary laminate configurations [AD-A164370] N86-25422
A high-order laminated plate theory with improved in-plane responses [AD-A164396] N86-25425
Principles of multivariant domination in opitmum control of technological processes N86-26159

VARIATIONS
Emittance growth from radiation fluctuations [DE86-005085] N86-26170

VECTOR ANALYSIS
Joint Services Electronics Program [AD-A163755] N86-25697

VECTORS (MATHEMATICS)
Cumulative reports and publications through December 31, 1985 [NASA-CR-178088] N86-25994
New ideas for parallel algorithms on vector- and multi-processors [DE86-002989] N86-26052

VEGETATION
The nature and origin of mineral coatings on volcanic rocks of the Black Mountain, Stonewall Mountain and Kane Springs Wash volcanic centers in southern Nevada [NASA-CR-176805] N86-25912

VELOCITY
Results from a high power, high frequency sodar [DE86-003041] N86-25868

VELOCITY DISTRIBUTION
Final stage of degeneracy of turbulent velocity field in wake stream N86-26100
Unsteady MHD flow in annular channel of a radial magnetic field N86-26129

VELOCITY MEASUREMENT
Correction of Space Tachometer - Stabilizing Gyro system N86-25621

VENTING
Exploratory studies on deep Earth sources of methane: Hg as a diagnostic and prospecting tool [PB86-156148] N86-25871

VERTICAL DISTRIBUTION
Feasibility study on the use of firefinder radar for wind profiling [PB86-158417] N86-25948

VERY LARGE SCALE INTEGRATION
Joint Services Electronics Program [AD-A163755] N86-25697
VLSI (Very Large Scale Integration) floating point chip design study [AD-A164198] N86-25702
Semiconducting transition metal silicides for electro-optic VSLI interconnects [AD-A164303] N86-25703
Metallization qualification for VLSI (TRACE test) [AD-A163032] N86-25813

VESTIBULAR TESTS
Normal and abnormal human vestibular ocular function [NASA-CR-176820] N86-25978

VESTIBULES
Normal and abnormal human vestibular ocular function [NASA-CR-176820] N86-25978

VIBRATION
Induced vibrations and resonance of shaft under nonsteady load N86-25578
Solving large-scale dynamic systems using band Lanczos method in Rockwell NASTRAN on CRAY X-MP N86-25837

VIBRATION DAMPING
Method of reducing vibrations in machines with high-speed rotor on ball bearings N86-25570
Dynamic edge effect in rigid homogeneous vibration-absorber coating N86-25593
Wave processes during flexural vibrations of beams under deformation N86-25640
Development of a new instrument for direct skin friction measurements [NASA-CR-176818] N86-25757
Variable friction secondary seal for face seals [NASA-CASE-LEW-14170-1] N86-25790
The Shock and Vibration Digest, volume 17, no. 11 [AD-A163153] N86-25843
Damping in structural joints N86-25845

VIBRATION MODE
Natural vibration modes of imperfect conical shells N86-25642
Precession of natural vibration mode in spherical shell during rotation N86-25845

VIBRATION SIMULATORS
Design of vibration machines with inertial excitation N86-25615

VIBRATIONAL SPECTRA
Infrared and ultrasonic spectra of sodium thiocyanate and lithium thiocyanate in tetrahydrofuran [AD-A163765] N86-25434
Combined experimental/analytical modeling of shell/payload structures [DE86-004968] N86-25848

VIDEO EQUIPMENT
Apparatus for continuously inspecting the physical characteristics of particulate matter [AD-D012132] N86-25819

VIEWING
Apparatus for continuously inspecting the physical characteristics of particulate matter [AD-D012132] N86-25819

VINYL RADICAL
Electrochemical properties of conducting, nitrogen-bearing iodinated polymers [AD-A164052] N86-25482

VISCOELASTICITY
Harmonic vibrations of viscoelastic shells of piezoceramic material with attendant heating N86-25622
Flow of viscoelastic fluids between plates rotating about distinct axes [AD-A163700] N86-25734

VISCOSITY
The preparation of new perfluoroether fluids exhibiting excellent thermal-oxidative stabilities [NASA-TM-87284] N86-25475

VISCOUS FLOW
Some remarks on the Navier-Stokes equations with a pressure-dependent viscosity [AD-A163726] N86-25737

VISCOUS FLUIDS
LP-stability for the strong solutions of the Navier-Stokes equations in the whole space [AD-A163631] N86-25732

Some remarks on the Navier-Stokes equations with a pressure-dependent viscosity
[AD-A163726] N86-25737
Incompressible viscous steady flow in channels and pipes N86-25751

VISIBLE SPECTRUM
Investigation of plasma processes in electronic transition lasers
[AD-A163141] N86-25780

VISION
Autonomous mobile robots
[AD-A164404] N86-25797
The first cortical implant of a semiconductor multielectrode array. VER (Visual Evoked Responses) and propagation analysis
[AD-A164015] N86-25972

VISUAL ACUITY
Emergent techniques for assessment of visual performance
[PB86-144755] N86-25988

VISUAL PERCEPTION
Emergent techniques for assessment of visual performance
[PB86-144755] N86-25988

VOICE COMMUNICATION
The effect of LPC (Linear Predictive Coding) processing on the recognition of unfamiliar speakers
[AD-A164461] N86-25665
Narrowband integrated voice data system based on the 2400-b/s LPC (Linear Predictive Coder)
[AD-A163158] N86-25671
NWR (National Weather Service) voice synthesis project, phase 1
[PB86-145604] N86-25684

VOICE DATA PROCESSING
Automated recognition of helium speech. Phase I: Investigation of microprocessor based analysis/synthesis system
[AD-A164113] N86-25663

VOLATILITY
Experimental and theoretical studies on transport processes in laser welding
[DE86-002953] N86-25880

VOLCANOES
Thematic mapper studies of Andean volcanoes
[NASA-CR-176807] N86-25866
Greenstone belts: Their components and structure N86-25905
The western Wabigoon Subprovince, Superior Province, Canada: Archean greenstone succession in rifted basement complex N86-25907
A simple tectonic model for crustal accretion in the Slave Province: A 2.7-2.5 Ga granite greenstone terrane N86-25908
The nature and origin of mineral coatings on volcanic rocks of the Black Mountain, Stonewall Mountain and Kane Springs Wash volcanic centers in southern Nevada
[NASA-CR-176805] N86-25912

VOLTAGE AMPLIFIERS
High-speed high-voltage amplifier N86-25605

VOLTAGE GENERATORS
Amplitudinal angle-to-code converter with rotating sine-cosine transformer N86-25574
High-current electron accelerator N86-25607

VOLTAGE REGULATORS
Input-current shaped ac to dc converters
[NASA-CR-176787] N86-25693

VOLUME
Geological evolution and analysis of confirmed or suspected gas hydrate localities. Volume 2: Baltimore Canyon Trough and environs, US East Coast
[DE86-001028] N86-25865

VORTEX FILAMENTS
Experimental investigation of a thrust augmenting ejector
[AD-A164473] N86-25744

VORTICES
Variation of friction velocity across the surface marginal ice zone in the East Greenland Sea
[AD-A164497] N86-25964
Helicopter tail rotor noise analyses
[NASA-CR-176829] N86-26163

W

WAFERS
Method of forming thermally stable high resistivity regions in n-type indium phosphide by oxygen implantation
[AD-D012159] N86-26225
A nondestructive noncontact device to characterize semiconductor material
[AD-D011659] N86-26228

WALL FLOW
Transient aerodynamic characteristics of foil in stream with separation flow near wavy wall N86-25533
Hydrodynamics of plasma compression with a magnetic field by a thin cylindrical wall N86-26148

WAR GAMES
Review of the literature on bi-level mathematical programming
[DE86-004377] N86-26019

WARFARE
Review of the literature on bi-level mathematical programming
[DE86-004377] N86-26019
Computer modeling of IR encounters and countermeasure effectiveness
[AD-A164359] N86-26198
Damage resistance of coated optics
[DE86-002391] N86-26210

WARNING SYSTEMS
Pilot evaluation of TCAS in the Long Ranger helicopter
[FAA/PM-85/30] N86-25334

WASPALOY
Axial and torsional fatigue behavior of Waspaloy
[NASA-CR-175052] N86-25454

WASTE DISPOSAL
Evaluation of control technologies for hazardous air pollutants, volume 1
[PB86-167020] N86-25895

WASTE UTILIZATION
Methane from biomass and waste
[PB86-156130] N86-25509

WASTES
Pacific manganese nodules: Characterization and processing
[PB86-150919] N86-25872

WATER
Epoxy-resin grouting of cracks in concrete
[AD-A164306] N86-25513
Hybrid single crystal optic fibers
[AD-D012069] N86-26204

WATER DEPTH
Coastal Secchi depth atlas
[AD-A164420] N86-25963
Measurement of the acoustic pressure everywhere over a modeled continental slope
[AD-A164126] N86-26164

WATER POLLUTION
Directory of selected research supported by NOAA's (National Oceanic and Atmospheric Administration's) Ocean Assessments Division
[PB86-150216] N86-25969
DNA analysis of epithelial cell suspensions
[DE86-002403] N86-25977

WATER VAPOR
Estimating water vapor condensation effects for transonic and supersonic flow fields
[AD-A163148] N86-25330

WAVE ATTENUATION
Ultrasonic nondestructive evaluation of damage in continuous fiber composites
[AD-A164056] N86-25816
Thin superconducting film characterization by surface acoustic waves
[AD-A164004] N86-26221
Feedforward control of waves in lattice elements
[AD-A164009] N86-26222

WAVE DIFFRACTION
Solution to problem of transient diffraction of acoustic waves by infinitely long open shells N86-25587
Hydrodynamic interaction of two spherical particles caused by sound wave propagating along center-to-center line N86-25589
Computational techniques for shock wave diffraction problems
[AD-A163776] N86-25738

WAVE DRAG
Wave drag of solids of revolution with frontal separation zone in supersonic stream N86-25532

WAVE EQUATIONS
Action of nonaxisymmetric normal load along surface of elastic shell interacting with fluid N86-25590
On the shore singularity of water waves. Part 1: The local model
[AD-A163707] N86-25735
A fourth order accurate finite difference scheme for the computation of elastic waves
[NASA-CR-178069] N86-26068
Nonlinear propagation of spatially bounded transverse waves through isotropic solid medium N86-26154
Feedforward control of waves in lattice elements
[AD-A164009] N86-26222

WAVE FRONTS
The construction and calibration of a LADAR (laser detection and ranging) cross-section measurement range
[AD-A163955] N86-25773
Laser radiation wavefront reversal with intermediate frequency conversion to another band N86-26135

WAVE INTERACTION
Active circulator gyrotron traveling-wave amplifier
[AD-D012128] N86-25769
Electromagnetic instability in a quadrupole-focus accelerator
[AD-A163206] N86-26184

WAVE PROPAGATION
Technical basis for the Geostationary Satellite Orbit Analysis Program (GSOAP), version 2
[PB86-151750] N86-25391
A high-order mixture model for periodic particulate composites
[AD-A164389] N86-25423
Hydrodynamic interaction of two spherical particles caused by sound wave propagating along center-to-center line N86-25589
Wave processes during flexural vibrations of beams under deformation N86-25640
Lateral wave propagation in the presence of a conducting plate
[DE86-004974] N86-25651
Millimeter-wave urban and suburban propagation measurements using narrow and wide bandwidth channel probes
[PB86-147741] N86-25683
Microwave and millimeter wave phase shifter
[AD-D012062] N86-25706
Propagation of shock waves through petroleum suspensions N86-26117
Theory of surface damage to nontransparent materials by laser radiation N86-26121
Meteorological correction to refraction of optical wave beams N86-26132
Nonlinear propagation of spatially bounded transverse waves through isotropic solid medium N86-26154
Three-dimensional wave propagation using boundary integral equation techniques
[AD-A164498] N86-26165
Feedforward control of waves in lattice elements
[AD-A164009] N86-26222

WAVEFORMS
Jamming effects on M-ary coherent and binary noncoherent digital receivers using random jammer models
[AD-A164522] N86-25669
On the two-dimensional periodic surface waves occurring in rectangular vessels: Theory versus experiment
[AD-A163708] N86-25736
Single particle FEL equations with overtones
[DE86-002423] N86-26177

WAVEGUIDES
Compact broadband rectangular to coaxial waveguide junction
[AD-D012117] N86-25713
Active circulator gyrotron traveling-wave amplifier
[AD-D012128] N86-25769

WAVELENGTHS
Fiber optic interferometer using two wavelengths or variable wavelength
[AD-D012121] N86-26208

WEAK ENERGY INTERACTIONS
Report of the 1985 High Energy Physics Advisory Panel study of the US High Energy Physics Program, 1985 - 1995
[DE86-002484] N86-26189

WEAK INTERACTIONS (FIELD THEORY)
Thin superconducting film characterization by surface acoustic waves
[AD-A164004] N86-26221

WEAPONS
Computer modeling of IR encounters and countermeasure effectiveness
[AD-A164359] N86-26198

WEAR
Tribolgy of selected ceramics at temperatures to 900 deg C
[NASA-TM-87267] N86-25476

WEAR INHIBITORS
Plasma-sprayed iron-base wear-resistant coatings containing titanium diboride, report of investigations/1985
[PB86-150901] N86-25498
Effect of undercoating by heat and air blast treatment on tribological characteristics of solid lubricant in steel friction pairs N86-25583

WEAR RESISTANCE
Hardening treatment of machine parts with CO2 power lasers N86-25576

Unlubricated sliding wear of partially stabilized zirconia, toughened alumina and silicon nitride
[DE86-009016] N86-25858

WEATHER DATA RECORDERS
AFOS (Automation of Field Operations and Services) era forecast verification
[PB86-152386] N86-25950

WEATHER FORECASTING
Compendium of meteorology scientific issues of 1950 still outstanding
[NASA-RP-1167] N86-25900
A three-dimensional mesoscale model for the simulation of clouds, precipitation and airflow
[AD-A164498] N86-25933
Investigation of high and low predictability periods in medium range forecasts
[AD-A164495] N86-25934
National hurricane operations plan, May 1985
[PB86-148364] N86-25936
AFOS (Automation of Field Operations and Services) - era forecast verification, October 1985
[PB86-148319] N86-25937
Severe local storm warning verification: 1984
[PB86-148244] N86-25938
Statistical analysis of SHEF (Standard Hydrometeorological Exchange Format) coding errors
[PB86-145141] N86-25940
Climatological summary programs F6, CLIMAT, SUMMARY, GETCS
[PB86-143948] N86-25941
Comparison among various thermodynamic parameters for the prediction of convective activity, part 2
[PB86-142353] N86-25942
Monthly and seasonal weather outlook for mid-February to mid-March 1986, volume 40, number 4, February 14, 1986
[PB86-162229] N86-25943
Hurricane Research Division, Atlantic Oceanographic and Meteorological Laboratory fiscal year 1985 programs: Fiscal year 1986 projections
[PB86-158755] N86-25945
Feasibility study on the use of firefinder radar for wind profiling
[PB86-158417] N86-25946
Program for Regional Observing and Forecasting Services (PROFS), fiscal year 1985
[PB86-158110] N86-25947
Minimum temperature forecast aid for radiational cooling situations in the lower Rio Grande Valley of Texas
[PB86-154242] N86-25948
Monthly and seasonal weather outlook for February 1986, volume 40, number 3, January 30, 1986
[PB86-155660] N86-25949
AFOS (Automation of Field Operations and Services) terminal forecast decoding
[PB86-152337] N86-25951
Atlantic Oceanographic and Meteorological Laboratory Fiscal Year 1985 report
[PB86-150091] N86-25953
AFOS (Automation of Field Operations and Services) terminal forecast decoding
[PB86-147360] N86-25954
Monograph on prospective developments in oceanology
[NASA-TM-87983] N86-25959
Research briefings for the Office of Science and Technology Policy, the National Science Foundation and selected federal departments and agencies, 1985
[PB86-148582] N86-26240

WEATHER STATIONS
AFOS (Automation of Field Operations and Services) era forecast verification
[PB86-152386] N86-25950

WEATHERING
Environmental factors affecting the corrosion of weathering steel
[PB86-136074] N86-25468

WEDGES
Induced vibrations of spherical shell in acoustic wedge N86-25625

WEIGHT MEASUREMENT
National Conference on Weights and Measures (70th), 1985
[PB86-150232] N86-25520
Journal of Research of the National Bureau of Standards, volume 90, number 5, September-October 1985
[PB86-166782] N86-26096

WEIGHT REDUCTION
Crack growth in near-alpha titanium alloys N86-25371

WELD STRENGTH
Visibility of transverse cracks for radiographic inspection of welds in spherical vessels N86-25549

WELDED JOINTS
Visibility of transverse cracks for radiographic inspection of welds in spherical vessels N86-25549
Failure analysis of a sodium heat pipe with integral lithium fluoride thermal energy storage
[AD-A163184] N86-25748
Operational reliability of welded T-joints made from CrMoV steels for use in steam lines
[BLL-CE-TRANS-8140-(9022.09)] N86-25792

WELDING
Five-channel instrument for acoustic flaw detection by method of acoustic emission N86-25630
European Science Notes, volume 40, number 2
[AD-A163006] N86-26096

WHEATSTONE BRIDGES
Electrolytic pressure transduction system
[AD-D012102] N86-25785

WHISTLERS
Stability of electron cyclotron waves in the presence of strong electron cyclotron heating
[DE86-004854] N86-26215

WHITE DWARF STARS
A search for metal lines in the spectra of DA white dwarfs
[NASA-CR-178825] N86-26283

WIDE ANGLE LENSES
Implementation of an ionospheric-image file management, processing, and display system
[AD-A164502] N86-25915

WIGGLER MAGNETS
Optical beam bending and focusing in free-electron oscillators
[DE86-002426] N86-25785
Single particle FEL equations with overtones
[DE86-002423] N86-26177

WIND (METEOROLOGY)
Radiation climate and turbulence structure of a tropical dry evergreen forest
[AD-A164079] N86-25930
CITPUFF: A Gaussian puff model for estimating pollutant concentration in complex terrain
[PB86-150885] N86-25952
Optical and radiative properties of a desert aerosol model
[AD-A163181] N86-26202

WIND EFFECTS
Simulation problem of controlling lateral movement of aircraft during landing approach N86-26160

WIND MEASUREMENT
Studies of complex terrain wind flows using acoustic sounder and optical cross-wind remote sensors
[DE86-002993] N86-25925

WIND PROFILES
Feasibility study on the use of firefinder radar for wind profiling
[PB86-158417] N86-25948

WIND TUNNEL TESTS
Experimental study of the performance of clustered parachutes in a low-speed wind tunnel
[DE86-004977] N86-25326
Mass spectrometric gas composition measurements associated with jet interaction tests in a high-enthalpy wind tunnel
[NASA-TM-87642] N86-25429
Flow around delta wings with broken-line leading edges N86-25560
Langley aerospace test highlights, 1985
[NASA-TM-87703] N86-26276

WIND VELOCITY
Optical System Model 4 for space-averaged wind and C sub n sup 2 measurements
[PB86-144086] N86-25955

WIND VELOCITY MEASUREMENT
Site influences on the
[AD-A164291] N86-25392

WINDOWS (APERTURES)
Threshold conditions for damage to potassium chloride single crystals exposed to CW CO-2 laser radiation N86-26119

WINTER
Investigation of high and low predictability periods in medium range forecasts
[AD-A164495] N86-25934

WIRE
Proceedings of the 34th Wire and Cable Symposium held at Cherry Hill, New Jersey on 19-21 November 1985
[AD-A164364] N86-26200

WIRE CLOTH
Personnel occupied woven envelope robot
[NASA-CR-176832] N86-25401

WORD PROCESSING
UNIX word processing at HAO (for use with the 4.2 BSD version and -me macro package)
[PB86-155801] N86-26053

WORDS (LANGUAGE)
Semantic modules in machine translation system N86-26257

WORKSTATIONS
Implementation of an ionospheric-image file management, processing, and display system
[AD-A164502] N86-25915
Man-machine problems in development and operation of computer-aided design systems N86-26258

WRINKLING
Approach to tackling problems of wrinkled state of soft shells N86-25623

X

X RAY ANALYSIS
Apparatus with transparent anvils-windows for optical and X-ray analysis under high pressure N86-25832
Application of scintillation detectors for X-ray diagnosis of laser plasma N86-26130

X RAY APPARATUS
Apparatus with transparent anvils-windows for optical and X-ray analysis under high pressure N86-25832

X RAY DIFFRACTION
Mossbauer investigation of intermetallic hydrides
[AD-A163762] N86-25433

X RAY IMAGERY
X-Ray Data Booklet. Center for X-Ray Optics
[DE86-005122] N86-26193

X RAY SCATTERING
Structural characterization of silica aerogel using specific surface area measurements
[DE86-003664] N86-25479
SAX (Small-Angle X-ray scattering) study of micelle formation in mixtures of butadiene homopolymer and styrene-butadiene block copolymer. Part 3: Comparison with theory
[AD-A163149] N86-25486
Time-slicing subsystem of the biology small-angle X-ray scattering station at the National Synchrotron Light Source
[DE86-004354] N86-26093

X RAY SOURCES
Operational characteristics of a high voltage dense plasma focus
[AD-A164298] N86-26218

X RAY SPECTROSCOPY
X-ray optics and microanalysis. Transactions of the International Conferency (8th) on X-Ray Optics and Microanalysis held at Moscow-Kiev on July 9-16, 1974
[PB86-155173] N86-25448

X RAYS
Solar-geophysical data number 496, December 1985. Part 2: (Comprehensive reports). Data for June 1985, January-May 1985 and miscellanea
[NASA-CR-176793] N86-25923
Characteristics of X-radiation emitted during focusing of laser beams on solid targets: Radiation losses in multicharge plasma N86-26103
Microchennel analyzer for recording particle and X-ray emission from laser plasma N86-26146
Laser-driven X-ray emission from a plasma focus N86-26150
Nonlinear nonreciprocity. Theory and applications to the enhancement of the Sagnac effect, optical bistability
[AD-A164374] N86-26199

Y

YAG LASERS
Laser exercise remote control system developed N86-25542

YANG-MILLS FIELDS
Gauge invariance of string fields
[DE86-002937] N86-26236

YAW
Boost control design for spinning missile
[AD-A164505] N86-25411

YIELD
Phosphorobacterin and its effectiveness
[AD-A164508] N86-25973

YIELD STRENGTH
Yielding and deformation behavior of the single crystal nickel-base superalloy PWA 1480
[NASA-CR-175100] N86-25455

Z

ZEOLITES
The structure of ZSM-5 molecular sieves at high temperature N86-25545

ZINC SELENIDES
Effect of diffusion constraints on composition of vapor phase during growth of CdS and ZnSe crystals N86-26116
Laser radiation in ZnSe excited by Gunn domains in streamer discharge channel N86-26118

ZIRCONIUM OXIDES
Fracture toughness of materials
[DE86-004545] N86-25847
Unlubricated sliding wear of partially stabilized zirconia, toughened alumina and silicon nitride
[DE86-003016] N86-25858

Typical Personal Author Index Listing

PERSONAL AUTHOR

BROOKS, D. E. N86-10136

NASA ACCESSION NUMBER

Listings in this index are arranged alphabetically by personal author. The NASA accession number denotes the number by which the citation is identified.

Typical Corporate Source Index Listing

Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The NASA accession number denotes the number by which the citation is identified. The titles are arranged under each corporate source in ascending accession number order.

A

ABILENE CHRISTIAN UNIV., TEX.
Measurements of observables of pion-nucleon reactions
[DE85-011778] N86-26187

ACUREX CORP., MOUNTAIN VIEW, CALIF.
Environmental assessment of NOx control on a spark-ignited large bore reciprocating internal combustion engine. Volume 2: Data supplement
[PB86-156817] N86-25803
Environmental assessment of NOx control on a spark-ignited large bore reciprocating internal combustion engine. Volume 1: Technical results
[PB86-156809] N86-25804
Environmental assessment of NOx control on a compression ignition large bore reciprocating internal combustion engine. Volume 2: Data supplement
[PB86-155827] N86-25805

ADIABATICS, INC., COLUMBUS, IND.
Formation of a natural gas engine data base
[PB86-154010] N86-25359

ADVANCED DECISION SYSTEMS, MOUNTAIN VIEW, CALIF.
Formalization of the intelligent program editor
[AD-A163180] N86-26043

ADVANCED INFORMATION AND DECISION SYSTEMS, MOUNTAIN VIEW, CALIF.
Formalization of the program reference language
[AD-A164265] N86-26036

ADVANCED MECHANICAL TECHNOLOGY, INC., NEWTON, MASS.
Development of a model for hot-surface ignition of combustible liquids
[AD-A164057] N86-25437
Unlubricated sliding wear of partially stabilized zirconia, toughened alumina and silicon nitride
[DE86-003016] N86-25858

ADVANCED STATISTICAL TECHNOLOGIES CORP., LAWRENCEVILLE, N.J.
Asymptotic properties of induced maximum likelihood estimates of nonlinear models for item response variables: The finite-generic-item-pool case
[AD-A163518] N86-26072

ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT, NEUILLY-SUR-SEINE (FRANCE).
Damage Tolerance Concepts for Critical Engine Components
[AGARD-CP-393] N86-25360

AERONAUTICAL RESEARCH LABS., MELBOURNE (AUSTRALIA).
Report on interest expressed in some Australian Defence Establishment products displayed at the 1985 Paris Air Show
[AD-A160807] N86-25341

AEROSTRUCTURES, INC., ARLINGTON, VA.
Dynamic and aeroelastic analyses of turbosystems in NASTRAN N86-25826

AIR FORCE GEOPHYSICS LAB., HANSCOM AFB, MASS.
Model vertical profiles of extreme rainfall rate, liquid water content and drop-size distribution
[AD-A164424] N86-25931
Optical and radiative properties of a desert aerosol model
[AD-A163181] N86-26202
Automated system for resolving the position of solar radio bursts
[AD-A164425] N86-26271
Peak-flux-density spectra of large solar radio bursts and proton emission from flares
[AD-A164458] N86-26272

AIR FORCE HUMAN RESOURCES LAB., BROOKS AFB, TEX.
Theory-based cognitive assessment
[AD-A164083] N86-25991
Computer-based training: Implementation and system
[AD-A164283] N86-26014

AIR FORCE INST. OF TECH., WRIGHT-PATTERSON AFB, OHIO.
Pitch-location effects on dynamic stall
[AD-A164322] N86-25329
Evaluation of a frequency response technique for aircraft system identification
[AD-A164367] N86-25339
Multivariable output control law design for the STOL (Short Takeoff and Landing) F-15 in landing configuration
[AD-A164516] N86-25340
An LQG up-and away flight control design for the STOL F-15 aircraft
[AD-A164108] N86-25384
Minimum impulse orbital evasive maneuvers
[AD-A163996] N86-25390
Modal assignment effects on decentralized control of a large space structure
[AD-A163977] N86-25402
The development of the AFIT Communications Laboratory and experiments for communications students
[AD-A163948] N86-25653
A knowledge based system for the design of mobile subscriber equipment communications networks
[AD-A163994] N86-25658
Prediction of power margins on satellite communications links as a function of local rain rate statistics and desired availability
[AD-A164097] N86-25662
Modeling and simulation of a signal processor implementing the Winograd Fourier transform
[AD-A164048] N86-25700
Dynamic response of fluid transmission lines
[AD-A164354] N86-25743
A laser feedback control design for passive ring laser gyros in a very high finesse cavity
[AD-A164309] N86-25760
The construction and calibration of a LADAR (laser detection and ranging) cross-section measurement range
[AD-A163955] N86-25773
The effects of through the thickness delaminations on curved composite panels
[AD-A164110] N86-25853
Improvement of end boundary conditions for off-axis tension specimen use
[AD-A164321] N86-25855
Study of bipolar nickel-cadmium batteries as pulsed load filters
[AD-A163949] N86-25879
The first cortical implant of a semiconductor multielectrode array. VER (Visual Evoked Responses) and propagation analysis
[AD-A164015] N86-25972
An analysis of potential predictive parameters of motion sickness using a computerized biophysical data acquisition system
[AD-A164099] N86-25981
Design and implementation of high performance content-addressable memories
[AD-A163995] N86-26010
Development and implementation of the X.25 protocol for the Universal Network Interface Device (UNID2.) Volume 1
[AD-A164076] N86-26011
Design of the human-computer interface for a computer aided design tool for the normalization of relations
[AD-A164100] N86-26012
Automated design of real-time, microprocessor-based controllers, volume 1
[AD-A164326] N86-26015
A contextual postprocessing expert system for English sentence reading machines
[AD-A163951] N86-26026
Interactive computer graphics for analysis and design of control systems
[AD-A163952] N86-26027
Effects of random phase shifts and carrier drift on the resolution properties of linear step frequency pulse trains
[AD-A163953] N86-26028
Development and evaluation of math library routines for a 1750A airborne microcomputer
[AD-A164050] N86-26030
A programmer's assistant for a special-purpose dataflow language
[AD-A164122] N86-26032
The design of a standard software development methodology for the Brazilian Aeronautical Ministry
[AD-A164289] N86-26037
Autonomous vehicle mission planning using AI (Artificial Intelligence) techniques
[AD-A163956] N86-26059
Particle beam tracker for an accelerating target
[AD-A163945] N86-26182
Superresolution using incoherent light and the least squares method
[AD-A163964] N86-26195
The apodisation of aberrated coherent multiaperture optical imaging systems A01
[AD-A164123] N86-26197
Implementation of the AFIT/ENG faculty and student database management system
[AD-A164051] N86-26247

AIR FORCE SYSTEMS COMMAND, WRIGHT-PATTERSON AFB, OHIO.
The current situation of the CAAC (Civil Aviation Administration of China)
[AD-A164464] N86-25324
Damage tolerance design concepts for military engines N86-25363
Limit cycle of the planar non-linear motion of a finned projectile
[AD-A164311] N86-25394
Acta Armamentarii (selected articles)
[AD-A164313] N86-25410
The influence of microstructure on the strength and toughness and the fatigue crack propagation in CrWMn steels
[AD-A164312] N86-25459
Calculation of the energetic characteristics of TN in composite solid propellants
[AD-A164310] N86-25504
Flaw detection of pressure vessels by laser-holographic Non-destructive Detection (NDT) Technique
[AD-A164451] N86-25818
Phosphorobacterin and its effectiveness
[AD-A164508] N86-25973
A mirror magnifier
[AD-A163204] N86-26203
Thermal calculation of a thermogenerator at changing temperatures along thermocontact surfaces
[AD-A164320] N86-26235

AIR FORCE WRIGHT AERONAUTICAL LABS., WRIGHT-PATTERSON AFB, OHIO.
Advanced experimental methods for monitoring the behavior of small cracks N86-25374
Advanced quantitative methods for nondestructive evaluation N86-25376

C

CALIFORNIA INST. OF TECH., PASADENA.

Approximation techniques for planar periodic structures
[AD-A164053] N86-25660
Imaging antenna arrays
[AD-A164055] N86-25661
Input-current shaped ac to dc converters
[NASA-CR-176787] N86-25693

CALIFORNIA STATE UNIV., HAYWARD.

New ideas for parallel algorithms on vector- and multi-processors
[DE86-002989] N86-26052

CALIFORNIA UNIV., BERKELEY.

Laser-induced free radical reactions
[PB86-168788] N86-25508
Extensions to polychain: Nonseparability testing and factoring algorithm
[AD-A164242] N86-26034
The group consensus problem
[AD-A164064] N86-26078
Continuation of research on multiparameter stochastic processes
[AD-A163763] N86-26066
The dynamics of vibrationally excited molecules
[AD-A163764] N86-26173

CALIFORNIA UNIV., BERKELEY. LAWRENCE BERKELEY LAB.

Effect of surface applied reactive element oxides on the oxidation of Cr-containing binary alloys
[DE86-002878] N86-25463
Using a computer-aided drafting system to aid in engineering and fabrication
[DE86-004097] N86-25510
Pulsed photothermal deflection spectroscopy in flowing media
[DE86-002879] N86-25788
Scientific information = data + meta-data
N86-26003
Measurement of interaction cross sections and nuclear radii of unstable p-shell nuclei
[DE86-002698] N86-26168
X-Ray Data Booklet. Center for X-Ray Optics
[DE86-005122] N86-26193
Spectrum of the cosmic background radiation: Early and recent measurements from the White Mountain Research Station
[DE86-002888] N86-26275

CALIFORNIA UNIV., IRVINE.

Comparative biochemistry and metabolism. Part 2: Naphthalene lung toxicity
[AD-A163144] N86-25983

CALIFORNIA UNIV., IRVINE, DAYTON, OHIO.

Acute toxicity studies on 2 Air Force hydraulic fluids (MLO 82-233 and MLO 82-585)
[AD-A163174] N86-25984
The experimental determination of safe atmospheric exposure concentrations of JP-10 jet fuel
[AD-A163179] N86-25985

CALIFORNIA UNIV., LOS ANGELES.

Research in solar-terrestrial physics
[AD-A164460] N86-26273
Research in solar-terrestrial physics
[AD-A164504] N86-26274

CALIFORNIA UNIV., SAN DIEGO.
A high-order mixture model for periodic particulate composites
[AD-A164389] N86-25423
A high-order laminated plate theory with improved in-plane responses
[AD-A164396] N86-25425
Learning internal representations by error propagation
[AD-A164453] N86-26060
CALIFORNIA UNIV., SAN DIEGO, LA JOLLA.
A composite plate theory for arbitrary laminate configurations
[AD-A164370] N86-25422
Assessment of research needs for advanced fuel cells
[DE86-002003] N86-25884
CALIFORNIA UNIV., SAN FRANCISCO.
Photoenergy transduction in halobacterium halobium
[NASA-CR-176673] N86-25970
CALIFORNIA UNIV., SANTA BARBARA.
Picosecond photoconductivity in trans-polyacetylene
[AD-A164373] N86-25440
Non-local screening in metal surfaces
[AD-A164340] N86-25460
Discontinuity of the exchange correlation potential from a density functional viewpoint
[AD-A164377] N86-26097
Density functional theory for excited states in a quasi local density approximation
[AD-A164369] N86-26174
CALIFORNIA UNIV., SANTA CRUZ.
Small and mesoscale processes in the marginal ice zone experiment
[AD-A164297] N86-25961
CALSPAN ADVANCED TECHNOLOGY CENTER, BUFFALO, N.Y.
Research on turbine flowfield analysis methods
[AD-A164070] N86-25740
CALSPAN FIELD SERVICES, INC., ARNOLD AFS, TENN.
Estimating water vapor condensation effects for transonic and supersonic flow fields
[AD-A163146] N86-25330
CAMBRIDGE UNIV. (ENGLAND).
Aspects of small crack growth N86-25370
Greenstone belt tectonics: Thermal constraints N86-25902
CARNEGIE-MELLON UNIV., PITTSBURGH, PA.
Autonomous mobile robots
[AD-A164404] N86-25797
CASE WESTERN RESERVE UNIV., CLEVELAND, OHIO.
Fatigue crack layer propagation in silicon-iron
[NASA-CR-175115] N86-25851
CATHOLIC UNIV. OF AMERICA, WASHINGTON, D.C.
Measurement and control of electrostatic charges on solids in a gaseous suspension
[DE86-003037] N86-25717
CENTRAL ELECTRICITY GENERATING BOARD, LONDON (ENGLAND).
Operational reliability of welded T-joints made from CrMoV steels for use in steam lines
[BLL-CE-TRANS-8140-(9022.09)] N86-25792
CHALMERS UNIV. OF TECHNOLOGY, GOETEBORG (SWEDEN).
Long-term study of SiO (v=1, J=2-1) maser emission from evolved stars and Orion A
[PB86-143070] N86-26267
CHICAGO UNIV., ILL.
Current distribution in ESD (Electron Stimulated Desorption) diodes. Cross section corrections
[AD-A163646] N86-25696
DFW (Dallas-Ft. Worth) microburst on August 2, 1985
[NASA-CR-176794] N86-25956
CINCINNATI UNIV., OHIO.
SAX (Small-Angle X-ray scattering) study of micelle formation in mixtures of butadiene homopolymer and styrene-butadiene block copolymer. Part 3: Comparison with theory
[AD-A163149] N86-25486
Structured microcontroller design using PLA firmware
[AD-A164255] N86-26013
CITY UNIV., LONDON (ENGLAND).
A constitutive model for the inelastic multiaxial cyclic response of a nickel base superalloy Rene 80 N86-25472
CITY UNIV. OF NEW YORK, BROOKLYN.
Electrochemical properties of conducting, nitrogen-bearing iodinated polymers
[AD-A164052] N86-25482
COLORADO RESEARCH DEVELOPMENT CORP., FORT COLLINS.
Semiconducting transition metal silicides for electro-optic VSLI interconnects
[AD-A164303] N86-25703
COLORADO STATE UNIV., FORT COLLINS.
Passive solar/gas technology characterization and development
[PB86-168796] N86-25886
General circulation variability, medium to long-range forecasting and energy industry related applications
[DE86-004819] N86-25926
COLORADO UNIV., BOULDER.
The dynamical equilibrium: A mathematical model for the dynamical description of the permanent deformation of an elastic material caused by microfracture or plastic flow N86-25862
A stable and efficient algorithm for nonlinear orthogonal distance regression
[AD-A164346] N86-26040
COLUMBIA GAS SYSTEM SERVICE CORP., COLUMBUS, OHIO.
Double effect absorption heat pump, phase 2 and 2A
[PB86-163722] N86-25887
COLUMBIA UNIV., NEW YORK.
Research investigation directed toward extending the useful range of the electromagnetic spectrum
[AD-A163482] N86-26194
COMMISSARIAT A L'ENERGIE ATOMIQUE, GIF-SUR-YVETTE (FRANCE).
Angular distribution of high energy electrons following radiation
[PB86-141934] N86-26179
COMMITTEE ON COMMERCE, SCIENCE, AND TRANSPORTATION (U. S. SENATE).
Nominations: October
[S-HRG-99-561] N86-26259
William R. Graham, to be Deputy Administrator, NASA N86-26260
COMPUTER HORIZONS, INC., CHERRY HILL, N. J.
Linking science, technology and economics data N86-26006
COMPUTER SOFTWARE MANAGEMENT AND INFORMATION CENTER, ATHENS, GA.
Fourteenth NASTRAN Users' Colloquium
[NASA-CP-2419] N86-25823
Pre- and post-processing for Cosmic/NASTRAN on personal computers and mainframes N86-25828
CONNECTICUT UNIV., STORRS.
Collision resolution algorithms for spread spectrum environments
[AD-A164469] N86-25666
A unified method for delay analysis of random multiple access algorithms
[AD-A164407] N86-26041
COORDINATING RESEARCH COUNCIL, INC., ATLANTA, GA.
The 1984 CRC (Coordinating Research Council) octane number requirement survey
[AD-A164454] N86-25505
COORS PORCELAIN CO., GOLDEN, COLO.
Ceramic tube materials and processing development
[PB86-168762] N86-25492
CORNELL UNIV., ITHACA, N.Y.
Helicopter tail rotor noise analyses
[NASA-CR-176829] N86-26163
Summary of recent research on mechanical behavior of polycrystalline solids
[DE86-004635] N86-26219
CRANFIELD INST. OF TECH., BEDFORD (ENGLAND).
The effect of atmospheric turbulence on the dispersion of unguided missiles
[CAR-8613] N86-25393

D

DARTMOUTH COLL., HANOVER, N.H.
A search for metal lines in the spectra of DA white dwarfs
[NASA-CR-176825] N86-26263
DEERE AND CO., MOLINE, ILL.
Industrial rotary engine development: Application opportunities
[PB86-153673] N86-25808
DEFENCE RESEARCH ESTABLISHMENT, OTTAWA. (ONTARIO).
The modification and application of a two-colour disappearing-filament pyrometer to perform flame temperature measurements
[AD-A164456] N86-25762
DEFENCE RESEARCH ESTABLISHMENT SUFFIELD, RALSTON (ALBERTA).
PLOT: A basic plotting routine for the Tektronix 4054 terminal and 4663 plotter
[AD-A164327] N86-26039
DEPARTMENT OF ENERGY, WASHINGTON, D. C.
Renewable energy research and development outlook, volume 2

Typical Contract Number Index Listing

Listings in this index are arranged alphanumerically by contract number. Under each contract number the NASA accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The NASA accession number denotes the number by which the citation is identified.

Typical Report Number Index Listing

Listings in this index are arranged alphanumerically by report number. The NASA accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

NAS 1.9/4:

WHAT YOU CAN DO FOR *STAR*

All users of this abstract service are urged to forward reports to be considered for announcement in *STAR*. This will aid NASA in its efforts to provide the fullest possible coverage of all scientific and technical publications that might support aeronautics and space research and development. If you have prepared relevant reports (other than those that you will transmit to NASA, DoD, or DOE through the usual contract- or grant-reporting channels), please send them for consideration to the NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Maryland 21240.

Reprints of journal articles, book chapters, and conference papers are also welcome. These will be considered for announcement in *STAR's* companion journal, *International Aerospace Abstracts*.

You may specify a particular source to be included in a report announcement if you wish; otherwise the report will be placed on public sale at the National Technical Information Service. Copyrighted publications will be announced but not distributed or sold.

PURCHASE OF *STAR*

The semimonthly issues are available for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

PUBLISHED BY:

UNITED STATES GOVERNMENT
NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
SCIENTIFIC AND TECHNICAL INFORMATION BRANCH
Scientific and Technical Aerospace Reports, Volume 24, is prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by RMS Associates.

The Administrator of the National Aeronautics and Space Administration has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Agency. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through March 22, 1988.

US ISSN 0036-8741

INTRODUCTION

Scientific and Technical Aerospace Reports (STAR) is a major component of a comprehensive National Aeronautics and Space Administration information system covering aeronautics, space, and supporting disciplines. *STAR* is issued on the 8th and 23rd of each month and announces current publications of the following types:

- NASA, NASA contractor, and NASA grantee reports
- Reports issued by other U.S. Government agencies, domestic and foreign institutions, universities, and private firms
- Translations in report form
- NASA-owned patents and patent applications
- Dissertations and theses

Cumulative index volumes are published annually.

Journal, book, and conference literature, cover-to-cover journal translations, and certain foreign dissertations are announced in a companion journal, *International Aerospace Abstracts (IAA)*, available on subscription from the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

SUBJECT SCOPE

Subject scope of *STAR*, and *IAA* includes all aspects of aeronautics and space research and development, supporting basic and applied research, and applications. Aerospace aspects of earth resources, energy development, conservation, oceanography, environmental protection, urban transportation, and other topics of high national priority are also covered.

OTHER NASA PUBLICATIONS

Other NASA publications and information services are described in the publication, *The NASA Scientific and Technical Information System ... and How to Use It*, available without charge from the NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Maryland 21240.

HOW TO USE *STAR* SUBJECT CATEGORIES

STAR is categorized by 10 major subject divisions divided into 74 specific subject categories and one general category/division. The major subject divisions are listed in the Table of Contents, together with a note for each that defines its scope and provides any cross-references. For example:

AERONAUTICS

Includes aeronautics (general); aerodynamics; air transportation and safety; aircraft communications and navigation; aircraft design, testing and performance; aircraft instrumentation; aircraft propulsion and power; aircraft stability and control; and research and support facilities (air).

For related information see also *Astronautics*.

Each major division is further divided into as many as nine specific categories, which are identified by category numbers.

Abstracts in *STAR* are grouped by specific category, the categories appearing in sequential order. Category breaks in the abstract section are identified by the category number and title, and a scope note. Cross-references to other categories are provided as appropriate. For example:

02 AERODYNAMICS

Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

For related information see also *34 Fluid Mechanics and Heat Transfer*.

CROSS-REFERENCES

Individual *STAR* abstracts are not ordinarily cross-referenced, except for certain conference reports or book translations that have had separate abstracts written for their component papers or chapters. Citations and abstracts of the components follow immediately after those of the parent document. When the subject content of a component differs sufficiently from the general content of the parent, a cross-reference citation also is printed at the end of the category to which it normally would have been assigned if it were independent.

DOCUMENTS ON MICROFICHE

Documents on microfiche(1) are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

AVAILABILITIES

One or more sources from which a document announced in *STAR* is available to the public is given in each citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code following the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, as indicated above, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Adminstration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its' Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this Introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: US Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of $1.50 each, postage free. (See discussion of NASA patents and patent applications below.)

Avail: ESDU. Pricing information on specific data, computer programs, and details on ESDU topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address.

Avail: (US Sales Only). These foreign documents are available to users within the United States from the National Technical Information Service (NTIS). They are available to users outside the United States through the International Nuclear Information Service (INIS) representative in their country, or by applying directly to the issuing organization.

NASA PATENTS AND PATENT APPLICATIONS

Patents and patent applications owned by NASA are announced in *STAR* under appropriate subject categories and are referenced in the *STAR* indexes. In the Report/Accession Number Index, patents are indexed by the NASA Case Number (which appears in lieu of the report number in other indexes), the U.S. Patent Number, the U.S. Patent Application Serial Number, and the U.S. Patent Class. Patent applications for which patents have not yet been issued are indexed by the NASA Case Number and the U.S. Patent Application Serial Number.

NASA *patent application specifications* are sold in paper copy by the National Technical Information Service at price code A02. Microfiche are sold at price code A01. The US-Patent-Appl-SN- number should be used in ordering either paper copy or microfiche from NTIS. Printed copies of *patents* (which are not microfiched) are available for purchase at $1.50 per copy from:

Commissioner of Patents and Trademarks
U.S. Patent and Trademark Office
Washington, D.C. 20231

When ordering patents, the U.S. Patent Number should be used, and payment must be remitted in advance, preferably by money order or check payable to the Commissioner of Patents and Trademarks. Prepaid purchase coupons for ordering are also available from the Patent and Trademark Office. The patents and patent applications announced in *STAR* are owned by NASA and are available for royalty-free licensing. Requests for licensing terms and further information should be addressed to:

Assistant General Counsel for Patent Matters/Code GP
National Aeronautics and Space Administration
Washington, D.C. 20546

ELIGIBILITY AND REGISTRATION FOR NASA INFORMATION PRODUCTS AND SERVICES

A variety of services is available to organizations of the following types that have registered with NASA to receive specific services or products:

1. NASA offices, research centers, contractors, subcontractors, grantees, and consultants;
2. Other U.S. Government agencies and their contractors;
3. Libraries in the United States that have arrangements with NASA to maintain collections of NASA documents for public reference;
4. Other organizations in the United States having a need for NASA documents in work related to aeronautics and space research;
5. Organizations abroad that have established reciprocal document exchange arrangements with NASA.

Only the central service points or central points of document acquisition and control within qualified organizations are eligible to register for NASA products and services. Domestic organizations that may be eligible to receive various classes of NASA publications and services should address their requests for registration or for further information to:

NASA Scientific and Technical Information Facility
ATTN: Registration Activity
P.O. Box 8757
B.W.I. Airport, Maryland 21240

Organizations abroad should direct requests to the same address, but to the attention of: International Exchange Program.

AVAILABILITY OF *STAR* ABSTRACTS ON MICROFICHE

Microfiche of the abstract sections of this issue and other issues of *STAR* are available on annual subscription from NTIS, Attn: Subscriptions, 5285 Port Royal Road, Springfield, Virginia 22161. Annual subscription rates are $70.00 North America; $140.00 foreign. Abstract sections for previous years retroactive to 1964 are available at the current rates. Microfiche for individual *STAR* issue abstract sections are not available.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC: NASA and NASA-sponsored documents and a large number of aerospace publications are available to the public for reference purposes at the library maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN: An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA - Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 50 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 50 regional depositories. A list of the regional GPO libraries, arranged alphabetically by state, appears on the inside back cover. These libraries are *not* sales outlets. A local library can contact a Regional Depository to help locate specific reports, or direct contact may be made by an individual.

VOLUME 24 NUMBER 17 / SEPTEMBER 8, 1986

TABLE OF CONTENTS

AERONAUTICS

Includes aeronautics (general); aerodynamics; air transportation and safety; aircraft communications and navigation; aircraft design, testing and performance; aircraft instrumentation; aircraft propulsion and power; aircraft stability and control; and research and support facilities (air).

For related information see also *Astronautics*.

01 AERONAUTICS (GENERAL) **2683**

02 AERODYNAMICS **2684**

Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

For related information see also *34 Fluid Mechanics and Heat Transfer*

03 AIR TRANSPORTATION AND SAFETY **2686**

Includes passenger and cargo air transport operations; and aircraft accidents.

For related information see also *16 Space Transportation* and *85 Urban Technology and Transportation*.

04 AIRCRAFT COMMUNICATIONS AND NAVIGATION **2688**

Includes digital and voice communication with aircraft; air navigation systems (satellite and ground based); and air traffic control.

For related information see also *17 Spacecraft Communications, Command and Tracking* and *32 Communications*.

05 AIRCRAFT DESIGN, TESTING AND PERFORMANCE **2691**

Includes aircraft simulation technology.

For related information see also *18 Spacecraft Design, Testing and Performance* and *39 Structural Mechanics*.

06 AIRCRAFT INSTRUMENTATION **2692**

Includes cockpit and cabin display devices; and flight instruments.

For related information see also *19 Spacecraft Instrumentation* and *35 Instrumentation and Photography*.

07 AIRCRAFT PROPULSION AND POWER **2693**

Includes prime propulsion systems and systems components, e.g., gas turbine engines and compressors; and on-board auxiliary power plants for aircraft.

For related information see also *20 Spacecraft Propulsion and Power, 28 Propellants and Fuels*, and *44 Energy Production and Conversion*.

08 AIRCRAFT STABILITY AND CONTROL **2693**

Includes aircraft handling qualities; piloting; flight controls; and autopilots.

09 RESEARCH AND SUPPORT FACILITIES (AIR) **2694**

Includes airports, hangars and runways; aircraft repair and overhaul facilities; wind tunnels; shock tube facilities; and engine test blocks.

For related information see also *14 Ground Support Systems and Facilities (Space)*.

ASTRONAUTICS

Includes astronautics (general); astrodynamics; ground support systems and facilities (space); launch vehicles and space vehicles; space transportation; spacecraft communications, command and tracking; spacecraft design, testing and performance; spacecraft instrumentation; and spacecraft propulsion and power.

For related information see also *Aeronautics*

12 ASTRONAUTICS (GENERAL) **2695**

For extraterrestrial exploration see *91 Lunar and Planetary Exploration*.

13 ASTRODYNAMICS **N.A.**

Includes powered and free-flight trajectories; and orbit and launching dynamics.

14 GROUND SUPPORT SYSTEMS AND FACILITIES (SPACE) **N.A.**

Includes launch complexes, research and production facilities; ground support equipment, e.g., mobile transporters; and simulators.

For related information see also *09 Research and Support Facilities (Air)*.

15 LAUNCH VEHICLES AND SPACE VEHICLES **2696**

Includes boosters; manned orbital laboratories; reusable vehicles; and space stations.

16 SPACE TRANSPORTATION **2696**

Includes passenger and cargo space transportation, e.g., shuttle operations; and rescue techniques.

For related information see also *03 Air Transportation and Safety* and *85 Urban Technology and Transportation*.

17 SPACECRAFT COMMUNICATION, COMMAND AND TRACKING **N.A.**

Includes telemetry; space communications networks; astronavigation; and radio blackout.

For related information see also *04 Aircraft Communications and Navigation* and *32 Communications*.

18 SPACECRAFT DESIGN, TESTING AND PERFORMANCE **2697**

Includes spacecraft thermal and environmental control; and attitude control.

For life support systems see *54 Man/System Technology and Life Support*. For related information see also *05 Aircraft Design, Testing and Performance* and *39 Structural Mechanics*.

19 SPACECRAFT INSTRUMENTATION **N.A.**

For related information see also *06 Aircraft Instrumentation* and *35 Instrumentation and Photography*.

20 SPACECRAFT PROPULSION AND POWER **2699**

Includes main propulsion systems and components, e.g., rocket engines; and spacecraft auxiliary power sources.

For related information see also *07 Aircraft Propulsion and Power, 28 Propellants and Fuels*, and *44 Energy Production and Conversion*.

CHEMISTRY AND MATERIALS

Includes chemistry and materials (general); composite materials; inorganic and physical chemistry; metallic materials; nonmetallic materials; and propellants and fuels.

23 CHEMISTRY AND MATERIALS (GENERAL) **2700**
Includes biochemistry and organic chemistry.

24 COMPOSITE MATERIALS **2700**
Includes laminates.

25 INORGANIC AND PHYSICAL CHEMISTRY **2702**
Includes chemical analysis, e.g., chromatography; combustion theory; electrochemistry; and photochemistry.
For related information see also *77 Thermodynamics and Statistical Physics.*

26 METALLIC MATERIALS **2706**
Includes physical, chemical, and mechanical properties of metals, e.g., corrosion; and metallurgy.

27 NONMETALLIC MATERIALS **2709**
Includes physical, chemical, and mechanical properties of plastics, elastomers, lubricants, polymers, textiles, adhesives, and ceramic materials.

28 PROPELLANTS AND FUELS **2713**
Includes rocket propellants, igniters, and oxidizers; storage and handling; and aircraft fuels.
For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power,* and *44 Energy Production and Conversion.*

ENGINEERING

Includes engineering (general); communications; electronics and electrical engineering; fluid mechanics and heat transfer; instrumentation and photography; lasers and masers; mechanical engineering; quality assurance and reliability; and structural mechanics.
For related information see also *Physics.*

31 ENGINEERING (GENERAL) **2717**
Includes vacuum technology; control engineering; display engineering; and cryogenics.

32 COMMUNICATIONS **2718**
Includes land and global communications; communications theory; and optical communications.
For related information see also *04 Aircraft Communications and Navigation* and *17 Spacecraft Communications, Command and Tracking.*

33 ELECTRONICS AND ELECTRICAL ENGINEERING **2724**
Includes test equipment and maintainability; components, e.g., tunnel diodes and transistors; microminiaturization; and integrated circuity.
For related information see also *60 Computer Operations and Hardware* and *76 Solid-State Physics.*

34 FLUID MECHANICS AND HEAT TRANSFER **2727**
Includes boundary layers; hydrodynamics; fluidics; mass transfer; and ablation cooling.
For related information see also *02 Aerodynamics* and *77 Thermodynamics and Statistical Physics.*

35 INSTRUMENTATION AND PHOTOGRAPHY **2735**
Includes remote sensors; measuring instruments and gages; detectors; cameras and photographic supplies; and holography.
For aerial photography see *43 Earth Resources.* For related information see also *06 Aircraft Instrumentation* and *19 Spacecraft Instrumentation.*

36 LASERS AND MASERS **2738**
Includes parametric amplifiers.

37 MECHANICAL ENGINEERING **2740**
Includes auxiliary systems (non-power); machine elements and processes; and mechanical equipment.

38 QUALITY ASSURANCE AND RELIABILITY **2742**
Includes product sampling procedures and techniques; and quality control.

39 STRUCTURAL MECHANICS **2742**
Includes structural element design and weight analysis; fatigue; and thermal stress.
For applications see *05 Aircraft Design, Testing and Performance* and *18 Spacecraft Design, Testing and Performance.*

GEOSCIENCES

Includes geosciences (general); earth resources; energy production and conversion; environment pollution; geophysics; meteorology and climatology; and oceanography.
For related information see also *Space Sciences.*

42 GEOSCIENCES (GENERAL) **N.A.**

43 EARTH RESOURCES **2746**
Includes remote sensing of earth resources by aircraft and spacecraft; photogrammetry; and aerial photography.
For instrumentation see *35 Instrumentation and Photography.*

44 ENERGY PRODUCTION AND CONVERSION **2748**
Includes specific energy conversion systems, e.g., fuel cells and batteries; global sources of energy; fossil fuels; geophysical conversion; hydroelectric power; and wind power.
For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power, 28 Propellants and Fuels,* and *85 Urban Technology and Transportation.*

45 ENVIRONMENT POLLUTION **2754**
Includes air, noise, thermal and water pollution; environment monitoring; and contamination control.

46 GEOPHYSICS 2756
Includes aeronomy; upper and lower atmosphere studies; ionospheric and magnetospheric physics; and geomagnetism.
For space radiation see *93 Space Radiation.*

47 METEOROLOGY AND CLIMATOLOGY 2761
Includes weather forecasting and modification.

48 OCEANOGRAPHY 2765
Includes biological, dynamic and physical oceanography; and marine resources.

LIFE SCIENCES

Includes sciences (general); aerospace medicine; behavioral sciences; man/system technology and life support; and planetary biology.

51 LIFE SCIENCES (GENERAL) 2767
Includes genetics.

52 AEROSPACE MEDICINE 2767
Includes physiological factors; biological effects of radiation; and weightlessness.

53 BEHAVIORAL SCIENCES 2772
Includes psychological factors; individual and group behavior; crew training and evaluation; and psychiatric research.

54 MAN/SYSTEM TECHNOLOGY AND LIFE SUPPORT 2773
Includes human engineering; biotechnology; and space suits and protective clothing.

55 PLANETARY BIOLOGY 2775
Includes exobiology; and extraterrestrial life.

MATHEMATICAL AND COMPUTER SCIENCES

Includes mathematical and computer sciences (general); computer operations and hardware; computer programming and software; computer systems; cybernetics; numerical analysis; statistics and probability; systems analysis; and theoretical mathematics.

59 MATHEMATICAL AND COMPUTER SCIENCES (GENERAL) 2789

60 COMPUTER OPERATIONS AND HARDWARE 2789
Includes computer graphics and data processing.
For components see *33 Electronics and Electrical Engineering.*

61 COMPUTER PROGRAMMING AND SOFTWARE 2791
Includes computer programs, routines, and algorithms.

62 COMPUTER SYSTEMS 2799
Includes computer networks.

63 CYBERNETICS 2799
Includes feedback and control theory.
For related information see also *54 Man/System Technology and Life Support.*

64 NUMERICAL ANALYSIS 2799
Includes iteration, difference equations, and numerical approximation.

65 STATISTICS AND PROBABILITY 2805
Includes data sampling and smoothing; Monte Carlo method; and stochastic processes.

66 SYSTEMS ANALYSIS 2806
Includes mathematical modeling; network analysis; and operations research.

67 THEORETICAL MATHEMATICS 2807
Includes topology and number theory.

PHYSICS

Includes physics (general); acoustics; atomic and molecular physics; nuclear and high-energy physics; optics; plasma physics; solid-state physics; and thermodynamics and statistical physics.
For related information see also *Engineering.*

70 PHYSICS (GENERAL) 2807

CONFINED SWIRLING JET PREDICTIONS USING A MULTIPLE-SCALE TURBULENCE MODEL
C. P. Chen Aug. 1985 22 p refs
(Contract NASw-3458)
(NASA-CR-178484; NAS 1.26:178484) Avail: NTIS
HC A02/MF A01 CSCL 20D

A recently developed multiple scale turbulence model is used for the numerical prediction of isothermal, confined turbulent swirling flows. Because of the streamline curvature and nonequilibrium spectral energy transfer nature of the swirling flow, the utilized multiple scale turbulence model includes a different set of response equations for each of the large scale energetic eddies and the small scale transfer eddies. Predictions are made of a confined coaxial swirling jet in a sudden expansion and comparisons are made with experimental data and with the conventional single scale two equation model. The multiple scale model shows significant improvement of predictions of swirling flows over the single scale k epsilon model. The sensitivity study of the effect of prescribed inlet turbulence levels on the flow fields is also included.

SUMMARY OF RESULTS OF NASA F-15 FLIGHT RESEARCH PROGRAM
Frank W. Burcham, Jr., Gary A. Trippensee, David F. Fisher, and Terrill W. Putnam Apr. 1986 34 p ref Presented at the AIAA 3rd Flight Testing Conference, Las Vegas, Nevada, 2-4 Apr. 1986 (NASA-TM-86811; H-1341; NAS 1.15:86811; AIAA-86-9761) Avail: NTIS HC A03/MF A01 CSCL 01B

NASA conducted a multidisciplinary flight research program on the F-15 airplane. The program began in 1976 when two preproduction airplanes were obtained from the U.S. Air Force. Major projects involved stability and control, handling qualities, propulsion, aerodynamics, propulsion controls, and integrated propulsion-flight controls. Several government agencies and aerospace contractors were involved. In excess of 330 flights were flown, and over 85 papers and reports were published. This document describes the overall program, the projects, and the key results. The F-15 was demonstrated to be an excellent flight research vehicle, producing high-quality results. Author

WHAT USAF AIRCRAFT SHOULD BE THE WILD WEASEL OF THE 1990'S?: AN ASSESSMENT OF THE F-4G, THE F-15WW, AND F-16WW M.S. Thesis
Michael J. Neitzel 7 Jun. 1985 125 p
(AD-A164727) Avail: NTIS HC A06/MF A01 CSCL 01/3

The USAF Wild Weasel mission was born in 1965 during the Vietnam conflict. The purpose of the mission was to counter the serious radar-directed threats that were decimating the US fighter arsenal. While the current F-4G Wild Weasel aircraft has effectively met the threat into the 1980's, its capabilities reflect the aircraft's 1950's design. Meanwhile, the Soviet Union is fielding many technologically advanced radar-directed threats that bring the adequacy of the F-4G into question. This study investigated what characteristics will be required to defeat the threat of the 1990's. Next, the F-4G, F-15WW, and F-16 Wild Weasel proposal were compared against the aircraft characteristics needed (as determined by a poll of experienced officers) to survive the threats in the 1990's. This thesis concludes that the F-15WW possesses the most desirable characteristics to serve as the Wild Weasel aircraft for the 1990's. GRA

THE C-17: AN ATTEMPT AT INCREASED AIRLIFT VERSATILITY M.S. Thesis
John W. Stone 7 Jun. 1985 127 p
(AD-A164822) Avail: NTIS HC A07/MF A01 CSCL 01/3

The Airlift Master Plan was developed as a guide for achieving long-term military airlift objectives. The cornerstone of the plan is the development and acquisition of the C-17. Although the C-17's direct-delivery concept is new, the quest for expanded aircraft versatility has been continually pursued in previous airlift aircraft development programs. Thus the C-17 is not the first aircraft that has attempted to combine the traditionally separate roles of intertheater and intratheater airlift. The most recent attempt at developing an aircraft capable of meeting both strategic and tactical requirements resulted in the C-5A. The C-5A failed to achieve the operational versatility predicted by its proponents and that failure has given rise to serious questions in regard to the C-17's probability of success in realizing its expanded airlift goals. A comparison of the C-5A and C-17 programs revealed the differences in concept formulation, design and acquisition strategy which will allow the C-17 to achieve its operational goals. The study further concludes that the direct-delivery concept is a valid airlift objective and current technology permits the development of an aircraft with the performance capabilities necessary to fulfill that objective. AN ANALYSIS OF S-3 SDLM (STANDARD DEPOT LEVEL MAINTENANCE) CORROSION DOCUMENTATION PROCEDURES M.S. Thesis
Steven L. Hanson and Mark E. Karr Dec. 1985 77 p
(AD-A165588; NPS554-85-011) Avail: NTIS HC A05/MF A01 CSCL 05/1

When senior personnel in Naval aviation are asked the question, How much time and money are we spending on corrosion prevention and correction?, fairly accurate estimates can be obtained for the organizational and intermediate levels of maintenance because they break out these costs in their maintenance data reporting systems. It is virtually impossible to quantify these same costs at the depot level since their current reporting system will not allow for the collection of such information. A second problem, caused by this rather limited reporting system, concerns the inability of the depot level engineering staff to gather sufficient accurate information about the types, extent, and locations of corrosion that occur on aircraft. This report provides a system design and implementation plan for corrosion monitoring for the Naval Air Rework Facility at Alameda, California. A computerized system for corrosion data collection and processing is needed. Research in this area led to the Depot Maintenance Data System (DMDS). GRA

PROCEEDINGS OF THE CONFERENCE ON LOW REYNOLDS NUMBER AIRFOIL AERODYNAMICS
Thomas J. Mueller, ed. Jun. 1985 356 p refs
(NASA Order L-77177-B; Grant N00014-85-G-0123)
(NASA-CR-177308; NAS 1.26:177308; AD-A163609; UNDAS-CP-77B123) Avail: NTIS HC A16/MF A01 CSCL 01B

Current interest in a variety of low Reynolds number applications has focused attention on the design and evaluation of efficient airfoil sections at chord Reynolds numbers from about 100,000 to about 1,000,000. These applications include remotely piloted vehicles (RPVs) at high altitudes, sailplanes, ultra-light man-carrying/man powered aircraft, mini-RPVs at low altitudes and wind turbines/propellers. Although the design and evaluation techniques for airfoil sections above chord Reynolds numbers of 500,000 are reasonably well developed problems related to boundary layer separation and transition have made it difficult to extend these techniques to lower Reynolds numbers. Presently available design and analysis techniques require improved criteria for laminar separation transition, reattachment and turbulent separation. Mathematical models of these complex phenomena require additional very careful experimental studies. GRA

A COMPUTATIONAL TRANSONIC FLUTTER BOUNDARY TRACKING PROCEDURE M.S. Thesis
J. W. Gallman, J. T. Batina, and T. Y. Yang Mar. 1986 13 p refs Presented at 27th Structures, Structural Dynamics and Materials Conference, San Antonio, Tex., 19-21 May 1986; Sponsored by AIAA Previously announced in IAA as A86-0902
(Grant NAG1-372)
(NASA-TM-87708; NAS 1.15:87708) Avail: NTIS HC A02/MF A01 CSCL 01A

An automated flutter boundary tracking procedure for the efficient calculation of transonic flutter boundaries is presented. The procedure uses aeroelastic responses to march along the boundary by taking steps in speed and Mach number, thereby reducing the number of response calculations previously required to determine a transonic flutter boundary. Flutter boundary results are presented for a typical airfoil section oscillating with pitch and plunge degrees of freedom. These transonic flutter boundaries are in good agreement with exact boundaries calculated using the conventional time-marching method. The tracking procedure is extended to include static aeroelastic twist as a simulation of the static deformation of a wing and contains all of the essential features that are required to apply it to practical three-dimensional cases. The procedure is also applied to flutter boundaries as a function of structural parameters. Author

PLUME CHARACTERISTICS OF SINGLE-STREAM AND DUAL-FLOW CONVENTIONAL AND INVERTED-PROFILE NOZZLES AT EQUAL THRUST
Uwe H. vonGlahn and Jack H. Goodykoontz 1986 39 p refs Presented at the 4th Applied Aerodynamics Conference, San Diego, Calif. 9-11 Jun. 1986; sponsored by AIAA
(NASA-TM-87323; E-3060; NAS 1.15:87323; AIAA-86-1809) Avail: NTIS HC A03/MF A01 CSCL 01A

The plume velocity and temperature decay rates of single-stream, conventional dual-flow and inverted-profile dual-flow nozzles are compared at equal values of ideal thrust over a wide range of flow conditions. The comparisons are made in terms of constant velocity and temperature contour maps. The results show that both dual-flow nozzle types have much greater plume velocity and temperature decay rates than those of equivalent thrust single-stream nozzles when the respective secondary flows were at ambient temperature. With hot secondary flows, the inverted-profile dual-flow plumes decayed significantly faster than those of single-stream nozzles; however, the decay rates for the conventional dual-flow streams were about the same as those for the single-stream nozzles. Consequently, with hot secondary flows, the inverted-profile dual-flow plumes decayed much faster than the conventional dual-flow plumes at equal thrust. Author

N86-26286*# National Aeronautics and Space Administration. Langley Research Center, Hampton, Va.
EXPERIMENTAL RESULTS FOR A FLAPPED NATURAL-LAMINAR-FLOW AIRFOIL WITH HIGH LIFT/DRAG RATIO
Robert J. McGhee, Jeffrey K. Viken (Mandex, Inc., Falls Church, Va.), Werner Pfenninger (Engineering Science Consultants, Grafton, Va.), William D. Beasley, and William D. Harvey May 1984 325 p Previously announced in IAA
(NASA-TM-85788; NAS 1.15:85788) Avail: NTIS HC A14/MF A01 CSCL 01A

Experimental results have been obtained for a flapped natural-laminar-flow airfoil, NLF(1)-0414F, in the Langley Low-Turbulence Pressure Tunnel. The tests were conducted over a Mach number range from 0.05 to 0.40 and a chord Reynolds number range from about 3.0 x 10(6) to 22.0 x 10(6). The airfoil was designed for 0.70 chord laminar flow on both surfaces at a lift coefficient of 0.40, a Reynolds number of 10.0 x 10(6), and a Mach number of 0.40. A 0.125 chord simple flap was incorporated in the design to increase the low-drag, lift-coefficient range. Results were also obtained for a 0.20 chord split-flap deflected 60 deg. Author

UNIFORMLY HIGH ORDER ACCURATE ESSENTIALLY NON-OSCILLATORY SCHEMES 3
Ami Harten (California Univ., Los Angeles), Bjorn Engquist, Stanley Osher, and Sukumar R. Chakravarthy (Rockwell International Corp., Thousand Oaks, Calif.) Apr. 1986 98 p refs
(Contracts NAS1-17070; NAS1-18107; Grants NAG1-270; NSF DMS-85-03294; DAAG29-85-K-0190)
(NASA-CR-178101; ICASE-86-22; NAS 1.26:178101) Avail: NTIS HC A05/MF A01 CSCL 01A

In this paper (a third in a series) the construction and the analysis of essentially non-oscillatory shock capturing methods for the approximation of hyperbolic conservation laws are presented. Also presented is a hierarchy of high order accurate schemes which generalizes Godunov's scheme and its second order accurate MUSCL extension to arbitrary order of accuracy. The design involves an essentially non-oscillatory piecewise polynomial reconstruction of the solution from its cell averages, time evolution through an approximate solution of the resulting initial value

problem, and averaging of this approximate solution over each cell. The reconstruction algorithm is derived from a new interpolation technique that when applied to piecewise smooth data gives high-order accuracy whenever the function is smooth but avoids a Gibbs phenomenon at discontinuities. Unlike standard finite difference methods this procedure uses an adaptive stencil of grid points and consequently the resulting schemes are highly nonlinear. Author

ANALYSIS OF TRANSITIONAL SEPARATION BUBBLES ON INFINITE SWEPT WINGS
R. L. Davis and J. E. Carter Washington Jun. 1986 39 p refs
(Contract NAS1-16585)
(NASA-CR-3956; NAS 1.26:3956) Avail: NTIS HC A03/MF A01 CSCL 01A

A previously developed two-dimensional local inviscid-viscous interaction technique for the analysis of airfoil transitional separation bubbles, ALESEP (Airfoil Leading Edge Separation), has been extended for the calculation of transitional separation bubbles over infinite swept wings. As part of this effort, Roberts' empirical correlation, which is interpreted as a separated flow empirical extension of Mack's stability theory for attached flows, has been incorporated into the ALESEP procedure for the prediction of the transition location within the separation bubble. In addition, the viscous procedure used in the ALESEP techniques has been modified to allow for wall suction. A series of two-dimensional calculations is presented as a verification of the prediction capability of the interaction techniques with the Roberts' transition model. Numerical tests have shown that this two-dimensional natural transition correlation may also be applied to transitional separation bubbles over infinite swept wings. Results of the interaction procedure are compared with Horton's detailed experimental data for separated flow over a swept plate which demonstrates the accuracy of the present technique. Wall suction has been applied to a similar interaction calculation to demonstrate its effect on the separation bubble. The principal conclusion of this paper is that the prediction of transitional separation bubbles over two-dimensional or infinite swept geometries is now possible using the present interacting boundary layer approach. TABLES FOR CORRECTING AIRFOIL DATA OBTAINED IN THE LANGLEY 0.3-METER TRANSONIC CRYOGENIC TUNNEL FOR SIDEWALL BOUNDARY-LAYER EFFECTS
Renaldo V. Jenkins and Jerry B. Adcock Jun. 1986 21 p refs
(NASA-TM-87723; NAS 1.15:87723) Avail: NTIS HC A02/MF A01 CSCL 01A

Tables for correcting airfoil data taken in the Langley 0.3-meter Transonic Cryogenic Tunnel for the presence of sidewall boundary layer are presented. The corrected Mach number and the correction factor are minutely altered by a 20 percent change in the boundary layer virtual origin distance. The sidewall boundary layer displacement thicknesses measured for perforated sidewall inserts and without boundary layer removal agree with the values calculated for solid sidewalls. Author

FACTORS AFFECTING THE VERTICAL MOTION OF A ZERO-PRESSURE, POLYETHYLENE, FREE BALLOON Environmental Research Papers, 31 Dec. 1983 - 31 Dec. 1984
James F. Dwyer 31 May 1985 108 p refs
(AD-A164596; AFGL-TR-85-0130; AFGL-ERP-921) Avail: NTIS HC A06/MF A01 CSCL 20/4

This paper discusses existing aerodynamic-thermodynamic models for predicting the vertical motion of free balloon systems. It demonstrates that: (1) the aerodynamic drag coefficient model should be based on Froude number and fractional volume as well as Reynolds number; (2) there has been a widespread error in definition of the instantaneous mass of the balloon film involved in the heat transfer process; (3) the gas bubble cannot be modelled as a sphere; (4) the gas bubble is asymmetrical except when near or at its natural ceiling altitude; and (5) the actual gas bubble shape, and most probably the added mass, is directly related to the type of gore pattern. Finally, a procedure is proposed for the analysis of actual flight data to enable the development of a practical, but also theoretically sound, model of the aerodynamic drag coefficient of a zero-pressure, free balloon- and subsequent refinement of the heat transfer models for direct and reflected solar energy. GRA

THE EFFECTS ON ROTOR NONUNIFORM INFLOW HARMONIC CONTENT OF UNEVEN CIRCUMFERENTIAL DISTRIBUTION OF JET ENGINE INLET GUIDE VANES
Margaret R. Hinsman Jan. 1986 39 p refs
(Contract N00024-85-C-6041)
(AD-A164629) Avail: NTIS HC A03/MF A01 CSCL 20/4

A computative parametric study was conducted to investigate the effects of vane section geometry, vane number, and primarily, uneven circumferential vane spacing on the harmonic content of the wake field produced by a row of jet engine inlet guide vanes (IGV). As parameters were varied, the harmonic content of the resulting wake field was analyzed for its potential effect on unsteady pressures at the rotor. A semi-empirical model is presented which was used to generate the two-dimensional flow field downstream of the IGV plane. Results show that uneven angular spacing of IGV should not be employed for reducing unsteady pressures experienced by the rotor. In fact, manufacturing tolerances, relative to IGV angular location, of evenly spaced vanes should be minimized to minimize unsteady pressures. GRA

VISCID/INVISCID INTERACTION ANALYSIS OF SUBSONIC TURBULENT TRAILING-EDGE FLOWS Final Report, Sep. 1983 - Jul. 1985
Mark Barnett and Joseph M. Verdon Dec. 1985 56 p
(AD-A165207; UTRC/R85-956634-6) Avail: NTIS HC A04/MF A01 CSCL 20/4

Subsonic turbulent flow past thin airfoil trailing edges is studied using a finite Reynolds number viscid/inviscid interaction model. Here, the flow in the outer or inviscid region is governed by the equations of linearized potential flow theory, while that in the inner or viscous region is governed by Prandtl's boundary-layer equations cast in terms of Levy Lees variables. The effects of turbulence are represented using an algebraic turbulence model based on the eddy viscosity concept. The flow in the vicinity of the local strong interaction is determined by iteratively matching the solutions in the inviscid and viscous regions using a quasi-simultaneous coupling procedure. Turbulent mean flow solutions have been obtained for a range of symmetric and asymmetric wedge shaped trailing edge geometries. Results illustrating the effects of airfoil thickness and loading on the detailed mean-flow behavior in the trailing edge/near wake region are presented. GRA

LAMINAR AND TURBULENT BOUNDARY-LAYER CALCULATIONS ON THE LEEWARD SURFACE OF A SLENDER DELTA WING AT INCIDENCE
A. C. deBruin 13 Apr. 1984 20 p Submitted for publication
(NLR-MP-84040-U; B8577053; ESA-86-96969) Avail: NTIS HC A02/MF A01

The boundary layer on the leeward surface of a slender delta wing at incidence was calculated for fully laminar flow and the case with artificial boundary layer tripping at the 50% semispan location. The behavior of the predicted boundary layer properties is qualitatively in good agreement with experimental observations. The rather large difference between the potential flow and experimental pressure distribution causes a discrepancy between the predicted and the experimentally observed location of secondary separation. It is expected that the potential flow pressure

distribution can be improved when the leading-edge and the secondary separation vortex sheet are correctly modeled in the potential flow calculation method. ESA

N86-26294# National Aerospace Lab., Amsterdam (Netherlands). Flight Div.
ANALYSIS OF HIGH REYNOLDS NUMBER WIND TUNNEL TESTS OF THE SEMISPAR
E. Willemsen, C. Leynse, and G. Graaf (Shell Internationale Petroleum Maatschappij B.B., Netherlands) 5 Feb. 1985 14 p Presented at the 17th Offshore Technology Conference, Houston, Tex., 6-9 May 1985
(NLR-MP-85014-U; B8577054; ESA-86-96976) Avail: NTIS HC A02/MF A01

Aerodynamic load measurements were performed on a 1:50 scale model of the semispar offshore platform concept to predict the loads exercised by the current on the full-scale structure. The test program comprised measurements with the model in even-keel and tilted conditions, in which the effects of ballast leg lengths were also investigated. All tests were carried out in uniform flow conditions, with test results corrected for wind-tunnel wall constraints. The effect of surface roughness on the measurements was investigated at various Reynolds numbers. Results obtained by applying drag calculation rules for rough, three-dimensional, circular cylinders and platform design rules concerning shielding are in good agreement with test results. Vertical forces exercise a large influence on overturning moments, in even keel and in tilted model conditions. ESA

A DEMONSTRATION EXPERT SYSTEM FOR IMPLEMENTING EMERGENCY PROCEDURES IN A HIGH-PERFORMANCE FIGHTER AIRCRAFT
Brenda L. Belkin Apr. 1986 14 p refs
(MAE-1749) Avail: NTIS HC A02/MF A01

A demonstration expert system was developed using a knowledge acquisition tool to simulate the operation of an electronic pilot's assistant operating on-board a high-performance fighter aircraft. The task selected for this simulation was the implementation of in-flight emergency procedures for the canopy loss scenario described in the F-16 Flight Manual. Four modes of pilot assistance operation were identified. Two modes require the Electronic Pilot's Assistant to help the pilot with routine flight tasks. The other two modes require the Electronic Pilot's Assistant to autonomously plan and execute procedures to maintain control of the aircraft in the event the pilot is incapacitated or subject to unmanageable workload. Author

LIGHTNING DISCHARGE PROTECTION ROD Patent Application
Charles F. Bryan, Jr., inventor (to NASA) Filed 24 Apr. 1986 14 p Sponsored by NASA
(NASA-Case-LAR-13470-1; NAS 1.71:LAR-13470-1; US-Patent-Appl-SN-855983) Avail: NTIS HC A02/MF A01 CSCL 01C

This invention is a system for protecting an in-air vehicle from damage due to the craft sustaining a lightning strike. It is an extremely simple device consisting of a sacrificial graphite composite rod, approximately the diameter of a pencil with a length of about five inches. The sacrificial rod is constructed with the graphite fibers running axially within the rod in a manner that best provides a path of conduction axially from the trailing edge of an aircraft to the trailing end of the rod. The sacrificial rod is inserted into an attachment hole 32 machined into trailing edges of aircraft flight surfaces, such as vertical fin cap 31, and attached with adhesive in a manner not prohibiting the conduction path between the rod and aircraft. The trailing end of rod may be tapered for aerodynamic and esthetic requirements. This rod is sacrificial but has the capability to sustain several lightning strikes and still provide protection. The novelty of this invention appears to reside in a system for protecting the most vulnerable parts of an in-air vehicle when the craft is hit by lightning with an extremely simple and inexpensive device. The materials are easily procured and the sacrificial rod generally can be constructed from the same composite as the flight or control surface to be protected. The protection extends to several in-air lightning strikes and provides protection to aircraft parts manufactured from all materials including organic composites. NASA

DEVELOPMENT AND EVALUATION OF A PROTOTYPE LIFE PRESERVER
B. J. Rueschoff, E. A. Higgins, M. J. Burr, and D. M. Branson Sep. 1985 66 p
(AD-A163224; FAA-AM-85-11) Avail: NTIS HC A04/MF A01 CSCL 06/7

The purpose of this study was to develop a prototype life preserver that included provisions for: (1) increased thermal protection in the event of accidental immersion in cold water, (2) 35 pounds of buoyancy, (3) a donning time of 15 s for an adult, (4) not weighing more nor requiring more storage space than currently used life preservers, (5) fitting individuals from the 5th percentile of adult females to the 95th percentile of adult males in the U.S. adult population, and (6) self-righting the wearer in 5 s. Evaluations were made to ensure that the prototype life preserver met goals of items 2 through 6. However, the focus of the study was the assessment of thermal response characteristics. To assess the thermal response of subjects wearing the prototype life preserver and a currently used standard personal flotation device a laboratory study with 10 subjects was conducted. Two subjects, one wearing the prototype and the other a standard vest, were immersed during each experiment in 12.8 C (55 F) water in the Civil Aeromedical Institute survival tank for 2 hours. Rectal temperature, heart rate, and EKG were measured continuously. Eight of ten subjects, while wearing the prototype life preserver, showed a decrease in the rate of cooling when compared to the cooling rate when wearing the standard vest. GRA

CRASH-RESISTANT CREWSEAT LIMIT-LOAD OPTIMIZATION THROUGH DYNAMIC TESTING WITH CADAVERS Final Report, May 1979 - Dec. 1985
J. W. Coltman, C. Van Ingen, and F. Selker Jan. 1986 112 p
(Contract DAAK51-79-C-0016; DA Proj. 1L1-62209-AH-76)
(AD-A164828; TR-85422; USAAVSCOM-TR-85-D-11) Avail: NTIS HC A06/MF A01 CSCL 01/2

The threshold of spinal injury for seated humans subjected to +Gz loading was investigated. The +Gz loading was induced by simulating crash conditions typically found in helicopter crashes, and modified by the use of energy-absorbing mechanisms incorporated in the seat structure. Fifteen tests were conducted with unembalmed cadavers as human surrogates at various limit-load settings to attempt to identify the load threshold causing spinal injury. Bone strength analysis was used to normalize the results of the cadaver test program. Performance data and autopsy results for the 15 crash tests are presented. A correlation was derived relating the frequency of spinal injury to the energy absorber limit-load factor for use in design of crashworthy seating systems. Comparison of the incidence of spinal injury between the experimental test data developed through testing with cadavers and field performance of production energy-absorbing seats is discussed. The report also contains a discussion of the biomechanics

of trauma associated with the human spine, including mechanical properties of the spine, typical injury mechanisms for +Gz loading, and theoretical models for predicting injury. GRA

FLAMMABILITY OF AIRCRAFT HYDRAULIC FLUIDS: A BIBLIOGRAPHY
Jan. 1986 46 p refs
(Contract DAAK70-86-C-0011)
(AD-A165463; CRC-546) Avail: NTIS HC A03/MF A01 CSCL 11/8

As part of an overall effort to collect flammability data on aircraft fluids, a critical survey was made of the aircraft hydraulic oil literature, with particular emphasis on flammability testing and flammability characteristics of existing and projected aircraft hydraulic fluids. Commercial aviation and military aviation fluids are treated separately, in view of their divergent development. Flammability test procedures are described. Flammability test results and other inspection tests are given for a variety of current and proposed aircraft hydraulic fluids. GRA

EVALUATION OF CHARGED FOG FOR SMOKE CLEARING SHIPBOARD FIRES Final Report, Jul. 1984 - Jul. 1985
John Kinsey and Frank J. Pendleton 12 Jul. 1985 49 p
(Contract N00014-84-C-2189)
(AD-A165551; MRI-8140-L) Avail: NTIS HC A03/MF A01 CSCL 13/12

Accidental fires occurring on-board Navy surface vessels create massive quantities of dense black smoke. To increase visibility and improve firefighting capabilities, appropriate technology is needed for clearing smoke from corridors and passageways. In response to this need, midwest Research Institute has conducted research to evaluate the use of charged water droplets (fog) for clearing smoke from a test chamber under controlled laboratory conditions. As part of this effort, a new type of charged droplet generator (electrostatic fogger) has been developed which is both novel in its approach and unique in design. The results of the study indicate that smoke can be visually cleared from the test chamber within 15 to 60 sec after application of the charged fog, with similar trends observed for particle number concentration. Also, the electrostatic fogger development in the study is superior in many respects to other devices of a similar capacity and, therefore, represents an advancement in charged fog technology. GRA

SAFETY REPORT GENERAL AVIATION CRASHWORTHINESS PROJECT. PHASE 3: ACCELERATION LOADS AND VELOCITY CHANGES OF SURVIVABLE GENERAL AVIATION ACCIDENTS Report, 1972 - 1981
4 Sep. 1985 187 p
(PB85-917016; NTSB-SR-85-02) Avail: NTIS MF A01; also available on subscription, North American Continent price HC $60.00/year; all others write for quote CSCL 01C

The report is the last in a series of three reports issued by the National Transportation Safety Board as a result of its General Aviation Crashworthiness Program. The purpose of the program is to provide information to support changes in crashworthiness design standards for seating and restraint systems in general aviation airplanes. A Phase One report presents a methodology for documenting impact severity. A Phase Two report presents specific data on survivable accidents which demonstrate that if all occupants wear shoulder harnesses, fatalities are expected to be reduced by 20 percent. Eighty-eight percent of the seriously injured persons in survivable crashes are expected to experience significantly fewer life-threatening injuries. The Phase Three report provides analytical results of actual crashes. The values of acceleration loads and velocity changes that occupants can sustain in survivable, modern aviation airplane accidents are defined. GRA

INTEGRATED RISK/COST PLANNING MODELS FOR THE US AIR TRAFFIC SYSTEM
John M. Mulvey and Stavros A. Zenios Dec. 1985 41 p refs
(Grants NAG1-520; NSF DCR-84-01098)
(NASA-CR-177274; NAS 1.26:177274; EES-85-9) Avail: NTIS HC A03/MF A01 CSCL 17G

A prototype network planning model for the U.S. Air Traffic control system is described. The model encompasses the dual objectives of managing collision risks and transportation costs where traffic flows can be related to these objectives. The underlying structure is a network graph with nonseparable convex costs; the model is solved efficiently by capitalizing on its intrinsic characteristics. Two specialized algorithms for solving the resulting problems are described: (1) truncated Newton, and (2) simplicial decomposition. The feasibility of the approach is demonstrated using data collected from a control center in the Midwest. Computational results with different computer systems are presented, including a vector supercomputer (CRAY-XMP). The risk/cost model has two primary uses: (1) as a strategic planning tool using aggregate flight information, and (2) as an integrated operational system for forecasting congestion and monitoring (controlling) flow throughout the U.S. In the latter case, access to a supercomputer is required due to the model's enormous size.

NAVSTAR GPS (GLOBAL POSITIONING SYSTEM) ACCURACY WHILE SURVEYING ARRAYS OF DEEP OCEAN TRANSPONDERS
Larry A. Anderson Dec. 1985 21 p
(AD-A163364; PMTC-TP-000037) Avail: NTIS HC A02/MF A01 CSCL 17/7

The observed accuracy of the Navstar GPS Global Positioning System when used with acoustic data to geodetically locate arrays of bottom-mounted ocean transponders is presented. Two arrays were to be located, and each was surveyed on several separate occasions. In addition to GPS with dual frequency precise P-code, the arrays were located by using Argo, Syledis, Transit satellites, and by several other tracking methods. Because the array positions have been well determined, the data is now able to reveal the absolute GPS fix error while at sea. For one survey, ground truth information from the Yuma GPS facility, 263 nautical miles (487 km) away, was used to reduce measurement bias.

MATH MODEL STUDY OF A PROPOSED GLIDE SLOPE FOR RUNWAY 13R, DALLAS-FORT WORTH AIRPORT, TEXAS
John Walls Jan. 1986 19 p refs
(AD-A164907; DOT/FAA/CT-TN85/80) Avail: NTIS
HC A02/MF A01 CSCL 01/5

This document describes instrument landing system (ILS) math modeling performed at the request of the Southwest Region. Data are presented showing the computed performance of a proposed glide slope for runway 13R at the Dallas-Fort Worth Airport, Texas. Model path structure and level run plots are provided for capture effect, null reference, and sideband reference systems installed at a location selected by region engineers. Results indicate that all three systems should meet category II path structure, linearity, and symmetry tolerances. The capture effect system provides the smoothest glidepath structure of the three systems modeled. Author (GRA)

A COST-EFFECTIVE NIGHT ATTACK SYSTEM FOR GROUND ATTACK AIRCRAFT
J. F. Fisher and G. R. Sleight *In* AGARD Guidance-Control-Navigation Automation for Night All-Weather Tactical Operations Oct. 1985 8 p (For primary document see N86-26316 17-04)
Avail: NTIS HC A07/MF A01

Current ground attack fighters have a good day visual flight rule (VFR) capability. However, they are generally ineffective at night. GEC Avionics have developed a simple integrated night vision system which allows a pilot to operate effectively at high speed and low level. The system uses a fixed forward-looking FLIR sensor to display imagery to the pilot on a raster head-up display. This allows him to terrain-follow and acquire targets. He then uses a touch-sensitive head down display to designate targets to his weapon system for subsequent attack. The pilot is also equipped with night vision goggles to permit hard maneuvering, and with a digital map to enable him to navigate flexibly. By designing the entire system as an integrated whole, cockpit workload is minimized. A series of flight trials has clearly proved the concept. The US Marine Corps AV-8B and RAF Harrier GR5 will soon be equipped with just such a system. Author

COCKPIT AUTOMATION REQUIREMENTS DERIVED FROM MISSION FUNCTIONS DATA c54
Bernadette Faulkner, R. Seifert, and K. D. Richter *In* AGARD Guidance-Control-Navigation Automation for Night All-Weather Tactical Operations Oct. 1985 7 p refs (For primary document see N86-26316 17-04)
Avail: NTIS HC A07/MF A01

Program activities directed towards the development of a system engineering concept for the design of the man-machine interface are summarized. The problem was approached from an operational and human task point of view. The first phase included the development of: (1) a mission task list for selected mission and weapon systems; (2) a method for rating the relative importance of each of the tasks related (a) to the frequency of occurrence, (b) to mission effectiveness, and (c) to flight safety; (3) criteria and/or categories for automation at the man-machine interface, against which the individual mission tasks could be rated; and (4) a method for rating the mission tasks in relation to the automation categories derived. AUTOMATION AND PILOT INTERACTIONS IN NIGHT OR ALL-WEATHER TACTICAL OPERATIONS c54
W. H. McKinlay *In* AGARD Guidance-Control-Navigation Automation for Night All-Weather Tactical Operations Oct. 1985 10 p (For primary document see N86-26316 17-04)
Avail: NTIS HC A07/MF A01

Some of the areas in which automation could be used to reduce pilot workload when operating at night or in low visibility are examined. It is shown that in navigation the pilot's task extends from the planning stage before take off to the point at which tactical decisions are taken in the air. The role of the mission planning system and the features of a system developed for this purpose are covered. The nature of the man-machine interface including its required features and the impact of the latter on the core avionic system including navigation and the MMI are addressed. Author

SOME QUANTITATIVE METHODOLOGY FOR COCKPIT DESIGN c06
Charles Bates, Jr. and Maris M. Vikmania *In* AGARD Guidance-Control-Navigation Automation for Night All-Weather Tactical Operations Oct. 1985 10 p refs (For primary document see N86-26316 17-04)
Avail: NTIS HC A07/MF A01

The rapidly developing technology in sensor systems, microprocessors, artificial intelligence and communication systems has blurred the traditional lines between avionics subsystems and offers new design options for integrating the aircrew into the weapon system. These developments, together with the stressful flight regimes imposed by advanced threat systems and the night-in-weather environment required for survival in air-to-ground attack/interdiction, require new approaches to crew station design. These new design opportunities are limited only by the design tools and data bases available for their execution. A simplified cockpit design process can be summarized as conceptual design, detailed design, and design verification. With the many tools needed to pursue this process the subset involving man/machine interface must

provide a decision track quantifying and predicting the impact of design decisions on crew performance. To meet the objective of the full utilization of the weapon system crew, each technology option under consideration for incorporation in the cockpit must be judged with consideration of both mission and human performance. The cockpit design process must be embedded in an adequate human performance data base tailored for use by design personnel and must take full advantage of operational experience. The development of a family of cockpit design tools, together with the required data bases, has been one of the objectives of the Air Force Aerospace Medical Research Laboratory research program. From this program a select set of methods will be described and examples provided. Author

SYNTHETIC REAL-TIME RELIEF DISPLAY ALL-WEATHER AIRBORNE MISSIONS **c06**
J. N. Botella *In* AGARD Guidance-Control-Navigation Automation for Night All-Weather Tactical Operations Oct. 1985 4 p (For primary document see N86-26316 17-04)
Avail: NTIS HC A07/MF A01

Within the context of all-weather airborne missions, it is necessary to provide the pilot with information on the external world, even, and particularly when information provided by radar or optronic sensors are failing. The development of altimetric digital data banks prompts investigations to examine the display of synthetic relief in a cockpit. The study of various mass storages shows that a color film has remarkable storage capacities. Altimetric data are stored on a film read by the MERCATOR reader (whose initial function is to read map images). Three-dimensional synthesis algorithms are used and they are provided with the exceptional possibilities enabled by the MERCATOR analysis. The philosophy of this study is to show how a unique product, the map reader MERCATOR, designed to display plane images, is used to perform tridimensional displays of relief. Author

THE WIDE FIELD HELMET MOUNTED DISPLAY **c06**
Joseph LaRussa *In* AGARD Guidance-Control-Navigation Automation for Night All-Weather Tactical Operations Oct. 1985 7 p refs (For primary document see N86-26316 17-04)
Avail: NTIS HC A07/MF A01

The wide field helmet mounted display developed by the Farrand Optical Company, Inc. is described. This display provides the pilot with an instantaneous field of view of 60 deg vertically and 135 deg horizontally. The central field of view consists of an overlap field of 25 deg within which full stereopsis is available. It would appear that a new design which the Farrand Optical Company, Inc. is now in the process of designing for Aerospace Medical Research Laboratory (AMRK) would be applicable for night all weather operations where such data as flight path control, computed weapon projectories, synthetic outside world views, expected and unexpected threats and automatic terrain following paths would be displayed. The parameters that must be considered in designing a wide field helmet mounted display are discussed. Briefly, these parameters are size, weight and balance on the head, brightness of the display and see-through ability of the display. The discussion assumes the use of a one inch, high brightness, high resolution CRT input already developed and operational. Author

APPLICATIONS OF DIGITAL TERRAIN DATA IN FLIGHT OPERATIONS
G. W. Cantrell *In* AGARD Guidance-Control-Navigation Automation for Night All-Weather Tactical Operations Oct. 1985 24 p (For primary document see N86-26316 17-04)
Avail: NTIS HC A07/MF A01

With the availability of a world-wide digital terrain data base becoming a reality, it is now possible to carry and display on a tactical aircraft all of the map information needed for a mission. Along with the map display on a color cathode-ray tube (CRT), current targets and mission-specific data can be shown. The limitations of today's commonly used film readers are eliminated by using a digital data base which contains elevation information; one such data base is the U.S. Defense Mapping Agency's Digital Land Mass System (DLMS). The terrain data can be digitally compressed and efficiently stored so that large area coverages may be achieved. With this information readily available, aircraft mission effectiveness and survivability can be enhanced. The system for accomplishing this task is called a digital map generator (DMG). The DMG architecture encompasses data storage, data access and reconstruction, data display processing, and data formatting for use by other aircraft subsystems. A DMG architecture was developed for application in low-level or nap-of-the-Earth tactical missions, as well as long range strategic missions. Mission capabilities are enhanced by using this DMG to support terrain following/terrain avoidance (TF/TA), autonomous navigation, threat avoidance, and weapons delivery. In addition, the same digital processing approach is usable for pre-flight mission planning. The ability to plan a flight using the actual mission data base gives the pilot the ability to see exactly where he will be at all times and to determine safe corridors for entry and departure, making maximum use of terrain shielding. Similarly, the terrain data may be used for reference during post-mission debriefing, in which the pilot can refer to in-flight annotations made through the DMG subsystem. Author

A NEW TECHNIQUE FOR TERRAIN FOLLOWING/TERRAIN AVOIDANCE GUIDANCE COMMAND GENERATION
Richard V. Denton, J. Edwin Jones, and Peter L. Froeberg *In* AGARD Guidance-Control-Navigation Automation for Night All-Weather Tactical Operations Oct. 1985 11 p refs (For primary document see N86-26316 17-04)
Avail: NTIS HC A07/MF A01

A real-time optimization technique that efficiently generates a robust, optimum terrain following/terrain avoidance (TF/TA) trajectory, and has the structural capability for adding threat avoidance is described. The TF/TA technique presented is based on definition of a performance measure that is systematically optimized in real-time. The approach uses on-board Defense Mapping Agency digital terrain elevation data extensively, as updated by real-time sensor inputs. The optimization of the performance measure embodies the real-time trade-off of flying over (TF) versus flying around terrain features (TA). The performance measure is defined to generally penalize large excursions from the nominal (globally-defined) route, while rewarding a trajectory that achieves better terrain masking than contained in the nominal, mission-planned route. Direct incorporation of limits on the flight control variables (bank angle, roll rate, normal acceleration, etc.) is included within the procedure. The TF/TA technique also addresses additional considerations that apply when combining the TF/TA flight trajectory computation with maneuvers through mission waypoints. This involves several subtleties associated with the relative importance of the turning maneuver desired versus the normally applicable TF/TA performance measure. Finally, the relevance of this work to other advances in

trajectory computation is described. This includes the relationship to global trajectory generation, and to integrated TF/TA with threat avoidance TF/(TA)2. Author

USE OF A CO2 LASER LIDAR FOR FLIGHT AND PENETRATION AT VERY LOW ALTITUDES [UTILISATION D'UN LIDAR A LASER CO2 POUR LE VOL ET LA PENETRATION A TRES BASSE ALTITUDE] c36
Bernard Stephan *In* AGARD Guidance-Control-Navigation Automation for Night All-Weather Tactical Operations Oct. 1985 8 p (For primary document see N86-26316 17-04)
Avail: NTIS HC A07/MF A01

A CO2 laser optical sensor system which allows the acquisition of accurate land distances for a large area is described. These values are obtained in a real-time mode with the use of a UMP 7800 computer, and allow the generation of a map of the terrain to determine geographic coordinates. This map makes it possible to determine the optimal navigation trajectory at very low altitudes, with optimization based on the terrain features. This sensor was tested at Villacoublay in 1984 and is currently under testing at C.E.V. The results of the experiments and the static and dynamic analysis tests are presented. Transl. by T.R.

A MISSION NAVIGATION AND CONTROL SYSTEM FOR MODERN MILITARY HELICOPTERS [UN SYSTEME DE NAVIGATION ET DE GESTION DE LA MISSION POUR LES HELICOPTERS MILITAIRES MODERNES]
J. L. Roch *In* AGARD Guidance-Control-Navigation Automation for Night All-Weather Tactical Operations Oct. 1985 10 p In FRENCH (For primary document see N86-26316 17-04)
Avail: NTIS HC A07/MF A01

The requirements of modern military helicopters have fostered the development of navigation systems which use position sensors as a part of a centralized mission control system. An overview of the requirements for modern operational helicopter systems is given, as well as current automatic navigation systems; this is followed by a report of the NADIR MK2 mission navigation and control system developed by the CROUZET Company. Transl. by T.R.

X-29A TECHNOLOGY DEMONSTRATOR FLIGHT TEST PROGRAM OVERVIEW
Walter J. Sefic and Cleo M. Maxwell May 1986 17 p refs Presented at the ISA Aerospace Industries/Test Measurement Symposium, Seattle, Wash., 5-8 May 1986
(NASA-TM-86809; H-1347; NAS 1.15:86809; ISA-504) Avail: NTIS HC A02/MF A01 CSCL 01C

An overview of the X-29A functional flight program and concept evaluation program is presented, including some of the unique and different preparations for the first flight. Included are a discussion of the many organizational responsibilities and a description of the program management structure for the test team. Also discussed are preflight ground, flight functional envelope expansion, and flight research test objectives and qualitive results to date for both a limited-envelope flight control system and an expanded-envelope system. The aircraft, including the instrumentation system and measurements, is described. In addition, a discussion is included regarding the use of major support facilities, such as ground and flight simulators, the NASA Western Aeronautical Test Range and mission control center, and the Grumman automated telemetry station. An overview of the associated real-time and postflight batch data processing software approaches is presented. The use of hardware-in-the-loop simulation for independent verification and validation and mission planning and practice is discussed. Also included is a description of the flight-readiness review, the airworthiness and flight safety review, work scheduling, technical briefings, and preflight and postflight crew briefings. The configuration control process used on the X-29A program is described, and its relationship to both simulation and aircraft operations is discussed. An X-29A schedule overview is presented with an outline of a proposed follow-on program. Author

THEORETICAL ANALYSIS OF THE ELECTRICAL ASPECTS OF THE BASIC ELECTRO-IMPULSE PROBLEM IN AIRCRAFT DE-ICING APPLICATIONS
Robert A. Henderson and Robert L. Schrag Jun. 1986 108 p refs
(Grant NAG3-284)
(NASA-CR-176808; NAS 1.26:176808; AR-86-2) Avail: NTIS HC A06/MF A01 CSCL 01C

A summary of modeling the electrical system aspects of a coil and metal target configuration resembling a practical electro-impulse deicing (EIDI) installation, and a simple circuit for providing energy to the coil, was presented. The model was developed in sufficient theoretical detail to allow the generation of computer algorithms for the current in the coil, the magnetic induction on both surfaces of the target, the force between the coil and target, and the impulse delivered to the target. These algorithms were applied to a specific prototype EIDI test system for which the current, magnetic fields near the target surfaces, and impulse were previously measured. Author

SIX DEGREE-OF-FREEDOM LIVE ISOLATION SYSTEMS, PART 1 Interim Report
Dennis R. Halwes and Colby O. Nicks Apr. 1986 79 p
(Contract NAS1-16969)
(NASA-CR-177928; NAS 1.26:177928) Avail: NTIS HC A05/MF A01 CSCL 01C

A Total Main Rotor Isolation System (TRIS) was analyzed, designed, fabricated, and bench tested for the reduction of main rotor vibration levels transmitted to the helicopter fuselage. The TRIS consists of a six degree-of-freedom passive system using six Liquid Inertia Vibration Eliminator (LIVE) units developed by Bell Helicopter Textron. The objective of the program is to develop a helicopter isolation system that will achieve 90% (or greater) isolation at minimum weight with no degradation in vehicle stability, handling qualities, alignment tolerance, and reliability or maintainability. CSCL 18/3

A new approach for assessing the survivability of aircraft components in nuclear blast and thermal environments is presented in this dissertation. A nonparametric technique is developed for use in calculating the reliability interference integral. This approach eliminates the need for density function identification and parameter estimation. Furthermore, the method can be used without resorting to large-sample random Monte Carlo simulation or propagation of moments. In addition to this, the derived cumulative distribution function using such a technique exactly interpolates the true distribution function at selected points. The method is applied to the problem of aircraft survivability in nuclear blast environments using failure (strength) distributions found in the literature. It is also applied to the case of aircraft survivability in nuclear thermal environments where direct failure data is not available. Inputs to the engineering models involved are treated statistically and the method is used to rigorously determine the statistical nature of the output variables. GRA

AQUILA REMOTELY PILOTED VEHICLE: RECENT DEVELOPMENTS AND ALTERNATIVES
Jan. 1986 14 p refs
(AD-A164597; GAO/NSIAD-86-41BR) Avail: NTIS HC A02/MF A01 CSCL 01/3

This GAO report is about the Army's Aquila Remotely Piloted Vehicle (RPV), which has had numerous difficulties since it entered full-scale development in 1979. Among these have been technical performance problems and funding cuts, which have led to substantial cost growth and schedule slippage. During the past year, the emergence of critical performance problems during testing led to a major program restructuring and threatened the Aquila's future. Prior to these changes, costs to acquire the Aquila were estimated at about $2 billion. This estimate has not yet been revised to reflect the recent changes. Several RPV systems exist in addition to the Aquila. The Army considered these alternative systems in a study it made in 1984 from the standpoint of their possible availability and potential to perform in the stringent environment envisioned for Aquila's use. GAO found that although the study did not consider several factors which could have led to a more balanced comparison, the Army chose to continue the Aquila development because of its earlier availability. AIRCRAFT PERFORMANCE OPTIMIZATION WITH THRUST VECTOR CONTROL M.S. Thesis
Mark S. Fellows Dec. 1985 132 p
(AD-A165388; AFIT/GAE/AA/85D-6) Avail: NTIS HC A07/MF A01 CSCL 01/2

The objective of this thesis is to determine to what extent a highly-maneuverable aircraft's overall performance capability is enhanced by thrust-vectoring nozzles. The resulting performance capabilities are compared to a baseline configuration with non-thrust-vectoring nozzles to determine the effects and advantages of thrust vectoring. The results indicate that the use of vectored thrust can significantly increase an aircraft's performance capability in turning flight. The greater the demand on the aircraft in a turning combat scenario, the more the aircraft utilizes its thrust-vectoring capability to complete the task. The results also indicate that the use of vectored thrust in other phases of flight -- such as cruise, acceleration and climb -- only slightly increases an aircraft's performance capability. GRA

INVESTIGATION OF BLADE VIBRATION T55-L-11C COMPRESSOR STAGES 1 AND 2
N. S. Swansson 2 Jul. 1986 25 p refs
(AR-004-046; ARL-AERO-Prop-R-168) Avail: NTIS HC A02/MF A01

A vibratory survey of the first and second stage compressor blades on the T55-L-11C engine was conducted following the warning of the manufacturer that the proposed fitting of locally designed intake screens might lead to blade vibration problems. Vibration tests and a simple analysis indicated a possible resonance region. Special statistical methods for small samples were used to fully define tolerance limits for this region and establish confidence levels in the limits. Operators were initially advised to restrict operation in the potential resonance region. Subsequent intake flow tests demonstrated that the screens generated no abnormal excitation, so the restrictions could be discontinued. Author

THE GENERAL ELECTRIC F404 - ENGINE OF THE RAAF'S NEW FIGHTER
Denis Frith Jul. 1985 55 p refs
(AD-A164562; ARL-AERO-PROP-TM-426) Avail: NTIS HC A04/MF A01 CSCL 21/5

The F404 engine in the F/A-18 is representative of a new generation of military turbofan engines. The features of the engine that govern its performance and contribute to its maintainability are discussed. The intention is to give the non-specialist an appreciation of those factors materially affecting the operation of this type of engine. The RAAF F/A-18 Hornets are powered by two General Electric F404-GE-400 augmented turbofan engines. The 3-stage fan, driven by the low-pressure turbine, compresses inlet air that subsequently divides into the bypass and core flows. Variable inlet guide vanes schedule the direction of the flow into the fan as a function of rotational speed. The core flow is further compressed for entry to the annular combustor by the compressor, driven by the high-pressure turbine. Variable inlet guide and two rows of stators adjust the flow direction as a function of corrected compressor speed. After expansion through the turbines, the high temperature gas from the combustion process is mixed with the bypass air to form the high speed jet out of the exhaust nozzle. When operating in afterburning mode, the speed of this jet is increased by additional combustion in the afterburner. GRA

DECOUPLING CONTROL SYNTHESIS FOR AN OBLIQUE-WING AIRCRAFT
Gurbux S. Alag (University of Western Michigan, Kalamazoo), Robert W. Kempel, and Joseph W. Pahle Jun. 1986 12 p refs Presented at the American Control Conference, Seattle, Wash., 18-20 Jun. 1986
(NASA-TM-86801; H-1339; NAS 1.15:86801) Avail: NTIS HC A02/MF A01 CSCL 01C

Interest in oblique-wing aircraft has surfaced periodically since the 1940's. This concept offers some substantial aerodynamic performance advantages but also has significant aerodynamic and inertial cross-coupling between the aircraft longitudinal and lateral-directional axes. This paper presents a technique for synthesizing a decoupling controller while providing the desired stability augmentation. The proposed synthesis procedure uses the concept of a real model-following control system. Feedforward gains are selected on the assumption that perfect model-following conditions are satisfied. The feedback gains are obtained by using eigensystem assignment, and the aircraft is stabilized by using partial state feedback. The effectiveness of the control laws developed in achieving the desired decoupling is illustrated by application to linearized equations of motion of an oblique-wing aircraft for a given flight condition. Author

AEROELASTIC CONTROL OF OBLIQUE-WING AIRCRAFT
John J. Burken, Gurbux S. Alag, and Glenn B. Gilyard (University of Western Michigan, Kalamazoo) Jun. 1986 12 p refs Presented at the American Control Conference, Seattle, Wash., 18-20 Jun. 1986
(NASA-TM-86808; H-1346; NAS 1.15:86808) Avail: NTIS HC A02/MF A01 CSCL 01B

The U.S. Navy and NASA are currently involved in the design and development of an unsymmetric-skew-wing aircraft capable of 65 deg wing sweep and flight at Mach 1.6. A generic skew-wing aircraft model was developed for 45 deg wing skew at a flight condition of Mach 0.70 and 3048 m altitude. At this flight condition the aircraft has a wing flutter mode. An active implementable control law was developed using the linear quadratic Gaussian design technique. A method of modal residualization was used to reduce the order of the controller used for flutter suppression. Author

VALIDATION OF A NEW FLYING QUALITY CRITERION FOR THE LANDING TASK
Donald T. Berry and Shahan K. Sarrafian 1986 10 p Presented at the AIAA Atmospheric Flight Mechanics Conference, Williamsburg, Va., 18-20 Aug. 1986
(NASA-TM-88261; H-1357; NAS 1.15:88261; AIAA-86-2126-CP) Avail: NTIS HC A02/MF A01 CSCL 01C

A strong correlation has been found to exist between flight path angle peak overshoot and pilot ratings for the landing task. The use of flightpath overshoot as a flying quality metric for landing is validated by correlation with four different in-flight simulation programs and a ground simulation study. Configurations tested were primarily medium-weight generic transports. As a result of

good correlation with this extensive data base, criterion boundaries are proposed for landing based on the flight path peak overshoot metric. Author

STUDY ON USING A DIGITAL RIDE QUALITY AUGMENTATION SYSTEM TO TRIM AN ENGINE-OUT IN A CESSNA 402B
Kent E. Donaldson 1986 37 p refs
(Grant NAG1-345)
(NASA-CR-177272; NAS 1.26:177272; KU-FRL-6132-3) Avail: NTIS HC A03/MF A01 CSCL 01C

A linear model of the Cessna 402B was used to determine if the control power available to a Ride Quality Augmentation System was adequate to trim an engine-out. Two simulations were completed: one using a steady state model, and the other using a state matrix model. The amount of rudder available was not sufficient in all cases to completely trim the airplane, but it was enough to give the pilot valuable reaction time. The system would be an added measure of safety for only a relatively small amount of development. Author

FAILURES IN ADVANCED FLIGHT CONTROL SYSTEMS OF FUTURE TRANSPORT AIRCRAFT
M. F. C. vanGool and W. W. Rickard (McDonnell-Douglas Corp., Long Beach, Calif.) 12 Nov. 1984 187 p refs
(Contracts NIVR-1745; RB-RLD-84/83-1.3.1)
(NLR-TR-84108-U; ESA-86-96983) Avail: NTIS HC A09/MF A01

Failure probability and the effects of flight control system failures on handling qualities of a medium-weight transport with reduced stability equipped with a side-stick controlled fly-by-wire flight control system were studied in a flight simulator. A very simple electrical back-up system was used to reduce the pitch divergence when the primary flight control system failed. Results indicate that a large variability in pilot ratings can occur in this kind of investigation. However, analysis of the ratings and the associated commentary provides a ranking of the configurations used from good to bad. The results are compared to the existing criteria for handling qualities. It is shown that the rankings correlate well with closed-loop performance criterion, and Mil-F-8785 C criteria, whereas other criteria are either not applicable (time history criteria), or inappropriate (static stability criterion, bandwidth criterion). ESA

FLIGHT SIMULATOR: COMPARISON OF RESOLUTION THRESHOLDS FOR TWO LIGHT VALVE VIDEO PROJECTORS Final Report, Oct. 1984 - Aug. 1985
Peter M. Crane, Jost P. Gerlicher, and Herbert H. Bell Jan. 1986 15 p refs
(Contracts F33615-78-C-0026; F33615-84-C-0066)
(AD-A164577; AFHRL-TP-85-43) Avail: NTIS HC A02/MF A01 CSCL 14/2

The Air Force Human Resources Laboratory/Operations Training Division is developing a visual system for advanced tactical air combat simulators. As part of this work, two light valve video projectors were evaluated on their ability to display small, high-contrast images. The angular size of the smallest detail which could reliably be identified by an observer was determined for the General Electric PJ5155 and Sodern SVS-14 Video Projectors for stationary and moving targets under a variety of conditions. Several observers evaluated the projectors using variations of the stairstep procedure to determine minimum resolvable target size. For almost all conditions, observers were able to recognize smaller targets on the General Electric system than on the Sodern. With targets moving horizontally, however, minimum resolvable target size for the General Electric projector was significantly larger than for targets moving vertically or diagonally at the same speed. A hypothesis for this effect is discussed. Author (GRA)

BOMB CRATER REPAIR TECHNIQUES FOR PERMANENT AIRFIELDS. REPORT 3. SERIES 4 TESTS
Samuel J. Alford and George M. Hammitt, II Oct. 1985 66 p
(AD-A164682; WES-TR-GL-81-12-3-Rept-3) Avail: NTIS HC A04/MF A01 CSCL 19/4

This study is a continuation of Reports 1 and 2 of this series which described Series 1, 2, and 3 tests, which were performed using different field methods of repairs and restoration of bomb craters. Results from these tests showed problem areas that needed correction when the crater repairs were trafficked with full-scale loading. Series 4 tests were run to determine: (1) a way to place grout with a minimum of equipment and verify thickness requirements, (2) whether a poor-quality material could be stabilized with high early-strength cement and trafficked early, (3) whether the loose stone problem (Foreign Object Damage (FOD)) encountered with the well-graded crushed limestone could be corrected with a cap of neat grout placed over the limestone, and (4) whether an asphalt with an indefinite storage life could be used for the binder in surface treatments and to obtain additional data with surface treatments as a possible solution for the loose stone problem (FOD) encountered with the crushed limestone. Testing was by accelerated traffic using single- and multiple-wheel gear assemblies. Author (GRA)

ANALYZING THE COST EFFECTIVENESS OF USING FLIGHT SIMULATORS IN THE ISRAELI AIR FORCE M.S. Thesis
Uzzi Rozen Dec. 1985 61 p
(AD-A164864) Avail: NTIS HC A04/MF A01 CSCL 05/9

During the last decade flight simulators have been increasingly used in the training of Israeli pilots. The increasing cost of a training flying hour, the shrinking training airspace over Israel since 1979, and the high performance standards required of the Israeli Air Force air crews were the accelerator factors in this process. This thesis describes a way to analyze the cost effectiveness of the present mix of flight simulators and flying hours in the training process of the I.A.F. air crews. The jet fighters, helicopters, and transportation communities are used as examples to demonstrate the implementation of the analysis. These examples give the reader a general picture of the cost effectiveness of using flight simulators in the I.A.F. Author (GRA)

INTERNATIONAL ULTRAVIOLET EXPLORER OBSERVATORY OPERATIONS Final Report, Oct. 1982 - Oct. 1985
Nov. 1985 145 p refs
(Contract NAS5-27295)
(NASA-CR-177873; NAS 1.26:177873; CSC/TR-85/6013) Avail: NTIS HC A07/MF A01 CSCL 22A

This volume contains the final report for the International Ultraviolet Explorer IUE Observatory Operations contract. The fundamental operational objective of the International Ultraviolet Explorer (IUE) program is to translate competitively selected observing programs into IUE observations, to reduce these observations into meaningful scientific data, and then to present these data to the Guest Observer in a form amenable to the pursuit of scientific research. The IUE Observatory is the key to this objective since it is the central control and support facility for all science operations functions within the IUE Project. In carrying out the operation of this facility, a number of complex functions were provided beginning with telescope scheduling and operation, proceeding to data processing, and ending with data distribution and scientific data analysis. In support of these critical-path functions, a number of other significant activities were also provided, including scientific instrument calibration, systems analysis, and software support. Routine activities have been summarized briefly whenever possible. Author

CALIBRATION OF THE ISEE PLASMA COMPOSITION EXPERIMENT
C. R. Baugher, R. C. Olsen (Alabama Univ., Huntsville), and D. L. Reasoner Mar. 1986 60 p refs Sponsored by NASA. Marshall Space Flight Center, Huntsville, Ala. Prepared in cooperation with Alabama Univ., Huntsville
(NASA-TM-86542; NAS 1.15:86542) Avail: NTIS HC A04/MF A01 CSCL 22A

The Plasma Composition experiment on the ISEE-1 satellite was designed to measure ions from 1 to 16 amu, at energies from near zero to 16 keV. The two nearly identical flight instruments were calibrated by means of preflight laboratory tests and in-flight data comparisons. This document presents most of the details of those efforts, with special emphasis on the low energy (0 to 100 eV) portion of the instrument response. The analysis of the instrument includes a ray-tracing calculation, which follows an ensemble of test particles through the detector. Author

BALLISTIC FLIGHT OF A PROJECTILE WITH TWO PRECESSIONAL MODES
T. Morgan 21 Nov. 1985 16 p Presented at the 24th AIAA Aerospace Science Meeting, Reno, Nev., 6-9 Jan. 1986 Original language document was announced in AIAA as A86-19923 Submitted for publication
(Contract W-7405-eng-48)
(DE86-003176; UCRL-93639; CONF-860130-3) Avail: NTIS HC A02/MF A01

Rapidly spinning projectiles with infinite rotational symmetry display a high degree of physical correspondence to a classical gyroscope. As with a gyroscope, such projectiles show two precessional modes, one of which will always be in evidence during a flight. Aeroballistic theory provides, additionally, for two simultaneously excited nutational modes, with sinusoidal frequencies close to, but not exactly coincident with, the precessional angular velocities. The combination of these two orthonormal rotations gives rise to complex pitching and yawing motion, which can be substantially different than the motion predicted by aeroballistic theory alone. Results from a numerical integration of the equations of motion in their most general form illustrate these differences.

MAGNETIC SPIN REDUCTION SYSTEM FOR FREE SPINNING OBJECTS Patent
Georg F. vonTiesenhausen, inventor (to NASA) Issued 15 Apr. 1986 6 p Supersedes N85-11122 Filed 23 Aug. 1984 Sponsored by NASA
(NASA-CASE-MFS-25966-1; US-Patent-4,582,277;
US-Patent-Appl-SN-643522; US-Patent-Class-244-161) Avail: US Patent and Trademark Office CSCL 22B

A spinning Earth satellite is shown in which it is desired to reduce the rotation or spin to a level that the satellite may be secured or handled remotely from a spacecraft. This is accomplished by the spacecraft having a mast carrying an electrical current coil which encircles the satellite. The magnetic field of the coil is normal to the spin axis of the satellite which causes circular eddy current flow in the housing of the satellite. This generates magnetic force opposing the rotation. In another embodiment the magnetic field is generated by the use of an electromagnet on a remote manipulation arm.

The Interactions Measurement Payload for Shuttle (IMPS) project will study interactions between large space vehicles, such as the space shuttle, and the low altitude plasma environment over the polar caps and in the auroral zone. Studies will be conducted from the orbiter bay and from a shuttle-based subsatellite; several investigations; and an environmental monitoring package. This will be the first of a series of missions to begin in 1978. This definition phase report presents the objectives and requirements of the IMPS project and instrument system followed by the mission design they dictate. The bulk of the report is a technical discussion of the investigations and work done on the space and instrument systems, describing both their capabilities and limitations. A description of the steps for reliability/quality assurance is followed by the recommendations of the JPL engineers and scientist involved in this phase of the IMPS project. GRA

MODELLING OF A COLD GAS JET SYSTEM FOR SATELLITE ATTITUDE CONTROL
Ismael EmiliodeOliveiraFilho and Eduardo Augusto Gomes Pereira Apr. 1986 6 p refs Presented at TELECON'85, Rio de Janeiro, Brazil, 10-13 Dec. 1985
(INPE-3853-PRE/917) Avail: NTIS HC A02/MF A01

For the Earth orbiting satellite to accomplish its objectives, it is of main concern that it keep a certain attitude in relation to the planet. Among the existing attitude control actuators, the gas jet is the one with the widest application because of its large range of torque generation capability and because of its independence in relation to other kinds of systems. To be able to use a gas jet system, however, it is fundamental to know its time performance. This work proposes a mathematical modelling for the thrust of a basic gas jet system, including on-off transient times. The model considers two valves in the line: a pressure regulating one and a control one. The latter is modelled in detail and its on and off times are obtained analytically. Expressions for the thrust and mass flow with time are also obtained. Transient times and thrust are calculated numerically and considered coherents with prevision. Author

THEORETICAL STUDY ON THE EFFECT OF THE DESIGN OF SMALL (MILLI-NEWTON) THRUSTER JETS ON MOLECULAR CONTAMINATION FOR THE SPACE STATION Final Report, 15 Nov. 1985 - 30 Jun. 1986
Ben R. Riley 1986 44 p refs
(Grant NAG3-674)
(NASA-CR-177263; NAS 1.26:177263) Avail: NTIS HC A03/MF A01 CSCL 22B

The self-induced molecular contamination around the space station could have adverse effects on space station components (for example solar panels) as well as scientific experiments that might be done on or near the space station. Aerospace engineers need to design a space station (SS) propulsion system that keeps the SS in a stable orbit and at the same time does not allow the propellant gases to interfere with the experiments of the user. One scenario that might accomplish the above requirements is to use an electrothermal propulsion system, resistojet, that will thrust continuously in the hundreds of milli-Newton range which will provide a constant altitude for the SS with a low g environment. As a first attempt to understand the contamination from such a propulsion system, a point source model was developed. The numerical results of the point source model are given. Number column densities for CO_2 are presented as a function of direction of observation (line of sight), temperature of the exit gas, and mean exit velocity. All the results are for a constant exhaust rate of 5,000 kg/year. In addition, a mathematical model to study the effect of nozzle design on the induced molecular environment around the space station produced by simple gas propellants is described. The mathematical model would allow one to follow the expansion of the gas from the throat of a nozzle to the nozzle exit plane and then into the space external to the nozzle. M.G.

RELIABILITY PREDICTION FOR SPACECRAFT Final Report, Mar. 1983 - Jan. 1985
Herbert Hecht and Myron Hecht Dec. 1985 152 p
(Contract F30602-83-C-0018)
(AD-A164747; RADC-TR-85-229) Avail: NTIS HC A08/MF A01

CSCL 22/2

This study provides the basis for improving the utility of Mil-Hdbk-217 for reliability prediction of spacecraft components and systems. The reliability performance histories of 300 satellite vehicles, which were launched between the early 1960's through Jan. '84, were reviewed and analyzed during the course of the study. Analysis of over 2500 reports of malfunctions indicated strong evidence of a decreasing failure rate with time in orbit. The cause for the decreasing hazard was found to be traceable primarily to design and environmental causes. In general, however, it was found that current predictions overestimate the failure rate by at least a factor of two and that the excess of predicted over observed failures increases with time in orbit. Three methods are provided for spacecraft reliability prediction. In order to account for the decreasing hazard, two of the procedures use a Weibull model with parameters based upon similar spacecraft mission types. A third method uses modifications of Mil-Hdbk-217 procedures to account for the overestimation of failure rates which result when current procedures are used. GRA

ANALYSIS OF ORBITAL SATELLITE STORAGE

T. L. Ferguson and T. H. Davey Nov. 1985 70 p refs

(Contract F04701-85-C-0086)

(AD-A164971; TR-0086(6417-03)-1; SD-TR-86-02) Avail: NTIS HC A04/MF A01 CSCL 22/2

This study addresses whether service of sufficient duration can be expected from a satellite that has been stored on orbit for significant periods of time. The question was approached in two ways. First, an extensive review of the research on orbital storage was conducted. While there has not been a great deal of published analysis of the subject, the records of those efforts are consistent in their conclusions that orbital storage does not appear to have any adverse impact on satellites or their redundant components. The second approach was empirical. A data set was collected, consisting of the dormant and post-dormant characteristics of redundant electronic boxes from 155 NASA, DOD and commercial satellites. Three separate investigations examined length of dormancy and subsequent length of activity of redundant units to statistically determine any relationship. GRA

STUDY OF NAVSAT CONTROL SEGMENT CHARACTERISTICS. PART 1: ELEMENTS OF A CONTROL SEGMENT CONCEPT Final Report

L. J. M. Joosten, P. J. dePagter, O. B. M. Pietersen, J. J. Renes, and H. F. A. Roefs Paris, France ESA 18 Sep. 1984 129 p Prepared in cooperation with Technische Hogeschool, Delft 3 Vol.

(Contract ESA-5501/83-F-RD(SC))

(NLR-TR-84086-L-Pt-1; ESA-CR(P)-2145-Vol-1; ESA-86-96871) Avail: NTIS HC A06/MF A01

The division of tasks between Navsat Regional and Mission Center is established and intercenter communication requirements and options are discussed. Equipment for the uplink and downlink stations, particularly the antenna systems, is studied. Time synchronization between the broadcasting moments of satellite navigation signals emitted by the different satellites is addressed. The forward time correction of the uplink signals and the measurement of the interstation time differences are investigated. Measurement of ionospheric delay is addressed by introducing the dual-frequency navigation method. The impact of the dual-frequency method in the space segments, especially the Doppler properties of the navigation signal in terms of frequency stability and control, is assessed. The use of the S-band for communication is treated. ESA

ATTITUDE ESTIMATION AND CONTROL OF MANEUVERING SPACECRAFT

T. Zwartbol, R. F. vandenDam, A. P. Terpstra, and P. Th. L. M. vanWoerkom 22 May 1984 19 p Revised Submitted for publication
(NLR-MP-84036-U; B8578436; ESA-86-96968) Avail: NTIS HC A02/MF A01

Application of sampled data, on board model-following, control, and estimation techniques to attitude control of high performance, maneuvering spacecraft is described. Model-following control comprises three simultaneous modes: target generation and control, disturbance accommodation control, and regulator control. The actuator is a reaction wheel. Estimation is carried out by two separate Kalman filters. One filter processes measurements from a rate-integrating gyro; output is an estimate of a three-dimensional spacecraft state vector. A second filter processes a-periodic measurements from a strapdown star sensor; output is an estimate of a three-dimensional gyro-parameter state vector. Estimation and control algorithms tests in closed-loop software simulations show very satisfactory performance. The algorithms were implemented in a 16 bit digital computer on board IRAS. In-flight estimation and control experiments produce very good results. ESA

MATHEMATICAL MODELS OF FLEXIBLE SPACECRAFT DYNAMICS: A SURVEY OF ORDER REDUCTION APPROACHES Annual Report, 1984
P. Th. L. M. vanWoerkom 21 Jan. 1985 13 p Presented at 10th IFAC Symp. on Automatic Control in Space, Toulouse, France, 25-29 Jun. 1985
(Contracts NIVR-1910)
(NLR-MP-85004-U; B8578426; ESA-86-96974) Avail: NTIS HC A02/MF A01

The usefulness of open loop model order reduction techniques for application of flexible spacecraft dynamics models was assessed. Approaches identified involve parameter optimization; aggregation; singular perturbation; modal dominance; component cost analysis; and internal balancing. The latter three approaches appear to be most meaningful, and convenient in applications. The problem of model order reduction is reviewed, and each of the six approaches is discussed. The latter three approaches are applied to the case of a long, flexible beam in space, controlled with two line torquers. ESA

(Contract NAS3-23773)
(NASA-CR-175084; NAS 1.26:175084; RI/RD86-116) Avail: NTIS HC A11/MF A01 CSCL 21H

Concepts for space maintainability of OTV engines were examined. An engine design was developed which was driven by space maintenance requirements and by a failure mode and effects (FME) analysis. Modularity within the engine was shown to offer cost benefits and improved space maintenance capabilities. Space operable disconnects were conceptualized for both engine change-out and for module replacement. Through FME mitigation the modules were conceptualized to contain the least reliable and most often replaced engine components. A preliminary space maintenance plan was developed around a controls and condition monitoring system using advanced sensors, controls, and condition monitoring concepts. A complete engine layout was prepared satisfying current vehicle requirements and utilizing projected component advanced technologies. A technology plan for developing the required technology was assembled. Author

STEREOSELECTIVE FORMATION OF A 2 PRIME (3 PRIME)-AMINOACYL ESTER OF A NUCLEOTIDE

Arthur L. Weber 1986 17 p refs

(Grant NsG-7627)

(NASA-CR-176830; NAS 1.26:176830) Avail: NTIS HC A02/MF A01 CSCL 07A

Reaction of DL-series and adenosine-5-phosphorimidazolide in the presence of adenosine-5'-(0-methylphosphate) and imidazole resulted in the stereoselective synthesis of the aminoacyl nucleotide ester, 2'(3')-0-seryl-adenosine-5'-(0-methylphosphate). The enantiomeric excess of D-serine incorporated into 2'(3')-0-seryl-adenosine-5'-(0-methylphosphate) was about 9%. Adenylyl-(5-> N)-serine and an unknown product also incorporated an excess of D-serine, however, seryl-serine showed an excess of L-serine. The relationship of these results to the origin of the biological pairing of L-amino acids and nucleotides containing D-ribose is discussed. Author

ON THE SINTERING OF SILICON CARBIDE

E. Gugel Mar. 1986 13 p refs Transl. by the Corporate Word, Inc., Pittsburgh, Pa.

(Contract NASw-4006)

(NASA-TM-88402; NAS 1.15:88402) Avail: NTIS HC A02/MF A01 CSCL 11D

This document deals with the sintering of silicon carbide using pressureless sintering. This technique makes it possible to sinter a primarily covalent material to usable densities up to over 98% thD without having to use a high amount of sinter additives as is the case with other non-oxide ceramic materials. The process takes place rapidly, and it is also possible to produce relatively thick-walled structural parts without major problems. This sheds more light on the true characteristics of silicon carbide in one structural part, since there is no second or nearly no second phase. Heat pressing has improved stability. Author

SILICON CARBIDE WHISKERS FOR COMPOSITES: GROWTH AND PROPERTIES

G. F. Hurley and J. J. Petrovic 1985 8 p Presented at the ASM/ESD Advanced Composites Conference, Dearborn, Mich., 3-4 Dec. 1985

(Contract W-7405-eng-36)

(DE86-000798; LA-UR-85-3453; CONF-851244-1) Avail: NTIS HC A02/MF A01

Silicon carbide (SiC) whiskers have great potential as reinforcements for structural ceramic matrix composites with significantly improved fracture toughness and strength. Such whiskers, synthesized at Los Alamos by a vapor-liquid-solid (VLS) process, are single crystal fibers with diameters in the range of 0.1 to 10 (MU)m and lengths presently as long as 100 mm. They possess superb mechanical properties, with an average strength of 8.4 GPa (1,220,000 psi) and an average elastic module of 580 GPa (84,000,000 psi), as well as excellent elevated temperature stability. Future possibilities include the synthesis of long SiC whiskers for continuous fiber composites, and other types of whisker materials to extend the range of new ceramic composite systems. DOE

COMPUTATIONAL SIMULATION OF PROGRESSIVE FRACTURE IN FIBER COMPOSITES

Christos C. Chamis 1986 12 p refs Presented at the International Conference on Computational Mechanics, Tokyo, Japan, 25-28 May 1986

(NASA-TM-87341; E-3090; NAS 1.15:87341) Avail: NTIS HC A02/MF A01 CSCL 11D

Computational methods for simulating and predicting progressive fracture in fiber composite structures are presented. These methods are integrated into a computer code of modular form. The modules include composite mechanics, finite element analysis, and fracture criteria. The code is used to computationally simulate progressive fracture in composite laminates with and without defects. The simulation tracks the fracture progression in terms of modes initiating fracture, damage growth, and imminent global (catastrophic) laminate fracture. Author

MEASURE OF DISPLACEMENT AROUND HOLES IN COMPOSITE PLATES SUBJECTED TO QUASI-STATIC COMPRESSION

John C. Duke, Jr., Daniel Post, Robert Czarnek, and Anand Asundi Washington Jun. 1986 65 p refs

(Grant NAG1-193)

(NASA-CR-3989; NAS 1.26:3989) Avail: NTIS HC A04/MF A01 CSCL 11D

Contour maps of thickness changes were obtained for three quasi-isotropic graphite-epoxy plates with central holes, loaded in compression. Thickness changes were determined for six load increments from nearly zero to within a few percent of the failure load. The largest change of thickness occurred near the hole but not at the boundary of the hole. Below 90 percent of the failure load, the thickness changes were nearly proportional to load. Irregularities of thickness changes occurred in zones of compressive stresses and they were attributed to localized fiber buckling. A new optical technique was developed to measure thickness changes with high sensitivity. It utilizes a comparatively simple means of holographic interferometry on both sides of the specimen, followed by additive moire to obtain thickness changes as the sum of the out-of-plane displacements. Sensitivity was 12.5 x 10 to the -6 power in. per fringe order. The fringe patterns represent thickness changes uniquely, even when specimen warpage and consequent out-of-plane displacements are very large. Author

THE EFFECT OF LOW VELOCITY IMPACT ON THE STRENGTH CHARACTERISTICS OF COMPOSITE MATERIALS LAMINATES Progress Report
H. Liebowitz 7 Jan. 1986 86 p refs
(Grant NAG1-158)
(NASA-CR-176846; NAS 1.26:176846) Avail: NTIS HC A05/MF A01 CSCL 11D

The nonlinear and dynamic response of composite structures to impact loading conditions was investigated. The convergence of both finite element and finite difference solution procedures was investigated with this configuration. The response of composite beams and plates to impact were examined. Fundamental data on the indentation and flexural response of both plate and beam geometry were collected. Numerical analyses were extended to the study of circular plates subjected to impact loading. Further work was done in modeling the response to simulated impact loading through careful modeling of the momentum transfer from impactor to target. The modeling methodology and solution procedures were well tested and verified. A computer program for the solution of circular plate problems was developed and is under testing. B.G.

ACCELERATED CORROSION TESTING OF GRAPHITE/EPOXY COMPOSITES AND ALUMINUM ALLOY MECHANICALLY-FASTENED JOINTS Final Report, 1 May 1980 - 20 Dec. 1984
S. D. Thompson, Billy L. White, and James A. Snide 20 Jun. 1985 50 p
(AD-A164772; AFWAL-TR-84-3115) Avail: NTIS HC A03/MF A01 CSCL 11/4

This program evaluates the effectiveness of a currently used finishing system to protect graphite/epoxy composites mechanically fastened to aluminum substructures with either titanium or A-286 CRES fasteners. Lap joint samples of laminated graphite/epoxy (+ or - 45/O2/9O)4/+ or - 45/O)s and aluminum alloy plates (2124-T851) were fabricated using either titanium (NAS1154V4) or A-286 CRES (MS 21140) fasteners. The unprotected baseline samples were fabricated by installing the fasteners in the uncoated graphite/epoxy aluminum alloy plates. The protected samples were exposed to humidity and salt fog for twelve weeks, tested in fatigue and exposed to the corrosive environment for twelve more weeks. The extent of corrosion was evaluated by both visual and microscopic examination. The unprotected samples experienced severe galvanic corrosion of the aluminum plate. The accelerated testing of the protected samples indicated the following problems: (1) If the area where the composite butts together in the lap joint was not properly sealed galvanic corrosion could occur in the aluminum. (2) If the composite was not painted on the edge, severe pitting of the primed aluminum alloy plate would occur on the edge of the aluminum plate. (3) The titanium fasteners performed better than the A-286 CR ES fasteners. GRA

THERMAL EXPANSION OF ELASTIC-PLASTIC COMPOSITE MATERIALS
George J. Dvorak Oct. 1985 38 p refs
(Contract N00014-85-K-0247)
(AD-A164910; CECM-1) Avail: NTIS HC A03/MF A01 CSCL 11/4

Exact relationships are derived between instantaneous overall thermal stress or strain vectors and instantaneous overall mechanical stifness or compliance, for two binary composite systems in which one of the phases may deform plastically. Also the local instantaneous thermal strain and stress concentration factors are related in an exact way to the corresponding mechanical concentration factors. The results depend on instantaneous thermoelastic constants and volume fractions of the phases. They are found for fibrous composites with two distinct elastically isotropic or transversely isotropic phases, and for any binary composite with elastically isotropic phases. The results indicate that in the plastic range the thermal and mechanical loading effects are coupled even if the phase properties do not depend on changes in temperature. The derivation is based on a novel decomposition procedure which indicates that spatially uniform elastic strain fields can be created in certain heterogeneous media by superposition of uniform phase eigen-strains with local strains caused by piecewise uniform stress fields which are in equilibrium with prescribed surface tractions. The method is extended to discretized microstructures, and also to analysis of moisture absorption and phase transformation effects on overall response and on local fields in the two composite materials. EVALUATION OF THE EFFECTS OF A PLASTIC BEAD PAINT REMOVAL PROCESS ON PROPERTIES OF AIRCRAFT STRUCTURAL MATERIALS Final Report, Oct. 1984 - Aug. 1985
Sidney Childers, David C. Watson, Patricia Stumpff, and Jon Tirpak Dec. 1985 151 p
(AD-A165289; AD-F630715; AFWAL-TR-85-4138) Avail: NTIS HC A08/MF A01 CSCL 11/4

An abrasive blasting process using plastic beads has been proposed for removing organic coatings from aircraft surfaces and component parts. During the prototype development of the plastic bead blasting process for paint removal many concerns surfaced relative to the potential effects of the process on metal and composite aircraft structural materials. This evaluation of the plastic bead blasting paint removal showed that it removed

protective metal coatings such as aluminum cladding and anodize coatings from aluminum alloys and cadmium plating from steel structure. Surface roughness resulted on clad aluminum alloys. Warpage as a result of surface cold working occurred on unsupported thin skin metal materials. The bond strength of thin skin adhesive bonded structure was not affected. The process is less damaging in fatigue to 7075-T6 aluminum structure blasted at 60 psi nozzle pressure than at 38 psi nozzle pressure. Epoxy/graphite composite structure which was plastic bead blasted showed statistically significant losses in the matrix dominated properties. No significant reductions occurred in the fiber dominated mechanical properties. GRA

(NASA-CR-176826; NAS 1.26:176826) Avail: NTIS
HC A03/MF A01 CSCL 07D

Research for the period from December 1, 1985 to May 31, 1986 is discussed, i.e., the reaction rate constant of HO2+O3 has been measured with a discharge-flow-tube apparatus. The HO2 radical was detected by the OH(A-X) photofragment emission produced from photodissociative excitation of HO2 at 147 nm. In the meantime, the optical emissions produced by the vacuum ultraviolet excitation of chemical species in the flow tube were investigated and used to examine the possibility for their interference with the HO2 detection. The research results are summarized below. Author

INVESTIGATION AND DEVELOPMENT OF ADVANCED SURFACE MICROANALYSIS TECHNIQUES AND METHODS Final Technical Report, 1 Apr. 1983 - 30 Sep. 1985
Robert W. Odom and Charles A. Evans, Jr. 1 Apr. 1983 125 p refs
(Contract MDA903-83-C-0099; ARPA Order 4713)
(AD-A163616) Avail: NTIS HC A06/MF A01 CSCL 07/4

The goals of this research program were two-fold: (1) Improve the sensitivity and quantitative capabilities of existing surface microanalysis techniques operating in the 1 to 150 micrometer lateral dimension regime; and (2) Investigate and evaluate techniques for obtaining trace level analyses of materials down to the 0.1 micrometer lateral dimension. This research program produced several results in the advancement of quantitation and detection limits of the two most widely used microanalytical techniques, scanning Auger microscopy (SAM) and secondary ion mass spectrometry (SIMS). This concept was developed and tested on the characterization of borophosphosilicate glass (BPSG) passivations and intermetal dielectrics. Three approaches were evaluated for the improvement of trace element detection limits. The first was to determine whether the laser enhancement concepts of resonant and nonresonant multiphonon ionization. The second approach to improved trace element detection limits was to thoroughly evaluate the analytical methodologies of specific impurity/matrix combinations relating to a particular technology. The third approach for enhanced trace component analysis was the evaluation of evolving microanalytical techniques which provide these improved quantitation or detection limits. GRA

NUMERICAL SIMULATION OF TURBULENT FLAMES USING VORTEX METHODS Annual Progress Report, 1 Sep. 1984 - 31 Aug. 1985
Ahmed F. Ghoniem 1 Oct. 1985 14 p refs
(Grant AF-AFOSR-0356-84)
(AD-A164080; AFOSR-85-1238TR; APR-1) Avail: NTIS
HC A02/MF A01 CSCL 21/2

Vortex schemes for direct numerical simulation of turbulence are developed to study the propagation and stability of turbulent flames. Attention is focused on the construction of accurate and efficient computational algorithms that are easily extendable to three dimensional reacting flow at high Reynolds numbers. A

Lagrangian vortex scheme, which incorporates stochastic simulation of diffusion, was used to obtain solutions for a recirculating flow and a mixing layer. Results showed good agreement with experimental data at intermediate Reynolds number for the first case, and was used to establish the convergence of the numerical method, the sources of errors and the appropriate scheme to improve the accuracy efficiently. For the mixing layer, the simulation predicted the average velocity and the streamwise fluctuations accurately, but overpredicted the cross-stream fluctuation, indicating that the latter are governed by the three dimensional effects. The response of the layer to harmonic modulations was analyzed revealing the nature of the flow and indicating how entrainment can be enhanced in shear flow. The relationship between the flow instability and the combustion stabilization in both cases indicated the premixed flames have a narrow range of stable existence in terms of the equivalence ratio. THEORETICAL N2-, 02- AND AIR-BROADENED HALFWIDTHS OF OZONE CALCULATED BY QUANTUM FOURIER TRANSFORM THEORY WITH REALISTIC COLLISION DYNAMICS
Robert R. Gamache, Richard W. Davies, and Laurence S. Rothman 31 Dec. 1985 6 p
(AD-A163276; AFGL-TR-85-0340) Avail: NTIS HC A02/MF A01 CSCL 07/4

Collision broadened halfwidths of ozone are evaluated with nitrogen, oxygen, and air as the perturbing gases. It is important to consider more realistic collision dynamics in the calculations. By replacing the classical path trajectories by linear trajectories with constant velocities chosen to give the equations of motion exact to first order in time we develop the interruption function in terms of the actual distance of closest approach determined by the intermolecular potential and the velocity at this point. This improvement to the theory results in halfwidths which are in good agreement with experimental measurements. The temperature dependence of the halfwidth has been determined for 126 transactions for N2-broadening and for 10 transitions for 02-broadening. Comparison with experimental measurements is given. GRA

DF VIBRATIONAL RELAXATION Final Report, 1 Sep. 1982 - 31 Aug. 1985
L. S. Dzelzkalns 31 Aug. 1985 28 p
(Contract N00014-82-K-0675)
(AD-A163421) Avail: NTIS HC A03/MF A01 CSCL 07/4

This report presents experimental results of the vibrational relaxation of DF(2 < or = v < or = 4) and DF(9 < or = v < or = 12). The fast flow infrared chemiluminescence method was used to determine vibrational relaxational rate constants for the processes DF(2 < or = v < or = 4) + Carbon Monoxide, Hydrogen Fluoride, Deuterium Fluoride, Nitrous Oxide, Carbon Tetrafluoride, and Sulfur Hexafluoride and DF(9 < or = v < or = 12) + Nitrogen, CO, HF, DF, Carbon Dioxide, and N2O. These are the first measurements of relaxation rate constants for the high vibrational states of DF. They are combined with low v-level data in order to gain additional insight into fundamental energy transfer questions such as the origin of the unusually strong v-dependences. GRA

MOLECULAR JET STUDY OF SOLVATION OF PYRAZINE BY SMALL HYDROCARBONS
J. Wanna and E. R. Bernstein 19 Mar. 1985 35 p refs
(Contract N00014-79-C-0647)
(AD-A164583) Avail: NTIS HC A03/MF A01 CSCL 07/4

Supersonic molecular jet two-color time of flight mass spectroscopy studies are reported for pyrazine solvated by methane, ethane, and propane. The results parallel those obtained for benzene and toluene solvated by these molecules. The presence of nitrogen atoms and lone pair electrons in the aromatic system has only a small effect on the cluster structure. Lennard-Jones potential calculations are presented along with the experimental data. Cluster shifts and binding energies are reported and correlated with geometries. The nucleation process for cluster formation appears to involve solvent dimers, as was found for the aromatic hydrocarbon systems. GRA

CARS DIAGNOSTICS OF HIGH PRESSURE COMBUSTION. 2. MEASUREMENTS OF NO, H2O AND HIGH PRESSURE FLAMES Final Report, 10 Oct. 1982 - 20 Dec. 1985
J. H. Stufflebeam and J. A. Shirley Dec. 1985 90 p refs
(Contract DAAG29-83-C-0001)
(AD-A164610; UTRC/R85-956328-F; ARO-18920.3-CH) Avail: NTIS HC A05/MF A01 CSCL 21/2

Spectroscopic investigations into the coherent anti-Stokes Raman spectroscopy (CARS) spectra of NO and H2O were conducted and the capability of CARS for diagnostics of high pressure flames examined. CARS is a remote laser diagnostic technique for temperature and species measurements in hostile combustion environments. As such it possesses considerable relevance to the Army in the general areas of ballistics and propulsion. This report describes the results of investigations conducted into the effects of high pressure, specifically the phenomenon of collisional narrowing, on CARS spectra from which temperature and density information derive. Experimental studies of CARS spectra were conducted in NO in a heated, high pressure cell over the range 300K to 800K, 1-33 atm, in H2O from 500K to 1000K, 5-30 atm and in a high pressure, premixed CO/air flame from 1-15 atm. The CARS spectra obtained were used to evaluate the CARS computer code. In addition, a new technique, termed dual broadband CARS, was developed which permits the simultaneous detection of a multiplicity of chemical species. This approach removes the nominal limitation on CARS of interrogating just a single constituent at a time. This technique should prove invaluable in the transient environments of combustion p High pressure combustion diagnostics; Collisional narrowing; Water vapor; Nitric oxide; High pressure premixed flame; and Polarization suppression. GRA

A FUNDAMENTAL MATHEMATICAL THEORY FOR THERMAL EXPLOSIONS IN RIGID SOLIDS AND IN GASES Final Report, 1 Mar. 1982 - 21 Jul. 1985
J. Bebernes and D. R. Kassoy 31 Jan. 1986 31 p refs
(Contract DAAG29-82-K-0069)
(AD-A164692; CUCOMB-2; ARO-18906.23-MA) Avail: NTIS HC A03/MF A01 CSCL 21/2

This research project has emphasized the formulation of rational mathematical models for transient and steady combustion processes. In particular, thermal explosion, shock wave initiation and high speed combustion waves have been examined. In each

case the describing mathematical system is analyzed using both formal and constructive techniques. The former are employed to consider issues of existence and uniqueness, solution bounds and general trajectory properties. Constructive solution development is based on a combination of asymptotic and numerical methods. This hybrid approach to the study of combustion problems has permitted us to develop both a rigorous and quantitative understanding of complex, initial-boundary value problems. GRA

DATA ANALYSIS FOR MULTIDIMENSIONAL LUMINESCENCE Interim Technical Report
Sharon L. Neal, Gabor Patonay, Mark P. Thomas, and Isiah M. Warner 10 Feb. 1986 31 p
(Contract N00014-83-K-0026)
(AD-A164867; EMORY/DC/TR/10) Avail: NTIS HC A03/MF A01 CSCL 07/5

The application of digital analysis and reduction methods to multidimensional luminescence measurements is reviewed. The applicability and performance of linear, frequency domain and optimization methods is discussed. The range of problems being solved by these methods is also reported. Linear methods have been developed to the greatest extent. Frequency domain and optimization techniques are being used more often as the need for digital analysis methods increases. GRA

AIR COMPRESSION HEATING IGNITION OF HIGH EXPLOSIVES IN THE LAUNCH ENVIRONMENT
John Starkenberg, Lewis H. Ervin, and Doenee L. McFadden Feb. 1986 34 p
(AD-A164961; BRL-TR-2709) Avail: NTIS HC A03/MF A01 CSCL 19/1

Compressive heating ignition has been the subject of an extensive analytical and experimental study at the Ballistic Research Laboratory. The experimental investigation was conducted using an apparatus referred to as the activator, originally designed at Picatinny Arsenal as a laboratory-scale artillery setback simulator. Several explosives have now been tested. These are TNT, composition-B (comp-B), composition A3 (comp-A3) type II, R8151 (German formulation for the 120 mm round), LX-14, and EARK-25 (an experimental intermolecular explosive). Pressurization rate and cavity size are the principal parameters governing compressive heating ignition. Although ignition may be inhibited by limiting the peak pressure, this did not appear to occur in the activator. Studies of precompression of both cut and polished and as cast surfaces indicated that the state of the explosive surface grossly affects sensitivity to this ignition mechanism. Sensitivity is greater for surfaces which have been precompressed. Geometries which generate convergent airflow yield ignition with milder stimuli than are required with planar geometries. TNT was found to be more sensitive than comp-B when both were precompressed. Comparison of unprecompressed explosives using bubble tests showed that TNT was less sensitive that comp-B and indicated that precompression more effectively seals TNT surfaces. GRA

OPTICAL ABSORPTION CHARACTERISTICS OF AEROSOLS Final Report, 26 Jan. 1982 - 30 Jun. 1985
E. M. Patterson 11 Sep. 1985 35 p
(Contract F19628-82-K-0021)
(AD-A165216; AFGL-TR-85-0204) Avail: NTIS HC A03/MF A01 CSCL 07/4

The absorption of well documented, highly absorbing submicron aerosols has been measured by means of diffuse reflectance and diffuse transmission techniques. The intent of these measurements was to compare the different techniques and to provide calibration of these absorption measurements in terms of aqueous transmission measurements. These measurements indicate that there is a consistency among the absorption techniques that the differences between absorption in an aqueous and in an air suspension need to be considered in calibrations of absorption techniques, and that the diffuse transmission and diffuse reflectance measurements using the dilution technique appear to yield consistent results. ELECTRODE PROCESSES IN POROUS ELECTRODES Final Technical Report, Sep. 1984 - Nov. 1985
T. Katan, P. J. Carlen, and J. R. Driscoll 26 Nov. 1985 11 p
(Contract N00014-80-C-0403)
(AD-A165410; LMSC-F104470) Avail: NTIS HC A02/MF A01 CSCL 07/4

This is the final technical report for an ONR contract. The scope of the effort for this period was to address novel methods of investigation of silver electrodes in order to better understand the chemical and physical processes which occur during charge and discharge. Three areas of study were covered by this effort. The first was the development of a mass spectrometric procedure to determine the distribution of silver (I) oxide and silver (II) oxide in a silver electrode at any stage of the charge-discharge process. The second was the development of a rapid analytical technique for the determination of silver (III) oxide in a silver electrode. The third was a preliminary study of the application of acoustic analysis to give a more complete understanding of the processes occurring during charge and discharge of silver electrodes. The results of these investigations are detailed in this report. GRA

SPECTROSCOPIC INVESTIGATIONS OF ORGANIC MOLECULES ON GRAPHITE SURFACES Final Report, 1 Jul. 1982 - 31 Dec. 1985
Richard H. Clarke 26 Feb. 1986 5 p
(Contract DAAG29-82-K-0124)
(AD-A165431; ARO-19141.3-CH) Avail: NTIS HC A02/MF A01 CSCL 07/4

The research program conducted over the past three years under ARO sponsorship focused on the spectroscopic investigation of polycyclic aromatic molecules adsorbed onto the surface of graphite. The overall aim of the investigation was to characterize the structural features of the adsorbed complex and to identify the nature of the interactions which stabilize them. Our approach was to examine a series of prototypical aromatic molecules bound to highly oriented pyrolytic graphite by optical, magnetic resonance,

and Raman spectroscopy. Results in several areas of significance were obtained in the course of the research program. In summary, these were: observance of optical and ODMR spectra of photoexcited quinoline and quinoxaline on graphite; observance of resonance Raman scattering from chlorophyll on graphite; observance of ODMR from chlorophyll on graphite; determination of the chlorophyll geometry on the graphite surface; demonstration of the feasibility of Raman-detected ODMR on surfaces. CARBON MONOXIDE INDUCED ORDERING OF ADSORBATES ON THE Rh(111) CRYSTAL SURFACE
C. M. Mate, B. E. Bent, and G. A. Somorjai Sep. 1985 9 p Presented at the 4th Conference on Vibrations at Surfaces, Bowess-on-Windermere, England, 15-19 Sep. 1985 Submitted for publication
(Contract DE-AC03-76SF-00098)
(DE86-004104; LBL-20360; CONF-8509183-2) Avail: NTIS HC A02/MF A01

It is found that the coadsorption of CO with ethylidyne, propylidyne, acetylene, fluorobenzene, benzene, and sodium on the Rh(111) surface induces ordering in the adsorbed overlayer. This phenomenon was studied using high resolution electrol energy loss spectroscopy (HREELS), low energy electron diffraction (LEED), and thermal desorption spectroscopy (TDS). The HREELS indicates that the adsorbates maintain their molecular integrity when coadsorbed with CO though a change in adsorption site sometimes occurs. In all cases, the C-O stretching frequency of coadsorbed CO is substantially reduced from that of CO adsorbed on clean Rh(111) and ranges from 1410 cm(-1) for CO coadsorbed with sodium to 1790 cm(-1) for CO coadsorbed with ethylidyne. PHOTOELECTROCHEMICAL REDUCTION OF CARBON DIOXIDE Annual Report, May 1984 - Apr. 1985
K. Chandrasekaran and J. O. Bockris Jul. 1985 68 p refs
(Contract GRI-5084-260-0982)
(PB86-157864; GRI-85/0176) Avail: NTIS HC A04/MF A01 CSCL 07D

Surface states at semiconductor-electrolyte interfaces were determined under illumination for CdTe, GaP and Si. The faradaic reaction involved was photoelectrochemical reduction of CO2 on CdTe and GaP and H2 evolution on Si. New equivalent circuits are proposed to represent the semiconductor-electrolyte interface under illumination. Surface state density is calculated per unit area at a given bias potential from integral surface state capacitance. Surface states at Si - aqueous H2SO4 interface act as recombination centers for the photogenerated electron hole pair annihilation. Surface states at CdTe-electrolyte interface act as faradaic mediators for CO2 reduction. It is proposed that adsorbed ions and radicals induce surface states. Potential of zero charge was determined for semiconductor electrolyte interfaces using Herbert pendulam and the results are discussed for several interfaces. GRA

IN SITU MONITORING OF ELECTROCHEMICAL REACTIONS BY SURFACE ENHANCED RAMAN SCATTERING Annual Report, 1 Jul. 1984 - 30 Jun. 1985
R. K. Chang and V. E. Henrich Nov. 1985 23 p
(Contract GRI-5083-260-0795)
(PB86-157500; GRI-85/0262) Avail: NTIS HC A02/MF A01 CSCL 07D

Surface enhanced Raman scattering (SERS) was applied in investigating the nature of the water adsorbates and the protonation of Ag-oxides on Ag electrodes immersed in various electrolytes and undergoing oxidation-reduction cycles. The vibrational frequency of the O-D stretching mode of water adsorbates was determined for the two possible orientations (oxygen pointing away from or toward the Ag surface) and the two possible species (deuterium or hydrogen) on the other bond. Chemical reactions on Au colloids and Ag powder were also investigated as a first step toward the eventual usage of SERS for real-time monitoring of adsorbate species on industrial catalysts. To better quantify the SERS on metallic microstructures, e-beam lithography was used to produce microstructure arrays of uniform size, shape, and separation. Significant progress was made in measuring the surface enhanced inelastic scattering in the low frequency (0-250/cm) by incorporating a 12 vapor cell as a prefilter in front of the optical multichannel analyzer. INVESTIGATION OF STRUCTURE-PERMEABILITY RELATIONSHIPS OF SILICONE POLYMER MEMBRANES Annual Interim Report, Oct. 1984 - Sep. 1985
K. Venkataraman, S. A. Stern, and J. E. Mark Oct. 1985 223 p refs Prepared in cooperation with Syracuse Univ., N.Y. and Cincinnati Univ., Ohio
(Contract GRI-5082-260-0666)
(PB86-157179; GRI-85/0246) Avail: NTIS HC A10/MF A01 CSCL 07D

An experimental apparatus was set up to determine the chemical and thermal stability of various silicone membranes to NH3, H2S and COS. Root-mean-square-end-to-end distance measurements were completed for (MePrSiO)x and (MeHxSiO)x. The electronic and conformation properties of Si-O-Si bond were studied using molecular orbitals (MO). Gas permeability and solubility data obtained indicate that the solubility and hence the permeability decreases with decreasing critical temperature of the penetrant except in the case of He and H2. The substitution of bulkier functional groups in the side-chains of a silicone polymer results in a decrease in the gas permeability of the polymer, due mainly to a decrease in the diffusivity of the penetrant in the polymer. The selectivity of the polymer is not affected by the substitution of bulkier functional groups in the side chain. A correlation was obtained for the solubility coefficient in Henry's law limit for different penetrants in a given silicone polymer. GRA

SURFACE FILM EFFECTS ON DROP TUBE UNDERCOOLING STUDIES Final Report
E. C. Ethridge and W. F. Kaukler (Alabama Univ., Huntsville) Apr. 1986 37 p refs
(NASA-TM-86547; NAS 1.15:86547) Avail: NTIS HC A03/MF A01 CSCL 11F

The effects of various gaseous atmospheric constituents on drop-tube solidified samples of elemental metals were examined from a microstructural standpoint. All specimens were prepared from the purest available elements, so effects of impurities should not account for the observed effects. The drop-tube gas has a definite effect on the sample microstructure. Most dramatically, the sample cooling rate is effected. Some samples receive sufficient cooling to solidify in free fall while others do not, splating at the end of the drop tube in the sample catcher. Gases are selectively absorbed into the sample. Upon solidification gas can become less soluble and as a result forms voids within the sample. The general oxidation/reduction characteristics of the gas also affect sample microstructures. In general, under the more favorable experimental conditions including reducing atmospheric conditions and superheatings, examination of sample microstructures indicates that nucleation has been suppressed. This is indicated by underlying uniform dendrite spacings throughout the sample and with a single dendrite orientation through most of the sample. The samples were annealed yielding a few large grains and single or bi-crystal samples were commonly formed. This was especially true of samples that were inadvertently greatly superheated. This is in contrast with results from a previous study in which surface oxides were stable and contained numerous sites of nucleation. The number of nucleation events depends upon the surface state of the specimen as determined by the atmosphere and is consistent with theoretical expectations based upon the thermodynamic stability of surface oxide films. Oxide-free specimens are characterized by shiny surfaces, with no observable features under the scanning electron microscope at 5000X. Author

SLOW STRAIN RATE TESTING OF HIGH STRENGTH LOW-ALLOY STEELS: A TECHNIQUE FOR ASSESSING THE DEGREE OF HYDROGEN EMBRITTLEMENT PRODUCED BY PLATING PROCESSES, PAINT STRIPPERS AND OTHER AIRCRAFT MAINTENANCE CHEMICALS
W. J. Pollock and C. Grey Dec. 1985 42 p
(AR-004-060; ARL-MAT-R-118) Avail: NTIS HC A03/MF A01

A slow strain rate tensile test which can be used to quantify rapidly in a statistically rigorous manner the severity of hydrogen embrittlement produced in high strength 4340 steel by paint strippers and plating processes is demonstrated. The results of multiple slow strain rate tests conducted at a crosshead displacement rate of .0002 mm/s using notched specimens in various paint strippers show that a minimum mean fracture stress and maximum standard deviation can be defined that correlates with the pass/fail criterion in standard notched C-ring tests. The advantages of using a slow strain rate test as a viable alternative to existing standard methods for hydrogen embrittlement testing are discussed. Author

OXIDATION AND EMITTANCE OF SUPERALLOYS IN HEAT SHIELD APPLICATIONS
Karl E. Wiedemann (Analytical Services and Materials, Inc., Hampton, Va.), Ronald K. Clark, and Jalaiah Unnam Jun. 1986 20 p Presented at the TMS-AIME Fall Meeting, Toronto, Ontario, 13-17 Oct. 1985
(NASA-TP-2578; L-16104; NAS 1.60:2578) Avail: NTIS HC A02/MF A01 CSCL 11F

Recently developed superalloys that form alumina coatings have a high potential for heat shield applications for advanced aerospace vehicles at temperatures above 1095C. Both INCOLOY alloy MA 956 (of the Inco Alloys International, Inc.), an iron-base oxide-dispersion-strengthened alloy, and CABOT alloy No. 214 (of the Cabot Corporation), an alumina-forming nickel-chromium alloy, have good oxidation resistance and good elevated temperature strength. The oxidation resistance of both alloys has been attributed to the formation of a thin alumina layer (alpha-Al2O3) at the surface. Emittance and oxidation data were obtained for simulated Space Shuttle reentry conditions using a hypersonic arc-heated wind tunnel. The surface oxides and substrate alloys were characterized using X-ray diffraction and scanning and transmission electron microscopy with an energy-dispersive X-ray analysis unit. The mass loss and emittance characteristics of the two alloys are discussed. Author

ANALYSIS OF THE PHYSICAL ATOMIC FORCES BETWEEN NOBLE GAS ATOMS, ALKALI IONS AND HALOGEN IONS
John W. Wilson, John H. Heinbockel (Old Dominion Univ., Hampton, Va.), and R. A. Outlaw Jun. 1986 37 p
(NASA-TP-2568; L-16093; NAS 1.60:2568) Avail: NTIS HC A03/MF A01 CSCL 07D

The physical forces between atoms and molecules are important in a number of processes of practical importance, including line broadening in radiative processes, gas and crystal properties, adhesion, and thin films. The components of the physical forces between noble gas atoms, alkali ions, and halogen ions are analyzed and a data base for the dispersion forces is developed from the literature based on evaluations with the harmonic oscillator dispersion model for higher order coefficients. The Zener model of the repulsive core is used in the context of the recent asymptotic wave functions of Handler and Smith; and an effective ionization potential within the Handler and Smith wave functions is defined to analyze the two body potential data of Waldman and Gordon, the alkali-halide molecular data, and the noble gas crystal and salt crystal data. A satisfactory global fit to this molecular and crystal data is then reproduced by the model to within several percent. Surface potentials are evaluated for noble gas atoms on noble gas and salt crystal surfaces with surface tension neglected. Within this context, the noble gas surface potentials on noble gas and salt crystals are considered to be accurate to within several percent. Author

HYDROGEN EMBRITTLEMENT OF NICKEL: MODELING OF THE EFFECT OF DIFFUSIVE SEGREGATION OF HYDROGEN ON INTERGRANULAR FRACTURE
D. H. Lassila and H. K. Birnbaum Jan. 1986 15 p
(Contract N00014-83-C-0468)
(AD-A163415) Avail: NTIS HC A02/MF A01 CSCL 11/6

Grain boundary fracture of hydrogen-charged nickel was studied under test conditions where hydrogen is essentially immobile. Prior to testing, hydrogen was allowed to diffuse during aging treatments. Experimental results show that the transition in the fracture mode from ductile rupture to intergranular is strongly dependent on aging temperature and time as well as initial bulk hydrogen concentration. Analytical modeling of these dependencies using established thermodynamic and kinetic relationships indicates that grain boundary hydrogen concentration controls the fracture mode of hydrogen-charged nickel at low temperatures. THE INHIBITION OF VAPOR-PHASE CORROSION. A REVIEW Interim Report, 1 Jul. - 30 Sep. 1985
George E. Fodor Oct. 1985 64 p
(Contract DAAK70-85-C-0007)
(AD-A163430; BFLRF-209) Avail: NTIS HC A04/MF A01 CSCL 11/6

This report documents a limited literature review on vapor phase corrosion and its inhibition. The direct cost of atmospheric corrosion of metals and alloys in the United States alone has been estimated to be between $5 billion to over $20 billion annually. This atmospheric corrosion, known by some researchers as vapor phase corrosion (VPC), is due to the individual and combined action of oxygen, moisture, and atmospheric pollutants. Additional contributors to VPC are rain, snow, dust, soot, ash, wind, and radiation (light, heat, etc.). The rate of VPC may be accelerated by both acids and bases, depending upon the metal. Rosenfeld showed that the mechanism of this attack is electrochemical, in which the electrolyte is composed of a thin film of humidity on the surface of the metal. Detrimental effects caused by photochemical reactions of sulfur dioxide and nitrogen oxides have been demonstrated. Classical methods of protecting equipment from atmospheric attack include: (1) using coating materials or paints, and (2) alloying the metal to increase its resistance to corrosion. An effective and relatively inexpensive method of controlling VPC in closed environments is through the use of vapor phase corrosion inhibitors (VCI). These materials, while having an appropriate vapor pressure, possess high passivating properties, strong tendencies toward surface adorption, and the ability to form a comparatively strong and stable bond with the metal surface. The room temperature threshold fatigue behavior of P/M HIP'd L.C. Astroloy has been examined. Material with grain sizes ranging from 5 micrometers to 50 micrometers has been tested to investigate the influence of grain size on the threshold response. In disc compact tension specimens grain size is observed to have little influence on the threshold values; in contrast tests conducted in four point bend specimens exhibit lower threshold values and display a dependence on grain size with larger grain sizes giving higher threshold values. Consideration has also been given to the growth of short cracks under cyclic loading at low stress intensities. The data reveal that under these conditions short cracks propagate at a consistently faster rate than long cracks subject to the same nominal stress intensity. Analytical work has been conducted which suggests that this behavior may be rationalized in terms of a more appropriate driving force for crack extension. Detailed microstructural information has been collected which identifies the major second phase particles present in the alloy. The effect of simple heat treatments on the distribution of these particles has been observed to be negligible. GRA

EFFECT OF CHROMIUM ADDITION TO THE LOW TEMPERATURE HOT CORROSION RESISTANCE OF PLATINUM MODIFIED ALUMINIDE COATINGS M.S. Thesis
Mark W. Dust Dec. 1985 77 p
(AD-A164755) Avail: NTIS HC A05/MF A01 CSCL 11/6

Marine gas turbines face many adverse conditions such as reduced fuel quality and a salt environment which present the sulfur, chloride, and sulfates required to initiate and propagate hot corrosion. A particularly severe type of hot corrosion is low temperature hot corrosion (LTHC) encountered at the low temperatures (600 to 750 C) used for low power destroyer operations. Platinum-aluminides have demonstrated great success as protective coatings which delay the onset of high temperature hot corrosion attack (800 to 1000 C). Chromium is known to provide good LTHC resistance. The effect of chromium addition to platinum aluminide coatings was investigated using two different nickel base superalloys, IN-738 (16% Cr) and IN-100 (10% Cr). GRA

CSCL 11/6

The relationship between susceptibility to stress-corrosion cracking (SCC) and grain boundary (GB) chemistry was investigated in an attempt to elucidate the SCC mechanism in aluminum-zinc-magnesium alloys. Research was performed in two phases: (1) develop a method for inducing intergranular fracture on the actual grain boundary to enable measurement of GB composite by Auger electron spectroscopy (AES), and (2) attempt to relate changes in GB composition to changes in SCC susceptibility. The three methods of inducing intergranular fracture were evaluated: (1) fracture at near-liquid nitrogen temperatures, (2) fracture after pre-exposure to liquid gallium, and (3) fracture after pre-exposure to water vapor-saturated air (WVSA). Fracture after pre-exposure to WVSA (i.e., hydrogen pre-exposure embrittlement: H-PEE) is brittle intergranular and no reaction occurred with the fracture surface, thereby allowing composition to be measured by AES. The H-PEE fracture technique was then used to measure GB compositions for an alloy whose SCC susceptibility was varied by changing either solution heat-treatment temperature (SHT) or aging time. GRA

A low-swelling Ti-modified austenitic stainless steel has been bombarded with pulsed 4 MeV Ni(++) and in some cases simultaneously with 0.2 to 0.4 MeV He(+) ion beams at 948K over a dose range from 1 to 70 dpa. The interruption periods studied were 60, 1, 10(-3), or 10(-5) s on time with equal off time. At 1 dpa, pulsed irradiation caused interstitial dislocation loops (and subsequent MC precipitates) to be more refined with decreasing pulse periods down to the realm of the vacancy lifetime (10(-1) to 10(-3) s); still faster pulsing at 10(-5) s yielded little difference from steady irradiation. At higher doses, 40 to 70 dpa, pulsing reduced the amount of radiation-induced G phase. Long pulse periods promoted the thermally-stable MC phase, while shorter periods like 10(-3) s aided M6C and M23C6 development. In helium-implanted material bubbles were present for all pulsing conditions but bias-driven voids only developed in continuously-irradiated specimens. The results are interpreted with regard to the inherent fluctuations in point defect concentrations that result from cascade formation. DOE

EFFECTS OF QUENCHED-IN HYDROGEN ON DEFORMATION OF IRON SINGLE CRYSTALS
K. Hsashimoto and M. Meshii 1985 4 p Presented at the 7th International Conference on the Strength of Metals and Alloys, Montreal, Quebec, 12 Aug. 1985
(Contract DE-AC02-76ER-01367)
(DE86-001883; DOE/ER-01367/158; CONF-850823; COO-1367-158) Avail: NTIS HC A02/MF A01

Effects of hydrogen on mechanical properties were investigated in iron single crystals quenched from temperatures between 833 and 1133 K in a hydrogen atmosphere. The specimens were tensile-tested in a temperature range from 77 to 200 K. The specimens quenched from 1133 K deformed almost exclusively by twinning and fractured at 77 K, the reference specimens cooled slowly from 1133 K deformed plastically without twinning and failed in a ductile manner. The twinning stress was lower that the yield stress of the reference specimens. Aging at room temperature completely eliminated the effect of hydrogen-quenching, indicating that hydrogen dissolved in iron is responsible for twinning. The specimens oriented to the [110] tensile direction deformed substantially even if they were quenched from 1133 K in a hydrogen atmosphere. The flow stress of the hydrogen-quenched specimens was lower than that of the reference specimens in the temperature range from 77 to 200 K. This softening effect was smallest at 200 K. DOE

ROLE OF HYDROGEN, SULFUR AND OTHER IMPURITIES IN INTERGRANULAR FRACTURE IN IRON
K. S. Shin and M. Meshii 1985 4 p Presented at the 7th International Conference on the Strength of Metals and Alloys, Montreal, Quebec, 12 Aug. 1985
(Contract DE-AC02-76ER-01367)
(DE86-001884; DOE/ER-01367/157; CONF-850823; COO-1367-157) Avail: NTIS HC A02/MF A01

The intergranular fracture stress was investigated as a function of grain boundary concentrations of sulfur and/or H in polycrystalline MRC-VP iron specimens. The fracture energy was determined as a function of grain boundary sulfur concentration by analyzing the empirical relations with a modified Griffith equation. Two different effects of H, permanent and reversible, were identified. The permanent effect of H was caused by the formation of intergranular microcracks due to the precipitation of supersaturated H and recovered only partially after annealing at high temperatures. The size of microcracks was found to be proportional to the square of H concentration at grain boundaries. The predicted sizes of the microcracks agreed well with those determined metallographically. The present study clearly indicates that there is no synergistic effect between H and sulfur on intergranular fracture of iron regardless of whether the H effect is reversible or permanent. It was found that the primary effect of C is to displace sulfur from grain boundaries and thus to improve the grain boundary strength by reducing the embrittling effect of sulfur. The second effect of C is to increase the frictional stress to dislocation motion and thus to increase the apparent stress for intergranular fracture. DOE

COMPARISON OF HIGH TEMPERATURE STEAM OXIDATION BEHAVIOR OF ZIRCALOY-4 VERSUS AUSTENITIC AND FERRITIC STEELS UNDER LIGHT WATER REACTOR SAFETY

ASPECTS
S. Leistikow, G. Schanz, and Z. Zurek (Technical Univ. of Cracow, Poland) Dec. 1985 38 p Presented at Polish-German Seminar on Properties of High Temperature Alloys, Kracow, Poland, 3-6 Jul. 1983
(KfK-3994; ISSN-0303-4003; ESA-86-96912) Avail: NTIS HC A03/MF A01

The oxidation behavior of Zircaloy-4, ferritic-martensitic steel 1.4914, and austenitic stainless steel 1.4970 was compared. Nuclear reactor typical tube sections were exposed on both sides to superheated steam at temperatures from 600 to 1300 C for up to 6 hr. Corrosion resistance of Zircaloy-4 is between austenitic and ferritic steel. Because of the chosen wall dimensions, Zircaloy-4 and the austenitic steel behave similarly in that the faster oxidation of the thicker Zircaloy-4 cladding consumes the total wall thickness in a time equivalent to the slower oxidation of the thinner austenitic steel cladding. The ferritic steel cladding is consumed faster because of the lower oxidation resistance and the thinner wall thickness compared to the austenitic steel. Besides oxide scale formation, oxygen diffusion into the bulk of the metal, forming oxygen-containing phases was evaluated. Their influence on mechanical cladding properties and dimensional changes were studied. ESA

ENGINEERING PROPERTY COMPARISONS FOR 2324-T39 AND 2024-T351 ALUMINUM ALLOY PLATE
L. Schra and W. G. J. tHart 19 Mar. 1984 64 p
(Contracts NIVR-1906)
(NLR-TR-84021-U; B8576225; ESA-86-96979) Avail: NTIS HC A04/MF A01

Engineering properties of the plate material of aluminum alloy 2324-T39 and alloy 2024-T351 were compared. Tensile strength, fracture toughness, notched fatigue strength, and the resistance to fatigue crack propagation under constant amplitude and flight simulation loading were considered. Significantly higher strength and fracture toughness properties are found for 2324-T39, but the notched fatigue strengths of both alloys are comparable. Fatigue crack propagation resistance of 2324-T39 is slightly better than 2024-T351 under constant amplitude loading, but less resistant under flight simulation loading. The latter result indicates that replacement of 2024-T351 by 2324-T39 in fatigue critical areas is questionable. ESA

EFFECTS OF CLADDING AND ANODIZING ON FLIGHT SIMULATION FATIGUE OF 2024-T3 AND 7475-T761 ALUMINUM ALLOYS
R. J. H. Wanhill Jan. 1985 29 p refs
(Contracts NIVR-1891)
(NLR-TR-85006-U; B8578427; ESA-86-96984) Avail: NTIS HC A03/MF A01

The effects of cladding and anodizing on flight simulation (gust spectrum) fatigue of notch specimens and riveted lap joints of 2024-T3 and 7475-T761 aluminum alloy sheet were investigated. Stress levels were chosen to provide long life data (100,000 simulated flights) for bare alloy specimens. Cladding and anodizing have very large effects on the fatigue lives. Cladding and anodizing are always detrimental for notched specimens. For lap joints, cladding is detrimental only combined with anodizing. Anodizing is very beneficial for lap joints to be assembled from bare alloy sheets. With equivalent surface treatments 2024-T3 specimens always have longer average fatigue lives than 7475-T761 specimens. ESA

INFLUENCE OF DEPOSITION VARIABLES ON LPCVD TUNGSTEN FILMS DEPOSITED BY THE WF6/Si REDUCTION
M. E. Tracy 1985 16 p Presented at Workshop
(Contract DE-AC04-76DP-00789)
(DE86-003727; SAND-85-7254C; CONF-8510238-1) Avail: NTIS HC A02/MF A01

In an effort to isolate and study the Si reduction of WF6 by the reduction reaction 2 WF6 + 3 Si (YIELDS) 2 W + 3 SiF4, a systematic study of the influence of temperature, substrate doping, deposition time and variable flow rates of tungsten hexafluoride (WF6) was conducted. The effect of varying these parameters on film thickness, layer resistivity, encroachment and adhesion was investigated. A set of operating conditions has been defined that yield stable, adherent, self-limiting films of -100A thickness that are free from encroachment. Film quality was found to be relatively insensitive to moderate variations in process parameters, a favorable indication in terms of process integration and manufacturability. DOE

HARDNESS OF ION IMPLANTED CERAMICS
W. C. Oliver, C. J. McHargue, G. C. Farlow, and C. W. White 1985 11 p Presented at the Materials Research Society Meeting Prepared in cooperation with Wright State Univ., Dayton, Ohio
(Contract DE-AC05-84OR-21400)
(DE86-004771; CONF-851217-21) Avail: NTIS HC A02/MF A01

It has been established that the wear behavior of ceramic materials can be modified through ion implantation. Studies have been done to characterize the effect of implantation on the structure and composition of ceramic surfaces. To understand how these changes affect the wear properties of the ceramic, other mechanical properties must be measured. To accomplish this, a commercially available ultra low load hardness tester has been used to characterize Al2O3 with different implanted species and doses. The hardness of the base material is compared with the highly damaged crystalline state as well as the amorphous material. DOE

FORMATION OF SURFACE LAYERS OF ICOSAHEDRAL Al(Mn)
J. A. Knapp and D. M. Follstaedt 1985 22 p Presented at the Materials Research Society Meeting, Boston, Mass., 2 Dec. 1985
(Contract DE-AC04-76DP-00789)
(DE86-004606; SAND-85-1335C; CONF-851217-19) Avail: NTIS HC A02/MF A01

Surface layers of the icosahedral phase of Al(Mn) have been formed from thin, alternating Al/Mn layers deposited on Al or Fe surfaces by rapid electron-beam or laser melting, by ion beam mixing, and by solid-state diffusion. The electron beam and laser treatments are similar to other liquid quenching techniques used previously to form the phase, but have well defined temperature histories which place limits on the melting point of the icosahedral phase, the time needed to its nucleation from the melt, and its growth velocity. Ion beam mixing is a way of forming the icosahedral phase which is quite different from melt quenching; the phase is formed during ion beam mixing at temperatures of 100 to 200 C. For mixing at less than or equal to 60 C an amorphous phase with icosahedral short-range order is formed, and this phase can be converted to the icosahedral phase by subsequent annealing. Formation of the icosahedral phase by reacting the as-deposited layers in the solid state has not been reported elsewhere. The results presented here place new restrictions on proposed structural and thermodynamic models for the icosahedral phase. DOE

POLYETHER-POLYESTER GRAFT COPOLYMER Patent Application
Vernon L. Bell, inventor (to NASA) Filed 24 Apr. 1986 20 p Sponsored by NASA
(NASA-Case-LAR-13447-1; NAS 1.71:LAR-13447-1;
US-Patent-Appl-SN-855879) Avail: NTIS HC A02/MF A01 CSCL 11B

This invention relates to a polyether graft copolymer having improved solvent resistance and crystalline thermally reversible crosslinks. The copolymer is prepared by a novel process of anionic copolymerization. The polymers of this invention exhibit good solvent resistance and are well suited for commercial aircraft parts. Previous aromatic polyethers, also well known as polyphenylene oxides, have certain deficiencies which detract from their usefulness. These well known commercial polymers are often soluble in common solvents including the halocarbon and aromatic hydrocarbon types of paint thinners and removers. This limitation prevents the use of these polyethers in structural articles that require frequent painting. In addition, the most popular commercially available polyether is a very high melting plastic. This makes it considerably more difficult to fabricate finished parts from this material. The present invention solves these problems by providing an aromatic polyether graft copolymer with improved solvent resistance and crystalline thermally reversible crosslinks. The graft copolymer is formed by converting the carboxyl groups of a carboxylated polyphenylene oxide polymer to ionic carbonyl groups in a suitable solvent, reacting pivalolactone with the dissolved polymer, and adding acid to the solution to produce the graft copolymer. (AD-A164537; ARO-22361.1-MS) Avail: NTIS HC A03/MF A01 CSCL 11/9

Interpenetrating polymer networks (IPNs), elastomers, and foams composed of polyurethanes and epoxies were prepared by the simultaneous technique. The effect of platelet geometry fillers (e.g., graphite, mica, glass) and cure time on the morphology of the IPNs was investigated. Fillers were incorporated by random batch mixing and the rubber roll mill technique. It was determined that low level of filler resulted in a small increase of dynamic mechanical properties (tan delta) and as the filler level increased, tan delta decreased. Samples with low post-curing times showed higher magnitudes of tan delta than samples with longer post-curing time. IPN foams with different ratios of polyurethane and epoxy were prepared at their sound absorption properties were measured by the impudance tube method. Different PU/Epoxy ratios showed different maximum sound absorption frequency ranges. In general, the IPN foams prepared showed higher sound absorption properties than the GM polyurethane foam reference. GRA

STUDY OF CHARGE AND POLARIZATION DISTRIBUTION IN POLYMERS Final Report, 1 Jul. 1982 - 30 Jun. 1985
Aime S. DeReggi 21 Jan. 1986 11 p refs
(Contracts MIPR-ARO-58-82; MIPR-ARO-143-83)
(AD-A164633; ARO-18712.5-PH) Avail: NTIS HC A02/MF A01 CSCL 20/3

It has been established that space charge effects are important in determining the polarization distribution of ferroelectric polymers when these are poled under conditions of significant, though still extremely small, conductivity. Asymmetric distributions are observed and these are indicative not only of space charge present during poling but also of polarity-dependent barrier effects at the metallic electrode-polymer interfaces. Among the polymers surveyed, which gave simple asymmetric polarization profiles, PVF2 and P(VF2-TE) showed a tendency to pole most strongly in the regions near the poling anode indicating accumulation of negative charge during poling, while PVF and Nulon 11 tend to pole most

strongly near the poling cathode, indicating accumulation of positive charge. The difference among samples in the sign of the change accumulated during poling suggests that a basic relation exists between charging behavior and bulk or surface polymer structure; however, additional work is required to establish the nature of such a relation. Under conditions of negligible conductivity, the observation of nonuniform sample properties are suspected to be of morphological origin or due to pre-existing polarization of unknown origin. However, it appears that under these conditions, the polarization distributions are nominally symmetric. Studies of electron-beam irradiated PVC have revealed interesting, new information-storage properties of this material. GRA

FIELD-INDUCED CRYSTALLIZATION IN HIGHLY PLASTICIZED POLY(VINYLIDENE FLUORIDE) FILMS
J. I. Scheinbeim, B. A. Newman, and A. Sen 27 Jan. 1986 30 p refs
(Contract N00014-80-C-0795)
(AD-A164684; TR-7) Avail: NTIS HC A03/MF A01 CSCL 20/3

Highly plasticized films of poly(vinylidene fluoride) (PCF2) containing approximately 18% by weight of tricresyl phosphate (TCP) and with initial crystallinites (phase II) of approximately 15% were poled under high vacuum. The poling temperatures were 75 C and 90 C and the poling field was 250 KV/cm. The poling time was varied from 15 minutes to 240 minutes. Weight measurements and X-ray diffraction data of poled films showed that with increasing poling time, (up to 4 hrs) that plasticizer content decreased (to a minimum of 11%) and the crystallinity of the PVF2 films increased (to a maximum of 45%). The field induced crystallization occurred as highly oriented phase I crystals. After poling for 1 hour (at 90 C), a significant percent of the crystalline material was observed to be in the polar phase I form. At longer times, a measure of the relative percent of phase I with respect to the total crystallinity decreased. As expected, the piezoelectric strain coefficient d sub 31, stress coefficient e sub 31, and pyroelectric coefficient P sub y increased with increasing phase I content, reaching maximum values after a 1 hour poling time at 90 C of d sub 31 approx. = 10 PC/N, e sub 31 approx. = 11 mc/m2 and P sub y approx. = 17 micro Cm per deg K. The dynamic mechanical modulus and d ielectric constant (measured at 3 Hz) were found to be approx. 1.3 GN/sq m and approx. 14.7 respectively under these poling conditions. GRA

THE EFFECTS OF STEEL PROFILE AND CLEANLINESS ON COATING PERFORMANCE Technical Note, Oct. 1979 - Sep. 1984
Richard W. Drisko, Eddy S. Matsui, and Lee K. Schwab Jan. 1986 33 p
(AD-A164788; NCEL-TN-1741) Avail: NTIS HC A03/MF A01 CSCL 11/3

A 5-year study was conducted in cooperation with the Steel Structure Painting Council (SSPC) to determine surface profile and cleanliness requirements for long-term performance of generic coating systems currently used on Navy shore facilities. The experimental design included two levels of cleaning (white metal finish and commercial finish), four levels of profile height (low, medium, high, and very high), eight levels of abrasive (eight different abrasives), and six levels of generic coating system (alkyd, acrylic latex, vinyl, epoxy, coal tar epoxy, and inorganic zinc/vinyl). Replicate sets of the different variations were exposed in a salt fog chamber and at test exposure sites in a tropical marine atmospheric environment at Kwajalein Atoll in the Marshall Islands; in an industrial environment at Pittsburgh, Pa.; and in a relatively mild marine atmospheric environment at Kure Beach, N.C. After 15 months of exposure at Kwajalein, relatively little change had occurred in the overall loss in bonding strength. Significantly different variations occurred between the different coating systems, and the range of values was greatly reduced. Salt fog exposure had a much greater effect on loss of adhesion than did natural exposure for 57 months for the periods measured. Levels of statistical significance for performance at Kwajalein varied greatly with time and were much greater on scribed than unscribed specimens. Author (GRA)

EXPERIMENTAL POLYURETHANE FOAM (PUF) ROOFING SYSTEMS. 3. NAVAL STATION, ROOSEVELT ROADS, PUERTO RICO, AND NAVAL FACILITY, CAPE HATTERAS, NORTH CAROLINA Interim Report, Sep. 1978 - Mar. 1984
Spencer R. Conklin, Daniel A. Zarate, and Robert L. Alumbaugh Jan. 1986 61 p
(AD-A164833; NCEL-TN-1742) Avail: NTIS HC A04/MF A01 CSCL 11/9

This report presents information on field investigations of experimental polyurethane foam (PUF) roofing systems installed at the Naval Station, Roosevelt Roads, P.R., and the Naval Facility, Cape Hatteras, N.C. The roof systems at Roosevelt Roads included three different foams applied at two thicknesses, five protective coating systems applied at thicknesses recommended by their manufacturer, and two different mineral roofing granules applied in the wet topcoat. The majority of the housing units was coated with acrylic and silicone coating systems, but urethane/hypalon, modified urethane, and butyl/hypalon elastomeric coating systems were also used. The roofing system installed on the Galley at Cape Hatteras was acrylic elastomer coated PUF roof applied over a modified bitumen membrane. At Roosevelt Roads, the butyl/hypalon coated system weathered the best. Energy consumption at Roosevelt Roads decreased at most only 12 to 13% after foaming the roofs. Mineral roofing granules improved weathering characteristics for the acrylic systems but not the silicones. At Cape Hatteras, one-half of the acrylic-coated roof weathered very well, while the other half showed extensive blistering. GRA

BIODEUTERATED MATERIALS: HIGH-TEMPERATURE LUBRICANTS FROM ALGAE Interim Report, Oct. 1984 - Sep. 1985
Rex A. Neihof, Mark M. Ross, and Joseph E. Campana 6 Jan. 1986 21 p refs
(AD-A164913; NRL-R-8952) Avail: NTIS HC A02/MF A01 CSCL 11/8

Substitution of deuterium for hydrogen imparts an enhanced resistance to oxidation in materials such as lubricants. The exploitation of this and other novel properties of deuterated materials in applications of Naval interest is only beginning to be realized. As an alternative to the conventional chemical methods of synthesizing deuterated compounds employing high temperature and reducing conditions, the present work explores the possible advantages of using algae grown in deuterium oxide (D2O) to provide completely deuterated precursors that are suitable for synthesizing a variety of lubricants. By proper choice of organism and growth conditions, it was possible to obtain dense cultures of algae containing 50 to 60% of their dry weight as long-chain fatty acids with different degrees of unsaturation. This report outlines strategies for synthesizing lubricant materials from these fatty acids and discusses the extension of biosynthesis to other deuterated materials such as polymers. GRA

STRUCTURE/PROPERTY STUDIES OF A HETEROCYCLIC CONDUCTIVE POLYMER Final Report
Leonard J. Buckley 1 Nov. 1985 39 p
(AD-A164959; NADC-85160-60) Avail: NTIS HC A03/MF A01 CSCL 07/4

Oxidized conductive polypyrrole/anion materials have been electrochemically synthesized under various preparation conditions to study the influence of electrode potential, current density, and anion species on the composition, structure, and properties. Elemental analysis indicates an increase in the sulfur/nitrogen ratio as the electrode potential is increased for polypyrrole/tosylate (PP(+)/OTs(-)). This implies an increase in anion concentration (or extent of oxidation of polypyrrole chains) with potential. Tensile properties of PP(+)/OTs(-) films have been measured and indicate a strong dependence on synthesis potential and current density. The ultimate tensile strength was found to decrease with an increase in these parameters. The effect of the size of the dopant anion has also been addressed by incorporating various para-substituted benzene sulfonates as the electrolyte counterion in the reaction. Tensile strength, modulus, and strain behavior was examined and has shown a transition in the tensile storage modulus (E') at approximately 25 C. This transition was not dependent on anion species. Facility engineers currently have no easy way of establishing if a paint coating is of suitable quality for satisfactory application and performance. As a result, most of the paint used is not tested for specification compliance, which can lead to premature coating failure. This research was undertaken to develop a simple, portable test kit that field personnel can use to check the basic qualities of oil-based and latex paints. The kit enables 14 properties such as drying time, hiding power, appearance, gloss, adhesion, and cleanability to be tested in the field. It is to be used as an initial screening device, so that only paints which do not appear to be equal to a standard need to be sent to a laboratory for more sophisticated testing. The kit's ease of use should encourage more testing prior to application, as well as avoiding the time and expense required for laboratory testing. Development of the kit is described, and instructions for its use are provided. GRA

STRUCTURE AND PROPERTIES OF POLYMERS AND ORGANOSILANES ADSORBED ONTO OXIDIZED ALUMINUM AND TITANIUM Final Report, 1 Jul. 1980 - 30 Sep. 1985
F. J. Boerio 31 Jan. 1986 43 p
(Contract N00014-80-C-0733)
(AD-A165210) Avail: NTIS HC A03/MF A01 CSCL 11/1

Wettability envelopes were constructed for mechanically polished iron, titanium, and aluminum from contact angles measured for selected liquids. The results indicated that typical epoxy adhesives should wet all three substrates. The failure path of iron/epoxy and titanium/epoxy lap joints exposed to water at 60 C for varying times was determined using x-ray photoelectron spectroscopy (XPS). When iron/epoxy lap joints were prepared from adherends pretreated with aqueous solutions of Gamma-aminopropyltriethoxysilane (Gamma-APS) at pH 8.0 and tested without exposure to water, failure was mostly within the primer. Joints prepared from adherends primed with Gamma-APS at pH 10.4 failed partly within the adhesive and partly near the interface. Iron/epoxy lap joints always failed in the primer near the primer/oxide interface when tested after exposure to water for seven days but very little corrosion of the substrates was observed. When titanium/epoxy lap joints were tested without exposure to water, failure was partly within the adhesive and partly near the primer/oxide interface regardless of the pH at which the primer was applied. However, the failure path shifted to near the primer/oxide interface after the joints were immersed in water for seven days. It was concluded that failure of the joints after exposure to water was associated with hydrolysis within the primer. The effect of silane primers on the failure properties of aluminum/epoxy tapered double cantilever beams was also investigated. GRA

APPLICATION OF CONDUCTIVE POLYMER TECHNOLOGY TO THE PRODUCTION OF A NOVEL MULTILAYER CAPACITOR
David Mandelblatt and R. Selwood 14 Jan. 1986 14 p
(Contract N00014-86-C-0008)
(AD-A165212) Avail: NTIS HC A02/MF A01 CSCL 09/1

Multilayer ceramic capacitors, due to their large capacitance, reduced volume and low cost, have become one of the fastest growing technologies in electronic devices. Present technology uses barium titanate as the dielectric which requires the use of precious metal (Pd, Pt, Au) internal electrodes as a result of the high firing temperatures (1300 to 1400C). These precious metals are responsible for 50 to 60% of the total cost of the capacitor and are subject to strategic foreign disruption. It is the goal of this investigation to evaluate the feasibility of using a polymer based dielectric and a polymer thick film metal electrode to build a multilayer capacitor that would eliminate the need for precious metals. Once this is accomplished, the next phase would ultimately involve the replacement of the silver in the polymer thick film electrode with synthetic metals. The work involved an extensive literature review, discussions with researchers active in this field and the testing of prototype polymer capacitors. Evaluations were carried out based on capacitance, permittivity dissipation factor and short-term stability. The initial results were considered encouraging and a continuing effort in this direction is most feasible. GRA

THERMAL RESPONSE TESTS OF CANDIDATE INSULATION SYSTEMS FOR THE CHLORINE TANK CAR Final Report, Dec. 1983 - Aug. 1984
William P. Wright, Wayne A. Slack, and Willis Jackson Feb. 1986 60 p
(AD-A165293; AD-F630715; BRL-TR-2712) Avail: NTIS HC A04/MF A01 CSCL 13/6

A number of thermal tests were performed on three insulation systems. The purpose was to ascertain if an insulation system consisting of existing materials could prevent the temperature of the shell of a chlorine tank car from exceeding 252 C (493 F) while the tank car is exposed to representative fire environments which can occur in a railroad accident. The significance of the temperature criteria is that a corrosive reaction between chlorine vapor and steel begins at approximately that temperature. GRA

ACID-CATALYZED DEGRADATION OF POLY(2-BUTYL-1,3,6-TRIOXOCANE)
James C. W. Chien, C. P. Lillya, and Bao-Bei Xu 10 Jan. 1986 33 p
(Contract N00014-83-K-0083)
(AD-A165327; TR-13) Avail: NTIS HC A03/MF A01 CSCL 07/3

Polyacetals, owing to the acid sensitivity of the acetal linkage, are attractive candidates for end uses in which acid sensitivity is a desirable property, e.g., photo- or electron-resists. Acid catalyzed degradation of poly (2-butyl-1,3,6-trioxocane) (1) has been studied. With ethyl tosylate as the catalyst, the cyclic monomer 2 was the

major product. The minor products are cis and trans isomers of C3H7CH=CH-OCH2CH2OCH2CH2OH, and three stereoisomers of C3H7CH=CH-OCH2CH2OCH2CH2O-CH=CH-C3H7 elucidated by 1H and 13C NMR, IR, electron impact and chemical ionization MS, and in the case of 2 also by comparison with an authentic sample. With 98% H2SO4 as the catalyst 2 is only a minor product. The major products are diethylene glycol, valeraldehyde, and 1,4-dioxane with some 2-butyl-1,3-dioxolane. Capillary GC/Mass spectrometry led to identification of the following less abundant products: tri-n-propylbenzene, alpha, beta-unsaturated aldehydes and cyclic dimer. The products of H2SO4-catalyzed decomposition of polymer were also obtained by heating monomer 2 with H2SO4. A detailed mechanism for the formation of the 8-member ring 2 in the decomposition is proposed which involves unzipping proceeds via open carbocation intermediates. According to the principle of microscopic reversibility, the same open carbocation is the propagating species in the polymerization of 2 under similar conditions. GRA

APPARENT VISCOSITY MEASUREMENTS OF SURFACTANT FOAM IN POROUS MEDIA
R. J. Treiner, W. E. Brigham, and L. M. Castanier Dec. 1985 37 p
(Contract DE-AC03-81SF-11564)
(DE86-000260; DOE/SF-11564/13; SU-SUPRI-TR-48) Avail: NTIS HC A03/MF A01

The apparent viscosity of surfactant foam in a sand pack model was measured at reservoir flow velocities. The effects of foam quality, surfactant concentration, and flow rate were investigated. Ottawa sand, 120 to 140-mesh, was packed into a 1 by 24 inch tube. Porosity was 38%, and permeability ranged from 5 to 8 darcies. Foam of a known quality and flow rate was continuously injected into the sand pack until a steady state condition was reached. Pressure drop was measured across three different segments of the sand pack. A system back pressure of 50 psig was applied to minimize changing foam quality caused by gas expansion. The surfactant used in this study was Suntech IV. All measurements were made at room temperature. Results show that the apparent viscosity of surfactant foam ranges from 50 to 70 centipoise at reservoir flow velocities. Increasing the foam quality corresponded to a small increase in the apparent viscosity of foam. Changes in surfactant concentration from 0.005 to 0.05 wt % caused a rapid increase in apparent viscosity. Changes in concentration above 0.05 wt % had little effect on apparent viscosity. Increasing the flow rate resulted in a reduction of the apparent viscosity of foam. This pseudo-plastic flow behavior has been widely reported in the literature. The apparent viscosity of foam in porous media was significantly effected by flow rate history. DOE

ADVANCED PROPULSION SYSTEMS AND ALTERNATIVE FUELS FOR NON-HIGHWAY TRANSPORTATION. AN ASSESSMENT OF UNIQUE AND PRIORITY RESEARCH AND DEVELOPMENT OPPORTUNITIES. VOLUME 3. A COMPENDIUM OF RESEARCH AND DEVELOPMENT Final Report
Sep. 1985 166 p
(Contract DE-AC01-84ER-30063)
(DE86-002975; DOE/ER-30063/T3-Vol-3) Avail: NTIS HC A08/MF A01

This report documents the combined results of a literature search and personal communications activity designed to identify on-going R and D and suggested R and D needs for advanced propulsion systems and alternative fuels utilization technologies for non-highway transportation applications. The results are presented in the three subsequent chapters of this report. Section 3 presents the results of the literature search. Some of the information reported in Section 3 was obtained through communications with and information received from various government and private R and D funding entities. Each identified R and D program or project is summarized and various additional information deemed pertinent is noted. Section 4 presents the results of discussions and communications with various private organizations and academic institutions. These discussions and communications were designed to buttress the literature search effort and were conducted independently of the literature search. Thus, some cross-reporting of research efforts will exist. Section 5 presents the results of personal communications with selected key researchers. This latter activity was designed to elicit recommendations of R and D needs, thus providing the workshop panel with additional advance information for its considerations as well as to provide additional input for the final assessments reported in Volume 1. TNT RDX AND HMX EXPLOSIVES IN SOILS AND SEDIMENTS. ANALYSIS TECHNIQUES AND DRYING LOSSES
J. H. Cragin, D. C. Leggett, B. T. Foley, and P. W. Schumacher Oct. 1985 18 p
(AD-A163278; CRREL-85-15; AMXTH-TE-TR-85038) Avail: NTIS HC A02/MF A01 CSCL 13/2

A method for the analysis of TNT, RDX and HMX explosives in soils and sediments has been developed. It consists of methanol extraction followed by reversed-phase high performance liquid chromatography using 10% acetonitrile/40% methanol/50% water as the eluant. This method was used to study the effect of various drying techniques on the recovery of TNT, RDX, and HMX from soil and sediment samples contaminated with high (%) and low (micron g/g) levels of these explosives. For highly contaminated samples, complete recovery of TNT and RDX was obtained using freeze drying while air drying at room temperature resulted in greater than 90% recovery for both explosives. Other techniques, such as oven drying at 105 C, oven drying at 45 C, microwave oven drying, and drying under infrared lamps, all resulted in greater losses, with TNT and RDX recoveries ranging from 76 to 90%. Drying losses were not due to simple volatilization containing low levels of TNT, RDX and HMX. Recoveries of all three explosives were quantitative for all the above drying techniques. Author (GRA)

CALCULATIONS OF BURNING SURFACES OF PROPELLANT GRAIN WITH EMBEDDED METAL WIRES AND OF INTERNAL BALLISTICS OF SUCH MOTOR
H. Hongquing 19 Dec. 1985 18 p
(AD-A163361; FTD-ID(RS)T-0904-85) Avail: NTIS HC A02/MF A01 CSCL 21/9

The propellant grain with embedded metal wires capable of producing two-stage thrusts, which suffers complex surface changes during the combustion process, is analyzed. Seven pertinent items of this grain are summarized which are very useful for the studies of its complex burning surfaces and the derivation of its calculation formulas about the burning surfaces. The calculation formulas of burning surfaces and that of internal ballistics are combined to form a chain of control equations. With this control chain, the burning processes of different stage and phase can be predicted very accurately if a double iteration method which satisfies optimum control conditions is used. The entire calculation process is a very good simulation of combustion, and the calculated results are in good agreement with the experimental data. GRA

THE EFFECT OF AIR GAPS ON THE PROPAGATION OF DETONATION IN CHARGES CONSISTING OF STACKED BLOCKS OF CAST TNT
A. W. Gibb Dec. 1985 89 p
(AD-A163398; AD-E500738; DRES-385) Avail: NTIS HC A05/MF A01 CSCL 19/1

A series of experiments was conducted to examine the influence on the uniformity of detonation propagation of air gaps between large blocks of slow-cooled cast TNT. Donor-receptor geometries examined were: (1) two blocks with the detonation front parallel to the gap edge, and (2) four blocks with one corner in common and the (planar) detonation front at an angle of 45 deg to the block edge. Air gaps from 3 mm to 25 mm were studied. The two-block configurations produced no distortion of the shape, but the measured detonation velocity in the donor blocks and the scatter in results in the receptor blocks were observed to be influenced by the orientation of the propagation velocity vector with respect to the long axis of the TNT crystals. The four-block configuration featured channelling of detonation gases ahead of the front in the air gaps, leading to an initially complex and distorted wave structure, as well as to a delay in reinitiation, in the vertically-opposite receptor block. The shape distortion and delay effects increased as the gap width was increased. GRA

UNUSUAL CONTAMINANT IN JP-4 FUEL DELIVERED TO FORT CAMPBELL, FORT KNOX, AND TENNESSEE ARMY NATIONAL GUARD Interim Report, Apr. - Jul. 1985
J. G. Barbee, R. S. McInnis, K. B. Kohl, and L. L. Stavinoha Nov. 1985 86 p
(Contract DAAK70-85-C-0007)
(AD-A163399; AD-E500738; BFLRF-201) Avail: NTIS HC A05/MF A01 CSCL 07/4

Many common types of debris were encountered during the course of a recent investigation to identify an unusual contaminant present in jet fuel (JP-4) at three Army locations. Most of the other debris were materials commonly found in fuel samples, e.g., metal flakes, rust, fibers, dirt, etc. Various analytical techniques used in this evaluation indicated that the unusual flake-like organic debris was probably a manmade (synthetic) organic component and not a fuel product. It had a high melting point (> 200 C) and was insoluble in most common solvents. The physical appearance of the flakes (thin and flat while floating in the fluid) indicated that the material was originally formed or deposited in a thin layer prior to its introduction into the fuel. The most likely source of a material with these characteristics was an unpigmented paint or protective coating from one of the epoxy or similar resin families. Such a material could be introduced into the fuel by debonding or delamination of the contaminant from any handling, storage, or transportation equipment that contains such a coating. The elements, chemical bonds, and functional groups detected by the various analytical tests were consistent with this conclusion. The use of a light box for enhanced visual (Clean and Bright) evaluation is presented in this report. GRA

CRACK PROPAGATION AND BRANCHING IN BURNING SOLID PROPELLANTS AND IGNITION OF NITRAMINE-BASED COMPOSITE PROPELLANTS Annual Report, Nov. 1984 - Dec. 1985
Kenneth K. Kuo, John A. Moreci, Jong U. Kim, Takaaki Torikai, and Mark Grubelich Jan. 1986 116 p
(Contract N00014-79-C-0762)
(AD-A164630; AR-1) Avail: NTIS HC A06/MF A01 CSCL 21/9

Three major tasks performed during the report period of investigation were: (1) crack propagation and branching in burning solid propellants, (2) ignition of nitramine-based composite propellants under rapid pressurization, and (3) ignition of nitramine-based composite propellants by CO2 laser. Propellant samples have been recovered by interrupted burning experiments. Four modes of crack propagation and/or branching were observed. The amount of surface area generated by mixed or branched modes is substantially higher than that of the single crack propagation mode, and thus could cause sufficiently severe burning in the damaged zone to result in rocket motor failure. The crack propagation problem is analyzed through the use of basic physical principles, experimental results, and Schaper's theory of crack propagation. A set of governing dimensionless parameters which control and characterize the degree of damage has been obtained. These parameters can be used to develop guidelines for safe operating conditions of rocket motors. Ignition characteristics of a series of RDX-based composite propellants were studied. The times for the onset of light emission (t sub LE) of different propellants under rapid pressurization were compared. It is also found that propellant samples with shorter t sub LE do not necessarily show higher mass consumption, this indicates that propellant vulnerability should be evaluated by both t sub LE and the fraction of mass consumed. GRA

RESEARCH IN ENERGETIC COMPOUNDS Interim Summary Report, 1 Jan. - 31 Dec. 1985
T. G. Archibald, L. C. Garver, M. P. Cohen, and K. Baum Feb. 1986 63 p refs
(Contract N00014-78-C-0147)
(AD-A164901; ONR-2-8) Avail: NTIS HC A04/MF A01 CSCL 07/3

Fluoronitro polymers for use as binders in pyrotechnics applications were investigated. Isopropyl 3,3-difluroroacrylate and 2,2-difluorovinyl isopropyl ketone were synthesized from 3-chloro-3, 3-difluoropropionate and 1-chloro-1,1-difluoro-4-methyl-3-pentanone. Attempted Michael addition reactions of nitronate ions to these olefins failed to give stable adducts. The geminal difluoroazides, 2-azido-2,2-difluoroacetophenone, 1-azido-1,1-difluoro-4-methyl-3-pentanone and isopropyl 3-azido-3,3-difluoropropionate were prepared from the corresponding chlorides with sodium azide. Reaction of lithium 2-nitropropane-1,3-diol acetonide with perfluoroalkyl iodides gave the corresponding 2-perfluoroalkyl-2-nitropropane-1,3-diacetonides. Work was continued on the synthesis of polynitro derivatives of the furofuran ring system. The intermediate furans such as 5-nitro-2-methyl-3-furanmethanol acetate, 3-methyl-2-furanmethanol acetate, and 2,3-furandi-methanol were synthesized, but closure of the second ring has not yet been effected. Work was begun on the synthesis of 1,1,3,3-tetranitrocyclobutane. The model compound 1,1-dinitrocyclobutane was prepared from 1-nitrocyclobutane. Oxidation of 1,3-diaminocyclobutane gave 1,3-dinitrocyclobutane. GRA

IMPINGEMENT OF LIQUID FUEL SPRAYS ON HEATED WALLS Final Report, 1 Aug. 1982 - 10 Jul. 1985
Norman Chigier, Francisco Ruiz, and James Zurlo 12 Feb. 1986 81 p
(Contract DAAG29-82-K-0162)
(AD-A165422; ARO-19485.4-EG) Avail: NTIS HC A05/MF A01 CSCL 21/4

An experimental study was made of the structure of high speed Diesel jets. A constant volume chamber was constructed into which sprays of different liquids at a controlled pressure and duration can be injected. The chamber can be pressurized to a design pressure of 900 psi and heated to 750 F. An air operated pump provides liquid injection pressures up to 10,000 psi. Microphotographs of the spray showed the formation of a train of surface waves and the presence of liquid ligaments issuing from the main liquid jet in the radial direction. Discharge coefficients decreased with increasing injection pressure, indicating presence of cavitation in the nozzle. Injection of liquid into a coaxial stream of air with velocities up to 340 m/s allowed determination of the constant A in the aerodynamic theory which represents the intensity of surface perturbations before any amplification by shear occurs. Results of an experiment conducted with liquids of different vapor pressure on 5 nozzles, indicate tha cavitation is a function of a nondimensional pressure parameter. GRA

ADVANCED PROPULSION SYSTEMS AND ALTERNATIVE FUELS FOR NON-HIGHWAY TRANSPORTATION. VOLUME 1: AN ASSESSMENT OF UNIQUE AND PRIORITY RESEARCH AND DEVELOPMENT OPPORTUNITIES Final Report
Sep. 1985 60 p
(Contract DE-AC01-84ER-30063)
(DE86-002973; DOE/ER-30063/T1-Vol-1) Avail: NTIS HC A04/MF A01

This report is Volume 1 of a three-volume set documenting an assessment of unique and priority research and development opportunities associated with advanced propulsion systems and alternative fuels utilization for non-highway transportation applications. The air, rail, marine, and pipeline modes of transportation were addressed. More specifically, the scope of the study was focused upon advanced fuel-powered prime movers which are or could be applied to aircraft, locomotives, boats/ships, and pipeline pumping/compression station applications. Of note is the fact that advanced electric powered propulsion technologies were not addressed. (This is principally an issue for the rail and pipeline modes.) This report (Volume 1) presents the assessments and recommendations resulting from the study as well as supporting information and background discussions. DOE

INVESTIGATION INTO ALTERNATIVE FUEL RATING TECHNIQUES Final Report
D. M. Doyle and J. R. Needham Nov. 1985 360 p
(Contract DE-AC01-83CE-50010)
(DE86-004277; DOE/CE-50010/1) Avail: NTIS HC A16/MF A01

An extensive range of fuels have been evaluated in representative naturally aspirated IDI and DI combustion systems with cylinder sizes of 0.61 and 0. 62 liters with rated speeds of 70 and 67 rev/s respectively. Performance, gaseous and particulate emissions and detailed combustion data were obtained, with the objective of correlating combustion and performance parameters with a view towards defining an engine-based fuel rating technique. The ASTM D613 procedure was found to not predict accurately the ignition delay of vegetable oil and volatile blends of naphtha and methanol with D.2. Petroleum and synthetic derived middle-distillates and a vegetable oil ester were ranked correctly. Ignition delay was found to feature mainly in defining cold start, noise and light load HC and CO emissions. A relatively simple rating method measuring ignition delay to rank these parameters, and heat release for NOx ranking, is discussed. Several reasons are given illustrating why an overall rating method will be very complex and perhaps not possible. Recommendations are made to highlight the requirements for improvement in fuel rating methods. DOE

SMOKELESS PROPELLANTS
Loughton, England Jan. 1986 178 p In ENGLISH and FRENCH Conference held in Florence, Italy, 12-13 Sep. 1985
(AGARD-CP-391; ISBN-92-835-0387-2) Avail: NTIS HC A09/MF A01

Eleven papers are presented from the conference. The specialist meeting was arranged in the following sessions: A review of smokeless propellant technology; Prediction and measurement of signature; Chemistry of smokeless propellants; and Smoke measurements. The purpose of the meeting was to bring together specialized experts in the field of smokeless propellants in order to discuss the definitions of the various degrees of smokelessness, and provide the results of the investigations performed in the last years. The achievements were discussed in the technical evaluation report, which suggests also several subjects for future investigations. For individual titles, see N86-26469 through N86-26479.

SMOKELESS PROPELLANTS OF IMPROVED PERFORMANCE
E. A. Baker *In* AGARD Smokeless Propellants Jan. 1986 p 6-1 - 6-5 (For primary document see N86-26468 17-28)
Avail: NTIS HC A09/MF A01

For double base propellants the high density of nitramines compared with nitrocellulose/nitroglycerine matrices of equivalent energy levels is particularly attractive where propellant energy levels or charge volumes are restrictive. The inclusion of nitramines generally reduced plateau burning rates and impairs plateau quality, but RDX filled extruded propellants with good plateau ballistics and low temperature dependence, suitable for boost applications

were developed. No departure from conventional EDB processing is involved. Author

PROPERGOL COMBUSTION BASED ON OCTOGENESIS [COMBUSTION DES PROPERGOLS A BASE D'OCTOGENE]
Guy Lengelle and Jean Duterque *In* AGARD Smokeless Propellants Jan. 1986 p 8-1 - 8-17 In FRENCH; ENGLISH summary (For primary document see N86-26468 17-28)
Avail: NTIS HC A09/MF A01

The investigation of the combustion of solid propellants based on HMX and energetic binder was carried out through the study of HMX and the energetic binder in self-burning, as well as that of their combination in propellants. The condensed phase behavior of the components was looked into by means of thermogravimetric analysis, differential scanning calorimetry, ignition and temperature (microthermocouples) profile measurements, as well as sampling and analysis of the gases produced from the condensed phase. At very low pressure, HMX sustains a staged flame, much like that of homogeneous propellants. The behavior of the binder is close to that of homogeneous propellants. The burning rate of the propellant is a compromise between the rates of the components, without interaction between the HMX flame and that of the binder. Author

STABILITY OF NITROCELLULOSE PROPELLANTS ASSESSED VIA THERMAL DECOMPOSITION AND ALTERATION OF THE STABILIZER COMPOSITION
P. vandeMey and A. H. Heemskerk *In* AGARD Smokeless Propellants Jan. 1986 p 9-1 - 9-8 (For primary document see N86-26468 17-28)
Avail: NTIS HC A09/MF A01

In the Netherlands the surveillance of propellants is performed by investigating the thermal behavior of the propellant at a temperature of 358 K. This procedure is accepted to represent a degradation equivalent to a storage period of at least ten years at ambient temperatures. To obtain additional information about the degradation of propellants thermal stability tests were performed at various temperatures and under several environmental conditions. Both the thermal behavior of the propellants and the chemical behavior of the stabilizing amine compound were determined during these experiments. The composition of the amine compounds was analyzed using HPLC techniques developed for these experiments. Author

BURNING STABILITY OF DOUBLE BASE PROPELLANTS
L. DeLuca, C. Zanotti, G. Riva, R. Donde, A. Volpi, C. Grimaldi, and G. Colombo *In* AGARD Smokeless Propellants Jan. 1986 p 10-1 - 10-17 (For primary document see N86-26468 17-28)
Avail: NTIS HC A09/MF A01

The nonsteady combustion and intrinsic burning stability of double base propellants are studied. Experimental results show that, over a large pressure range, the energetics and the dynamics of double base combustion is controlled by the fizz zone. This permits the classical quasi-steady gas phase assumption to be applied. However, a novel transient flame model is required, since the fizz zone, although thin in time, is thick in space. This novel transient flame model includes several previous models as particular cases; in addition it allows an already existing nonlinear burning stability theory to be immediately applied to double base combustion. In general, double base burning is found to be less stable than composite propellant burning, both statically and dynamically. This is due to the relatively little energy stored in the condensed phase and elongated fizz zone yielding a weak energy coupling at the burning surface. Author

ELASTOMER MODIFIED CAST DOUBLE BASE PROPELLANTS
G. I. Evans and D. Facer *In* AGARD Smokeless Propellants Jan. 1986 p 13-1 - 13-17 (For primary document see N86-26468 17-28)
Avail: NTIS HC A09/MF A01

Cast double base propellants have many attractive features for tactical missile systems, not least where plume signature transparency is at a premium. However, such propellants are limited in mechanical properties, particularly strain capability at low temperatures of -40 C or less. The development of a new class of CDB propellants is described utilizing an elastomer in the binder. The advantages, properties and performance of these EMCDB propellants are given. The field of candidate polymer systems is explored with test results and chemistry of the binder together with the criteria leading to the selection of suitable elastomer binders. Author

THE REDUCTION OF EXHAUST SIGNATURE IN SOLID PROPELLANT ROCKET MOTORS
G. I. Evans and P. K. Smith *In* AGARD Smokeless Propellants Jan. 1986 p 16-1 - 16-16 (For primary document see N86-26468 17-28)
Avail: NTIS HC A09/MF A01

An important feature of cast double base propellants is that during combustion the propellant itself produces extremely low levels of exhaust smoke. Developments in insulation material and, in particular, charge inhibitors have allowed the low smoke potential of the propellant to be fully realized in rocket motor firings. A further dramatic reduction in exhaust signature was obtained by suppressing secondary combustion in the rocket motor. This was achieved over a wide range of typical propellant charge and motor configurations using propellant additives. Flame suppressed plumes offer the desirable property of low exhaust emissions both in the visible and IR regions of the electromagnetic spectrum. Similarly missile communications both at optical and radio frequency wavelengths are improved by the absence of secondary combustion. The inhibitor and propellant developments concerned are reviewed and the reductions in exhaust signature which are obtained by the optimized use of secondary flame suppression is quantified. Author

THE CHEMICAL INTERACTION OF BALLISTIC MODIFIERS IN CDB PROPELLANT: ITS EFFECT UPON BALLISTICS AND STABILITY
J. D. M. Pearson, A. C. J. Shedden, and I. A. Duncan *In* AGARD Smokeless Propellants Jan. 1986 p 17-1 - 17-15 (For primary document see N86-26468 17-28)
Avail: NTIS HC A09/MF A01

During the development of a platonized cast double base propellant it was noted that a spread of burning rates from batch to batch was obtained. Subsequently batches of the propellant presistantly showed a marked decrease in gas crack lifetime, on accelerated aging, compared with earlier satisfactory results. Extensive work showed the stability problem to be associated with a chemical reaction between the ballistic modifiers. This reaction was reproduced in the laboratory, while at the same time the ballistic variability of the propellant was under investigation. It became apparent that the chemical interaction between the modifiers affected the propellant platonized burning rate and that the by products of this reaction cause the accelerated aging problem. This understanding allowed a new ballistic modifier to be developed which helped solve the stability problem while at the same time gave much more reproducible ballistics. Author

DIRECT EROSIVE BURNING MEASUREMENTS OF A REDUCED-SMOKE SOLID PROPELLANT ROCKET BY FLASH X-RAYS
T. Constantinou and D. Greatrix (Toronto Univ., Ontario) *In* AGARD Smokeless Propellants Jan. 1986 p 18-1 - 18-13 (For primary document see N86-26468 17-28)
Avail: NTIS HC A09/MF A01

Despite the multitude of models available, proper erosive burning modelling continues to be a difficult task in the internal

ballistic prediction of solid propellant rockets with high volumetric loading. The majority of models are based on erosive burning measurements using small motors, window motors and with such techniques as imbedded probes or interrupted burning. Such methods, however, are not believed to exhibit the real combustion process. The flash X-ray technique using full sized motors gives a more realistic measurement of burning rates. This technique can be used to evaluate the internal ballistic code with different erosive burning models, a pressure-time record can be obtained and compared to experimental data. A comparison and evaluation of the different models, is thus possible. Data based on static firings of reduced smoke motors were analyzed by the above method and the results are presented. Author

EXPERIMENTAL TECHNIQUES FOR OBTAINING PARTICLE BEHAVIOR IN SOLID PROPELLANT COMBUSTION
David W. Netzer and John P. Powers *In* AGARD Smokeless Propellants Jan. 1986 p 19-1 - 19-17 (For primary document see N86-26468 17-28)
Avail: NTIS HC A09/MF A01

A continuing investigation is being conducted to develop techniques to obtain quantitative data that can be used to relate solid rocket propellant composition and operating environment to the behavior of solid particulates within the grain port and exhaust nozzle. The techniques employed are high speed motion pictures of propellant strand burners and slab burners in a cross flow environment, SEM analysis of post fire residue (strand, slab, and motor), determination of D sub 32 across the exhaust nozzle using measurements of scattered laser light, and holograms of burning propellant strands, slabs and motors. In addition, techniques are being studied for automatic retrieval of particle size distributions from holograms taken of the combustion of solid propellants. Actual particle sizes of burning aluminum particles were obtained in high speed motion pictures by using high intensity rear illumination of the burning propellants to eliminate the flame envelopes surrounding the burning particles. Measurements of diffractively scattered light were made for determination of changes in D sub 32 across a solid propellant rocket motor exhaust nozzle. Two dimensional motors were employed to obtain holograms of propellant burned in a cross flow environment. Other efforts were directed at reduction of speckle in the recorded holograms and optimization of techniques for minimizing excessive smoke in the recorded scenes. A computer controlled Quantimet 720 is being used in an effort to obtain particle size distributions from reconstructed holograms. Author

GAS ANALYSIS FOR THE INVESTIGATION OF THE COMBUSTION OF DOUBLE-BASE PROPELLANTS AND HMX
Jean-Francois Trubert *In its* Smokeless Propellants (AGARD-CP-391) Jan. 1986 p 20-1 - 20-14 (For primary document see N86-26468 17-28)
Avail: NTIS HC A09/MF A01

The linear pyrolysis method under vacuum by conduction and radiation, with analysis by mass spectrometry is used to obtain the composition of the gases produced by solid propellant condensed phase degradation, while minimizing the secondary reactions and under conditions close to actual burning. This method was elaborated with reference to double base propellants, and in the presence of additives. Important quantities of formaldehyde, glyoxal and carbon dioxide are obtained. The presence of low amounts of nitrogen and carbon monoxides, carbon dioxide and water indicates that the gases result mostly from the degradation. The small difference between the quantitative compositions shows that the additive does not act on the condensed phase degradation. This method was applied to HMX. The analysis shows large amounts of several nitrogen oxides (NO2, NO, N2O), formaldehyde, and cyanhydric acid, and small quantities of water, nitrogen and carbon oxides. Author

MEASUREMENTS OF DISTRIBUTED COMBUSTION
M. W. Beckstead, P. C. Braithwaite, and D. L. Gordon *In* AGARD Smokeless Propellants Jan. 1986 p 21-1 - 21-12 (For primary document see N86-26468 17-28)
Avail: NTIS HC A09/MF A01

Acoustic suppressants are commonly added to low smoke and smokeless propellants to avoid the problem of combustion instability. Although some suppressants are considered to be inert, most actually react with the combustion products. If a particle reacts while traversing a relatively large portion of the system, the interchange of energy between the burning particle and the acoustic environment can result in either a driving or damping contribution to the acoustics of the system, which is referred to as distribution combustion. Instead of using actual solid propellants, and experimental technique was developed to study this mechanism utilizing a gas fired Rijke burner. Advantages of this approach allow testing an additive independent of the propellant burning surface, avoiding the use of solid propellants, and allowing for independent control of frequency, O/F ratio, temperature, and particle addition. Al and ZrC are additives commonly used in solid propellants to suppress combustion instability. Experimental results obtained using Al and ZrC in the Rijke burner indicate that both additives cause an increase in the acoustic growth rate when compared to growth rates obtained without any particles in the system. The increase caused by Al is significantly greater that that caused by ZrC, which is expected because the reaction of Al releases more than twice the energy ZrC does. The increase in the acoustic growth rate due to distributed combustion was found to be directly related to the heat of reaction. Author

COMPARATIVE STUDY OF NONDESTRUCTIVE PAVEMENT TESTING, WES (WATERWAYS EXPERIMENT STATION) NDT (NONDESTRUCTIVE TESTS) METHODOLOGIES Final Report
Jim W. Hall and Don R. Alexander Sep. 1985 66 p
(AD-A163379; WES-MP-GL-85-26) Avail: NTIS HC A04/MF A01
CSCL 13/2

A demonstration of nondestructive airfield pavement evaluation procedures conducted by the US Army Engineer Waterways Experiment Station (WES) using both the WES 16-kip vibrator and a Dynatest falling weight deflectometer (FWD) is described. The nondestructive tests (NDT) were conducted at MacDill Air Force Base on five pavement test areas consisting of asphaltic concrete, portland cement concrete, and composite pavements. Two methods of data analysis were used. The dynamic stiffness modulus (DMS) method used dynamic deflection data from the WES 16-kip vibrator with a correlation analysis developed a number of years ago by WES. This method uses a correlation between the DSM (a load-deflection ratio) and the allowable load on a single wheel as derived from traditional test pit methods. The second analysis scheme used measured deflection basins at the pavement surface and layered elastic theory. Elastic moduli are computed by matching measured deflection basins with computed basins. Limiting stress/strain is then used to compute allowable aircraft loadings. This method was used with data from both the WES 16-kip vibrator and the FWD. Also demonstrated was a method of determining joint load transfer and of making appropriate adjustments to the allowable load to account for lack of load transfer. GRA

OPERATIONAL SOIL MOISTURE PREDICTION MODEL Final

Report
Lev N. Gutman 20 Dec. 1985 65 p
(Contract DAJA45-84-C-0007)
(AD-A165313; AD-E301922) Avail: NTIS HC A04/MF A01 CSCL 08/13

The one dimensional problem of the diurnal variations of moisture and temperature at different depths of the thermally active, non-frozen, non-swelling soil layer is considered. It is assumed that we know: (1) Values of all meteorological elements at anemometer level at any time, (2) Moisture and temperature distribution with depths at some initial moment; and (3) Physical parameters and characteristics of the soil and vegetation cover which we shall call canopy for brevity. The model consists of: (1) Partial differential equations of the subsurface hydrology for a non-saturated vapor-liquid flow in the soil, allowing for the moisture removal by the roots of plants. (2) Algebraic empirical and ordinary differential equations for the description of the radiative and turbulent heat transfer between the atmosphere and the soil through the canopy allowing for the influence of condensation or evaporation at the foliage and also the retention of a part of the precipitation by the foliage. (3) Moisture and vapor balance equations at the surface of the soil. (4) Continuity conditions for heat and vapor fluxes at the top of the canopy. (5) Semiempirical algebraic equations of the type of surface layer equations for a thin atmospheric layer between the canopy and anemometer level. Results of computations are in agreement with experimental data. A few examples of soil moisture computations are presented together with experimental data. GRA

IN-PROCESS CONTROL OF MACHINING. PHASE 1: MILLING
J. T. McCabe, Peter A. Albrecht, D. Locke, and Raymond A. Kirschbaum Sep. 1985 134 p
(Contract DAAA08-83-C-0052)
(AD-A165391; SARRI-EN-TR-85-01) Avail: NTIS HC A07/MF A01 CSCL 13/9

A system to control the path of a milling cutter was developed, integrated with a machining center, and demonstrated. Feedback control was based on measurements of machined edge coordinates taken behind the cutter. The demonstration consisted of milling four, parallel, identical, teardrop-shaped openings, spaced 90 degrees apart through the wall of an orifice tube. A linear diode array, sensitive to reflected light, was used to locate and record the edge profile of each opening. Real-time tool path redirection was based on a continual analysis of generated orifice area accumulation, thereby basing control of the machining process on area, the parameter which best reflected the function of the part. After the machining was completed, the optical edge sensor was used to inspect the part before it was removed from the machine. These processes resulted in significant improvements in productivity and quality. GRA

LINEAR RESONANCE COOLER
Apr. 1985 40 p
(Contract DAAK70-82-K-0222)
(AD-A165492) Avail: NTIS HC A03/MF A01 CSCL 13/1

The contract requires the incorporation of linear drive technology into a cryocooler design meeting the Specification for the US Army 1/4 Watt Common Module Cooler as closely as possible. The Resonant Cryocooler employs a concept using magnetic forces to linearly move dual opposed pistons in the compressor thus eliminating the use of rotary motors, crankshaft, greases and bearings. While not a requirement of the contract, the expander also employs a linear motor to control displacer stroking. This allows for electronic end stopping to mitigate microphonics problems. In addition, the ability to vary the waveform of the displacer motion and its phasing with respect to the compressor pressure wave form in order to optimize performance offers the potential for extending the operational life of the cooler. AN E-PLANE ANALYSIS OF APERTURE-MATCHED HORN ANTENNAS USING THE MOMENT METHOD AND THE UNIFORM GEOMETRICAL THEORY OF DIFFRACTION
D. J. Heedy and W. D. Burnside Sep. 1984 114 p refs
(Grant NsG-1613)
(NASA-CR-176841; NAS 1.26:176841; OSU-TR-716148-1) Avail: NTIS HC A06/MF A01 CSCL 20N

The moment method and the uniform geometrical theory of diffraction are utilized to obtain two separate solutions for the E-plane field pattern of an aperture-matched horn antenna. This particular horn antenna consists of a standard pyramidal horn with the following modifications: a rolled edge section attached to the aperture edges and a curved throat section. The resulting geometry provides significantly better performance in terms of the pattern, impedance, and frequency characteristics than normally obtainable. The moment method is used to calculate the E-plane pattern and BSWR of the antenna. However, at higher frequencies, large amounts of computation time are required. The uniform geometrical theory of diffraction provides a quick and efficient high frequency solution for the E-plane field pattern. In fact, the uniform geometrical theory of diffraction may be used to initially design the antenna; then, the moment method may be applied to fine tune the design. This procedure has been successfully applied to a compact range feed design. Author

ASYMPTOTIC HIGH FREQUENCY ANALYSIS OF THE ELECTROMAGNETIC BACKSCATTERING FROM AN INLET MODEL CONSISTING OF PIECEWISE LINEARLY TAPERED SECTIONS
A. Altintas and P. H. Pathak Nov. 1985 146 p refs
(Grant NsG-1613)
(NASA-CR-176844; NAS 1.26:176844; OSU-TR-716148-6) Avail: NTIS HC A07/MF A01 CSCL 20N

Electromagnetic backscattering from an open ended three dimensional inlet model is analyzed and computed patterns are compared with results of experimental measurements. The model is comprised of two sections. The first section consists of a linearly tapered waveguide with a rectangular opening at one end and the other end is connected to the second section which is a uniform rectangular waveguide with a planar perfectly conducting termination. The model is electrically large so that many propagating modes are excited. The method of analysis contains conventional aperture integration and modal techniques combined with high frequency techniques, which employ concepts such as modal rays, geometrical theory of diffraction and equivalent currents. For the cases considered, it is shown that only a few of the many

propagating modes contribute appreciably to the backscattered field. These modes are selected according to their modal ray angle directions. Author

THE NEGLIGIBLE EFFECT OF NON-GAUSSIAN SURFACE DEVIATIONS IN LARGE MM-LAMBDA REFLECTORS' APERTURE EFFICIENCY AND THE PERFORMANCE OF ITAPETINGA 45-FT ANTENNA AT LAMBDA = 3.3 MM
P. Kaufmann, Z. Abraham, E. Scalise, Jr., R. E. Schaal, J. L. MonteirodoVale, and J. W. S. Vilas Boas 2 Jul. 1986 18 p
Submitted for publication. Sponsored in part by FINEP
(INPE-3837-PRE/908) Avail: NTIS HC A02/MF A01

The aperture efficiency at lambda = 3.3 mm of the 45-ft Itapetinga reflector was found to be about 25 percent. This radiometric result suggests an equivalent surface accuracy of less than 0.25 mm, root-sum-square (rss), assuming a Gaussian distribution of errors, which is smaller than the actual rss estimated for the dish, and represents a 5 dB improvement in gain. This result confirms that non-Gaussian errors across a smooth surface have negligible effects on the aperture efficiency, and that antenna efficiency may be predicted from mechanical measurements when the slowly varying errors across the source are known. It is possible to predict that relatively simple mechanical readjustments of the reflector and subreflector may raise its efficiency to 30 percent. Author

This technical report discusses the vulnerability of equipment used by amateur/MARS radio operators in the United States to disruption or damage by transient electromagnetic effects such as lightning, voltage surges, and electromagnetic pulse (EMP) waves. It also reports the results of two test programs; one to evaluate existing transient suppression devices and components, and one to evaluate the response of amateur radio equipment to an EMP transient environment. Based on the test results, the report recommends procedures and a low-cost installation scheme which will significantly increase the operational survivability of amateur type communications equipment in a lightning or EMP environment. Volume 1 contains the test results and recommendations for transient protection of amateur radio equipment. B.G.

MODEL STUDIES OF SURFACE NOISE INTERFERENCE IN GROUND-PROBING RADAR

Steven A. Arcone and Allan J. Delaney Nov. 1985 23 p
(AD-A163208; CRREL-85-19) Avail: NTIS HC A02/MF A01 CSCL 17/9

Ground-probing radar can be an effective tool for exploring the top 10 to 20 m of ground, especially in cold regions where the freezing of water decreases signal absorption. However, the large electrical variability of the surface, combined with the short wavelengths used, can often cause severe ground clutter that can mask a desired, deeper return. In this study a model facility was constructed consisting of a metallic reflector covered by sand. Troughs of saturated sand were emplaced at the surface to carry surface electrical properties and to act as a noise source to interfere with the bottom reflections. Antenna polarization and height, and signal stacking in both static (antennas stationary) and dynamic (antennas moving) modes were then investigated as methods for reducing the surface clutter. Polarization parallel to the profile direction (perpendicular to the troughs' axes) gave profiles superior to the perpendicular case because of the dimensional sensitivity of the antenna radiation. Dynamic stacking greatly improved the signal-to-noise ratio because noise sources were averaged as the antennas moved, while the desired reflector, buried at constant depth, was enhanced. Raising the antennas above the surface

also reduced noise because the surface area over which reflections were integrated increased. All three noise reduction techniques could be effective in surveys for reflectors at nearly constant depth such as groundwater tables or ice/water interfaces.

A COMPARISON OF VOICE AND KEYBOARD DATA ENTRY FOR A HELICOPTER NAVIGATION TASK Final Report
Frank J. Malkin and Kathleen A. Christ Dec. 1985 42 p
(AD-A163245; HEL-TM-17-85) Avail: NTIS HC A03/MF A01 CSCL 17/2

The Doppler navigation set, AN/ASN 128 was used to compare manual keyboard data entry of navigation map coordinates with an isolated-word speech recognition system. Twelve male Army aviators entered data by keyboard and by voice while controlling a helicopter flight simulator. The results indicated that although the keyboard mode was faster than the voice mode of data entry, the aviators preferred using voice. Voice data entry was perceived as requiring less effort and reducing pilot workload. However, the relative slowness and low accuracy (85.5 percent) of voice data entry highlight the limitations that may exist for speech recognition systems in performing time or task critical functions. A SCHEDULE-BASED APPROACH FOR FLOW-CONTROL IN DATA COMMUNICATION NETWORKS Ph.D. Thesis
Utpal Mukherji Jan. 1986 120 p
(Contract N00014-84-K-0357; Grant NSF ECS-83-10698; DARPA Order 3045)
(AD-A163253; LIDS-TH-1527) Avail: NTIS HC A06/MF A01 CSCL 17/2

An approach for achieving user-session packet throughput guarantees and packet intranetwork delay limits is described. Both objectives are important for packetized voice calls. The approach permits flexible usage of link capacity by sessions, which is important for data sessions. Throughput is guaranteed to a session at links in its path by scheduling priority-slots in link frames for transmission. An extension of end-to-end windowing limits the intra-network delay for a session to the sum of, first, the product of the frame-time and the session's window-size, and, second the session's priority-slot schedule-delay. An NP-completeness result is proven, showing, for general networks, that the scheduling of priority-slots to obtain minimum sum of schedule-delays is algorithmically hard. Minimum-delay scheduling algorithms for special network classes, and a scheduling heuristic for general networks, are presented. For Poisson packet generation at session rates less than throughput guarantees, limited simulations suggest that low mean values of packet end-to-end delays, relatively insensitive to choice of window-sizes, are obtained even at small but non-zero window-sizes. THREE-DIMENSIONAL NUMERICAL SIMULATIONS OF FELs BY TRANSVERSE MODE SPECTRAL METHOD
Cha-Mei Tang and P. Sprangle 30 Dec. 1985 28 p
(AD-A163297; NRL-MR-5694) Avail: NTIS HC A03/MF A01 CSCL 20/5

A numerical method is presented for solving a three-dimensional radiation field by decomposing the radiation field into transverse modes that satisfy the free space wave equation and the boundary conditions. The formalism includes betatron oscillations in a realizable wiggler, finite emittance and energy spread in an amplifier or oscillator configuration. This formalism can be generalized to calculate sidebands resulting from the synchrotron oscillations. The transverse mode spectral method is compared with the finite difference method, spectral method and transform spectral method. Examples from a computer code using Gaussian-Hermite expansion are given. Self-focusing of the radiation beam due to gain and refraction of the Free Electron Laser is shown. GRA

A COMPARATIVE ANALYSIS OF WHISPERED AND NORMALLY PHONATED SPEECH USING AN LPC-10 VOCODER
Johnny B. Wilson and James D. Mosko Dec. 1985 36 p
(AD-A163307; RADC-TR-85-264) Avail: NTIS HC A03/MF A01 CSCL 17/2

The determination of the performance of an LPC-10 vocoder in the processing of adult male and female whispered and normally phonated connected speech was the focus of this study. The LPC-10 vocoder's analysis of whispered speech compared quite favorably with similar studies which used sound spectrographic processing techniques. Shifting from phonated speech to whispered speech caused a substantial increase in the phonomic formant frequencies and formant bandwidths for both male and female speakers. The data from this study showed no evidence that the LPC-10 vocoder's ability to process voices with pitch extremes and quality extremes was limited in any significant manner. A comparison of the unprocessed natural vowel waveforms and qualities with the synthesized vowel waveforms and qualities revealed almost imperceptible differences. An LPC-10 vocoder's ability to process linguistic and dialectical suprasegmental features such as intonation, rate and stress at low bit rates should be a critical issue of concern for future research. Line-of-sight (LOS) microwave systems normally use the frequency spectrum from 2 to 12 gigahertz (GHz). The LOS path lengths range from 1 to 100 miles depending upon propagation, terrain, frequency, and tower height, among other engineering considerations. The average system consists of path lengths of approximately 30 miles. The total microwave system consists of terminals, relays, and normal support functions required for any communications system, such as technical control, multiplex, utilities, land, and buildings. LOS microwave transmission is usually dual diversity, using either frequency, space, or polarization diversity. The transmission system will generally contain dual receive and transmit equipment at all locations for use as either frequency diversity systems or hot standby systems for redundancy. Two techniques may be employed for the transmission and multiplexing of communications circuits. DCS uses frequency modulation transmission and frequency division multiplex (FDM) also called analog systems. Currently DCS uses digital transmission and time division multiplex (TDM), referred to as digital systems. GRA

ELECTROMAGNETIC PENETRATION THROUGH A SLOT INTO A RECTANGULAR WAVEGUIDE Interim Technical Report
Hu Zhenya and Roger F. Harrington Oct. 1985 52 p refs
(Contract DAAG29-84-K-0078)
(AD-A164590; SYRU/DECE/TR-85/4; ARO-21378.4-EL; ITR-3) Avail: NTIS HC A04/MF A01 CSCL 20/3

Electromagnetic penetration into a matched rectangular waveguide through a longitudinal slot in a conducting plane is considered. The problem is divided into two parts, one in half space and another inside the waveguide, by use of the equivalence principle. The resultant equations are the same as some previously described, the only difference being that the excitation vector is changed from an incident wave inside the waveguide to an incident plane wave in half space. The magnetic current over the slot is obtained from the solution of the matrix equations. The electromagnetic penetration into a matched rectangular waveguide and the electromagnetic reradiation into half space through a slot are computed from the equivalent magnetic current over the slot.

The computed results show that a plane wave at normal incidence and a resonated slot near the side of the waveguide broad wall allow orders of magnitude greater power to penetrate into the waveguide than when the slot is not resonated. GRA

COMPARISON OF THE COHERENT ATTENUATION PREDICTED BY SINGLE AND MULTIPLE SCATTERING THEORIES FOR THE CASE OF SEVERAL TYPES OF HYDROMETEORS
Yushieh Ma, Vijay K. Varadan, and Vasundara V. Varadan 31 Jan. 1986 62 p
(Contract DAAG29-84-K-0187)
(AD-A164635; ARO-21825.2-GS) Avail: NTIS HC A04/MF A01 CSCL 20/14

A systematic computation has been completed in order to compare the difference in the coherent attenuation predicted using multiple and single scattering theories. This is the first study in the literature to examine quantitative results based on two different scattering theories. Therefore one is able to tell the approximate range, in both frequency and concentration regimes, where single scattering theory can be applied for different types of hydrometeors. However, the computations give exact figures up to the four decimal place and reveal that, in most cases, if interactions among scatterers are not considered, the coherent attenuation can either be over- or under-estimated. This is a serious problem in communications between distant stations. GRA

A LOOP ANTENNA FOR A VLF (VERY LOW FREQUENCY) SATELLITE TRANSMITTER
H. C. Koons, M. H. Dazey, and D. C. Pridmore-Brown 30 Sep. 1985 43 p refs
(Contract F04701-83-C-0084)
(AD-A164652; TR-0084A(5723-01)-1; SD-TR-85-49) Avail: NTIS HC A03/MF A01 CSCL 17/2

The Space Sciences Laboratory of The Aerospace Corporation is currently defining an experiment to test a loop antenna configuration as a very low frequency (VLF) transmitter in the ionosphere. The experiment is sponsored by the Naval Air Systems Command. The primary objectives of the experiment are to validate existing models for radiation by a loop antenna and to study the performance of the antenna in the ionospheric plasma. The antenna will be carried into orbit in the payload bay of the Space Shuttle. During the radiation tests it will be deployed above the payload bay by the remote manipulator system. A VLF receiver aboard a subsatellite will be used to map the radiation pattern of the antenna by measuring the field intensities at distances of 1 to 100 Km from the transmitter. Calculations predict that the antenna impedance will only be slightly modified by the plasma and that the link to the receiver can be closed at distances well beyond 100 km. A one-third scale model of the antenna has been constructed. Impedance measurements have been made on the model in a 5-m diameter space plasma simulation chamber at NASA Lewis Research Center. The measurements confirm that the reactance of the antenna in an ionospheric plasma is essentially identical to its free space self-inductance. The effective series resistance of the circuit increases with frequency. The losses are attributed to power transferred to plasma turbulence. GRA

MIXED-ORDER FINITE ELEMENTS FOR THE SOLUTION OF THREE-DIMENSIONAL ELECTROMAGNETIC FIELDS Interim Report, Sep. 1983 - Sep. 1984
Z. J. Cendes, D. Hudak, and D. Sun Jan. 1986 33 p
(Contract F19628-83-C-0079)
(AD-A164786; RADC-TR-85-158) Avail: NTIS HC A03/MF A01 CSCL 20/4

A new method of modeling electromagnetic waves by the finite element method is presented. The method is based on a numerical formulation in which different orders of polynomials are used to approximate the three different components of either the electric or the magnetic field vectors. It provides a reliable procedure for the finite element solution of three-dimensional electromagnetic field problems. Heretofore, such solutions were plagued by the presence of spurious modes. The new method is applied to the analysis of fields in resonant electromagnetic cavities. GRA

PROCESS SYNCHRONIZATION AND DATA COMMUNICATION BETWEEN PROCESSES IN REAL TIME LOCAL AREA NETWORKS M.S. Thesis
Reinhard Haeger Dec. 1985 113 p
(AD-A164860) Avail: NTIS HC A06/MF A01 CSCL 17/2

This thesis extends the multi-computer real-time executive, MCORTEX. The multiple cluster system RTC (Real Time Cluster Star), consisting of clusters of single board computers (INTEL iSBC 86/12A), which are connected via an Ethernet Local Area Network, serves as a hardware basis for the implementation of extended MCORTEX. The extension upgrades MCORTEX to system-wide synchronization and general data communication between any processes in the system. An intercluster shared memory model is developed, that partially replicates intracluster shared memory, such that shared data replication is minimized and the system's processing speed is maximized. This implementation, by transmitting produced shared data to all consuming clusters as soon as possible after production, guarantees that only cluster local hits occur in the system. Shared memory space is used efficiently by transmitting shared data to consuming clusters only, and by the ability to store shared data contiguously in intracluster shared memory. GRA

ROBUST AND NONPARAMETRIC DETECTION OF FADING NARROWBAND SIGNALS Technical Report, Sep. 1983 - Aug. 1985
M. Weiss and Stuart C. Schwartz Jan. 1986 240 p refs
(Contract N00014-81-K-0146)
(AD-A164924; Rept-19) Avail: NTIS HC A11/MF A01 CSCL 17/9

This thesis deals primarily with the design and analysis of algorithms for detection of narrowband slowly fading signals, embedded in noise of uncertain distribution. The signal's phase and amplitude are random, but are essentially constant over the observation interval; in addition, the Doppler frequency of the signal is unknown. This is the most common model of target echoes received by radar or sonar systems. Attention is focused on i.i.d. noise samples whose marginal distribution belongs to an epsilon-mixture family, where the scale (variance) of the nominal part of the distribution is also unknown. This is an important generalization of the model. The purpose of the derived detection algorithms is two-fold: first, to assure constant probability of false alarm, regardless of the noise distribution (DF-CFAR); and second, to

achieve optimal maximin probability of detection (Pd) performance. GRA

EXACT CALCULATIONS OF FIRST ORDER CONTRIBUTIONS TO THE INCOHERENT INTENSITY
Vasundara V. Varadan, Yushieh Ma, and Vijay K. Varadan Jan. 1986 33 p refs
(Contract DAAG29-84-K-0187)
(AD-A164927; ARO-21825.1-GS) Avail: NTIS HC A03/MF A01 CSCL 14/5

Basic studies on the effect of inhomogeneities - via their geometry, size, material properties, distribution, multiple, scattering processes and statistical correlations in position and the effect of aligned versus randomly oriented non-spherical scatterers has continued this year. Emphasis has been on studies of the second moment of the field fluctuation, namely the incoherent intensity. The effects of completely correlated (identical) scatterers versus partially correlated scatterers (distinct) has been studied as a function of observation angle, non-dimensional wavenumber, and concentration. Due to the specific form of the expressions for the incoherent intensity, the effect of correlations is to decrease the value of the incoherent intensity, the effect of correlations is to decrease the value of the incoherent intensity. Since the correlation contribution is also very much angle dependent, the effects are more in some direction than in others. In every case both vertical and horizontal polarizations are studied and the differences in the results are discussed. The multiple amplitudes of the effective field exciting each scatterer are explicitily calculated leading to more accurate values of the second moment. It may be recalled that the effective field and the effective propagation constant are calculated in the Quasi Crystalline approximation and include the effects of pair correlation and sequential multiple scattering terms. (Contract DCA100-84-C-0009)
(AD-A165446; Rept-155; DCA/MSO-85-109A) Avail: NTIS HC A13/MF A01 CSCL 17/2

This manual is intended to provide comprehensive instructions on the use of the IBM-PC based Demand-Assigned Multiple access (DAMA) simulation environment. It presents information on the set up and loading of the various programs in the environment, as well as details on how to use each of the programs. All packages are structured as workspaces in the STSC Inc. version of the language APL*PLUS/PC. These programs will only run on an APL*PLUS/PC system, and it is assumed that the simulation user has a license for using APL*PLUS/PC from STSC. In the following section, an overview of the APL environment is presented. Each of the five following chapters document the five delivered workspaces (MODEL, BBNOISE, TDMA4N, TDMA4N, and DAMADR). Chapter 7 presents the results of the simulation validation effort. Chapter 8 gives a description of the noise model used in the simulation, as well as a user's guide to the noise simulation functions. Complete workspace documentation, including listings, cross-references, and function call trees are included as an appendix to this report. Author (GRA)

USE OF LAN (LOCAL AREA NETWORK) TECHNOLOGY IN DSCS (DEFENSE SATELLITE COMMUNICATION SYSTEM) EARTH TERMINALS Final Report, Oct. 1985 - Feb. 1986
Alan Jacobsen and Matthew Griffin 20 Feb. 1986 212 p
(Contract DCA100-85-C-0062)
(AD-A165496; STI/E-TR-850156) Avail: NTIS HC A10/MF A01 CSCL 17/2

The report addresses the use of local area network (LAN) technology to support intercommunications within the Defense Satellite Communications Systems (DSCS) Earth terminals. A summary of local area network capabilities and options is provided as background material. Two types of device intercommunications are identified: the intercommunication of equipment to directly provide the circuit-switched channels needed for DSCS user circuits and the intercommunication of equipment in support of control and status monitoring functions. Issues and concerns regarding the application of LAN technology to either of these objectives are discussed. Additionally, the application of digital switching technology, specifically, use of the Integrated Multiplex, Patch, and Test (IMPAT) equipment, has also been considered as a means to fulfill these intercommunication requirements. METHODS OF OBTAINING OFFSHORE WIND DIRECTION AND SEA-STATE DATA FROM X-BAND AIRCRAFT SAR (SYNTHETIC APERTURE RADAR) IMAGERY OF COASTAL WATERS
Gary A. Mastin, Charles A. Harlow, Oscar K. Huh, and S. A. Hsu Apr. 1985 18 p
(Contract N00014-83-C-0150)
(AD-A165552; TR-410) Avail: NTIS HC A02/MF A01 CSCL 17/9

X-band synthetic aperture radar (SAR) imagery of the Goto Islands of Japan was digitally analyzed to extract air-sea interaction parameters and to assess the potential of texture measures in analysis of SAR ocean imagery. Wind direction is extracted from wind rows, wind streaks, and random turbulence patterns observed in the SAR imagery. Sea-state parameters are either extracted directly from the imagery or estimated using the extracted information in previously established empirical formulas. A convenient method of digitally presenting imagery, local power spectra, and the extracted/estimated parameters is presented. Texture analysis based on gray-level co-occurrence (GLC) matrices is applied to SAR ocean imagery. The inertia measure is shown to extract similar information to the power spectrum. The cluster-shade measure is shown to be sensitive to image phase. GRA

SYNTHETIC APERTURE RADAR (SAR) PRODUCT SIMULATION Final Report
G. Domik (Technische Univ., Graz, Austria), Ph. Hartl, A. Popella (Deutsche Forschungs- und Versuchsanstalt fuer Luft- und Raumfahrt, Stuttgart, West Germany), and A. J. Sieber Paris ESA Jul. 1985 241 p
(ESA-CR(P)-2149; ESA-86-96876) Avail: NTIS HC A11/MF A01

Existing SAR product simulator applicability to advanced land missions was assessed. It is found that none of them are appropriate. The requested input files characterizing the topography of an area of interest are not available to the quality necessary for realistic simulations. As part of the simulation process itself, the modeling of image speckle and image texture and the coherent SAR data hologram need more research. The development of a coherent radar cross section data base, including coordinated monostatic and bistatic calibrated measurements; development of algorithms for modeling image speckle and image texture, and

verification by analysis of existing SAR data; and harmonization of the development of digital terrain models are recommended. ESA

STATISTICAL ANALYSIS OF DIGITAL SIDE-LOOKING AIRBORNE RADAR (SLAR) DATA
Juergen Nithack Aug. 1985 54 p
(DFVLR-FB-85-59; ISSN-0171-1342; ESA-86-96879) Avail: NTIS HC A04/MF A01; DFVLR, Cologne DM 18

Statistical characteristics of X-Band radar data taken with digital SLAR were analyzed. It is shown that gray value distributions of range strips (50 pixels wide) and of distributed targets are sufficiently described by a normal distribution. Errors of 1st and 2nd kind were evaluated to judge the possibilities of classification, to define the minimum characteristic area of a surface type, and to judge internal equality of different surface types and equality of surface data over range after radiometric correction. A method to derive a correction factor from the SLAR data is demonstrated. This factor comprises system characteristics and geometry parameters only. A calibration concept is described, and requirements concerning calibration normals and overall accuracy are derived from the results of the data analysis. ESA

INDIUM PHOSPHIDE SOLAR CELLS: STATUS AND PROSPECTS FOR USE IN SPACE
Irving Weinberg and David J. Brinker 1986 11 p Presented at 21st Intersociety Energy Conversion Engineering Conference (IECEC), San Diego, Calif. 25-29 Aug. 1986; sponsored by American Ceramic Society, SAE, American Nuclear Society, IEEE, AIAA and American Institute of Chemical Engineers
(NASA-TM-87315; E-3046; NAS 1.15:87315) Avail: NTIS HC A02/MF A01 CSCL 10A

The current status of indium phosphide cell research is reviewed and state of the art efficiencies compared to those of GaAs and Si. It is shown that the radiation resistance of InP cells is superior to that of either GaAs or Si under 1 MeV electron and 10 MeV proton irradiation. Using lightweight blanket technology, a SEP array structure and projected cell efficiencies, array specific powers are obtained for all three cell types. Array performance is calculated as a function of time in orbit. The results indicate that arrays using InP cells can outperform those using GaAs or Si in orbits where radiation is a significant cell degradation factor. It is concluded that InP solar cells are excellent prospects for future use in the space radiation environment. Author

OPTICAL AND ELECTROCHEMICAL STUDY OF MODEL ZINC ELECTRODE PORES IN ALKALINE ELECTROLYTE
J. H. Flatt, F. R. McLarnon, and E. J. Cairns Sep. 1985 179 p
(Contract DE-AC03-76SF-00098)
(DE86-002967; LBL-20025) Avail: NTIS HC A09/MF A01

A computer-controlled model single-pore cell has been developed to study zinc electrode discharge behavior in alkaline electrolytes. The cell design allows for simultaneous microscopic and potential performance observations. A quartz-supported, thin-film cadmium reference microelectrode was designed, fabricated and installed in the cell. The cell was designed to create model pores of dimensions comparable to those in commercial zinc electrodes. Zinc electrode discharge behavior was studied in pores of effective radii between 14 and 20 microns at 7 mA/sq cm, 30 mA/sq cm and 1250 mA/sq cm rates of discharge in 7.7M KOH electrolyte. Results are consistent with a dissolution-precipitation discharge reaction mechanism. SEM studies showed significant variations in electrodes surface morphology with location in the pore and rate of discharge. Significant pore[OH(-)] gradients, with slow relaxation times, were found to exist within the pore at the mA/sq cm rate. Passivation was observed at the 1250 mA/sq cm rate. Zinc electrode discharge behavior in 3.5M KOH-3.4M KF showed a similar discharge reaction mechanism. However, earlier surface film formation in 3.5M KOH-3.4M KF was found to occur. Initial reaction penetration depths in 7.7M KOH and 3.5M KOH-3.4M KF electrolytes were 0.11 cm and 0.10 cm. DOE

ANALYSIS OF HELICAL WAVEGUIDE
S. Ahn and A. K. Ganguly 23 Dec. 1985 32 p
(AD-A163252; NRL-MR-5620) Avail: NTIS HC A03/MF A01 CSCL 09/1

The dispersion characteristics of the large diameter helical waveguide are calculated using Pierce's small signal theory. The backward wave oscillation poses a serious problem for the development of this circuit as a broad-band, high gain amplifier. The gain of the backward waves is in general higher than the gain of the forward waves. For the first space harmonic (m=1) mode, the forward and the backward wave gains are, respectively, 2.17 dB/cm and 2.24 dB.cm. The bandwidth is 40% for a total gain of 30 dB if the backward waves are ignored. The onset of the backward wave oscillation limits the bandwidth to 5% for such high gain. The threshold interaction length for the onset of oscillation is also calculated. If the oscillations are not suppressed, the total gain of the circuit is limited to about 12 dB. At this low gain, the bandwidth can be as high as 57%. The device performs better with the low order space harmonic modes. Not only the gain and the bandwidth are larger for the low order modes but the ratio of the backward to forward wave gains and the number of the backward waves excited are also smaller. Author (GRA)

MONOLITHIC CATHODES Final Report, Dec. 1983 - Apr. 1985
Paul R. Davis and Lynwood W. Swanson Nov. 1985 33 p
(Contract F19628-84-K-0026)
(AD-A163282; RADC-TR-85-211) Avail: NTIS HC A03/MF A01 CSCL 09/1

The purpose of this program was to evaluate LaB6 (210) and (310) oriented single crystal material for flat cathode applications and to deliver mounted LaB6 cathodes with (310) orientation for operation in RADC/Varian life test vehicles. To that end, the program was divided into four separate tasks, as shown in the report. This project was extended for 3 months past the initial program period so that unavoidable delays could be overcome and the project completed. The final report covers the entire period of the program, which terminated 29 March 1985. GRA

NON-UNIFORM CURRENTS ON A WEDGE ILLUMINATED BY A TE (TRANSVERSE ELECTRIC) PLANE WAVE Interim Report, Sep. 1984 - Jul. 1985
P. K. Murthy and Gary A. Thiele Nov. 1985 44 p
(Contract F19628-83-K-0034)
(AD-A163323; UDR-TR-85-84; RADC-TR-85-212) Avail: NTIS HC A03/MF A01 CSCL 20/3

Closed form expressions for nonuniform currents on a perfectly conducting, infinite wedge illuminated by transverse electric plane wave are presented. These expressions are derived by requiring that they coincide with the current predicted by the asymptotic diffraction theory far from the edge and, further, that they agree with the current predicted by the eigenfunction solution at the edge. The angle of incidence is arbitrary and our expressions remain valid even for glancing angles of incidence when either

one or both faces of the wedge is in the vicinity of a geometric optic boundary. Formulas presented here are simple involving the well known modified Fresnel functions but are not uniform. Exact expressions for non-uniform currents are available for the two special cases of half plane and infinite plane. For these special cases, our solution reduces to the exact solution. Currents computed using the expressions developed here are compared with currents computed from the eigenfunction solution of the wedge. Good agreement is obtained throughout. Author (GRA)

A THREE DIMENSIONAL PLASMA SIMULATION CODE APPLIED TO PHASE VELOCITY PREDICTION IN A COUPLED CAVITY CIRCUIT Final Technical Report, Sep. 1982 - Sep. 1985
Paul E. Prince Oct. 1985 54 p
(Contract F30602-82-C-0161)
(AD-A163331; UTEC-85-049; RADC-TR-85-198) Avail: NTIS HC A04/MF A01 CSCL 20/3

The problems encountered in the design of circuits for traveling wave devices are of sufficient difficulty that analytic solutions are not usually possible. Historically, resistive networks, electrolytic tanks, and analog computers have been used to simulate devices and thereby permit direct measurement of the field variations. With the advent of large digital computers, it has become possible to solve these problems in a much more general fashion by numerically integrating the fundamental differential equations over a discrete mesh. The recent development of numerical techniques to efficiently handle the massive data storage problem necessary to self-consistently solve Maxwell's equations with sources, combined with the continuing improvement in computer price/performance ratios, has led to the development of computer codes powerful enough to perform three-dimensional numerical experiments. Codes of this type have been used for a number of years in EMP calculations and in plasma physics. This paper will present the initial results of applying a three-dimensional plasma simulation code to microwave tube design problems; specifically, the cold testing of coupled-cavity to find phase/frequency characteristics. EVALUATION OF TWT (TRAVELING WAVE TUBE) CATHODE IMPREGNANT MANUFACTURING PROCEDURES
R. A. Lipeles 27 Nov. 1985 27 p
(Contract F04701-85-C-0086)
(AD-A163360; TR-0086(6945-02)-1; SD-TR-85-84) Avail: NTIS HC A03/MF A01 CSCL 09/1

Impregnant manufacturing procedures were evaluated as part of a program to develop guidelines for producing reliable dispenser cathodes. Such procedures must be controlled in order to eliminate variations in impregnant composition that can give rise to unpredictable cathode performance. Experiments revealed that variations in impregnant composition result primarily from contamination by moisture, incomplete mixing, and incomplete reaction. Procedures developed to overcome these problems are discussed. The following recommendations are made: (1) Alumina must be dried prior to weighing to avoid inaccurate formulation due to moisture. (2) Multiple dry and wet mixing steps are nedded to thoroughly homogenize the starting materials. (3) Calcination temperatures of 1300 + or - 60 C are required to form thoroughly reacted barium calcium aluminates. (4) Thermogravimetry is useful for testing impregnants and starting materials for moisture contamination. GRA

COMPACTION WITH AUTOMATIC JOG INTRODUCTION
F. M. Maley Oct. 1985 24 p refs
(Contract N00014-80-C-0622)
(AD-A163436) Avail: NTIS HC A02/MF A01 CSCL 09/5

A novel polynomial-time algorithm for compacting a VLSI layout is presented. Compared to previous algorithms, the algorithm promises to produce higher quality output while reducing the need for designer intervention. The performance gain is realized by converting wires into constraints on the positions of the active devices. These constraints can be solved by graph-theoretic techniques to yield optimal positions for chip components. A single-layer router is then used to restore the wires to the layout, using as many as jogs as necessary. An automated compaction procedure is an effective tool for cutting production costs of a VLSI circuit at low cost to the designer, because the yield of fabricated chips is strongly dependent on the total circuit area. Sect 1 is an introduction. Sect 2 states the definitions and theoretical results that underlie the new compaction method. Sect 3 shows how the circuit layout is converted to a data structure appropriate for compaction, and Sect 4 details the body of the compaction algorithm. Sect 5 covers several improvements to the algorithm that should make it run considerably faster. Sect 6 comments on the algorithms of results, and a discussion of the practical value of the compaction algorithm. GRA

POWER SENSING DEVICE Patent Application
Jaime Quiros, inventor (to Air Force) Filed 19 Jul. 1985 12 p
(AD-D012171; US-Patent-Appl-SN-756549) Avail: NTIS HC A02/MF A01 CSCL 09/5

A power sensing device is disclosed for use with an electrical alternating current (AC) power source, a primary load, and a plurality of secondary loads. The power sensing device detects when the primary load is turned on, and automatically supplies power from the electrical AC power source to the plurality of secondary loads in response thereto. The power sensing device also senses when the primary load is turned off, and removes electrical power from the plurality of secondary loads in response thereto. Author (GRA)

MINIMIZING EHF WAVEGUIDE LOSSES
Edward W. Gilbertson Dec. 1985 79 p
(AD-A164726; RADC-TR-85-223) Avail: NTIS HC A05/MF A01 CSCL 09/1

To minimize RF power transmission losses at high frequencies, rectangualr waveguide has become the standard transmission medium. At EHF frequencies, rectangular waveguide attenuation rises to unacceptably high levels. To minimize waveguide loss, length is minimized. Where this is not possible, a variety of alternatives exist, each having lower attenuation than standard rectangular waveguide and each with its own advantages and limitations. Square circular (modes TE11 and TE01), oversized rectangular, oversized circular (modes TE11 and TE01), and dielectric waveguides are addressed and categorized according to bendability. By choosing the technology with the lowest attenuation which meets the installation's bendability requirements, the optimum transmission method can be determined. Attenuations are calculated for comparison at 44 GHz, but the discussion is general enough to hold throughout the EHF frequency range.GRA

FINITE LENGTH DISCRETE MATCHED FILTERS
Andrew B. Martinez and John B. Thomas Jan. 1986 18 p

(Contract N00014-81-K-0146)
(AD-A164869; TR-20) Avail: NTIS HC A02/MF A01 CSCL 09/5

The Matched Filter (MF) is well known to be the linear detector that has the maximum output Signal-to-Noise Ratio (SNR). The problem of finding the minimum filter length in discrete time to achieve a certain level of performance is considered when there is some freedom in choosing a signal shape. Upper and lower bounds on the SNR are given in terms of the eigenvalues of the noise covariance matrix. Since these bounds are rather difficult to compute, looser, but easier to compute, bounds are given. Several examples are presented which illustrate the exact and approximate bounds. GRA

(AD-A164916; ESL-710816-18; AR-8) Avail: NTIS HC A09/MF A01 CSCL 09/5

An overview of the research in electromagnetics is given. The progress in diffraction studies, which include diffraction by nonconducting surfaces, vertex diffraction, diffraction by wedges, diffraction in the paraxial regions of smooth quasicylindrical convex surfaces, and caustic field analysis, is reviewed. Hybrid techniques including diffraction by perfectly conducting surfaces, the problem of diffraction by edges formed at junctions between perfectly conducting and dielectric boundaries, analysis of microstrip antennas, and reflecting antenna synthesis are presented. Integral equation studies of material coated edges and time domain studies are also updated. E.R.

QUASI-TEM ANALYSIS OF MICROWAVE TRANSMISSION LINES BY THE FINITE ELEMENT METHOD
Zorica Pantic and Raj Mittra Feb. 1986 35 p
(Contract N00014-84-C-0149)
(AD-A164943; UILU-ENG-86-2205) Avail: NTIS HC A03/MF A01 CSCL 09/3

This paper describes a finite element approach to quasi-TEM analysis of several different types of isolated and coupled microwace transmission lines. Both the first and higher-order ordinary elements, as well as singular and infinite elements are used to solve for the potential and field distribution in the cross-section of the line. Next, the cross-sectional field distribution is inserted in a variational expression to compute the capacitance per unit length of the line and the effective permittivity and characteristic impedance of the line are obtained from the capacitance value. A perturbationl approach is developed for estimating the losses due to conductor and dielectric dissipation and computing the attentuation constant. Lines treatable by this method may contain an arbitrary number of arbitrarily shaped conductors, including a system of conductors either placed above a single ground plane or between two parallel ground planes, and inhomogeneous dielectric regions that can be approximated locally by a number of homogeneous subregions. DIGITALLY CONTROLLED PROGRAMMABLE ACTIVE FILTERS M.S. Thesis
Panagiotis Andresakis Dec. 1985 201 p refs
(AD-A164999) Avail: NTIS HC A10/MF A01 CSCL 09/3

In this research a general purpose digitally controlled analog filter is presented. The novel design is a cascade of second order sections that are individually programmed to achieve any filtering topologies. Two binary words are used to control the pole frequency omega p and selectivity Qp of each section independently. Each second order section is a Generalized-Immittance Converter (GIC) biquads which are known for their high stability and low active and passive sensitivity. CMOS switches are used to electronically relocate the minimum number of passive elements to achieve function programmability. Switches are also used to select the number of cascaded sections to realize higher order transfer functions. GRA

CONCEPT STUDY OF A MULTIPLE BEAM LENS ANTENNA WITH AN INTERNAL PHASE SHIFT MASK
Daniel T. McGrath Aug. 1985 28 p
(AD-A165277; RADC-TR-85-159) Avail: NTIS HC A03/MF A01 CSCL 09/5

A new antenna architecture has been investigated to assess its usefulness for limited scan systems. It consists of a passive lens with a few small subarrays spaced evenly across its focal surface. Between the lens and the focal surface is a phase shift layer, or mask, comprised of oppositely-facing planar arrays interconnected by phase shifters (similiar to a phased array lens). The mask redirects a focusing wave from an arbitrary angle onto one of the subarrays. It is shown that a system with only 19 small subarrays, and a mask containing about 4500 elements could provide complete Earth coverage with as many as 19 simultaneous 0.3 deg beams. The pattern quality of those beams is good, provided that no two are steered to within a few beamwidths of each other. GRA

LUMPED-ELEMENT AND LEAKY-WAVE ANTENNAS FOR MILLIMETER WAVES Final Technical Report
A. A. Oliner Jan. 1986 193 p
(Contract F19628-81-K-0044)
(AD-A165280; RADC-TR-85-255) Avail: NTIS HC A09/MF A01 CSCL 09/5

This contract was concerned with millimeter wave antennas that cannot be scaled from their microwave frequency counterparts, and it concentrated on novel leaky wave antennas. Two such waveguides were selected: the groove guide, and nonradiative dielectric (NRD) guide. Six different leaky wave antennas were analyzed on this program, with two treated in special detail. Three different mechanisms for producing leakage were employed: asymmetry, foreshortening the structure's cross section, and using leaky higher modes. The different mechanisms also lead to different polarizations of the radiated fields. Accurate theoretical analyses were conducted for each of the antenna structures. Transverse equivalent networks were established, the elements of which were derived in closed form, so that the dispersion relations were also. Numerical values for the propagation characteristics were obtained as a function of various geometric parameters, to aid in the design of antennas based on these leaky structures. Special design considerations, including optimization procedures, were also developed when possible. GRA

IONIZATION INDUCED INSTABILITY IN AN ELECTRON COLLECTING SHEATH
D. L. Cooke and I. Katz Jun. 1985 30 p
(Contract F19628-82-C-0081)
(AD-A165330; SSS-R-85-7343; AFGL-TR-85-0256; SR-2) Avail:

NTIS HC A03/MF A01 CSCL 09/1

A numerical investigation of the electron collecting sheath about a positively biased probe in the ionosphere has been conducted to determine the effect of ionization within the sheath. This report is directed at the space charge limited regime appropriate to objects with characteristic size much larger than the ambient Debye length, and uniform surface potential much greater than the ambient plasma temperature. A fluid approximation is employed to model the dynamics of the secondary plasma produced within the sheath. The results indicate that when the secondary ion production exceeds a critical level, the sheath edge propagates outward in an explosive fashion, in a manner similar to the propagation of double layers. This critical level is shown to be equivalent to a mean free path for ionization by electrons lambda sub ie < (sq. rt. (m(sub i)/m(sub e))) (D(sub S)/alpha) where D sub S is the sheath thickness and alpha is a geometry dependent parameter. Usual ionosphere-probe interactions appear to be sub critical, but an enhanced neutral background might be produced by shuttle contaminants, could reach the critical level, and trigger the instability. ELECTRON INDUCED CONDUCTIVITY OF AL2O3 AS PERTAINING TO THERMIONIC INTEGRATED CIRCUITS M.S. Thesis
Peter J. Peterson Dec. 1985 109 p
(AD-A165589) Avail: NTIS HC A06/MF A01 CSCL 09/5

Experiments were conducted to measure the electron induced conductivity (EIC) of single crystal sapphire (Al2O3) and polycrystalline alumina (Al2O3). The EIC is generated when the samples are bombarded with high energy electrons, utilizing the Naval Postgraduate School's S-band linear accelerator (LINAC). The EIC was measured at dose rate up to 6 x 10 to the 7th power rad (Si)/sec. The EIC for alumina was an order of magnitude smaller than the value for sapphire. The value calculated for alumina was 10,000 per ohm cm and 1,000 per ohm cm for sapphire. The response of EIC to a given dose rate did not change as the dose accumulated. Surface flashover problems during electron irradiation were observed and are discussed. GRA

AREA PENALTY FOR SUBLINEAR SIGNAL PROPAGATION DELAY ON CHIP (PRELIMINARY VERSION)
Paul M. B. Vitanyi Aug. 1985 25 p Partly in ENGLISH and FRENCH Presented at 26th Annual IEEE Symposium on Foundations of Computer Science, Portland, Oreg., 21-23 Oct. 1985 Revised
(Contract BMFT-0101-ZA/WF/WRD-174/4)
(CWI-CS-R8514; B8575491; ESA-86-97005) Avail: NTIS HC A02/MF A01

It is shown that sublinear signal propagation delay in VLSI circuits carries a far greater penalty in wire area than is commonly realized. Therefore, the global complexity of VLSI circuits is more layout dependent than thought. This effect is pronounced in wafer scale integration technology. Lower bounds on the trade-off between sublinear signaling speed and layout area for the implementation of a complete binary tree in VLSI are established. Sublinear delay can only be realized at the cost of superlinear area. Designs with equal length wires can either not be laid out at all (for logarithmic delay) or require such long wires in the case of radical delay that the aimed for gain in speed is cancelled. For wire length distributions commonly occurring on chip, the requirements for sublinear signal propagation delay tend to cancel the gain. ESA

THE AIR-INJECTION METHOD OF FIXING BOUNDARY-LAYER TRANSITION AND INVESTIGATING SCALE EFFECTS
P. R. Ashill, comp., J. L. Fulker, comp., D. J. Weeks, and M. Verain 15 Mar. 1985 44 p refs
(RAE-TR-85025; RAE-AERO-3609; BR97257; ESA-85-96844)
Copyright. Avail: Issuing Activity

Experience with the air-injection method of fixing transition in wind tunnel tests on two-dimensional airfoils and a swept panel at high subsonic free-stream speeds is described. The method is shown to provide a repeatable level of disturbance which, for a given flow condition, may be generated without interrupting the test, and does not cause a significant excess drag. Examples illustrate the effectiveness of the technique in demonstrating scale-sensitive features of flows. A correlation which allows the minimum value of air-injection mass flow needed to fix transition to be estimated from a knowledge of the behavior of natural laminar flow on the wing is presented. A COMPUTER CODE FOR THREE-DIMENSIONAL INCOMPRESSIBLE FLOWS USING NONORTHOGONAL BODY-FITTED COORDINATE SYSTEMS Final Report
Y. S. Chen Mar. 1986 86 p refs
(Contract NAS8-35918)
(NASA-CR-178818; NAS 1.26:178818) Avail: NTIS HC A05/MF A01 CSCL 20D

In this report, a numerical method for solving the equations of motion of three-dimensional incompressible flows in nonorthogonal body-fitted coordinate (BFC) systems has been developed. The equations of motion are transformed to a generalized curvilinear coordinate system from which the transformed equations are discretized using finite difference approximations in the transformed domain. The hybrid scheme is used to approximate the convection terms in the governing equations. Solutions of the finite difference equations are obtained iteratively by using a pressure-velocity correction algorithm (SIMPLE-C). Numerical examples of two- and three-dimensional, laminar and turbulent flow problems are employed to evaluate the accuracy and efficiency of the present computer code. The user's guide and computer program listing of the present code are also included. Author

APPLICATION OF A COMPUTATIONAL MODEL FOR VORTEX GENERATORS IN SUBSONIC INTERNAL FLOWS
William G. Kunik 1986 24 p refs Presented at the 22nd Joint Propulsion Conference, Huntsville, Ala., 16-18 Jun. 1986; sponsored by AIAA, ASME, SAE and ASEE
(NASA-TM-87327; E-3072; NAS 1.15:87327; AIAA-86-1458) Avail: NTIS HC A02/MF A01 CSCL 20D

A model for the analysis of vortex generators in a fully viscous subsonic internal flow is evaluated. A vorticity source term is used in a modified form of the Parabolized Navier-Stokes equations to model the shed vortex. Computed results are compared with idealized flow vortex paths, and with experimental data for vortex generators embedded in a thick turbulent boundary layer. The analysis is also compared with experimental data for a separated diffusing S-duct and for a diffusing S-duct with vortex generators. Quantitative comparisons are shown for the latter three cases. Emphasis is placed on verifying the ability of the model to predict global distortions in the flow field. Author

THERMODYNAMIC EVALUATION OF TRANSONIC COMPRESSOR ROTORS USING THE FINITE VOLUME APPROACH Semiannual Status Report, 20 Dec. 1985 - 31 May 1986
Stephen Nicholson and John Moore 1986 81 p
(Grant NAG3-593)
(NASA-CR-176840; NAS 1.26:176840; JM/86-2) Avail: NTIS HC A05/MF A01 CSCL 20D

The finite volume explicit time marching method was refined and improved. Previously, extension had been made to the finite volume method to improve the accuracy of the calculation of total pressure in inviscid flow, extend the method to allow the calculation of laminar and turbulent boundary layers in internal flows, and improve the shock capturing properties of the method by introducing a Mach number dependent interpolation scheme for the pressure used in the calculating the density. The current work extends these developments by using the new pressure interpolation scheme in two dimensional viscous calculations, including a more complete description of the viscous stresses, introducing a criteria for the transverse upwind differencing which is a function of the ratio of transverse and streamwise mass fluxes, and allowing the calculation of internal flow where boundary layers are present on both walls of the duct. The manner in which the viscous stresses are evaluated in the nonorthogonal, nonuniform grid is detailed. The convergence is investigated and results for calculations of laminar flow in a converging duct are presented. Results for calculations of transonic flow in a converging-diverging nozzle are presented and the results are compared with Sajben's measurements and calculations by others. Author

(NASA-CR-178104; ICASE-86-26; NAS 1.26:178104) Avail: NTIS HC A03/MF A01 CSCL 20D

The problem of a boundary layer on a flat plate which has a constant velocity opposite in direction to that of the uniform mainstream is examined. It was previously shown that the solution of this boundary value problem is crucially dependent on the parameter which is the ratio of the velocity of the plate to the velocity of the free stream. In particular, it was proved that a solution exists only if this parameter does not exceed a certain critical value, and numerical evidence was adduced to show that this solution is nonunique. Using Crocco formulation the present work proves this nonuniqueness. Also considered are the analyticity of solutions and the derivation of upper bounds on the critical value of wall velocity parameter. Author

An implicit difference procedure for the solution of equations for a chemically reacting hypersonic boundary layer is described. Difference forms of arbitrary error order in the x and y coordinate plane were used to derive estimates for discretization error. Computational complexity and time were minimized by the use of this difference method and the iteration of the nonlinear boundary layer equations was regulated by discretization error. Velocity and temperature profiles are presented for Mach 20.14 and Mach 18.5; variables are velocity profiles, temperature profiles, mass flow factor, Stanton number, and friction drag coefficient; three figures include numeric data. SPECTRAL METHODS IN FLUID DYNAMICS Final Report
M. Y. Hussaini and T. A. Zang May 1986 63 p refs Sponsored by NASA. Submitted for publication
(Contract NAS1-18107)
(NASA-CR-178103; ICASE-86-25; NAS 1.26:178103) Avail: NTIS HC A04/MF A01 CSCL 20D

Fundamental aspects of spectral methods are introduced. Recent developments in spectral methods are reviewed with an emphasis on collocation techniques. Their applications to both compressible and incompressible flows, to viscous as well as inviscid flows, and also to chemically reacting flows are surveyed. The key role that these methods play in the simulation of stability, transition, and turbulence is brought out. A perspective is provided on some of the obstacles that prohibit a wider use of these methods, and how these obstacles are being overcome. Author

MONOBALL ENERGY TRANSFER: TEST REPORT Final Report, 27 Sep. 1985 - 26 Jun. 1986
Francis C. Wessling Jun. 1986 23 p
(Grant NAG8-046)
(NASA-CR-176812; NAS 1.26:176812) Avail: NTIS HC A02/MF A01 CSCL 20D

An aluminum platform serves as a storage shelf for experiments transported on the space shuttle. This platform is attached to the shuttle storage area through several supports, each consisting of an attachment fitting, a monoball bearing, a clevis pin and a support strut. The experiments must be temperature controlled during and after launch. Consequently, heat loss through the plate, attachment fitting, monoball bearing, and strut are important. The overall conductance of the monoball bearing was determined by an experimental method of heating the outer ring with a nichrome resistance wire and cooling the inner ball with propylene glycol. Temperature differences across the bearing were measured for various heat fluxes. The overall conductance is 0.42 Watts/C (0.80 BTU/hr F), This yields a 16 watt loss for a 38 C temperature difference across the bearing. Author

This collection of papers covers some recent developments in numerical analysis and computational fluid dynamics. Some of these studies are of a fundamental nature. They address basic issues such as intermediate boundary conditions for approximate factorization schemes, existence and uniqueness of steady states for time dependent problems, and pitfalls of implicit time stepping. The other studies deal with modern numerical methods such as total variation diminishing schemes, higher order variants of vortex and particle methods, spectral multidomain techniques, and front tracking techniques. There is also a paper on adaptive grids. The fluid dynamics papers treat the classical problems of imcompressible flows in helically coiled pipes, vortex breakdown, and transonic flows. For individual titles, see N86-26553 through N86-26573.

The time dependent, isentropic, quasi-one-dimensional equations of gas dynamics and other model equations are considered under the constraint of characteristic boundary conditions. Analysis of the time evolution shows how different initial data may lead to different steady states and how seemingly anamolous behavior of the solution may be resolved. Numerical experimentation using time consistent explicit algorithms verifies the conclusions of the analysis. The use of implicit schemes with very large time steps leads to erroneous results. Let u(bar x,t) be a weak solution of the Euler equations, governing the inviscid polytropic gas dynamics; in addition, u(bar x,t) is assumed to respect the usual entropy conditions connected with the conservative Euler equations. It is shown that such entropy solutions of the gas dynamics equations satisfy a minimum entropy principle, namely, that the spatial minimum of the specific entropy is an increasing function of time. This principle equally applies to discrete approximations of the Euler equations such as the Godunov-type and Lax-Friedrichs schemes. The derivation of this minimum principle makes use of the fact that there is a family of generalized entropy functions connected with the conservative Euler equations. Author

Avail: NTIS HC A25/MF A01 CSCL 20D

A multidomain Chebyshev spectral collocation method for solving hyperbolic partial differential equations was developed. Though spectral methods are global methods, an attractive idea is to break a computational domain into several subdomains, and a way to handle the interfaces is described. The multidomain approach offers advantages over the use of a single Chebyshev grid. It allows complex geometries to be covered, and local refinement can be used to resolve important features. For steady-state problems it reduces the stiffness associated with the use of explicit time integration as a relaxation scheme. Furthermore, the proposed method remains spectrally accurate. Results showing performance of the method on one dimensional linear models and one and two dimensional nonlinear gas dynamics problems are presented. Author

Substructuring methods are in common use in structural mechanics problems where typically the associated linear systems of algebraic equations are positive definite. Here these methods are extended to problems which lead to nonpositive definite, nonsymmetric matrices. The extension is based on an algorithm which carries out the block Gauss elimination procedure without the need for interchanges even when a pivot matrix is singular. Examples are provided wherein the method is used in connection with finite element solutions of the stationary Stokes equations and the Helmholtz equation, and dual methods for second-order elliptic equations. The Dean problem of steady viscous flow through a coiled circular pipe is studied numerically for a large range of Dean number and for several coiling ratios. It was found that the solution family, as parameterized by Dean number, has numerous folds or limit points. Four folds and hence five branches of solutions are found. It is speculated that infinitely many solutions can exist in this family for some fixed value(s) of D. More resolution and higher accuracy would be required to justify this conjecture and to find the rule of formation of new solution branches. Author

CALCULATIONS OF THE STABILITY OF SOME AXISYMMETRIC FLOWS PROPOSED AS A MODEL OF VORTEX BREAKDOWN
Nessan Mac Giolla Mhuiris *In its* Advances in Numerical and Applied Mathematics Mar. 1986 p 229-263 (For primary document see N86-26552 17-34)
Avail: NTIS HC A25/MF A01 CSCL 20D

The term vortex breakdown refers to the abrupt and drastic changes of structure that can sometimes occur in swirling flows. It was conjectured that the bubble type of breakdown can be viewed as an axisymmetric wave traveling upstream in a primarily columnar vortex flow. In this scenario the wave's upstream progress is impeded only when it reaches a critical amplitude and it loses stability to some nonaxisymmetric disturbance. The stability of some axisymmetric wavy flows to three dimensional disturbances, viewing the amplitude of the wave as a bifurcation parameter is examined. The stability of a set of related columnar vortex flows, constructed by taking the two dimensional flow at a single axial location and extending it throughout the domain without variation, is investigated. The method used will be to expand the perturbation velocity in a series of divergence free vectors which ensures that the continuity equation for the incompressible fluid is satisfied exactly by the computed velocity field. Projections of the stability equation onto the space of inviscid vector fields eliminated the pressure term from the equation and reduces the differential eigen problem to a generalized matrix eigen problem. Results are presented both for the one dimensional, columnar vortex flows and also for the wavy bubble flow. Author

MULTIGRID METHOD FOR A VORTEX BREAKDOWN SIMULATION
Shlomo Taasan *In its* Advances in Numerical and Applied Mathematics Mar. 1986 p 291-312 (For primary document see N86-26552 17-34)
(Contracts NAS1-17070; NAS1-18107)
Avail: NTIS HC A25/MF A01 CSCL 20D

An inviscid model for a steady axisymmetric flow with swirl was studied. The governing equation is a nonlinear elliptic equation which has more than one solution for a certain range of the swirl parameter. The physically interesting solutions have closed streamlines that look like vortex breakdown (bubblelike solutions). A multigrid method is used to find these solutions. Using an FMG algorithm (nested iteration), the problem is solved in just a few multigrid cycles. Author

The standard point vortex method was recently shown to be of high order of accuracy for problems on the whole plane, when using a uniform initial subdivision for assigning the vorticity to the points. If obstacles are present in the flow, this high order deteriorates to first or second order. Vortex methods which are of arbitrary accuracy (under regularity assumptions) regardless of the presence of bodies and the uniformity of the initial subdivision are introduced. Author

PSEUDO-TIME ALGORITHMS FOR THE NAVIER-STOKES EQUATIONS
R. C. Swanson and E. Turkel (Tel-Aviv Univ., Isreal) *In its* Advances in Numerical and Applied Mathematics Mar. 1986 p 331-359 (For primary document see N86-26552 17-34)
(Contracts NAS1-17070; NAS1-18107)
Avail: NTIS HC A25/MF A01 CSCL 20D

A pseudo-time method is introduced to integrate the compressible Navier-Stokes equations to a steady state. This method is a generalization of a method used by Crocco and also by Allen and Cheng. It is shown that for a simple heat equation that this is just a renormalization of the time. For a convection-diffusion equation the renormalization is dependent only on the viscous terms. The method for the Navier-Stokes equations was implemented using a Runge-Kutta algorithm. This enables the time step to be chosen based on the inviscid model only. The use of residual smoothing when viscous terms are present was discussed. Author

Avail: NTIS HC A25/MF A01 CSCL 20D

The construction and the analysis of essentially nonoscillatory shock capturing methods for the approximation of hyperbolic conservation laws are continued. These schemes share many desirable properties with total variation diminishing (TVD) schemes, but TVD schemes have at most first order accuracy in the sense of truncation error, at extrema of the solution. An hierarchy of uniformly high order accurate approximations of any desired order of accuracy which are tailored to be essentially nonoscillatory are constructed. The design involves an essentially nonoscillatory piecewise polynomial reconstruction of the solution from its cell averages, time evolution through an approximate solution of the resulting initial value problem, and averaging of this approximate solution over each cell. To solve this reconstruction problem, an interpolation technique was used that when applied to piecewise smooth data gives high order accuracy whenever the function is smooth but avoids a Gibbs phenomenon at discontinuities. Avail: NTIS HC A25/MF A01 CSCL 20D

AZTEC (Adaptive Zoom Tracking-Experiment Code) is a code to solve the one-dimensional gas dynamic equations in a variable area duct with specific implementation for plane, cylindrical, and spherical geometries. The program uses a fixed, locally and adaptively refinable grid, together with a set of moving grid points which migrate through the fixed grid. The moving points represent shocks or contact discontinuities, and can be created or destroyed, usually as the result of a collision. The basic difference scheme for both the fixed and moving grid is Godunov's method, with the Riemann solver used to compute both cell boundary fluxes and the speeds of the moving points. Tracking of rarefaction waves on the moving grid is difficult with this method since the waves must be represented as piecewise constant. In one version the polytrophic gas equation of state was replaced by one in which the pressure is a continuous piecewise linear function of specific volume at constant entropy. With this assumption the solution of each Riemann problem is piecewise constant, and the method is exact until the wave structure becomes too complicated. Some preliminary numerical results are exhibited. Author

Avail: NTIS HC A25/MF A01 CSCL 20D

Finite difference approximation of transonic flow problems is a well developed and largely successful approach. Nevertheless, there is still a real need to develop finite element methods for applications arising from fluid-structure interactions and problems with complicated boundaries. A least squares based finite element scheme was introduced. It is shown that, if suitably formulated, such an approach can lead to physically meaningful results. Bottlenecks that arise from such schemes are also discussed. Author

Avail: NTIS HC A25/MF A01 CSCL 20D

Helmholtz type boundary value problems are important in a variety of scattering and diffraction problems. Standard numerical schemes based on finite difference, finite element, or integral equation methods are generally not well suited for these problems in the intermediate frequency range since the oscillatory solution is not accurate approximated by piecewise polynomials. A version of the weak element method is employed to numerically solve these problems in two dimensions. This method consists of partitioning the domain into small elements and locally approximating the solution in each element by a sum of exponentials. These piecewise approximations are joined together at interelement boundaries by continuity conditions for certain functionals of the approximate solution. The method is analyzed using a complementary variational formulation. It is shown that the weak element method is considerably more accurate than standard discretization methods when the solution is adequately approximated locally by the exponential basis functions. These results are validated by numerical experiments. Author

Avail: NTIS HC A25/MF A01 CSCL 20D

A methodology is established to cluster points along curves in a manner which does not change the existing pointwise distribution outside of a specific region containing the cluster. In each instance, points are pulled from the perimeters of the region towards the cluster center. The result is a smooth expansion from each end followed by a compression into the center. Altogether, this represents a local redistribution of points which can be employed either interactively or automatically. Author

Avail: NTIS HC A25/MF A01 CSCL 20D

The problem of a boundary layer on a flat plate which has a constant velocity opposite in direction to that of the uniform mainstream was examined. It was previously shown that the solution of this boundary value problem is crucially dependent on the parameter which is the ratio of the velocity of the plate to the velocity of the free stream. In particular, it was proven that a solutin exists only if this parameter does not exceed a certain critical value, and numerical evidence was adduced to show that this solution is nonunique. Using Crocco formulation the present work proves this solution is nonunique. Also considered are the analyticity of solutions and the derivation of upper bounds on the critical value of wall velocity parameter. Author

COMPARISON OF MEASURED AND COMPUTED BOUNDARY LAYERS AT THE TAIL-END OF TWO AXISYMMETRIC BODIES IN THE ARE QUIET WIND TUNNEL
G. J. Cooper, comp. Jun. 1985 28 p Presented at EC-5 Intern. Workshop on Electron Cyclotron Emission and Electron Cyclotron Heating and Gyrotron User/Developer Meeting, San Diego, Calif., 9-12 Nov. 1985 Sponsored by Admiralty Research Establishment, Teddington, England
(AMTE(N)-TM-84063; BR97645; ESA-86-96849) Avail: Issuing Activity

Velocity profiles measured at the tail end of two axisymmetric bodies are compared with velocity profiles produced by a potential flow and first order boundary layer computer model. The computer program can produce excellent agreement with measured data if the boundary layer transition position can be optimized in the computation. The program is valuable in determining the model and duct configuration most suitable for simulating a particular full scale situation. Preliminary testing of models may be necessary to establish the actual boundary layer transition position, and to change it using a boundary layer trip device, or to optimize the position selected for the computation. ACTIVE CONTROL OF BOUNDARY LAYER TRANSITION AND TURBULENCE Patent Application
Lucio Maestrello, inventor (to NASA) Filed 11 Mar. 1986 13 p (NASA-Case-LAR-13532-1; NAS 1.71:LAR-13532-1; US-Patent-Appl-SN-838649) Avail: NTIS HC A02/MF A01 CSCL 20D

The invention is a system and method for controlling boundary layer flow such that flow separation can be delayed and skin friction drag can be reduced. The invention consists of heater elements used to trigger turbulent flow and audio speakers used to suppress turbulent oscillations. By inducing turbulent oscillations into the flow in a region of positive pressure gradient, pressure patterns became more regular. The suppression of these patterns can be accomplished by imposing an out-of-phase suppressing wave. This wave is the audio output generated by a feedback amplifier using inputs from a hot-wire anemometer reading downstream turbulence. The novel features of the present invention are the tripping of boundary layer flow in a region of positive pressure gradient and the cooperative use of the feedback means to control turbulence. The result is a significant reduction in drag and separation problems. NASA

REGULARITY FOR A SINGULAR CONSERVATION LAW Technical Summary Report
R. E. Meyer Sep. 1985 55 p refs
(Contract DAAG29-80-C-0041; Grant NSF MCS-82-15064)
(AD-A163620; MRC-TSR-2871) Avail: NTIS HC A04/MF A01 CSCL 20/4

The main structure underlying the nonlinearity of conservation laws of gasdynamical type in two independent variables is discussed at the hand of a canonical example describing also properties of water waves near shore. The ultimately singular nature of such laws is here the central issue and calls for an unusual formulation. Attention is directed to the globally strong solutions, and an unusual regularization is employed to make them accessible, after illposedness is overcome. The usual regularity theory is not normally sufficient for singular partial differential equations, and the neccessry additional chapter on extensions to the singular locus is developed in detail for the canonical example. Criteria for the relation between regularized and strong solutions are discussed and used to characterize the class of solutions that are globally strong in the strictest sense. GRA

POINTED BUBBLES RISING IN A TWO-DIMENSIONAL TUBE Technical Summary Report
Jean-Marc Vanden-Broeck Dec. 1985 12 p
(Contract DAAG29-80-C-0041; Grant NSF MCS-80-01960)
(AD-A163624; MRC-TSR-2893) Avail: NTIS HC A02/MF A01 CSCL 20/4

This document considers a periodic array of plane bubbles rising in a gravity field. This configuration can serve as a model for an advanced stage of Rayleigh-Taylor instability. Vanden-Broeck solved the problem numerically and showed that two classes of solutions are possible. One class is characterized by a bubble profile with a continuous slope at the apex of the bubble whereas the other is characterized by the presence of a cusp at the apex. In a recent paper Garabedian and Modi conjectured that solutions with a 120 deg. angle at the apex might also exist. In this paper a scheme is presented to compute such solutions. It is found that a solution exists at a unique Froude number of 0.36. This result does not support Garabedian's conjecture that bubbles with a 120 deg. angle at the apex exist for all values of F between 0.23 and 0.36. GRA

A STUDY OF THE FLUID-DYNAMIC PRESSURE FIELDS ON COMPRESSOR REED VALVES M.S. Thesis
Robert D. Hunt Dec. 1985 120 p refs
(AD-A164102; AFIT/GAE/AA/85D-09) Avail: NTIS HC A06/MF A01 CSCL 20/4

The flow induced pressure field in a reed valve arrangement was analytically predicted and experimentally measured for steady state conditions. The flow was found to be supersonic in nature with an imbedded shock for all but the lowest pressure runs. The analytic method used one-dimensional isentropic and normal shock relations. The technique provides a good first look at the nature of the flow and is compatible for use on a small computer system. The experimental data was obtained by using an idealized reed valve model. The data acquisition system was

computerized and used a scanivalve system to measure the pressure in the valve model. Circular, square, and rectangular valve plate geometries were investigated. The inlet was circular for all cases. Flow visualization oil was also used in a qualitative approach to determine the location and shape of the shock in the flow. The pressure measurements and the flow visualization showed the shock to be circular for all geometries and pressures tested. At high total pressure runs the valve plate began vibrating and the shock location became smeared suggesting the shock was also oscillating. GRA

HYDRAULIC POWER MODULATION LAMINAR PROPORTIONAL AMPLIFIER DEVELOPMENT
K. M. Lee and D. N. Wormley Nov. 1985 88 p
(Contract DAAK21-81-C-0122; DA Proj. 1L1-61102-AH-44)
(AD-A163390; HDL-CR-85-122-1) Avail: NTIS HC A05/MF A01 CSCL 20/4

A basic analytical and experimental study of the influence of geometry on laminar proportional fluidic amplifier characteristics has been conducted. Performance characteristics for current HDL C-Format amplifier designs as well as new configurations have been determined to identify the design tradeoffs among characteristics including blocked load gain, pressure recovery, flow recovery, efficiency, laminar operating range and dynamic response. The results of the study have led to the development and testing of a laminar proportional amplifier (LPA) specifically designed for power modulation applications. The power modulation amplifier has a nozzle to splitter distance which is 37.5 percent of the standard LPA design and as a result has a blocked load pressure gain which is approximately 35 percent of that of the standard LPA, but has a pressure recovery, 1.35 times and efficiency double the respective values of the standard LPA. In addition, the power modulation LPA has an increased operating range with respect to temperature variations and increased dynamic response with an increase in the frequency at which 90 degrees phase shift occurs in the frequency response by a factor of 2.6. The increased pressure recovery and efficiency can lead to reductions in fluidic system size and weight for applications in which power modulation is of prime importance. GRA

SUMMER STUDY PROGRAM IN GEOPHYSICAL FLUID DYNAMICS, WOODS HOLE OCEANOGRAPHIC INSTITUTION: CHAOS
George Veronis and Linda M. Hudon Nov. 1985 280 p refs
(Contract N00014-82-G-0079; Grants NSF MSC-82-000450; NSF DMS-85-04166)
(AD-A164601; WHOI-85-36) Avail: NTIS HC A13/MF A01 CSCL 20/4

The explosive growth of dynamical system theory stems in large part from the realization that it is applicable to many natural phenomena. Indeed, much of the theoretical development has been sparked by numerical and laboratory experiments which exhibit ordered sequences of behavior that call for a general framework of interpretation. Five lectures exposed us to elementaty examples of bifurcation and chaos, to symmetry breaking, normal forms and temporal and spatial disorder, as well as to pertinent fluid mechanical and astrophysical phenomena. In addition are the development with an elegant summary of different types of intermittency; Seminars on phase instability and turbulence as an extension of the lecture series; and the fascinating correspondence between the frequencies observed in one recent fluid mechanics experiment, and results from number theory relating the Fibonacci series to the golden mean. VORTICITY OPTICAL PROBE Final Technical Report, 1 Jun. 1983 - 14 Apr. 1985
14 Apr. 1985 9 p refs
(Contract N00014-83-K-0460)
(AD-A164619) Avail: NTIS HC A02/MF A01 CSCL 20/4

The design, construction, and testing of a new scale flow system is discussed. It appears from preliminary examination that this flow system generates a turbulent boundary layer suitable for wide ranging study of vorticity dynamics. Verification that the flow exhibits normal boundary layer characteristics with both flow visualization and hot-film anemometry is under way. The Vorticity Optical Probe (VOP) provides a measure of local vorticity fluctuations. Ideally, the study of boundary layer turbulence would be conducted on a smooth flat plate with uniform flow at infinity, no plate end effects, and neglegible disturbance by extended flow structures and background turbulence in the incident flow. To minimize the scale and cost of the tunnel, compromises were required. Nonetheless, it was our goal to simulate the above free boundary layer conditions, to the maximum extent that this is possible in a modest scale flow tunnel suited to application of the VOP geometry using the available technical experience, in order to confirm the precision and accuracy of the probe for study of the vorticity dynamics of both transitional and turbulent flow and to carry out precise studies on well defined flows. INFINITE ELEMENTS FOR TWO-DIMENSIONAL FLUID-STRUCTURE INTERACTION PROBLEMS
Erwin A. Schroeder Feb. 1986 22 p
(AD-A164749; DTNSRDC-86/001) Avail: NTIS HC A02/MF A01 CSCL 13/10

This report describes an effective method for using two-dimensional infinite elements to compute acoustic or magnetic fields in the unbounded fluid region surrounding a submerged vehicle. In this method, finite elements represent the bounded region containing the vehicle and may also be used to represent a layer of fluid surrounding the vehicle. Infinite elements are used to represent the unbounded exterior region. Since infinite elements are not bounded, their shape functions are chosen to contain decay factors to produce convergent integrals. If, from physical or other considerations, the order of decay of the solution as the radius increases is known, infinite elements should be chosen with the same order of decay. The results obtained in this study were found to be within 2% when the decay factor of infinite elements matched that of the solution. However, for other problems, the order of decay of the solution may not be known in advance, and, therefore, it may not be possible to match the two rates of decay. For such cases, the errors were found to be as large as 20%. In such situations, a layer of finite fluid elements, two elements thick around the structure, reduced the errors to less than 3.5% for the modes and decay factors tested. GRA

THREE-DIMENSIONAL SEPARATION AND VORTICAL WAKES OVER A PROLATE SPHEROID Final Report
Demetri P. Telionis and Christopher E. Costis Sep. 1985 51 p
(Contract N00167-84-C-0044)
(AD-A164781; VPI-E-86-1; DTNSRDC/ASED-CR-01-85) Avail: NTIS HC A04/MF A01 CSCL 20/4

A vortex lattice code was developed to generate potential flow solutions over three dimensional bodies. An approximate boundary layer technique is incorporated to allow the calculation of the line separation. The separated vortex sheets are modeled in terms of a vortex grid which is convected with the flow. Special conditions at separation determine the strength of nascent vorticity. Viscous inviscid interaction in three dimensions allows the accurate prediction of the line of separation and the pressure distribution over the attached flow region. GRA

ANNUAL PROGRESS REPORT, 1 JUNE 1984-31 MAY 1985
Nicolaides Nov. 1985 6 p Submitted for publication
(Grant AF-AFOSR-0137-84)
(AD-A164853; AFOSR-86-0001TR) Avail: NTIS HC A02/MF A01 CSCL 20/4

The use of certain nonconforming schemes for solving

viscous incompressible flow problems was put on a rigorous foundation, and the resulting theory was used to construct new convergent schemes. The investigator was able to show that a certain nonconforming quadratic element actually has the same accuracy as a well known nonconforming cubic. This is of great practical significance because the costs of implementing the quadratic elements are far less than those for cubics. GRA

FREE GYROSCOPE EXPERIMENTS OF TWO IMMISCIBLE LIQUIDS IN A PARTIALLY FILLED CYLINDER Final Report
Lyle D. Kayser, William P. DAmico, Jr., and William I. Brannan Dec. 1985 30 p
(AD-A164937; BRL-MR-3484) Avail: NTIS HC A03/MF A01 CSCL 20/4

Gyroscope experiments have been conducted to measure the yaw growth rate in a cylinder filled with two immiscible liquids (silicone oil and water). The experimental data were obtained by measuring the yaw history was processed to obtain the yaw growth rate induced by the liquid. Yaw histories were obtained for a 90% filled cylinder (height - 25.78 cm and diameter = 8.24 cm) spinning at 50 rev/sec. The aspect ratio (height/diameter) of the cylinder was 3.126. The composition of the liquid payload was changed by varying the oil to water ratios - ratios of 100/0, 85/15, 75/25, 30/70, 15/85, and 0/100 were tested. The experimental data were found to be consistent with a recent theory by Murphy. However, a small, but consistent, bias was observed between the measured and predicted values of yaw frequency at the maximum growth rate; the experimental values were slightly larger. Author (GRA)

A PHYSICAL MODEL AND CONSERVATION EQUATION FOR DYNAMIC SOLID-LIQUID BEHAVIOR Progress Report, Aug. 1983 - Apr. 1985
John N. Majerus Feb. 1986 102 p
(Contract DAAK11-83-K-0009)
(AD-A165295; BRL-CR-551) Avail: NTIS HC A06/MF A01 CSCL 20/4

A self-consistent set of equations were developed for 3-D penetration problems. The set of equations includes polymorphic and thermodynamic phase changes, finite material extensions and rotations between time-steps, thermal softening, Hugioniot volumetric relationships, strain and strain-rate dependency for elastic-viscoplastic deviatoric behavior, generalized inertial forces, and conductive, convective and radiation heat fluxes. Continuous mapping between fluid and solid states were obtained by selecting velocity and temperature as the primary variables. The resulting set of mass, linear momentum and energy equations form a coupled set of differential and integral-differential equations. These equations were approximated by discretizing in both time and space via the method of weighted residuals using piecewise continuous weighting and trial functions. A quadratic time-element was assumed and a wide variety of algebraic recursion relationships were derived for the corresponding implicit solution schemes. In order to quickly evaluate any of these solution schemes, a new concept entitled creation and annihilation was introduced where geometric sub-regions are added to, and subtracted from, the geometric problem during the penetration process. EFFECT OF LIQUID COMPOSITION ON ENHANCED FLOW DUE TO SURFACE SHEAR IN THE CONTACT LINE REGION: CONSTANT VAPOR PRESSURE BOUNDARY CONDITION
P. C. Wayner, Jr. and C. J. Parks 1985 8 p
(Contract DAAG29-83-K-0058)
(AD-A165545; ARO-19879.17-EG) Avail: NTIS HC A02/MF A01 CSCL 07/4

The physicochemical phenomena associated with fluid flow in an evaporating ultrathin film of an ideal binary mixture in the contact line region are discussed. The effect of composition and temperature gradients on surface shear is analyzed and the results are compared with experimental trends. Although simple in concept, the constant vapor pressure boundary condition appears to be very useful in delineating the relative effects of surface tension, temperature and composition on fluid flow due to surface tension gradients in general. ENERGY DEPOSITION, HEAT FLOW AND RAPID SOLIDIFICATION DURING LASER AND ELECTRON BEAM IRRADIATION OF MATERIALS
C. W. White and M. J. Aziz Oct. 1985 57 p Presented at the ASM Metals Congress - International Conference on Surface Modifications, Toronto, Ontario, 13 Oct. 1985
(Contract DE-AC05-84OR-21400)
(DE86-002240; CONF-8510160-7) Avail: NTIS HC A04/MF A01

The fundamentals of energy deposition, heat flow, and rapid solidification during energy deposition from lasers and electron beams is reviewed. Emphasis is placed on the deposition of energy from pulsed sources (10 to 100 ns pulse duration time) in order to achieve high heating and cooling rates (10(8) to 10(10) (0)C/s) in the near surface region. The response of both metals and semiconductors to pulse energy deposition is considered. Guidelines are presented for the choice of energy source, wavelength, and pulse duration time. DOE

HEAT PUMP STRATEGY AT THE NEVADA TEST SITE
R. E. Davis 1985 4 p Presented at the 8th World Engineering Congress, Atlanta, Ga., 22 Oct. 1985
(Contract DE-AC08-76NV-00020)
(DE85-013669; CONF-851002-1) Avail: NTIS HC A02/MF A01

The high desert location of the Nevada Test Site (NTS) provides both high and low temperature extremes during the course of a year. The remoteness of the NTS resulted in the selection of electricity as the principal energy source for environmental conditioning systems. These two factors have led the facility designers at the NTS to select the technology of heat pumps as the principal means of providing air conditioning for new facilities. This paper discusses the installations of heat pumps at the NTS over the past five years. Air-to-air heat pumps installed at the NTS include split systems, single package systems, and through-the-wall systems. A large central plant closed cycle water-to-air heat pump system is also described. The results of a recent analysis of an open cycle water source heat pump system are also presented. DOE

TOPAZ3D: A THREE-DIMENSIONAL FINITE ELEMENT HEAT TRANSFER CODE
A. B. Shapiro Aug. 1985 61 p
(Contract W-7405-eng-48)
(DE85-017878; UCID-20484) Avail: NTIS HC A04/MF A01

TOPAZ3D is a three dimensional implicit finite element computer code for heat transfer analysis. A user's manual for TOPAZ3D is provided as is a description of the numerical algorithms used. Sample problems with analytical solutions are presented. TOPAZ3D was implemented on the Cray and Vax computers. TOPAZ3D can be used to solve for the steady state or transient temperature field on three dimensional geometries. Material properties may be temperature dependent and either isotropic or orthotropic. A variety of time and temperature dependent boundary conditions can be specified including temperature, flux, convection, and radiation. By implementing the user subroutine feature, users can model chemical reaction kinetics and allow for any type of functional representation of boundary conditions and internal heat generation. TOPAZ3D can solve problems of diffuse and specular band radiation in an enclosure coupled with conduction in the material surround the enclosure. Additional features include thermal contact resistance across an interface, bulk fluids, phase change, and energy balances. Thermal stresses can be calculated using the solid mechanics code NIKE3D which reads

the temperature state data calculated by TOPAZ3D. TOPAZ3D is an extension of the two dimensional heat transfer code TOPAZ to three dimensions. DOE

(Contract W-7405-eng-36)
(DE86-005003; LA-tr-86-1) Avail: NTIS HC A02/MF A01

A new technique is described for the numerical investigation of time-dependent elastic-plastic flow with sliding interfaces. The Lagrangian equations of sliding motion are derived analytically; detailed results for sliding interfaces are described. Numerical simulation results of a standard cylinder test are in good agreement with experimental data. In the problem of two-dimensional unsteady flow, sliding (contact interruption) is a kind of mechanical phenomenon frequently occurred. On a sliding plane, the normal-direction velocity of the sliding object is continuous while the tangential-direction velocity is interrupted. The differential equation for motion does not apply, therefore another group of sliding-motion equations should be used instead. In the paper, the following conditions are assumed: elastic-plastic flow, and frictionless (nonviscous) sliding plane. An analysis method is used to derive the sliding motion equations. In addition, a type of difference model is presented for the sliding motion equations. Finally, an example is given for numerical calculation. DOE

US-Patent-Class-73-863.72) Avail: US Patent and Trademark Office CSCL 14B

A fluid sampler for collecting a plurality of discrete samples over separate time intervals is described. The sampler comprises a sample assembly having an inlet and a plurality of discreet sample tubes each of which has inlet and outlet sides. A multiport dual acting valve is provided in the sampler in order to sequentially pass air from the sample inlet into the selected sample tubes. The sample tubes extend longitudinally of the housing and are located about the outer periphery thereof so that upon removal of an enclosure cover, they are readily accessible for operation of the sampler in an analysis mode.

PLANAR OSCILLATORY STIRRING APPARATUS Patent Application
Martin F. Wolf, inventor (to NASA) (Stanford Univ., Calif.) Filed 15 Aug. 1985 15 p

(Contract NAS8-34872)
(NASA-Case-MFS-26002-1-CU; NAS 1.71:MFS-26002-1-CU; US-Patent-Appl-SN-765991) Avail: NTIS HC A02/MF A01 CSCL 14B

The present invention is directed to an apparatus for stirring materials using planar orthogonal axes oscillations. The apparatus has a movable slide plate sandwiched between two fixed parallel support plates. Pressurized air is supplied to the movable slide plate which employs a tri-arm air bearing vent structure which allows the slide plate to float and to translate between the parallel support plates. The container having a material to be stirred is secured to the upper surface of the slide plate through an aperture in the upper support plate. A motor driven eccentric shaft loosely extends into a center hole bearing of the slide plate to cause the horizontal oscillations. Novelty lies in the combination of elements which exploits the discovery that low frequency, orthogonal oscillations applied horizontally to a Bridgman crucible provides a very rigorous stirring action, comparable with and more effective by an order of magnitude than the accelerated crucible rotation technique. POLARIZATION MODULATED ELLIPSOMETRY Final Report
James L. Lauer and Norbert Marxer 10 Jul. 1986 114 p
(Grant NAG3-222)
(NASA-CR-177264; NAS 1.26:177264) Avail: NTIS HC A06/MF A01 CSCL 14B

For the investigation of the composition and thickness of thin nonuniform films on bearing and other tribological surfaces an automated ellipsometer was built, which is extremely sensitive to relative changes in thickness and composition of surface films. These changes can be seen by scanning across the surface with 20 micrometer lateral resolution. By measuring at different angles of incidence one can determine the film thickness and identify the material of the film by its complex index of refraction. For the analysis of organic layers on top of several metallic layers it was necessary to develop mathematical procedures to increase the absolute precision of the instrument. The ellipsometer is described in detail, and the precision is discussed. The actual performance of the ellipsometer was tested on three experiments. In the first one the composition and thickness of patches of an oxide film inside a wear track were determined. In the second the thickness of a carbon overcoat sputtered on a computer disk was measured: the carbon was identified as graphitic and of random orientation. In the third thickness of silicon oxide on top of a silicon substrate was found. Important features of this apparatus are: (1) accurate settings of the polarization stages and the angle of incidence (both automated); (2) high precision in the determination of the ellipsometric parameters without calibration prior to an experiment; and (3) very accurate scanning modes with high spatial resolution. DEVELOPMENT OF A TESTBED FOR MULTISENSOR DISTRIBUTED DECISION ALGORITHMS M.S. Thesis
Mark A. Schon Dec. 1985 85 p refs
(AD-A164487; AD-E900539) Avail: NTIS HC A05/MF A01 CSCL 09/2

Distributed decision problems arise when two or more sensors viewing the same phenomenon must work cooperatively to draw inferences about the observed situation. Typical examples are in target detection and target classification. Such problems are characterized by distributed processing of information and communication between processors over a limited bandwidth data link. This thesis presents some statistical distributed decision algorithms and describes the implementation of one of them on a set of loosely coupled multiprocessor clusters which simulate the distributed environment characterizing multisensor decision roblems. IMPROVED DESIGNS FOR ISOCON CAMERAS IN HERTR SYSTEMS Final Report, 4 Dec. 1984 - 22 May 1985
Joseph J. Stafford 7 Jun. 1985 28 p refs
(Contract N60921-85-C-0063)
(AD-A164627; NSWC-TR-85-382) Avail: NTIS HC A03/MF A01 CSCL 17/8

The HERTR imaging systems are experiencing Isocon tube failures at a rate which is not typical of more intensely used imaging systems containing Isocon tubes. Heat is the usual cause for early Isocon tube failures. A HERTR system was visited and it was decided that, indeed, heat was the probable cause for a failure. A mechanical design was prepared which was as similar as possible to the major confining structure surrounding the HERTR camera. In subsequent tests with the duplicate structure, the thermal failure mode was duplicated without continuing the tests to completion. A design change was initiated and tested with the duplicate system. Thermal characteristics of the altered system were measured. Additional deficiencies in the HERTR imaging system were noted during the course of the visit to the HERTR site. These deficiencies are also described in this report. Recommendations are made to alter the HERTR design to include the modifications made to the duplicate camera design. In the short term these modifications are simple and inexpensive to implement. Recommendations are also included for an extensive modification to high energy imaging systems, particularly those subject to pulsed operating conditions and to those operating in photon limited situations which is usual in X-ray imaging systems. AN EVALUATION OF THE CAPABILITY OF THE SURFACE CONDITION ANALYZER (SCAN) SENSORS TO MEASURE RUNWAY WATER DEPTH Final Report, Mar. 1981 - Jan. 1986
C. W. Rogers, E. J. Mack, and B. J. Wattle Jan. 1986 58 p
(Contract N00014-81-C-0443)
(AD-A164719; CALSPAN-6857-M-1) Avail: NTIS HC A04/MF A01 CSCL 14/2

Field tests of Surface Systems, Inc.'s Surface Condition Analyzer's (SCAN) capability to measure runway water depth during rainfall events were performed at the Spirit of St. Louis Airfield, St. Louis, Mo., during March-May of 1985. These limited tests were scheduled to provide data in real rainfall events and to answer questions of sensor capability relative to true runway water depth and or sensor installation and siting protocol--i.e., should the sensor surface be horizontal or flush relative to a sloping runway surface. Field calibration checks showed that sensors installed in the runway surface can measure in-situ water depth in the range 0.030 to 0.40 inches (+ or = 0.01 inches). In real rainfall with rates ranging from 0.30 inches/hour (very light) to 6.0 inches/hour (heavy), it was found that the sensor-measured water depth correlated very well with an independently measured water depth over the range 0.03 to 0.10 inches (maximum observed).

At the lower end of this range, both sensors measured the same water depth, while at the top end, the sloping, flush-mounted sensor indicated only about 75% of the water depth measured independently and by the horizontally mounted sensor. GRA

DTNSRDC THREE COMPONENT LASER DOPPLER VELOCIMETRY: TOWING TANK SYSTEM MEASUREMENT ERRORS Final Report
David J. Fry 1 Oct. 1985 142 p
(AD-A164743; DTNSRDC/SPD-1163-03) Avail: NTIS HC A07/MF A01 CSCL 14/2

A three-component Laser Doppler Velocimetry (LDV) system is tested. Thirteen measurement errors are quantified in terms of: velocity field characteristics, LDV equipment design, and user chosen system operating parameters. Operating parameter effects on measurement error are emphasized because usually they are the only way an experimenter can control errors. Background sections and appendixes explain in considerable detail, the origin of these measurement errors. First, the operating parameter choices for the towing tank LDV system are listed with a description of how they affect measurements. Then, each of the measurement errors is discussed, and this helps establish a functional relationship to operating parameters, LDV equipment design, and flow field characteristics. GRA

DTNSRDC THREE COMPONENT LASER DOPPLER VELOCIMETRY: MEAN VELOCITY DATA ANALYSIS
David J. Fry 10 Oct. 1985 130 p
(AD-A164744; DTNSRDC/SPD-1163-02) Avail: NTIS HC A07/MF A01 CSCL 14/2

This report describes how the columinous amount of data from Laser Doppler Velocimetry (LDV) experiments can be distilled to produce useful and comprehendable results. The procedures draw heavily on the experience and development work done in implementing three component LDV systems for the towing tanks and large wind tunnels of the David Taylor Naval Ship Research and Development Center. The standard procedures and computer software described are meant to reduce the time needed to analyze and report LDV experiments. The procedures address data collection, data calibration, measurement error estimation, data display graphics, and short and long term data storage. GRA

A STUDY OF THE OPTIMIZATION PROBLEM FOR CALIBRATING A LACOSTE AND ROMBERG G GRAVITY METER TO DETERMINE CIRCULAR ERRORS
Dingbo Chao and Edward M. Baker Sep. 1985 102 p
(Contract F19628-82-K-0017)
(AD-A165218; OSU/DGSS-364; AFGL-TR-85-0208; SR-9) Avail: NTIS HC A06/MF A01 CSCL 08/5

This report discusses how the circular errors of a gravity meter could be effectively calibrated in a laboratory. Minimization of the trace of the variance-covariance matrix of adjusted parameters, is adopted as the criterion for the optimization. The mathematical analysis of the trace is made in the case of one wavelength in order to find the best distribution of observations, as well as the worst. For several wavelengths, a number of simulative computations are carried out for finding effective distribution of observations and the best and worst weights. A set of numerical solutions for the equations over a certain range of observations is obtained. Based on the simulative studies, the concepts of phase distribution and effectiveness of observations in the periodic error calibration are presented and so a design for the most effective distribution of observations is introduced. For the calibration of periodic errors with several wavelengths, it is preferable to select two weights that can be mutually compensated in fitting them with all involved periods. An attempt is made to answer how many observations should be made for determining the periodic screw errors with reasonable accuracy. GRA

CONCEPTUAL DEVELOPMENT OF STRAIN-GAGE SIGNAL INTERPRETATION SYSTEM FOR JET ENGINE APPLICATIONS Final Report, Feb. 1983 - Mar. 1985
Ray M. Chi, Deborah C. Haas, William C. McClurg, and Philip E. Zwicke Oct. 1985 157 p
(Contract F33615-82-C-2263)
(AD-A165489; UTRC/R85-956394-R1; AFWAL-TR-85-2052) Avail: NTIS HC A08/MF A01 CSCL 21/5

This study sought to define the hardware/software configurations of an expert system capable of monitoring and interpreting strain-gage signals from jet engine compressor stages and immediately taking necessary evasive actions to ensure rig safety. First, a comprehensive strain-gage data bank was generated that contains all major categories of aeromechanical phenomena and noise signals from fan and compressor stages of various engines. These data were analyzed in both time and frequency domains to identify significant signal features for various types of aeromechanical phenomena and noise. These individual signal features were combined with spatial (interblade and interstage), temporal and other syntactic features to form a complete feature set for each aeromechanical phenomenon or noise type. These feature sets were then used in a three level classifier system to determine the probability values of each possible aeromechanical phenomenon and noise type. The first classification uses only the individual strain gage feature to determine the category probability for each phenomena and noise type. The second level uses the spatial features to refine the category pseudo-probability values and yield the event probability values. The third level combines the temporal features with the ev ent probability values to yield the final probabilities based on which decisions are made on the type of actions to be taken to ensure rig safety. GRATING INTERFEROMETRIC SENSORS Final Technical Report, 1 Sep. 1982 - 31 Oct. 1985
Anthony M. Tai Feb. 1986 92 p refs
(Contract DAAG29-82-K-0173)
(AD-A165593; ERIM-163700-12-F; ARO-18491.6-PH) Avail: NTIS HC A05/MF A01 CSCL 17/5

A new class of grating-based interferometric sensors is introduced for target discrimination, detection and passive synthetic aperture imaging. It is shown that the grating-based interferometric sensors provide superior system sensitivity and flexibility. Several design approaches and operating modes of the grating interferometric sensors are presented and experiments demonstrating the proposed system concepts are described. We have examined the uses of a grating interferometer for passive synthetic aperture imaging to achieve imaging resolution beyond that permitted by the collection aperture and as a moving target sensor to detect the presence of moving targets that are too small to be resolved. We have shown that the achromaticity of the grating interferometer allows the use of a wider instantaneous spectral bandwidth which in turn provides a better system sensitivity than conventional systems. In addition, the grating interferometer offers a simple means to achieve two-dimensional aperture fill and it is more tolerant to system vibration. GRA

THREE-DIMENSIONAL SIMULATIONS OF AN XUV FREE-ELECTRON LASER
J. C. Goldstein, B. D. McVey, and B. E. Newnam 1985 12 p refs Presented at the International Conference on Insertion Devices for Synchrotron Sources, Stanford, Calif., 27-30 Oct. 1985
(Contract W-7405-eng-36)
(DE86-003654; LA-UR-85-4092; CONF-8510186-4) Avail: NTIS HC A02/MF A01

Operation of free-electron lasers (FEL) at long optical wavelengths (greater than or equal to 600 nm) has now been successfully demonstrated at several laboratories. To operate an FEL at shorter wavelengths imposes constraints on the brightness of the electron beam which are difficult to achieve. Until recently, it was perceived that only an electron storage ring could satisfy these beam requirements. However, our previous 1-D theoretical calculations revealed that modest improvements in the emittance available from rf-linear accelerators would be sufficient to allow operation of an FEL in the XUV spectral range (greater than or equal to 50 nm). We shall present new theoretical results for the design of a linac-driven XUV FEL derived from an improved simulation model. The model is fully three-dimensional in its treatment of the undulator magnetic field, the optical radiation field, and the motion of electrons in a finite-emittance beam. Furthermore, the model computes self-consistently the motion of the electrons and the amplification, diffraction, and the refraction of the light within the undulator magnet. Propagation of the optical beam and reflection at the mirrors of the optical resonator are incorporated in the model so that a complete laser oscillator solution can be generated. The computed performance parameters of a particular XUV FEL oscillator design will be compared with the output of synchrotron radiation sources. DOE

KrF LASERS AS INERTIAL FUSION DRIVERS
D. B. Harris, R. R. Berggren, N. A. Kurnit, D. D. Lowenthal, R. G. Berger, J. M. Eggleston, J. J. Ewing, and M. J. Kushner 1985 37 p Presented at the 11th Symposium on Fusion Engineering, Austin, Tex., 18-28 Nov. 1985 Prepared in cooperation with Spectra Technology, Inc., Bellevue, Wash.
(Contract W-7405-eng-36)
(DE86-003667; LA-UR-85-4019; CONF-851102-34) Avail: NTIS HC A03/MF A01

A new type of KrF laser system has been proposed that has a significantly higher efficiency than pure angular multiplexed KrF lasers. This system uses electron-beam-sustained discharge lasers to pump a high gain Raman amplifier. The discharge lasers can operate at a higher efficiency than e-beam pumped lasers, and the forward Raman scattering process has both a high gain and high quantum efficiency using the rotational transition. The Raman system cost and performance has been examined and compared to the pure angular multiplexed system. The discharge-Raman system has a higher efficiency (12.3% vs 9.1%) and a higher cost ($140/joule vs $100/joule). For an ICF power plant driver, the higher efficiency offsets the higher cost, making the discharge-Raman system appear to be an attractive alternative to the pure angular multiplexed system. DOE

TRANSIENT CONDUCTANCE MEASUREMENTS AND HEAT-FLOW ANALYSIS OF PULSED-LASER-INDUCED MELTING OF ALUMINUM THIN FILMS
J. Y. Tsao, S. T. Picraux, P. S. Peercy, and M. O. Thompson 1985 7 p Presented at the Materials Research Society Meeting Prepared in cooperation with Cornell Univ., Ithaca, N.Y.
(Contract DE-AC04-76DP-00789)
(DE86-003928; SAND-85-1397C; CONF-851217-12) Avail: NTIS HC A02/MF A01

We report time-resolved electrical-resistance measurements during pulsed-laser melting of a metal, aluminum. The resistances are correlated with the thresholds for partial and full melting. We describe a semi-analytic solution, based on an impulse-response function, for the response, to a heating pulse, of a thin film of good thermal conductor supported by an infinite substrate. The results agree well with the resistance measurements, and confirm our interpretation of the data. In addition, time-resolved reflectance measurements establishing that, in this geometry, melting and solidification proceed via the motion of a well-defined, planar liquid/solid interface, whose position can be deduced from the resistance measurements. These measurements permit the first real-time determinations of melt-depths and quenching histories during rapid-solidification processing of metals. DOE

TRANSIENT ANALYSIS OF A BUNCHED BEAM FREE ELECTRON LASER
J. M. Wang and L. H. Yu 1985 12 p Presented at the 7th International FEL Conference, Tahoe City, Calif., 8-13 Sep. 1985
(Contract DE-AC02-76CH-00016)
(DE86-003372; BNL-37139; CONF-850956-13) Avail: NTIS HC A02/MF A01

The problem of the bunched beam operation of a free electron laser was studied. Assuming the electron beam to be initially monoenergetic, the Maxwell-Vlasov equations describing the system reduce to a third order partial differential equation for the envelope of the emitted light. The Green's function corresponding to an arbitrary shape of the electron bunch, which describes the transient behavior of the system, is obtained. The Green's function was used to discuss the start up problem as well as the power output and the power spectrum of a self-amplified spontaneous emission. DOE

A MODEL FOR THE KINETICS OF A SOLAR-PUMPED LONG PATH LASER EXPERIMENT
Larry V. Stock (Hampton Inst., Va.), John W. Wilson, and Russell J. DeYoung May 1986 33 p refs
(Grant NAG1-411)
(NASA-TM-87668; NAS 1.26:87668) Avail: NTIS HC A03/MF A01 CSCL 20E

A kinetic model for a solar-simulator pumped iodine laser system is developed and compared to an experiment in which the solar simulator output is dispersed over a large active volume (150 cu cm) with low simulator light intensity (approx. 200 solar constants). A trace foreign gas which quenches the upper level is introduced into the model. Furthermore, a constant representing optical absorption of the stimulated emission is introduced, in addition to a constant representing the scattering at each of the mirrors, via the optical cavity time constant. The non-uniform heating of the gas is treated as well as the pressure change as a function of time within the cavity. With these new phenomena introduced into the kinetic model, a best reasonable fit to the experimental data is found by adjusting the reaction rate coefficients within the range of known uncertainty by numerical methods giving a new bound within this range of uncertainty. The experimental parameters modeled are the lasing time, laser pulse energy, and time to laser threshold. Author

ELECTRON MICROPULSE DIAGNOSTICS AND RESULTS FOR THE LOS ALAMOS FREE-ELECTRON LASER
W. E. Stein and R. L. Sheffield 1985 19 p refs Presented at the 7th International Free-Electron Laser Conference, Tahoe City, Calif., 8 Sep. 1985
(Contract W-7405-eng-36)
(DE86-003690; LA-UR-85-3167; CONF-850956-14) Avail: NTIS HC A02/MF A01

The electron beam diagnostic used in the Los Alamos free-electron laser are described. These include the standard beam-current,-position and -profile monitors as well as more elaborate energy and temporal spectrometers. Emphasis is given to the latter devices, which provide three-dimensional representations of the electron beam current as a function of energy and time in the picosecond region. These results were used to determine the performance of the accelerator and the laser. Crucial accelerator parameters were the energy spread and temporal shape of the micropulse. Essential laser parameters were the extraction efficiency and the duration of lasing during an individual micropulse. DOE

PROPOSAL FOR FEL EXPERIMENTS DRIVEN BY THE NATIONAL BUREAU OF STANDARDS' CW MICROTRON Memorandum Report, Oct. 1984 - Sep. 1985
Cha-Mei Tang, P. Sprangle, S. Penner, B. M. Kincaid, and R. R. Freeman 31 Dec. 1985 11 p
(AD-A163227; NRL-MR-5709) Avail: NTIS HC A02/MF A01 CSCL 20/5

Free Electron Laser experiments driven by the race-track microtron (RTM) are proposed. The design of RTM has many exceptional properties: (1) normalized transverse emittance of 10 mm mrad, comparable to a storage ring; (2) axial emittance less than 30 keV-degree, much superior to r.f. linacs; (3) electron energy tunable from 20 to approximately 200 MeV; (4) CW operation; (5) energy stability; (6) compactness; and (7) high power-conversion efficiency. Accelerator up-grades to increase the peak current and to recover a significant part of the electron beam energy are also proposed. It seems possible to obtain peak current of I sub p = 5-10A, for electron pulse length of leb greater than approx. 1.2 mm. We have made conservative estimates based on I sub p = 1.0 A in estimating the performance of the FELs to be used with the RTM. Low gain calculations indicate that the FEL can oscillate at the fundamental wavelength ranging from 0.15 to 100 micrometers. Furthermore, we will outline experiments to generate harmonics in the extreme ultraviolet radiation. GRA

INITIATOR DURATION EFFECT ON PULSED CHAIN REACTION CHEMICAL LASER SCALING LAWS
Harold Mirels 15 Nov. 1985 52 p
(Contract F04701-85-C-0086)
(AD-A163387; TR-0086(6930-01)-3; SD-TR-85-82) Avail: NTIS HC A04/MF A01 CSCL 20/5

The effect of initiator pulse duration on the performance of a pulsed chain reaction chemical laser is investigated using a two-level vibrational model. Analytic results are presented for a saturated laser in the limits of weak and strong initiation. The initiator is assumed to provide a uniform (e.g., electron beam), parabolic (e.g., flash lamp), or power law variation of F-atom production rate F sub B with time. Laser performance is presented as a function of t sub b/t sub e where t sub B and t sub e are initiator and laser pulse times, respectively. In the weak initiation regime, an increase of t sub B/t sub e from zero to one results in a decrement in laser output energy of 20 and 33-1/3% for a flash lamp and electron-beam initiator, respectively. In the strong initiation regime, an increase of t sub B/t sub e from zero to one results in an energy decrement of only 5 and 10% for a flash lamp and electron-beam initiator, respectively. In each case, the laser pulse time t sub e is increased by a factor of two as t sub B/t sub e increases from zero to one. GRA

HC A03/MF A01 CSCL 20/5

A high power blue-green laser was pumped with an array of the dense plasma focus. As the result of optimizing the operating conditions of the dense plasma focus and laser system, the maximum untuned laser output exceeded 2.1mJ corresponding to the energy density 3J/cu cm which is much higher than the typical flashlamp dye laser. The optimum operating conditions of the DPF device and laser system were argon pressure 0.3 torr, dye concentration 6 x 0.0001 mol/liter and 10% output transmission mirror. In order to enhance the efficiency of a blue-green laser through spectrum conversion of the pumping light, a converter dye, BBQ, was mixed in the laser dye solutions. The laser was pumped with the hypocyloidal-pinch plasma radiation source. The maximum increase of laser output at the dye mixture of LD490+BBQ or coumarin 503+bbq was about 80%. The enhancement is mainly due to the abundance of near uv in the pumping source, the fairly good match of the fluorescence band of converter dye with the absorption band of the laser dye, and a small overlap of fluorescence band of laser dyes with triplet-triplet adsorption band of converter dye. The results of a thermodynamic cycle (SFC) and weight analysis performed to establish engine configuration, size, weight and performance are reported. Baseline design configuration was a 2,000 hour MTBO Compound Cycle Engine (CCE) for a helicopter application. The CCE configuration was extrapolated out to a 10,000 MTBO for a shipboard genset application. The study showed that an advanced diesel engine design (CCE) could be substantially lighter and smaller (79% and 82% respectively) than todays contemporary genset diesel engine. Although the CCE was not optimized, it had about a 7% reduction in mission fuel consumption over today's genset diesels. The CCE is a turbocharged, power-compounded, high power density, low-compression ratio diesel engine. Major technology development areas are presented. Author

THE EXAMINATION OF THREE SCUFFING WEAR DISC SPECIMENS FROM UNIVERSITY COLLEGE, CARDIFF
J. Manson Aug. 1985 16 p
(AMTE(M)-TM-85219; BR96848; ESA-86-96848) Avail: Issuing Activity

A metallographic examination of test disk specimens suggests a simple model of scuffing wear. The surface structures and bulk microstructural changes found are consistent with the frictive welding of material at the surface, with a large heat pulse decaying into the bulk material. The results suggest that the initiation of scuffing wear cannot be found on the zone just in front of a scuffed area as the heat pulse generated in the frictive event travels through and changes the prescuffing area. A polish etch effect is the major surface difference between run specimens. ESA

A CENTRIFUGAL TYPE GASKET FOR BEARINGS
P. D. Kiykov, B. T. Tsoy, and V. A. Brenner 3 Feb. 1986 7 p
Transl. into ENGLISH from Russian Patent no. 214984, 29 Mar. 1968 p 1-2
(AD-A164796; FTD-ID(RS)T-0699-85) Avail: NTIS HC A02/MF A01 CSCL 11/1

There is a familiar centrifugal-type gasket for bearings, consisting of an immovable inner ring and an outer rotating ring connected to it, both secured on an axle. The described device differs from the familiar in that the outer and inner rings have joining conical surfaces, flaring in the direction of the outside of the bearing. The inner conical surface of the outer ring is smooth, while the surface of the inner ring joined to it has annular recesses. GRA

MECHANICAL FACE SEAL DYNAMICS Final Report, Jan. 1983 - Aug. 1985
Itzhak Etsion and Itzhak Green Dec. 1985 66 p
(Contract F49620-83-C-0057)
(AD-A164978; EEC-159; AFWAL-TR-85-2082) Avail: NTIS HC A04/MF A01 CSCL 11/1

This report summarizes a three year study of noncontacting coned-face mechanical seal dynamics. Both small perturbation and full nonlinear analyses are presented. An experimental technique to measure relevant dynamic properties of elastomeric secondary seals is described. The critical speed, for the dynamic stability threshold, and the critical rotor runout are presented. It is shown that the more simple to use small perturbation analysis gives very good results for most practical cases. This document includes information on the following form areas: (1) Stiffness and Damping Characteristics of Elastomer O Rings Secondary Seals Subjected to Reciprocating Twist; (2) A Kinematic Model for Mechanical Seals with Antirotation Locks or Positive Drive Devices; (3) Stability Threshold and Steady State Response of Noncontacting Coned-Face Seals; and (4) Nonlinear Dynamic Analysis of Noncontacting Coned-Face Mechanical Seals. ADVANCED PROPULSOR DESIGN STUDIES Final Report
Walter S. Gearhart Jun. 1985 57 p refs
(Contract DTCG23-84-F-20046)
(AD-A164983; USCG-D-1-86) Avail: NTIS HC A04/MF A01 CSCL 13/10

It is the purpose of the propulsor to convert rotational shaft energy into a propulsive thrust. Ideally, this conversion is to be accomplished with the most efficient, vibration-free and inexpensive device. However, emphasis on achieving a particular performance goal such as cavitation resistance, efficiency, or propulsor weight and mechanical simplicity may limit the designer in the type of propulsor configuration to be selected. It is the intent of this document to review the propulsive characteristics of various propulsive types for application on planning hull type craft. On the basis of these studies the performance advantages and shortcomings associated with each type of propulsor will be discussed. The performance of the conventional open propeller as well as propellers employing stationary counterswirl vanes located upstream of the propeller (reaction fin propulsor) shall be reviewed. Ducted propulsors employing a stator blade located upstream of the rotor shall also be considered. GRA

In the Fuel Recycle Division, Consolidated Fuel Reprocessing Program at ORNL, a comprehensive remote systems development program has existed for the past seven years. The new remote technology under development is expected to significantly improve remote operations by extending the range of tasks accomplished by remote means and increasing the efficiency of remote work undertaken. The application of advanced manipulation is viewed as an essential part of a series of design directions whose sum describes a somewhat unique blend of old and new technology. A design direction based upon the Teletec concept is

explained and recent progress in the development of an advanced servomanipulator-based maintenance concept is summarized to show that a new generation of remote systems is feasible through advanced technology. DOE

ENVIRONMENTAL ASSESSMENT OF NOx CONTROL ON A COMPRESSION IGNITION LARGE BORE RECIPROCATING INTERNAL COMBUSTION ENGINE. VOLUME 1: TECHNICAL RESULTS Final Report, Apr. 1980 - Apr. 1981
C. Castaldini Jan. 1986 113 p
(Contract EPA-68-02-3188)
(PB86-155819; ACUREX-TR-81-81/EE; EPA-600/7-86-001A) Avail: NTIS HC A06/MF A01 CSCL 21G

Volume 1 of the report gives emission results from field tests of the exhaust gas from a large-bore, compression-ignition reciprocation engine burning diesel fuel. An objective of the tests was to evaluate the operating efficiency of the engine with combustion modification NOx control to reduce emissions to below the proposed NOx new source performance standard (NSPS) of 600 ppm at 15 percent O2 dry. Engine NOx emissions were reduced 31 percent (from 825 to 571 ppm) at 15 percent O2 with 3.5 degrees of fuel injection timing retard. The reduction was accompanied by a 1 percent loss in engine efficiency. CO emissions decreased slightly from 119 to 90 ppm). Total unburned hydrocarbons remained relatively unchanged (25 ppm), as did particulate emissions (35 ng/J) and total organic emissions (55 ng/J). Volatile organics (boiling point less than about 100 C) accounted for the largest fraction of the total organic. Naphthalene, fluoroanthene, phenanthrene/anthracene, and pyrene were the only organic priority pollutants detected in both tests at levels below 70 micrograms/dscm. GRA

THREE-LEVEL ENERGY BALANCE CLIMATE MODEL WITH TOPOGRAPHY, EXPLICIT RADIATIVE TRANSFER, AND EXPLICIT SEA ICE AND SNOW MASS BUDGETS Ph.D. Thesis
L. D. D. Harvey 1986 347 p
(Grant NSF ATM-82-17015)
(PB86-181799; NCAR/CT-97) Avail: NTIS HC A15/MF A01 CSCL 03B

A three-level energy balance climate is presented, in which temperatures are computed for the surface, surface air, and stratosphere. The model has land-sea resolution, explicit sea ice and snow mass budgets, and uses a nested integration scheme such that shorter time steps are used for newly forming ice in leads. The sea ice model is found to be very sensitive to the value of many of the input parameters. The effect of adding individual processes can vary dramatically in magnitude from zone to zone and for different seasons. The snowpack sensitivity to changes in model parameters is much less than that of the sea ice model. The full model sensitivity to a solar constant change appears to be dependent on part on the way in which changes in ice mass are partitioned between changes in ice area and in ice thickness. GRA

EVALUATION OF MULTILAYER PRINTED WIRING BOARDS BY METALLOGRAPHIC TECHNIQUES: AN ILLUSTRATED GUIDE TO THE PREPARATION AND INSPECTION OF PLATED-THROUGH HOLE TEST COUPONS BASED ON THE REQUIREMENTS OF MIL-P-55110D
Jane Jellison May 1986 72 p refs
(NASA-RP-1161; Rept-86B0088; NAS 1.61:1161) Avail: NTIS HC A04/MF A01 CSCL 14D

This work is an illustrated handbook containing the rationale and procedure for the evaluation of multilayer printed wiring board construction integrity with respect to plated-through holes in accordance with the requirements of MIL-P-55110D, Printed Wiring Boards. It is intended as a practical aid for those concerned with determining the construction integrity of multilayer boards for high reliability applications. Photomicrographs of cross sectioned holes illustrate defect types, acceptable and unacceptable conditions, and methods of measurement. A procedure for specimen preparation is given, and appropriate paragraphs of the military specification are included and explained. Author

SEQUENTIAL TESTING AND CONFIDENCE INTERVALS FOR THE MTBF (MEANTIME BETWEEN FAILURES) OF SYSTEMS HAVING EXPONENTIAL DISTRIBUTION OF THE INTERFAILURE TIMES
S. Zacks 23 Dec. 1985 28 p
(Contract N00014-83-K-0216)
(AD-A165189; GWU/IMSE/SERIAL-T-506/85) Avail: NTIS HC A03/MF A01 CSCL 14/2

The application of the Wald SPRT to life testing of equipment, having an exponential distribution of the interfailure times, has been in practice since the 1950s. The problem discussed in the present paper is that of the exact computation of the distributions of the stopping times, and the determination of confidence limits for the mean time between failures (MTBF), theta, after stopping. Formulae are developed for the exact computation of the distribution of stopping times in sequential life testing, according to a modified SPRT. These distributions yield the fractiles of the stopping times at acceptance or at rejection, from which confidence limits for the MTBF can be obtained. GRA

EFFECTS OF CAVITATION ON HIGH-CYCLE FATIGUE LIFE
S. Majumdar Sep. 1985 11 p Presented at the Minnowbrook Conference on Life Prediction for High Temperature Gas Turbine Materials, Blue Mountain Lake, N.Y., 27 Aug. 1985
(Contract W-31-109-eng-38)
(DE86-001814; CONF-8508146-1) Avail: NTIS HC A02/MF A01

Cavitation was measured in 304 stainless steel after creep tests. Results show that cavitation is highly inhomogenous. This has a significant effect on the interaction between small amounts of creep damage and high cycle fatigue life. The low cycle creep-fatigue and the high cycle fatigue are not independent and may have large interactive effects. DOE

BOUNDARY FORCE METHOD FOR ANALYZING TWO-DIMENSIONAL CRACKED BODIES
P. W. Tan (Analytical Services and Materials, Inc., Hampton, Va.), I. S. Raju, and J. C. Newman, Jr. May 1986 44 p refs
(NASA-TM-87725; NAS 1.15:87725) Avail: NTIS
HC A03/MF A01 CSCL 20K

The Boundary Force Method (BFM) was formulated for the two-dimensional stress analysis of complex crack configurations. In this method, only the boundaries of the region of interest are modeled. The boundaries are divided into a finite number of straight-line segments, and at the center of each segment, concentrated forces and a moment are applied. This set of unknown forces and moments is calculated to satisfy the prescribed boundary conditions of the problem. The elasticity solution for the stress distribution due to concentrated forces and a moment applied at an arbitrary point in a cracked infinite plate are used as the fundamental solution. Thus, the crack need not be modeled as part of the boundary. The formulation of the BFM is described and the accuracy of the method is established by analyzing several crack configurations for which accepted stress-intensity factor solutions are known. The crack configurations investigated include mode I and mixed mode (mode I and II) problems. The results obtained are, in general, within + or - 0.5 percent of accurate numerical solutions. The versatility of the method is demonstrated through the analysis of complex crack configurations for which limited or no solutions are known. Author

THE CRACK PROBLEM IN A REINFORCED CYLINDRICAL SHELL
O. Selcuk Yahsi (Middle East Technical Univ., Ankara, Turkey) and F. Erdogan Mar. 1986 35 p
(Grants NGR39-007-011; NSF MEA-84-14477)
(NASA-CR-176686; NAS 1.26:176686) Avail: NTIS
HC A03/MF A01 CSCL 20K

In this paper a partially reinforced cylinder containing an axial through crack is considered. The reinforcement is assumed to be fully bonded to the main cylinder. The composite cylinder is thus modelled by a nonhomogeneous shell having a step change in the elastic properties at the $z=0$ plane, z being the axial coordinate. Using a Reissner type transverse shear theory the problem is reduced to a pair of singular integral equations. In the special case of a crack tip touching the bimaterial interface it is shown that the dominant parts of the kernels of the integral equations associated with both membrane loading and bending of the shell reduce to the generalized Cauchy kernel obtained for the corresponding plane stress case. The integral equations are solved and the stress intensity factors are given for various crack and shell dimensions. A bonded fiberglass reinforcement which may serve as a crack arrestor is used as an example. Author

LOW-CYCLE THERMAL FATIGUE
Gary R. Halford Feb. 1986 114 p refs
(NASA-TM-87225; E-2890; NAS 1.15:87225) Avail: NTIS HC A06/MF A01 CSCL 20K

A state-of-the-art review is presented of the field of thermal fatigue. Following a brief historical review, the concept is developed that thermal fatigue can be viewed as processes of unbalanced deformation and cracking. The unbalances refer to dissimilar mechanisms occurring in opposing halves of thermal fatigue loading and unloading cycles. Extensive data summaries are presented and results are interpreted in terms of the unbalanced processes involved. Both crack initiation and crack propagation results are summarized. Testing techniques are reviewed, and considerable discussion is given to a technique for thermal fatigue simulation, known as the bithermal fatigue test. Attention is given to the use of isothermal life prediction methods for the prediction of thermal fatigue lives. Shortcomings of isothermally-based life prediction methods are pointed out. Several examples of analyses and thermal fatigue life predictions of high technology structural components are presented. Finally, numerous dos and don'ts relative to design against thermal fatigue are presented. Author

NONLINEAR DAMAGE ANALYSIS: POSTULATE AND EVALUATION Final Report, 30 Sep. 1981 - 6 Apr. 1983
B. N. Leis and T. P. Forte 6 Apr. 1983 101 p refs
(Contract NAS3-22825)
(NASA-CR-168171; NAS 1.26:168171) Avail: NTIS HC A06/MF A01 CSCL 20K

The objective of this program is to assess the viability of a damage postulate which asserts that the fatigue resistance curve of a metal is history dependent due to inelastic action. The study focusses on OFE copper because this simple model material accentuates the inelastic action central to the damage postulate. Data relevant to damage evolution and crack initiation are developed via a study of surface topography. The effects of surface layer residual stresses are explored via comparative testing as were the effects in initial prestraining. The results of the study very clearly show the deformation history dependence of the fatigue resistance of OFE copper. Furthermore the concept of deformation history dependence is shown to qualitatively explain the fatigue resistance of all histories considered. Likewise quantitative predictions for block cycle histories are found to accurately track the observed results. In this respect the assertion that damage per cycle for a given level of the damage parameter is deformation history dependent appears to be physically justified. Author

BUCKLING BEHAVIOR OF RENE 41 TUBULAR PANELS FOR A HYPERSONIC AIRCRAFT WING
William L. Ko, John L. Shideler, and Roger A. Fields May 1986 31 p refs Presented at the AIAA/ASME/ASCE/AHS 27th Structures, Structural Dynamics and Materials Conference, San Antonio, Texas, 19-21 May 1986
(NASA-TM-86798; H-1327; NAS 1.15:86798; AIAA-86-0978) Avail: NTIS HC A03/MF A01 CSCL 20K

The buckling characteristics of Rene 41 tubular panels for a hypersonic aircraft wing were investigated. The panels were repeatedly tested for buckling characteristics using a hypersonic wing test structure and a universal tension/compression testing machine. The nondestructive buckling tests were carried out under different combined load conditions and in different temperature environments. The force/stiffness technique was used to determine the buckling loads of the panel. In spite of some data scattering, resulting from large extrapolations of the data fitting curve (because of the termination of applied loads at relatively low percentages of the buckling loads), the overall test data correlate fairly well with theoretically predicted buckling interaction curves. Also, the structural efficiency of the tubular panels was found to be slighly higher than that of beaded panels. Author

INTERFRAME BUCKLING OF ALUMINIUM ALLOY STIFFENED PLATING
J. D. Clarke, comp., J. W. Swan, comp., and M. Verain Oct. 1985 65 p
(AMTE(S)-R-85104; BR97439; ESA-86-96850) Avail: Issuing Activity

Compression tests on 5 stiffened N8 aluminum alloy plates covering typical full scale warship scantlings are described. The panels were manufactured using normal shipyard production methods to ensure typical initial distortion and residual stresses. Maximum loads and post-buckling load/deflection results are compared with theoretical predictions using a computer program (NI06C). Test results show significant variations in yield strength. In most cases the maximum strength of aluminum alloy structures can be calculated using NI06C with the plating behavior represented by an equivalent steel b/t value giving the same beta. The peak load for sharply varying load/deflection curves may be overestimated. The measured post-buckling strength is higher than that predicted by the simple two half frame finite element model used. This is partly due to the rotational restraint at the frame ends, but could also be due to the additional rotational restraint at the ends provided by the short sections with doubler plates. ESA

PROBABILISTIC ANALYSIS OF NONLINEAR STRUCTURES SUBJECTED TO TRANSIENT LOADS. PART 1 Final Report, 15 Nov. 1983 - 30 Nov. 1984
Dennis Morrison Oct. 1985 117 p
(Contract F29601-81-C-0013)
(AD-A163235; NMERI-TA8-81-Pt-1; AFWL-TR-84-154-Pt-1) Avail: NTIS HC A06/MF A01 CSCL 13/13

A technique for the analysis of reliability in linear and nonlinear systems that can be modeled as single-degree-of-freedom (SDF) structures is investigated and established. Transition probabilities are established using conditional probability and problems for stationary and nonstationary input are shown. Methods for computational enhancements are investigated. Multiple point failure analysis of multiple-degree-of-freedom (MDF) systems is addressed separately. Peak responses are expanded in a series involving the input and systems parameters and moments of the peak response are determined. Margins of survival are established using random failure levels and the probability of survival is computed. A second method using the equations of a numerical technique to form the joint probability density of the response measures is also presented. Author (GRA)

DAMAGE PREDICTION OF PROJECTILE PENETRATION PROCESS BASED ON ENERGY DISSIPATION RATE Final Report, 1 Apr. 1983 - 30 Sep. 1984
G. C. Sih and D. H. Song Aug. 1985 167 p
(Contracts DAAG46-83-K-0158; DA Proj. 8X3-63304-D-215)
(AD-A163268; AMMRC-TR-85-26) Avail: NTIS HC A08/MF A01 CSCL 19/4

The projectile penetration process covers a wide range of failure modes depending on impact velocity, configuration and

material of the projectile and target. This study overcomes previous difficulties in such mathematical descriptions by applying a concept which assumes that material damage occurs nonhomogeneously throughout the target and can be uniquely associated with the rate at which energy is dissipated in a unit volume of material. Introduced as a corollary of the strain energy density theory are the quantities dV/dA and dW/dV which represent, respectively, the rate of change of volume with surface area and the strain energy density function. Together they deterime the energy used to damage a differential area in the projectile penetration process. Orientations of the damage planes form the failure path. A numerical procedure is developed for modeling the material damage process during projectile penetration. The progressive damage pattern for each time increment is exhibited where the elements fail nonhomogeneously. For blunt projectiles impacting relatively hard targets, the conditions for plugging failure are met soon after impact with little radial flow of material. This failure mode is investigated by invoking different assumptions in the state of the failed elements. This model can also treat the phase transformation of solid where shear bands are formed in regions of highly localized energy states. GRA

RESIDUAL STRESS MEASUREMENTS ON M1 TANK WELDMENTS Final Technical Report, 1 Apr. - 30 Sep. 1985
S. B. Catalano 30 Sep. 1985 40 p
(AD-A163330; TACOM-TR-13133) Avail: NTIS HC A03/MF A01 CSCL 19/3

Residual stress levels were measured on four weldment areas of the M1 tank--two on the hull and two on the turret. Measurements were performed on preexisting tanks as well as on current production runs. Two hulls and two turrets of preexisting tanks were measured; three hulls and two turrets of current production runs were measured. Measurements were performed on the weld nugget and heat-affected zones using portable X-ray diffraction equipment. A total of 142 measurements were performed. Only six measurements exhibited tensile residual stresses; the remainder exhibited compressive residual stresses. The highest tensile residual stress observed was 47,000 psi. Weldment areas measured were: race ring to forward glacis; turret roof plate joint; gunner primary sight to frontal slope plate; and side plate to front portion of hull. GRA

TWO COMPLIANCE EXPRESSIONS FOR ARBITRARY LOCATIONS ACROSS A CRACK IN A CT (COMPACT TYPE) SPECIMEN Interim Report, Jan. 1984 - Mar. 1985
P. R. Enderle and Noel E. Ashbaugh Jun. 1985 56 p refs
(Contracts F33615-81-C-5015; F33615-84-C-5051)
(AD-A163369; AFWAL-TR-85-4074) Avail: NTIS HC A04/MF A01 CSCL 20/11

Two empirical equations were developed that express displacement across the crack in a compact type specimen as a function of crack length and distance behind the crack tip. The coefficients in the equations were generally determined by least square error fit to crack surface displacements obtained from finite element analysis. In one expression, simple types of functions which depend on either crack length or distance from the crack tip were combined to form an equation that is similar to a series expansion in two separate variables. The second equation was developed from a combination of the far field behavior of the displacements and a near field fit which incorporates the near tip analytical displacement behavior. Both equations have application to a broad range of values of crack length and distance from the crack tip. Either equation can be used in conjunction with measurements of displacement across the crack surface to indirectly determine the crack length. GRA

HIGH STRAIN RATE MATERIAL BEHAVIOR Final Report, Aug. 1982 - Sep. 1985
A. M. Rajendran and Stephan J. Bless Dec. 1985 242 p
(Contract F33615-82-C-5126)
(AD-A165214; UDR-TR-84-138; AFWAL-TR-85-4009) Avail: NTIS HC A11/MF A01 CSCL 20/11

High strain rate material behavior of 1020, C1008, HY100 steels, OFHC copper, 7039-T64 aluminum, and BeO was characterized. Data were obtained from split Hopkinson bar (SHB) and plate impact test configurations. A high speed photographic system was used to obtain dynamic stress-strain data from necking Hopkinson bar specimens. The state variable based viscoplastic constitutive model of Bodner and Partom was considered for the material modeling. Computer programs and special purpose subroutines were developed to use the Bodner-Partom model in the STEALTH finite difference code. A unique iterative algorithm was developed to evaluate the model constants from both tensile SHB and plate impact test data. The model constants were determined for the five metals. Both tension and compression SHB and plate impact tests were successfully simulated using Bodner-Partom model constants. GRA

CRYSTAL PLASTICITY ANALYSIS OF LARGE-STRAIN SHEAR
R. J. Asaro and T. C. Lowe Dec. 1985 26 p
(Contract DE-AC04-76DR-00789)
(DE86-005061; SAND-85-8245) Avail: NTIS HC A03/MF A01

Successful computer prediction of metal forming processes requires accurate constitutive relations to represent large-strain deformation. Crystal plasticity analyses of metal polycrystals subject to large strains are described which will help guide the formulation of such relations. The response of a polycrystalline aggregate of grains is analyzed to elucidate the effects of boundary constraint during large strain shear deformations. Deformation-induced textures are also predicted. Predictions of the Swift effect, that is, normal strains that accompany finite shear strains, are compared with experimental data. DOE

THE POSTBUCKLING BEHAVIOR OF BLADE-STIFFENED CARBON EPOXY PANELS LOADED IN COMPRESSION
J. F. M. Wiggenraad 19 Feb. 1985 20 p
(Contracts NIVR-312.2-1019)
(NLR-MP-85019-U; B8577052; ESA-86-96977-L) Avail: NTIS HC A02/MF A01

The postbuckling behavior of blade-stiffened carbon epoxy panel laminates consisting of only a few layers due to the relatively low design loads was studied in compression tests. Certain coupling terms in the stiffness matrices were thought to be no longer insignificant. The full scale panels buckle in a global mode and do not show any postbuckling strength. The short columns, buckling in a local mode, support 1.8 times the initial buckling load before failure. Comparison with calculations shows that the influence of the coupling terms on the buckling behavior of the specimens is relatively small: it decreases the buckling load slightly, does not change the end shortening curves significantly and is mainly apparent in the out-of-plane deflections. ESA

SOME TESTS TO ASSESS THE EFFECT OF CRACK STOPPERS ON THE FATIGUE LIFE OF CENTER-NOTCHED SPECIMENS
J. Schijve and F. A. Jacobs Feb. 1984 33 p refs
(NLR-TR-84051-U; B8576224; ESA-86-96981) Avail: NTIS HC A03/MF A01

Crack stoppers were evaluated in crack propagation tests on Alclad 2024-T3 sheet specimens (thickness 2 mm) provided with a central crack to assess the usefulness of very simple crack stopping elements which can be applied to macrocracks in sheet metal structures accessible from one side only. Results show that a stop hole at the crack tip should be filled to obtain a good propping of the hole. Self tapping screws and tapered pins give large crack growth retardation lives. Large retardations are obtained with hard driven rivets and with heavily tightened bolts in the stop holes, but they require accessibility from two sides. Flight-simulation

loading on specimens with tightened bolts indicates a significant retardation, but quantitatively the effects under flight-simulation loading and under constant-amplitude loading are highly different. ESA

CONSTANT AMPLITUDE AND FLIGHT SIMULATION OF FATIGUE TESTS ON ADHESIVE BONDED LAP JOINT SPECIMENS OF 2024-T3 SHEET MATERIAL
J. Schijve and F. A. Jacobs 9 Aug. 1984 47 p refs
(Contracts NIVR-1725)
(NLR-TR-84090-U; B8576223; ESA-86-96982) Avail: NTIS HC A03/MF A01

Fatigue tests were carried out on Redux and FM 123/5 bonded specimens at various stress levels, temperatures (RT to 65C) and low and high test frequencies. Type of failure (bond line failure or sheet failure) and the significance of the adhesive squeeze-out for crack nucleation were examined. Results indicate that the fatigue notch effect of a thickness increase as a result of adhesive bonding of sheet material is very small; the effect of secondary bending is more significant. If the bending effect is not excessive (depending on the design) the fatigue strength of a bonded lap joint is high. In flight-simulation tests, bond line failures do not occur even under severe test conditions. The life in flight is highly superior to results for riveted lap joint and a single shear strap joint, while it is of the same order of magnitude found for riveted double-strap joints. ESA

HISTORY MATCHING BY SPLINE APPROXIMATION AND REGULARIZATION IN SINGLE-PHASE AREAL RESERVOIRS Final Report
Tai-yong Lee (California Inst. of Tech., Pasadena), Costas Kravaris (Michigan Univ., Ann Arbor), and John Seinfeld (California Inst. of Tech., Pasadena) Mar. 1986 54 p Submitted for publication
(Contracts NAS1-17070; NAS1-18107)
(NASA-CR-178087; ICASE-86-19; NAS 1.26:178087) Avail: NTIS HC A04/MF A01 CSCL 09B

An automatic history matching algorithm is developed based on bi-cubic spline approximations of permeability and porosity distributions and on the theory of regularization to estimate permeability or porosity in a single-phase, two-dimensional real reservoir from well pressure data. The regularization feature of the algorithm is used to convert the ill-posed history matching problem into a well-posed problem. The algorithm employs the conjugate gradient method as its core minimization method. A number of numerical experiments are carried out to evaluate the performance of the algorithm. Comparisons with conventional (non-regularized) automatic history matching algorithms indicate the superiority of the new algorithm with respect to the parameter estimates obtained. A quasioptimal regularization parameter is determined without requiring a priori information on the statistical properties of the observations. Author

A PROPOSAL FOR A PROJECT ENTITLED ASSESSMENT OF FOREST RESOURCES IN URUGUAY SUBMITTED TO THE UNITED NATIONS INDUSTRIAL DEVELOPMENT ORGANIZATION (UNIDO)
Rene Antonio Novaes, David Chung Liang Lee, Pedro Hernandez Filho, Armando PachecodosSantos, and Flavio Jorge Ponzoni Mar. 1986 13 p
(INPE-3828-NTE/255) Avail: NTIS HC A02/MF A01

This project proposal was submitted by request of the United Nations Industrial Development Organization (UNIDO). The main objective is to collect basis forest information for the development, promotion, and utilization of alternative sources of energy through the use of Uruguay's national resources and to define the value of LANDSAT-TM as an aid in efficient management of the country's plantations. An additional objective is to train the Uruguayan technical team. Indications are given as to how each task will be accomplished and what techniques will be employed in performing main tasks such as: forest mapping and development of map legends, map accuracy assessment and forest area correction, stand timber volume evaluation, field sampling, and mensuration procedures. Flow diagrams of the overall project, activity bar diagrams, and list of equipment required for task completion are included. The expected results of the map products and timber volumes are discussed. Author

WHEAT AREA ESTIMATION USING DIGITAL LANDSAT MSS DATA AND AERIAL PHOTOGRAPHS
Mauricio A. Moreira, Sherry C. Chen, and Getulio T. Batista Mar. 1986 28 p Submitted for publication
(INPE-3824-PRE/900) Avail: NTIS HC A03/MF A01

A procedure to estimate wheat (Triticum aestivum L) area using sampling technique based on aerial photographs and digital LANDSAT MSS data was developed. Aerial photographs covering 720 sq km were visually analyzed. Computer classification of LANDSAT MSS data acquired on Sept. 4, 1979 was done using unsupervised and supervised algorithms and classification results were spatially filtered using a post-processing technique. To estimate wheat area, a regression approach was applied using different sample sizes and various sampling units. Based on four decision criteria proposed in this study, it was concluded that: (1) as the size of sampling unit decreased, the percentage of sample area required to obtain similar estimation performance also decreased; (2) the lowest percentage of the area sampled for wheat estimation under established precision and accuracy criteria through regression estimation was 13.09% using 10 sq km as the sampling unit; and (3) wheat area estimation obtained by regression estimation was more precise and accurate than those obtained by direct expansion method. CHARACTERISTICS OF WESTERN REGION FLASH FLOOD

EVENTS IN GOES IMAGERY AND CONVENTIONAL DATA
Eric L. Fleming and LeRoy E. Spayd, Jr. Mar. 1986 87 p refs
(NOAA-TM-NESDIS-13) Avail: NTIS HC A05/MF A01

Characteristics of western region convective and extratropical cyclone flash flood events as observed in (VIS and IR) GOES imagery and conventional surface and upper air data are presented. One hundred and thirty-seven convective heavy rainfall events from 1981 to 1983 were examined and categorized into time of year, time of day of maximum precipitation, minimum cloud top temperature at time of maximum precipitation, and type of satellite-observed convective system. Detailed analysis of conventional data for the largest flash flood producing mesoscale convective systems (MCS) yielded four distinct atmospheric patterns at the surface, 700, and 500 mb levels. Twenty-four flash flood events produced by extratropical cyclones from 1981 to 1983 were classified into three main types of satellite observed cloud patterns. These atmospheric composites and satellite observed cloud patterns were designed to aid operational meteorologists in recognizing and forecasting flash flood events in the western region of the United States. RESEARCH ON ENHANCING THE UTILIZATION OF DIGITAL MULTISPECTRAL DATA AND GEOGRAPHIC INFORMATION SYSTEMS IN GLOBAL HABITABILITY STUDIES Final Report, 1985-1986
Edward A. Martinko and James W. Merchant Feb. 1986 60 p
Sponsored in part by the Kansas Fish and Game Commission
(Grant NGL-17-004-024)
(NASA-CR-177294; NAS 1.26:177294) Avail: NTIS HC A04/MF A01 CSCL 05B

The University of Kansas Applied Remote Sensing (KARS) program is engaged in a continuing long term research and development effort designed to reveal and facilitate new applications of remote sensing technology for decision makers in governmental agencies and private firms. Some objectives of the program follows. The development of new modes of analyzing multispectral scanner, aerial camera, thermal scanner, and radar data, singly or in concert in order to more effectively use these systems. Merge data derived from remote sensing with data derived from conventional sources in geographic information systems to facilitate better environmental planning. Stimulation of the application of the products of remote sensing systems to problems of resource management and environmental quality now being addressed in NASA's Global Habitability directive. The application of remote sensing techniques and analysis and geographic information systems technology to the solution of significant concerns of state and local officials and private industry. The guidance, assistance and stimulation of faculty, staff and students in the utilization of information from the Earth Resources Satellite (LANDSAT) and Aircraft Programs of NASA in research, education, and public service activities carried at the University of Kansas. A SIMULATION ANALYSIS OF THE FATE OF PHYTOPLANKTON WITHIN THE MID-ATLANTIC BIGHT
John J. Walsh, Dwight A. Dieterle, and Mark B. Meyers 1986 82 p
(Grant NAGw-678)
(NASA-CR-177265; NAS 1.26:177265) Avail: NTIS HC A04/MF A01 CSCL 08A

A time-dependent, three-dimensional simulation model of wind-induced changes of the circulation field, of light and nutrient regulation of photosynthesis, of vertical mixing as well as algal sinking, and of herbivore grazing stress, is used to analyze the seasonal production, consumption, and transport of the spring bloom within the mid-Atlantic Bight. The particular case (c) of a 58-day period in February-April 1979, simulated primary production, based on both nitrate and recycled nitrogen, with a mean of 0.62 g C sq m/day over the whole model domain, and an export at the shelf-break off Long Island of 2.60 g ch1 sq m/day within the lower third of the water column. About 57% of the carbon fixation was removed by herbivores, with 21% lost as export, either downshelf or offshore to slope waters, after the first 58 days of the spring bloom. Extension of the model for another 22 days of case (c) increased the mean export to 27%, while variation of the model's parameters in 8 other cases led to a range in export from 8% to 38% of the average primary production. Spatial and temporal variations of the simulated algal biomass, left behind in the shelf water column, reproduced chlorophyll fields sensed by satellite, shipboard, and in situ instruments. Author

IMPULSE RADAR SOUNDING OF LEVEL FIRST-YEAR SEA ICE FROM AN ICEBREAKER
Carl R. Martinson Nov. 1985 15 p
(AD-A163229; CRREL-SR-85-21) Avail: NTIS HC A02/MF A01 CSCL 08/12

During the weeks of May 1984, a CRREL impulse radar system was used onboard the R V Polarstern to measure the thickness of level first-year sea ice. The purpose was to determine the onboard performance of the radar system and, if possible, provide ice thickness information to researchers conducting other tests. Radar data were compared with ice thickness determined by drilling, indicating that radar soundings could be a viable means of collecting ice thickness information. A lack of adequate coordination between the two measurement methods prevented a point-by-point comparison of ice thicknesses; the comparisons were based on averages for particular test runs. The differences of the averages for the two measuring methods ranged from 0.03 m to 0.22 m with a mean variation in the differences of 0.13 m for eight runs. There may have been some interference from the ship's hull during data collection because of the location of the antenna. However, an unidentified signal in some of the data does not appear to obscure a valid return from the bottom of the ice sheet. Author (GRA)

AN ISOSTATIC EARTH MODEL
Hans Suenkel Sep. 1985 59 p refs
(Contract F19628-82-K-0017)
(AD-A164608; OSU/DGSS-367; AFGL-TR-85-0239; SR-10) Avail: NTIS HC A04/MF A01 CSCL 08/5

The concept of the conventional Airy/Heiskanen isostatic model is investigated from scratch, based on the harmonic analysis of the topographic-isostatic potential. First and higher order approximations for those coefficients are discussed and rule of thumb formulas given. The estimated frequency transfer function between the power spectrum of the observed gravitational field and the power spectrum implied by the isostatic model strongly suggests a smoothing of the compensation surface according to Vening Meinesz with a smoothing operator of Gaussian bell-shaped type, and a depth of compensation of about 24 km. A proof of equivalence of using a standard Airy/Heiskanen model with a larger compensation depth and a corresponding Poisson smoothed Vening Meinesz model at a smaller depth has been given for the case of linear approximation, yielding an entirely new interpretation of recent isostatic models. An iterative least-squares process has been designed which provides parameter estimates of that isostatic model in best possible agreement with the observed gravitational potential of the earth. Based on these parameters a set of harmonic coefficients of the topographic-isostatic potential, complete up to degree and order 180 was computed. Several maps of topography-isostasy implied geoidal heights are presented for comparison. GRA

THE ATCHAFALAYA RIVER DELTA. REPORT 7. ANALYTICAL ANALYSIS OF THE DEVELOPMENT OF THE ATCHAFALAYA RIVER DELTA

Flora C. Wang Sep. 1985 203 p refs
(Contract DACW39-81-C-0004)
(AD-A164931; WES-TR-HL-82-15; Rept-7) Avail: NTIS HC A10/MF A01 CSCL 08/8

The diversion of fresh water and sediments from the Mississippi River to the Atchafalaya River is developing a new delta on the south-central Louisiana coast. The building of this new wetland area has prompted scientific interest in predicting delta evolution. This study reports the analytical prediction of future delta growth based on the theory of turbulent jets that issue from river outlets and discharge into quiescent bays. An integrated form of the hydrodynamics equations of flow continuity and momentum balance, coupled with the advection-diffusion mass transport equation, have been formulated into a two dimensional spatial domain. Closed-form analytical solutions are obtained with the aid of similarity functions for the velocity and sediment concentration profiles. A numerical procedure for estimating the area and volume of deposition of the delta sediments is presented. The results show that the deposited sediment forms a saddle-shaped bottom. Rapid accumulatin of suspended sediment near the river outlet and an abrupt decline of sediment deposition away from the outlet observed. It is concluded that the riverine inflow has a insignificant influence of sediment deposition within a short longitudinal distance, and that beyond that distance the riverine inflow is insignificant. The analytical predictions are compared with the predictions made by other statistical and generic approaches; an agreement is found. Author (GRA)

A MULTIINDEX MULTITEMPORAL APPROACH TO MAP CROPS IN THE EARLY GROWING SEASON: AN APPLICATION TO TWO ITALIAN IRRIGATION DISTRICTS: EAST SESIA AND GRANDE BONIFIGA FERRARESE
M. Sc. Dott and S. Azzali May 1985 42 p Sponsored by European Economic Commission
(ICW-1611; ESA-86-96955) Avail: NTIS HC A03/MF A01

The feasibility of a method to determine quality, quantity, and type of crops and their water stress by LANDSAT images was tested in two irrigation districts in the Po valley, Italy. In spite of striking misestimates, results are promising, 5 out of 11 crops being detected. However, the uncertain number of yearly available images and lack of reference data to tune the method inhibit the operational development of this tool. It is emphasized that the feasibility of mapping individual crops by means of LANDSAT-MSS data is definitely proven in principle. A semioperational use of such data would provide an opportunity to iron out practical details and assess the amount of needed ancillary and ground-reference data, given the required accuracy of determination. The overall goal of the United States' energy policy is to foster an adequate supply of energy at a reasonable cost. This policy recognizes that adequate supply requires flexibility in the energy system, with no reliance on any single source of supply. The Energy Storage Program of the Office of Energy Storage and Distribution is supporting this policy by providing the technology base and exploratory development required for the more effective use of electrochemical technologies, aimed at improved energy flexibility in transportation, electric utility, and industrial applications. This document represents a compilation of seventy-four project summaries of research supported by the US Department of Energy, Energy Storage Program. Sections included in this report are: Sodium Sulfur Research and Development, Flow Battery Research and Development, Advanced Battery Research, Systems Analysis, Performance and Testing, Metal Air Batteries, and Fuel Cells.DOE

The separator technology is a critical element in the nickel-hydrogen (Ni-H2) systems. Previous research and development work carried out at NASA Lewis Research Center has determined that separators made from zirconium oxide (ZrO2) and potassium titanate (PKT) fibers will function satisfactorily in Ni-H2 cells without exhibiting the problems associated with the asbestos separators. These separators and their characteristics were previously discussed. A program was established to transfer the separator technology into a commercial production line. A detailed plan of this program will be presented and the preliminary results will be discussed. Author

EFFECTS OF IMPURITIES ON SILICON SOLAR-CELL PERFORMANCE
R. H. Hopkins *In* JPL Proceedings of the Flat-Plate Solar Array Project Workshop on Low-Cost Polysilicon for Terrestrial Photovoltaic Solar-Cell Applications Feb. 1986 p 15-34 (For primary document see N86-26679 17-44)
Avail: NTIS HC A18/MF A01 CSCL 10A

Model analyses indicate that sophisticated solar cell designs (back surface fields, optical reflectors, surface passivation, and double layer antireflective coatings) can produce devices with conversion efficiencies above 20%. To realize this potential, the quality of the silicon from which the cells are made must be improved; and these excellent electrical properties must be maintained during device processing. As the cell efficiency rises, the sensitivity to trace contaminants also increases. For example, the threshold Ti impurity concentraion at which cell performance degrades is more than an order of magnitude lower for an 18% cell than for a 16% cell. Similar behavior occurs for numerous other metal species which introduce deep level traps that stimulate the recombination of photogenerated carriers in silicon. Purification via crystal growth in conjunction with gettering steps to preserve the large diffusion length of the as grown material can lead to the production of devices with efficiencies above 18%, as verified experimentally. REQUIREMENTS FOR HIGH-EFFICIENCY SOLAR CELLS
C. Tang Sah *In* JPL Proceedings of the Flat-Plate Solar Array Project Workshop on Low-Cost Polysilicon for Terrestrial Photovoltaic Solar-Cell Applications Feb. 1986 p 37-52 (For primary document see N86-26679 17-44)
Avail: NTIS HC A18/MF A01 CSCL 10A

Minimum recombination and low injection level are essential for high efficiency. Twenty percent AM1 efficiency requires a dark recombination current density of 2 x 10 to the minus 13th power A/sq cm and a recombination center density of less than 10 to the 10th power /cu cm. Recombination mechanisms at thirteen locations in a conventional single crystalline silicon cell design are reviewed. Three additional recombination locations are described at grain boundaries in polycrystalline cells. Material perfection and fabrication process optimization requirements for high efficiency are outlined. Innovative device designs to reduce recombination in the bulk and interfaces of single crystalline cells and in the grain boundary of polycrystalline cells are reviewed. Author

ECONOMICS OF POLYSILICON PROCESS: A VIEW FROM JAPAN
Yasuhiro Shimizu *In* JPL Proceedings of the Flat-Plate Solar Array Project Workshop on Low-Cost Polysilicon for Terrestrial Photovoltaic Solar-Cell Applications Feb. 1986 p 57-78 (For primary document see N86-26679 17-44)

The production process of solar grade silicon (SOG-Si) through trichlorosilane (TCS) was researched in a program sponsored by New Energy Development Organization (NEDO). The NEDO process consists of the following two steps: TCS production from by-product silicon tetrachloride (STC) and SOG-Si formation from TCS using a fluidized bed reactor. Based on the data obtained during the research program, the manufacturing cost of the NEDO process and other polysilicon manufacturing processes were compared. The manufacturing cost was calculated on the basis of 1000 tons/year production. The cost estimate showed that the cost of producing silicon by all of the new processes is less than the cost by the conventional Siemens process. Using a new process, the cost of producing semiconductor grade silicon was found to be virtually the same with any to the TCS, dicloro-silane, and monosilane processes when by-products were recycled. The SOG-Si manufacturing processes using the fluidized bed reactor, which needs further development, shows a greater probability of cost reduction than the filament processes. B.G.

Techniques are being developed to provide lower cost polysilicon material for solar cells. Existing technology which normally provides semiconductor industry polysilicon material is undergoing changes and also being used to provide polysilicon material for solar cells. Economics of new and existing technologies are presented for producing polysilicon. The economics are primarily based on the preliminary process design of a plant producing 1,000 metric tons/year of silicon. The polysilicon processes include: Siemen's process (hydrogen reduction of trichlorosilane); Union Carbide process (silane decomposition); and Hemlock Semiconductor process (hydrogen reduction of dichlorosilane). The economics include cost estimates of capital investment and product cost to produce polysilicon via the technology. Sensitivity analysis results are also presented to disclose the effect of major paramentes such as utilities, labor, raw materials and capital investment. Author

Economic evaluation methods and analyses of emerging photovoltaic (PV) technology since 1976 was prepared. This type of analysis was applied to the silicon research portion of the PV Program in order to determine the importance of this research effort in relationship to the successful development of commercial PV systems. All four generic types of PV that use silicon were addressed: crystal ingots grown either by the Czochralski method or an ingot casting method; ribbons pulled directly from molten silicon; an amorphous silicon thin film; and use of high concentration

lenses. Three technologies were analyzed: the Union Carbide fluidized bed reactor process, the Hemlock process, and the Union Carbide Komatsu process. The major components of each process were assessed in terms of the costs of capital equipment, labor, materials, and utilities. These assessments were encoded as the probabilities assigned by experts for achieving various cost values or production rates. B.G.

DEVELOPMENT OF THE SILANE PROCESS FOR THE PRODUCTION OF LOW-COST POLYSILICON
Sridhar K. Iya *In* JPL Proceedings of the Flat-Plate Solar Array Project Workshop on Low-Cost Polysilicon for Terrestrial Photovoltaic Solar-Cell Applications Feb. 1986 p 135-145 (For primary document see N86-26679 17-44)
Avail: NTIS HC A18/MF A01 CSCL 10A

It was recognized that the traditional hot rod type deposition process for decomposing silane is energy intensive, and a different approach for converting silane to silicon was chosen. A 1200 metric tons/year capacity commercial plant was constructed in Moses Lake, Washington. A fluidized bed processor was chosen as the most promising technology and several encouraging test runs were conducted. This technology continues to be very promising in producing low cost polysilicon. The Union Carbide silane process and the research development on the fluidized bed silane decomposition are discussed. B.G.

Silicon deposition on silicon seed particles by silane pyrolysis in a fluidized bed reactor (FBR) was investigated as a low cost, high throughput method to produce high purity polysilicon for solar cell applications. The emphasis of the research is fundamental understanding of fluidized bed silicon deposition. The mechanisms involved were modeled as a six-path process: heterogeneous deposition; homogeneous decomposition; coalescence; coagulation; scavenging; and chemical vapor deposition growth on fines. Author

FLUIDIZED-BED REACTOR MODELING FOR PRODUCTION OF SILICON BY SILANE PYROLYSIS
M. P. Dudukovic, P. A. Ramachandran, and S. Lai *In* JPL Proceedings of the Flat-Plate Solar Array Project Workshop on Low-Cost Polysilicon for Terrestrial Photovoltaic Solar-Cell Applications Feb. 1986 p 167-184 (For primary document see N86-26679 17-44)
Avail: NTIS HC A18/MF A01 CSCL 10A

An ideal backmixed reactor model (CSTR) and a fluidized bed bubbling reactor model (FBBR) were developed for silane pyrolysis. Silane decomposition is assumed to occur via two pathways: homogeneous decomposition and heterogeneous chemical vapor deposition (CVD). Both models account for homogeneous and heterogeneous silane decomposition, homogeneous nucleation, coagulation and growth by diffusion of fines, scavenging of fines by large particles, elutriation of fines and CVD growth of large seed particles. At present the models do not account for attrition. The preliminary comparison of the model predictions with experimental results shows reasonable agreement. The CSTR model with no adjustable parameter yields a lower bound on fines formed and upper estimate on production rates. The FBBR model overpredicts the formation of fines but could be matched to experimental data by adjusting the unkown jet emulsion exchange efficients. The models clearly indicate that in order to suppress the formation of fines (smoke) good gas-solid contacting in the grid region must be achieved and the formation of the bubbles suppressed. B.G.

SILICON PRODUCTION IN AN AEROSOL REACTOR
Jin Jwang Wu and Richard C. Flagan *In* JPL Proceedings of the Flat-Plate Solar Array Project Workshop on Low-Cost Polysilicon for Terrestrial Photovoltaic Solar-Cell Applications Feb. 1986 p 187-208 (For primary document see N86-26679 17-44)
Avail: NTIS HC A18/MF A01 CSCL 10A

An aerosol reactor system was developed in which large particles of silicon can be grown by silane pyrolysis. To grow particles to sizes larger than one micron, vapor deposition must be used to grow a relatively small number of seed particles. Suppression of nucleation is achieved by limiting the rate of gas phase chemical reactions such that the condensible products of the gas phase chemical reactions diffuse to the surface of the seed particles as rapidly as they are produced. This prevents high degrees of supersaturation and runaway nucleation during the growth process. Particles on the order of 10 microns were grown repeatedly with the present aersol reactor. The nucleation controlled aerosol reactor is, therefore, a suitable system for the production of powders that can readily be separated from the gas by aerodynamic means. B.G.

PROCESSES AND PROCESS DEVELOPMENT IN JAPAN
Toshio Noda *In* JPL Proceedings of the Flat-Plate Solar Array Project Workshop on Low-Cost Polysilicon for Terrestrial Photovoltaic Solar-Cell Applications Feb. 1986 p 213-231 (For primary document see N86-26679 17-44)
Avail: NTIS HC A18/MF A01 CSCL 10A

The commercialization of solar power generation necessitates the development of low cost manufacturing method of silicon suitable for solar cells. The manufacturing methods of semiconductor grade silicon (SEG-Si) and the development of solar grade silicon (SOG-Si) in foreign countries was investigated. It was concluded that the most efficient method of developing such materials was the hydrogen reduction process of trichlorosilane (TCS), using a fluidized bed reactor. The low cost reduction of polysilicon requires cost reductions of raw materials, energy, labor, and capital. These conditions were carefully reviewed. The overall conclusion was that a development program should be based on the TCS-FBR process and that the experimental program should be conducted in test facilities capable of producing 10 tons of silicon granules per year. A basic requirement of large scale solar cell fabrication is to provide low cost base material. Unconventional refining of metallurical grade silicon represents one of the most promising ways of silicon meltstock processing. The refining concept is based

on an optimized combination of metallurgical treatments. Commercially available crude silicon, in this sequence, requires a first pyrometallurgical step by slagging, or, alternatively, solvent extraction by aluminum. After grinding and leaching, high purity quality is gained as an advanced stage of refinement. To reach solar grade quality a final pyrometallurgical step is needed: liquid-gas extraction. Author

A METALLURGICAL ROUTE TO SOLAR-GRADE SILICON
Anders Schei *In* JPL Proceedings of the Flat-Plate Solar Array Project Workshop on Low-Cost Polysilicon for Terrestrial Photovoltaic Solar-Cell Applications Feb. 1986 p 279-295 (For primary document see N86-26679 17-44)
Avail: NTIS HC A18/MF A01 CSCL 10A

The aim of the process is to produce silicon for crystallization into ingots that can be sliced to wafers for processing into photovoltaic cells. If the potential purity can be realized, the silicon will also be applicable for ribbon pulling techniques where the purification during crystallization is negligible. The process consists of several steps: selection and purification of raw materials, carbothermic reduction of silica, ladle treatment, casting, crushing, leaching, and melting. The leaching step is crucial for high purity, and the obtainable purity is determined by the solidification before leaching. The most difficult specifications to fulfill are the low contents of boron, phosphorus, and carbon. Boron and phosphorus can be excluded from the raw materials, but the carbothermic reduction will unavoidably saturate the silicon with carbon at high temperature. During cooling carbon will precipitate as silicon carbide crystals, which will be harmful in solar cells. The cost of this solar silicon will depend strongly on the scale of production. It is as yet premature to give exact figures, but with a scale of some thousand tons per year, the cost will only be a few times the cost of ordinary metallurgical silicon. Author

SOLAR SILICON FROM DIRECTIONAL SOLIDIFICATION OF MG SILICON PRODUCED VIA THE SILICON CARBIDE ROUTE
M. Rustioni, D. Margadonna, R. Pirazzi (Samim Abrasivi S.p.A., Domodossola, Italy), and S. Pizzini (Milan Univ., Italy) *In* JPL Proceedings of the Flat-Plate Solar Array Project Workshop on Low-Cost Polysilicon for Terrestrial Photovoltaic Solar-Cell Applications Feb. 1986 p 297-321 Sponsored in part by ENEA (For primary document see N86-26679 17-44)
Avail: NTIS HC A18/MF A01 CSCL 10A

A process of metallurgical grade (MG) silicon production is presented which appears particularly suitable for photovoltaic (PV) applications. The MG silicon is prepared in a 240 KVA, three electrode submerged arc furnace, starting from high grade quartz and high purity silicon carbide. The silicon smelted from the arc furnace was shown to be sufficiently pure to be directionally solidified to 10 to 15 kg. After grinding and acid leaching, had a material yield larger than 90%. With a MG silicon feedstock containing 3 ppmw B, 290 ppmw Fe, 190 ppmw Ti, and 170 ppmw Al, blended with 50% of off grade electronic grade (EG) silicon to reconduct the boron content to a concentration acceptable for solar cell fabrication, the 99% of deep level impurities were concentrated in the last 5% of the ingot. Quite remarkably this material has OCV values higher than 540 mV and no appreciable shorts due to SiC particles. B.G.

SILICON PURIFICATION USING A Cu-Si ALLOY SOURCE
R. C. Powell, P. Tejedor, and J. M. Olson *In* JPL Proceedings of the Flat-Plate Solar Array Project Workshop on Low-Cost Polysilicon for Terrestrial Photovoltaic Solar-Cell Applications Feb. 1986 p 367-377 (For primary document see N86-26679 17-44)
Avail: NTIS HC A18/MF A01 CSCL 10A

Production of 99.9999% pure silicon from 98% pure metallurgical grade (MG) silicon by a vapor transport filtration process (VTP) is described. The VTF process is a cold wall version of an HCl chemical vapor transport technique using a Si:Cu3Si alloy as the silicon source. The concentration, origin, and behavior of the various impurities involved in the process were determined by chemically analyzing alloys of different purity, the slag formed during the alloying process, and the purified silicon. Atomic absorption, emission spectrometry, inductively coupled plasma, spark source mass spectrometry, and secondary ion mass spectroscopy were used for these analyses. The influence of the Cl/H ratio and the deposition temperature on the transport rate was also investigated. Author

(DE86-004057; CONF-851146-2) Avail: NTIS HC A02/MF A01

The National Battery Test Laboratory (NBTL) is an Argonne National Laboratory facility for testing, evaluating, and studying advanced electric storage batteries. The facility tests batteries developed under Department of Energy programs and from private industry. These include batteries intended for future electric vehicle (EV) propulsion, electric utility load leveling (LL), and solar energy storage. Since becoming operational, the NBTL has evaluated well over 1400 cells (generally in the form of three- to six-cell modules, but up to 140-cell batteries) of various technologies. Performance characterization assessments are conducted under a series of charge/discharge cycles with constant current, constant power, peak power, and computer simulated dynamic load profile conditions. Flexible charging algorithms are provided to accommodate the specific needs of each battery under test. Special studies are conducted to explore and optimize charge procedures, to investigate the impact of unique load demands on battery performance, and to analyze the thermal management requirements of battery systems. STATUS OF ELECTRIC VEHICLE BATTERY DEVELOPMENT AND MANUFACTURING ACTIVITIES OUTSIDE OF THE UNITED STATES
J. H. Swisher Dec. 1985 70 p Presented at the Materials Research Society Meeting, Boston, Mass., 2 Dec. 1985
(Contract DE-AC06-76RL-01830)
(DE86-004215; DOE/RL-01830/T40) Avail: NTIS HC A03/MF A01

A study was conducted to summarize and analyze current activities outside of the United States in battery technology for electric vehicles. Emphasis was placed on batteries which are either commercially available now or may be fully developed within the next ten years. The battery systems of greatest interest currently are sodium/sulfur, nickel/iron, zinc/bromine, and advanced lead/acid. The countries with the largest programs are England, Japan, and the Federal Republic of Germany. Performance and cost goals for each system do not vary significantly from one country to another, with the possible exception of the Soviet Union. The number of joint ventures and consortia that have formed in recent years has increased, and international cooperation is now an important feature of current activities in battery technology. US Executive Branch policy is now very supportive of joint ventures. For this and other reasons, organizations in the United States could benefit from increased involvement in cooperative international activities. DOE

UPDATE ON THE STRUCTURAL DESIGN OF THE SANDIA 34-M VERTICAL AXIS WIND TURBINE
D. F. Berg and T. D. Ashwill 1986 8 p Presented at the 5th ASME Wind Energy Symposium
(Contract DE-AC04-76DP-00789)
(DE86-004217; SAND-85-2534C; CONF-860218-1) Avail: NTIS HC A02/MF A01

Sandia National Laboratories, as lead Department of Energy (DOE) laboratory for Vertical Axis Wind Turbine (VWAT) technology development in the USA, has been funded by the Wind/Oceans Technologies Division of the DOE to design and build a 34-M research-oriented VAWT. The machine will incorporate step-tapered blades with natural laminar flow blade sections, and will be capable of operating as either a constant rpm or a continuously-variable rpm machine. Design changes in the last year have reduced the predicted blade flatwise mean stresses by 56% and have reduced the rotor weight by 10,400 kg (23,000 lbs.). Flutter and aeroelastic damping analyses have been completed, instrumentation defined, and initial testing plans developed. The long lead time components of the turbine have been ordered, with deliveries to start in March, 1986. First turn of the turbine is planned for October, 1986. DOE

PROCEEDINGS OF THE SECOND ANNUAL HEAT ENGINES CONTRACTORS MEETING
Aug. 1985 381 p Meeting held in Morgantown, W. Va., 29 Apr. - 1 May 1985
(Contract DE-AC21-85MC-21353)
(DE85-008595; DOE/METC-85-6023; CONF-850429) Avail: NTIS HC A17/MF A01

The Second Annual Heat Engines Contractors Meeting was held April 29 through May 1, 1985, at the Sheraton Lakeview

Resort and Conference Center in Morgantown, West Virginia and was sponsored and hosted by the US Department of Energy (DOE), Office of Fossil Energy, Morgantown Energy Technology Center (METC). The annual meeting provided a forum for the exchange of information between DOE contractors and interested parties, and this year's meeting was attended by 220 individuals from industry, academia, national laboratories, and other governmental agencies. The proceedings have been reproduced from camera-ready manuscripts furnished by the authors. These papers have not been extensively edited. Most of them deal with gas turbines, diesel engines, fuel slurries, and pulverized fuels for these. The latter requires special coal preparation to get low ash fuels. Twenty-eight papers have been entered individually into EDB and ERA. DOE

HIGH TEMPERATURE MOLTEN SALT STORAGE Final Subcontract Report
J. Ives, J. C. Newcomb, and A. G. Pard Oct. 1985 95 p
(Contract DE-AC02-83CH-10093)
(DE85-016874; SERI/STR-231-2836) Avail: NTIS
HC A05/MF A01

The design of a high-temperature molten salt thermal energy storage (TES) concept, including some materials testing, was developed by Rockwell International's Rocketdyne Division (RD), under contract to SERI, and is described in this document. The main features of the concept are a conical hot tank with a liner and internal insulation that allows unrestricted relative thermal expansion and the use of cathodic protection (impressed voltage) to inhibit corrosion. The RD design uses two tanks and ternary eutectic lithium-sodium-potassium carbonates for sensible heat storage. The tanks were sized for 6 h of storage at a discharge rate of 300 MW, giving 1800 MWh total usable thermal storage capacity. The molten carbonate storage medium is cycled between 425 and 900C. From the design study, no definitive statement can be made as to the cost-effectiveness of cathodic protection. Several anode design issues need to be resolved before cathodic protection can significantly reduce corrosion where the liner comes in contact with molten salts. However, where the tank is exposed to salt vapor, the large corrosion allowance required for the liner without cathodic protection results in a much thicker liner wall and shorter liner life than originally perceived, which affects system costs significantly. DOE

HC A04/MF A01

This technical progress report to the Solar Energy Research Institute covers work on high-efficiency, stacked, multijunction amorphous silicon alloy thin-film solar cells. Material growth was begun in a multisector reactor. The a-Si:H films grown in this reactor were very high quality, as shown in their high ratio of photo-to-dark conductivity and very low dark conductivity. High-band-gap a-Si:H films were achieved by using H etching of films during growth. H2 dilution in the plasma led to a sharpening of the valence band tail in both a-Si:H and a-(Si,Ge):H films. No SiH2 bonds were observed after Ge was added to the a-Si:H. Experiments were begun to develop a two-level, stable back contact to a-Si:H. Preliminary results indicate that a Cr/Pd contact may be stable and moderately reflecting, but the best reflection was obtained with Ag. Mo appears to be a suitable, stable contact to SnO2. A critical parameter in achieving 8.5% efficient a-Si:H devices was plasma-cleaning between deposition of the p- and i-layers. 6.5% efficient a-(Si,Ge):H devices were also grown. Two types of tandem cells were fabricated. DOE

NUMERICAL MODELING OF A SOLID PARTICLE SOLAR CENTRAL RECEIVER
G. H. Evans, W. G. Houf, R. Greif, and C. Crowe Dec. 1985 63 p Prepared in cooperation with California Univ., Berkeley and Washington State Univ., Pullman
(Contract DE-AC04-76DR-00789)
(DE86-005066; SAND-85-8249) Avail: NTIS HC A04/MF A01

The flow of air and particles and the heat transfer inside a solar heated, open cavity containing a falling cloud of 100 to 1000 micron solid particles have been studied. Two-way momentum and thermal coupling between the particles and the air is included in the analysis along with the effects of radiative transport within the particle cloud, among the cavity surfaces, and between the cloud and the surfaces. The flow field is assumed to be two dimensional with steady mean quantities. The PSI-Cell (Particle Source In cell) computer code is used to describe the gas-particle interaction. The method of discrete ordinates is used to obtain the radiative transfer within the cloud. The results include the velocity and temperature profiles of the particles and the air. In addition, the thermal performance of the solid particle solar receiver has been determined as a function of the following particle parameters: size, mass flow rate, absorptivity, and infrared scattering albedo. Other parameters which have been varied include the incident solar flux (both magnitude and distribution) and receiver size. A forced flow, applied across the cavity aperture, has also been investigated as a means of decreasing convective heat loss from the cavity. Comparison of the results from the model has been made with an experiment performed at the radiant heat facility in Albuquerque. The model has also been used to predict the entrainment of air and the decrease in particle drag which has been observed when measurements were made of particle velocity in a cloud of particles in free fall. HC A08/MF A01

Electron beam and heat pipe technique furnaces for space-borne microgravity experiments were assessed. Testing of demonstration model furnaces clearly shows the advantages of the heat pipe principle for an isothermal furnace. Isothermality of the whole furnace working space can be provided without additional heaters for compensation of the working space end heat losses. Temperature stability during long-time furnace operation can be achieved by using a variable conductance heat pipe (VCHP) with gas pressure feedback-control. The VCHP principle with gas pressure measurement provides a viable method to improve the temperature measurement accuracy, for absolute temperature measurement, and provides long-time accuracy of the temperature measurement. The furnace can be operated at least in a temperature range of 900 to 1500 C. ESA

GROWTH CAPABILITIES OF EUROPEAN RETRACTABLE SOLAR ARRAYS Final Report
G. Behrens Paris, France ESA Jun. 1985 89 p
(Contract ESTEC-5554/83-NL-PB(SC))
(ESA-CR(P)-2141; ESA-86-96870) Avail: NTIS HC A05/MF A01

The growth capabilities of the Advanced Rigid Array, Rigid Solar Generator, L-Sat solar array, SOLA solar array, Space Telescope solar array, and the Ultralight Panel array were assessed. Capabilities of up to 18kW are needed for the NASA manned space station. The assessment shows that each of the arrays can reach the required power range, but without taking economic factors into account, and given that only the existing application was considered, it is not possible to recommend any particular concept. MODELING OF A HEAT PUMP CHARGED WITH A NON-AZEOTROPIC REFRIGERANT MIXTURE Final Report
P. Domanski Jan. 1986 396 p Sponsored by EPRI
(PB86-168267; NBS-TN-1218) Avail: NTIS HC A17/MF A01; also available SOD HC $18.00 as SN003-003-02716-2 CSCL 13A

An analysis of the vapor compression cycle and the main components of an air-to-air heat pump charged with a binary non-azeotropic mixture has been performed for steady-state operation. The general heat pump simulation model HPBI has been formulated which is based on independent, analytical models of system components and the logic linking them together. The logic of the program requires an iterative solution of refrigerant pressure and enthalpy balances, and refrigerant mixture and individual mixture component mass inventories. The modeling effort emphasis was on the local thermodynamic phenomena which were described by fundamental heat transfer equations and equation of state relationships among material properties. In the compressor model several refrigerant locations were identified and the processes taking place between these locations accounted for all significant heat and pressure losses. GRA

BIOCHEMICAL TRANSFORMATIONS IN TWO PLANT/SOIL SYSTEMS EXPOSED TO SIMULATED ACIDIC PRECIPITATION
P. M. Irving 1985 24 p Presented at the 7th International Symposium on Environmental Biochemistry, Rome, Italy
(Contract W-31-109-eng-38)
(DE86-004040; CONF-8509211-1) Avail: NTIS HC A02/MF A01

We were interested in determining how normal deposition rates of acidic rain affect the cycling of nutrients in two minimally managed perennial forage-soil systems. The objectives of our research were to quantify the impacts of acidic rain on the plant-soil system, through process-oriented studies of the soil biota, and through examination of the relationships between soil and plants. Our approach was to measure biogeochemical interactions within two sensitive model ecosystems exposed to different doses of simulated acidic rain during a two-year period. The results presented here are a summary of some of the highlights of our investigations. Although the complete picture of ecosystem reponse cannot be reported here, we include a selection of information on treatment effects ranging from chemical and biological processes to population and production dynamics. A MICROCOMPUTER POLLUTION MODEL FOR CIVILIAN AIRPORTS AND AIR FORCE BASES
H. M. Segal, J. K. Kemp, and P. L. Hamilton Dec. 1985 55 p
(AD-A163232; FAA-EE-85-4; AFESC/ESL-TR-85-41) Avail: NTIS HC A04/MF A01 CSCL 09/2

Over the past five years, the Federal Aviation Administration and the United States Air Force have developed a number of user-friendly emissions and dispersion models for air quality assessment purposes. The first, Simplex A was completed in July 1981. The second, called Emissions and Dispersion Modeling System (EDMS), has just been completed and this report constitutes its User's Guide. First, this User's Guide shows how the EDMS system evolved from the earlier, more complex AVAP and AQAM systems. Then, it identifies the hardware and software required to run the system and provides instructions on how to add, delete or change standard information. Finally, through a 125-step example problem, it instructs the user on how to input and process data to produce: (1) an emissions inventory of all sources at an airport/airbase, and (2) an estimate of the concentrations of these sources at specified locations. An inexperienced user should be able to process the example problem in less than three hours. Author (GRA)

A REVIEW OF METHODS TO TRACK OIL IN ARCTIC WATERS Final Report
Joseph W. St.Martin Jun. 1985 25 p refs
(AD-A164679; USCG-D-28-85) Avail: NTIS HC A02/MF A01 CSCL 13/2

A review of available literature on the tracking of oil in Arctic environments was conducted. The effectiveness of satellite and aircraft mounted detection devices used in locating oil-on-water, ice or in an ice/water mixture was examined. Oil spill tracking buoys and devices, both micro and macro scale, were also reviewed with their applicability to the Arctic environment detailed. Recommendations were made for the U.S. Coast Guard to use ARGOS system buoys on Arctic oil spills for long term tracking of movement. An additional recommendation was made for the future testing of the HU-25A mounted AIREYE surveillance system or an HC-130 mounted sensor package on oil spilled in an Arctic environment. HEC-5Q: SYSTEM WATER QUALITY MODELING
R. G. Willey Jan. 1986 23 p
(AD-A164832; HEC-TP-111) Avail: NTIS HC A02/MF A01 CSCL 13/2

Several state-of-the art models are available for analyzing water quality conditions in complex reservoir systems for a given set of operational conditions. Some of these models can even make operational decisions regarding proper gate regulations to obtain a desirable water quality condition at a dam site for a given set of flow conditions. HEC-5Q, Simulation of Flood Control and Conservation Systems (including Water Quality Analysis) computer model, has the unique capabilities to accept user-specified water quantity and quality needs system-wide and to decide how to regulate the network of reservoirs. The decision criteria are programmed to consider flood control, hydropower, instream flow

(municipal, industrial, irrigation, water supply, fish habitat) and water quality requirements. The HEC-5Q program was first applied to the Sacramento River System in California and a report was published in July 1985. Two other applications are in progress in the Kanawha and Monongahela River systems, and are expected to be completed by September 1986. GRA

GAS EXCHANGE BETWEEN THE FOREST AND THE ATMOSPHERE
C. E. Murphy, Jr. 1985 36 p Presented at the Department of Energy (DOE) Meterology Workshop, Lake Placid, N.Y., 1 Oct. 1985
(Contract DE-AC09-76SR-00001)
(DE86-004624; DP-MS-85-116; CONF-8510250-1) Avail: NTIS HC A03/MF A01

Forest gas exchange is discussed in terms of the processes that control the rate of exchange with the atmosphere. Examples are presented to show how vegetative uptake control is varied for gases with different characteristics. The prediction of uptake for large areas and over long periods of time is discussed in terms of quantitative models of the gas exchange processes. Finally, remote sensing is suggested as a means of obtaining the parameters needed to make the model predictions. DOE

SELECTIVE CATALYTIC REMOVAL OF NO FROM STATIONARY SOURCES
F. J. J. G. Janssen, F. M. G. vandenKerkhof, and A. J. vanLoon, ed. 1985 19 p
(S/T-Rept-Vol-3-No-6; B8574251; ISBN-90-353-0029-7; ISSN-0167-8590; ESA-86-96945) Avail: NTIS HC A02/MF A01

Research on selective catalytic removal of nitric oxide with ammonia to develop catalysts for use under conditions likely to produce flue gases was surveyed. The activity and selectivity of supported vanadium, tungsten, and iron oxide catalysts were studied in a plug-flow and a mixed-flow reactor on a laboratory scale between 370 and 670 K. The effects of the NO/NH3 ratio, space-velocity and oxygen on the reduction reactions, and effects of catalysts on ammonia and sulfur dioxide oxidation were investigated. The catalysts were characterized by conventional techniques. All the catalysts showed relatively high NO conversion. Data show that the NO/NH3 reaction in the presence of oxygen below 575 K is according to the formula 4 NO + 4 NH3 + O2 yields 4N2 + 6 H2O. Selectivity decreases above 625 K because of NH3 oxidation. The rate of the NO/NH3 reaction on the catalysts under dilute gas conditions is markedly increased by the addition of 1% oxygen. ESA

MARYLAND WATER RESOURCES RESEARCH CENTER, FISCAL YEAR 1984 PROGRAM REPORT
Sep. 1985 28 p Sponsored in part by the Geological Survey, Reston, Va.
(Grant DI-14-08-0001-G-911)
(PB86-133253; USGS-G-911-01) Avail: NTIS HC A03/MF A01 CSCL 13B

Within the framework of the 1984 Program of the Maryland Water Resources Research Center, three projects were focused on questions of pollution of surface and ground water and one on acid rain. An information transfer project focused on the protection of ground water supplies. In a project to assess nitrogen and phosphorus losses via subsurface ground water flow from conventional and no-till corn watersheds, evidence was obtained that the leaching of nitrates into percolate or ground water is not enhanced by the use of no-till cultivation. No phosphate was found in percolate samples from either no-till or conventional cultivation treatments. A two-year study has been conducted to assess the accumulation of toxic metals in the sediments of Maryland's Eastern Shore rivers. In a project to determine the impact on human health of contaminants present in sludge applied as soil amendment, ground and surface water have been analyzed for mutagenic compounds. Preliminary information on acidity in rainfall indicates increased levels of H(+), SO4(2-), Pb, and Mn over a control area in Tennessee. GRA

USER-FRIENDLY SCREENING MODEL FOR POINT-SOURCE IMPACT ASSESSMENT
D. B. Turner Apr. 1986 19 p
(PB86-176369; EPA-600/D086-062) Avail: NTIS HC A02/MF A01 CSCL 04A

A user friendly air quality simulation screening model coded in FORTRAN is described and sample use is shown for point source impact assessment. The model was developed and tested on a personal computer and can be run interactively on a mainframe. Any of five dispersion techniques: (1) wind fluctuations, (2) Briggs urban, (3) Briggs rural, (4) Pasquill-Gifford, or (5) Brookhaven can be used. Plume rise can be calculated either by Briggs 1975 techniques, currently included in models used for regulatory purposes, or by techniques which calculate plume rise layer-by-layer and consider partial penetration. Maximum ground level concentration downwind or concentrations at specific locations can be estimated. Receptor locations can be specified in four ways: (1) specific downwind distance, (2) downwind and crosswind location, (3) distance and azimuth from the source, or (4) Cartesian coordinates of both source and receptor. The model provides ground level estimates for a single stack or ground level source. GRA

A STUDY OF THE UNSTEADY AERODYNAMIC FORCES GENERATED BY A DEFORMING JOUKOWSKI AIRFOIL Ph.D. Thesis
John Hugh Russell 1985 150 p
Avail: Univ. Microfilms DA8528520

An analytic study is performed in order to determine the aerodynamic forces that arise from the prescribed deformations of a Joukowski airfoil. The fluid medium is assumed to be an incompressible, potential flow and the superposition principle is used to build the entire flow field. Unsteadiness enters the analysis only through the time dependent body deformations and through the action of the trailing wake. The analysis proceeds in order of increasing difficulty through the construction of the computational model to its application on the general Joukowski airfoil. In all instances evaluated, a degree of unsteady lift enhancement or decrement was observed, depending upon the particular deformation and deformation rate. The study also makes use of a special form of the Blasius Theorem in order to facilitate determination of the aerodynamic forces in a moving reference frame. The unsteady forces are determined by means of a computer code that calculates the time history of the lift and drag arising from the airfoil deformations. The code also computes the effects that the deforming airfoil and the wake have upon each other. Dissert. Abstr.

DETERMINATION OF BAND OSCILLATOR STRENGTHS OF ATMOSPHERIC MOLECULES FROM HIGH RESOLUTION VACUUM ULTRAVIOLET CROSS SECTION MEASUREMENTS

Semiannual Status Report, 1 Nov. 1985 - 30 Apr. 1986

W. H. Parkinson May 1986 69 p refs

(Grant NAG5-484)

(NASA-CR-177293; NAS 1.26:177293; SASR-3) Avail: NTIS HC A04/MF A01 CSCL 04A

An account is given of progress in work on (1) the determination of band oscillator strengths of the Schumann-Runge absorption bands of (16)O2 and (18)O2 from cross section measurements conducted at 79 K; (2) the determination of the absolute absorption cross section of the Schumann-Runge bands of (16)O(18)O from optical depth measurements performed on mixtures of (16)O2, (18)O2 and (16)O(18)O at 79K; and (3) the influence of Schumann-Runge linewing contributions on the determination of the Herzberg continuum absorption cross section of (16)O2 in the wavelength region 194 to 204 nm. The experimental investigations are effected at high resolution with a 6.65 m scanning spectrometer which is, by virtue of its small instrumental width (EWHM = 0.0013 nm), uniquely suitable for cross section measurements of molecular bands with discrete rotational structure. Absolute cross sections, which are independent of the instrumental function and from which band oscillator strengths are directly determined, are measurod for the absorption bands that are most predissociated. Such measurements are needed for (1) accurate calculations of the stratospheric production of atomic oxygen and heavy ozone formed following the photopredissociation of (18)O(16)O by solar radiation penetrating between the absorption lines of (16)O2; (2) elucidation of the mechanism of predissociation of the upper state of the Schumann-Runge bands; and (3) determination of the true shape of the Herzberg continuum cross section. MIDDLE ATMOSPHERE PROGRAM. HANDBOOK FOR MAP, VOLUME 19

Richard A. Goldberg, ed. (National Aeronautics and Space Administration. Goddard Space Flight Center, Greenbelt, Md.) Mar. 1986 210 p

(NASA Order W-15897)

(NASA-CR-176800; NAS 1.26:176800; MAP-HANDBOOK-19) Avail: NTIS HC A10/MF A01; also available from SCOSTEP Secretariat, University of Illinois, 1406 West Green Street, Urbana, Ill. 61801 CSCL 04A

This MAP handbook is concerned with rocket techniques and instrumentation as they are currently employed in the middle atmosphere. It is composed of nine chapters, written by experts on rocket experiments. The emphasis is on measurement techniques rather than results, although results are incorporated wherever they provide examples which illustrate the measurement features. The chapters first cover techniques relating to measurements of neutral dynamics and chemistry, then measurements of the various intermittent and excessive radiation sources which effect the middle atmospheric environment, and finally measurements of the plasma environment including electric fields. The weighting toward plasma related parameters is not accidental, but reflects both the historical headstart given by early development of radio wave and probe techniques to measure electron density, and by the relatively limited number of techniques available for neutral atmospheric measurements. For individual titles, see N86-26726 through N86-26734.

ROCKET TECHNIQUES USED TO MEASURE THE NEUTRAL ATMOSPHERE

F. J. Schmidlin *In* International Council of Scientific Unions Handbook for MAP, Vol. 19 Mar. 1986 28 p (For primary document see N86-26725 17-46)

Avail: NTIS HC A10/MF A01; also available from SCOSTEP Secretariat, University of Illinois, 1406 West Green Street, Urbana, Ill. 61801 CSCL 04A

One important facet of middle atmosphere studies is the role of direct measurements provided by rocket systems. These systems range in size from the small meteorological rocketsonde capable of providing temperature and wind data to the larger sounding rocket designed to carry much larger payloads. The more common methods of rocket meteorological measurements used today are discussed, some of which were first deployed over 25 years ago. The major emphasis is given to that system which produces the most measurements (the small meteorological rocket), the types of sensors, the role and applicability of coordinated launchings such as obtained from the Meteorological Rocket Networks, and, the data quality and uses. The large sounding rockets produce similar data but, because of the cost and complexity involved in launching these bigger vehicles, fewer data are obtained. This does not, however, detract from the value of such data. The observational virtue of rocket data is its vertical height resolution which added new information on the atmospheric structure in mesoscale and, possibly, microscale dimensions. Rocket exploration of the atmosphere has changed the popular notion that the middle and upper atmosphere is a static, quiet area, to the realization that this region is highly active and dynamic. ROCKET TECHNIQUES FOR MEASUREMENT OF OZONE AND RELATED NEUTRAL MINOR CONSTITUENTS

A. J. Krueger *In* International Council of Scientific Unions Handbook for MAP, Vol. 19 Mar. 1986 27 p (For primary document see N86-26725 17-46)

Avail: NTIS HC A10/MF A01; also available from SCOSTEP Secretariat, University of Illinois, 1406 West Green Street, Urbana, Ill. 61801 CSCL 04A

Rockets are the only vehicles for direct measurement of the neutral composition of the stratosphere and mesosphere above balloon altitudes (35 to 40 km). Instrumentation was developed for routine measurements of ozone using either UV absorption, chemiluminescence, or airglow techniques, and for nitric oxide using chemiluminescence. Other species which were measured are nitrogen dioxide, water vapor, hydroxyl, and atomic oxygen. Ozone was measured about 400 times, nitric oxide about 10 times, and the remaining species only one or two times. Author

MEASUREMENTS OF X-RAY ENERGY DEPOSITION IN THE MIDDLE ATMOSPHERE

J. R. Barcus *In* International Council of Scientific Unions Handbook for MAP, Vol. 19 Mar. 1986 32 p (For primary document see N86-26725 17-46)

Avail: NTIS HC A10/MF A01; also available from SCOSTEP Secretariat, University of Illinois, 1406 West Green Street, Urbana, Ill. 61801 CSCL 04A

Rocket techniques as applied to measurements in the middle atmosphere of X-rays in the 5 to 100 keV range are presented. Different types of detectors and payloads are compared in regard to their capabilities and limitations. Assessment of the energy deposition by X-rays is examined by methods involving in situ measurements and/or model-dependent calculations. Recent results illustrate the role of X-rays as an important source of ionization in the middle atmosphere at all latitudes, with the greatest range of effects taking place at high magnetic latitudes. DC-PROBE MEASUREMENTS IN THE MIDDLE ATMOSPHERE
E. V. Thrane *In* International Council of Scientific Unions Handbook for MAP, Vol. 19 Mar. 1986 17 p (For primary document see N86-26725 17-46)
Avail: NTIS HC A10/MF A01; also available from SCOSTEP Secretariat, University of Illinois, 1406 West Green Street, Urbana, Ill. 61801 CSCL 04A

Rocket-borne dc probes were used extensively to study the weakly ionized plasma in the lower ionosphere and upper stratosphere. Although based upon the same basic principle, the probes were used in many different forms to measure both ion and electron densities, as well as electron temperature, and in some cases, ion composition. In recent years, probes have been used successfully to study turbulence in the middle atmosphere. The most important electrostatic probe techniques are reviewed and the accuracy and sensitivity of the different instruments are discussed and illustrated with sample measurements. The theory for the collection of ions or electrons by means of such probes in a collision-dominated regime is complex and not well developed. Some of the theoretical difficulties are pointed out briefly. Author

ROCKET PROBE TECHNIQUES FOR MEASURING BULK ION PROPERTIES
J. D. Mitchell *In* International Council of Scientific Unions Handbook for MAP, Vol. 19 Mar. 1986 18 p (For primary document see N86-26725 17-46)
Avail: NTIS HC A10/MF A01; also available from SCOSTEP Secretariat, University of Illinois, 1406 West Green Street, Urbana, Ill. 61801 CSCL 04A

An overview of rocket probe techniques for measuring middle atmosphere ion properties is presented. The measured parameters include conductivity, ion mobility and number density, all of which characterize the region's electrical structure. Particular consideration is given to the Gerdien condenser because of its capability to measure all three of these ion quantities. This probe was adapted for flight operation while either attached to a rocket or, more often, descending on a parachute. The use of a parachute potentially enhances the probe's measurement capabilities and also it lessens detrimental flow effects on ion collection. From the brief presentation of measurement results, it is demonstrated that a variety of presently flown probe systems, both supersonic and subsonic, show general consistency in measuring conductivity; and, in fact, they occasionally have been combined to enhance overall investigations. Also, it is observed that electrical conductivity is the most variable of the three parameters, having a strong dependence on temperature, solar conditions, and local ionization sources. Author

MEASUREMENT TECHNIQUES FOR MIDDLE ATMOSPHERE ELECTRIC FIELDS
N. C. Maynard *In* International Council of Scientific Unions Handbook for MAP, Vol. 19 Mar. 1986 15 p (For primary document see N86-26725 17-46)
Avail: NTIS HC A10/MF A01; also available from SCOSTEP Secretariat, University of Illinois, 1406 West Green Street, Urbana, Ill. 61801 CSCL 04A

Both the difficulty of access to the region and the difficulty of measurement techniques has caused the middle atmosphere to be one of the last near Earth regions to be explored electrodynamically. Recent improvements in measurement techniques spurred by the apparent discovery of large V/m electric fields have resulted in new thrusts into this previously neglected field. Both double probe techniques and field mills were adapted for middle atmosphere measurements. A brief description of each technique is given along with some of the pitfalls and difficulties associated with middle atmosphere electric field measurements. Measurement of mV/m level electric fields is now possible in the D region. The detection of V/m level fields in the lower ionosphere remains controversial; however, increasing evidence is accumulating for their existence. Author

KINEMATICS, COMPOSITION AND THERMODYNAMICS OF THE MESOPAUSE, TURBOPAUSE, REGION OF THE ATMOSPHERE (BETWEEN 80 AND 120 KM) RELATED TO THE AEROASSISTED ORBIT TRANSFER VEHICLE (AOTV) OPERATIONS
Michael Susko Apr. 1986 21 p refs
(NASA-TM-86545; NAS 1.15:86545) Avail: NTIS HC A02/MF A01 CSCL 04A

The mesopause-turbopause region (80 to 120 km) of the atmosphere which is frequently used as a boundary between the thermosphere and mesosphere for models of the atmosphere is discussed. The initialization of models is important since uncertainties may lead to significant changes in the computations of total

density at greater altitudes. In this transition region, the experimental data base for the total gas density and the constituents of smaller abundance is very limited. The turbopause height (h sub t) may vary from 90 to 120 km and no pronounced dependence of (h sub t) on season, local time, or solar activity is determined. The importance of atmospheric turbulence is discussed and its important role in the mesosphere and lower atmosphere by influencing the thermal balance of the upper atmosphere, as well as the distribution of different atmospheric constituents, is presented. The number of measurements of turbulence at these altitudes is small. Data from radio meteors, noble gas ratio analysis, and luminescent cloud analysis reveal no definite conclusion or systematic variation of the turbulence region. The heat input by gravity waves is a dominant term in the energy balance equation. Also gravity waves, either directly or through a mechanism of turbulence generation, enhance the mixing ability of the atmosphere. Internal gravity waves produce variations in the density as well as concentration of atomic oxygen. The uncertainty in the atmospheric density variation leads to control system design problems for the AOTV relative to the control authority required to deal with the unpredictable variation in density. EQUATORIAL F REGION VERTICAL PLASMA DRIFTS: SEASONAL AND LONGITUDINAL ASYMMETRIES IN THE AMERICAN SECTOR
I. S. Batista, M. A. Abdu, and J. A. Bittencourt Mar. 1986 29 p refs Sponsored in part by Fundo Nacional de Desenvolvimento Cientifico e Tecnologico. Submitted for publication
(INPE-3839-PRE/909) Avail: NTIS HC A03/MF A01

Longitudinal and seasonal asymmetries in the evening ionospheric F region plasma vertical drift (V sub z) enhancements, between two longitudinally separated stations situated along the magnetic equator, are investigated under solar maximum conditions. Results obtained from the analysis of ionosonde data acquired at the Huancayo, Peru and Fortaleza, Brazil stations are used. The two stations have markedly different magnetic declination angles. The observed asymmetries are interpreted using a detailed numerical simulation of the E and F region electrodynamic coupling process that takes into account its asymmetry about the equator arising from the finite magnetic declination angle. The results of the simulation show, in agreement with observations, that the evening F region vertical drift pre-reversal peak occurrence time and its seasonal variation at a station are controlled by the magnetic declination angle at that station, which determines the seasonal variation of the sunset times (and hence the integrated Pedersen conductivity longitudinal gradient) at its magnetic conjugate E layers. The amplitude of the pre-reversal peak, on the other hand, undergoes the influence of the magnetic declination angle as well as of the thermospheric zonal wind. Author

DYNAMICS OF NON-RELATIVISTIC EQUATORIAL ELECTRONS AND PROTONS INSIDE THE PLASMASPHERE
O. Pinto, Jr., O. Mendes, Jr., and W. D. Gonzalez Mar. 1986 25 p Sponsored in part by Fundo NACIONAL DE Desenvolvimento Cientifico e Tecnologico. Submitted for publication
(INPE-3833-PRE/905) Avail: NTIS HC A02/MF A01

The dynamics of nonrelativistic equatorial electrons and protons inside the plasmasphere are studied. These particles are subjected to the combined action of the geomagnetic field and plasmaspheric electric fields, both assumed to be static, during magnetically quiet and distrubed periods. It is concluded that, during magnetically quiet periods, electrons tend to corotate with and simultaneously drift away from the Earth. On the other hand, protons show a more complex dynamical behavior, strongly depending on energy and local time, presenting open orbits similar to those of electons, except for an energy interval in which closed orbits exist within certain local time intervals. During magnetically disturbed periods, at least around L = 2, the behavior of electrons and protons remains approximately unchanged. Author

THERMOSPHERIC MODELS: A SHORT REVIEW ON THE BASIC ASSUMPTIONS
Carlos Jose Zamlutti Mar. 1986 35 p refs Submitted for publication
(INPE-3823-PRE/899) Avail: NTIS HC A03/MF A01

Thermospheric models vary in a wide range of approaches: theoretical, analytical, semiempirical, numerical, etc. The models should be used only if the basic assumption, on which they are based, are valid. This paper deals with a critical review of thermospheric models keeping in view that they are designed to predict the actual behavior of the neutral atmosphere parameters above 90 km. Emphasis is put on the lower thermosphere to avoid interhemispheric transport effect, not included in most of the models. Author

The imaging instrumentation for the Dynamics Explorer Mission was designed primarily to obtain global auroral images. The instrument, however, was also used successfully to study marine bioluminescence, the geocorona, and the global distribution of atmospheric ozone. The imager has considerable potential for the study of astronomical sources of ultraviolet radiation as well. The data produced by the imager is used to study the brightness and isotrophy of the diffuse ultraviolet background. Author

THEMATIC MAPPER RESEARCH IN THE EARTH SCIENCES: TECTONIC EVALUATION OF THE NUBIAN SHIELD OF NORTHEASTERN SUDAN/SOUTHEASTERN EGYPT USING THEMATIC MAPPER IMAGERY Interim Report
Feb. 1986 24 p refs Original contains color illustrations
(Contract NAS5-28757)
(NASA-CR-177311; NAS 1.26:177311) Avail: NTIS HC A02/MF A01 CSCL 08G

The tectonic evaluation of the Nubian Shield using the Thematic Mapper (TM) imagery is progressing well and shows great promise. The TM tapes for the six LANDSAT 5 scenes covering the northern portion of the Red Sea hills were received, and preliminary maps and interpretations were made for most of the area. It is apparent that faulting and shearing associated with the major suture zones such as the Sol Hamed are clearly visible and that considerable detail can be seen. An entire quadrant of scene 173,45 was examined in detail using all seven bands, and every band combination was evaluated to best display the geology. A comparison was done with color ratio combinations and color combinations of the eigen vector bands to verify if band combinations of 7-red, 4-green, and 2-blue were indeed superior. There is no single optimum enhancement which provides the greatest detail for every image and no single combination of spectral bands for all cases, although bands 7, 4, and 2 do provide the best overall display. The color combination of the eigen vector bands proved useful in distinguishing fine detailed features. B.G.

Research effort on behalf of the Crustal Dynamics Project

focused on the development of methodologies suitable for the analysis of space-geodetic data sets for the estimation of crustal motions, in conjunction with results derived from land-based geodetic data, neo-tectonic studies, and other geophysical data. These methodologies were used to provide estimates of both global plate motions and intraplate deformation in the western U.S. Results from the satellite ranging experiment for the rate of change of the baseline length between San Diego and Quincy, California indicated that relative motion between the North American and Pacific plates over the course of the observing period during 1972 to 1982 were consistent with estimates calculated from geologic data averaged over the past few million years. This result, when combined with other kinematic constraints on western U.S. deformation derived from land-based geodesy, neo-tectonic studies, and other geophysical data, places limits on the possible extension of the Basin and Range province, and implies significant deformation is occurring west of the San Andreas fault. A new methodology was developed to analyze vector-position space-geodetic data to provide estimates of relative vector motions of the observing sites. The algorithm is suitable for the reduction of large, inhomogeneous data sets, and takes into account the full position covariances, errors due to poorly resolved Earth orientation parameters and vertical positions, and reduces baises due to inhomogeneous sampling of the data. This methodology was applied to the problem of estimating the rate-scaling parameter of a global plate tectonic model using satellite laser ranging observations over a five-year interval. The results indicate that the mean rate of global plate motions for that interval are consistent with those averaged over several million years, and are not consistent with quiescent or greatly accelerated plate motions. This methodology was also used to provide constraints on deformation in the western U.S. using very long baseline interferometry observations over a two-year period. M.G.

PARTICLE AND WAVE DYNAMICS DURING PLASMA INJECTIONS
H. C. Koons and J. F. Fennell 15 Jul. 1985 34 p refs
(Contract F04701-83-C-0084)
(AD-A163210; TR-0084A(5940-06)-3; SD-TR-85-51) Avail: NTIS HC A03/MF A01 CSCL 04/1

The SCATHA satellite measures particle and wave parameters as it moves outbound on the dusk side from the plasmasphere into the plasma sheet. In many cases plasma waves are not observed in the quiescent plasma sheet prior to a plasma injection. The electron distribution function prior to entry into the plasma sheet is a nearly isotropic soft spectrum J(E) approx. 1/E. Just inside the plasma sheet the spectrum begins to harden and becomes anisotropic, J perpendicular greater than J parallel. As the satellite penetrates deeper into the plasma sheet the spectrum further hardens, especially near alpha sub 0 approx. 90 deg. At the injection the electron spectrum drastically hardens and often becomes peaked in the keV energy range. The pitch angle anisotropy is further enhanced in favor of J perpendicular. The plasma wave emissions onset occurred at the time of the injection. Whistler-mode waves are observed below the electron cyclotron frequency. Electrostatic waves are detected in bands between the electron cyclotron frequency harmonics. GRA

RADIATION OF LONG ELECTROMAGNETIC WAVES BY A MODULATED ELECTRON BEAM IN THE IONOSPHERE Final Report, Dec. 1983 - Aug. 1985
E. C. Field and L. E. Johnson Dec. 1985 45 p
(Contract F19628-84-C-0014)
(AD-A163306; PSR-1566; RADC-TR-85-233) Avail: NTIS HC A03/MF A01 CSCL 04/1

Pulsed electron beams in the ionosphere radiate electromagnetic energy and, therefore, might work as wireless virtual antennas. Such virtual antennas would be most useful at low frequencies because small or moderate-size wire antennas work well at high frequencies. Natural beams radiate energy that propagates down through the ionosphere, but no experiment has used a man-made electron beam to produce radiation at the modulation frequency or its harmonics, and detected that radiation on the ground. The present report addresses the feasibility of such an experiment, and suggests preferred configurations. Motivated by communications applications, which require good time availability, it considers only phenomena, such as the triggering plasma of instabilities or guidance in transient ionospheric ducts. A variety of plasma wave and electric field effects were observed during the AMPTE (Active Magnetospheric Particle Tracer Explorers) solar wind barium release. Electron plasma oscillations at the local electron plasma frequency provided measurements of the electron density during the entire event. A static electric field of about 1 to 2 mVolt/m was detected in the diamagnetic cavity. This electric field is in the same direction as the solar wind electric field, suggesting that polarization charges in the ion cloud are not effective at shielding out an external electric field. As the spacecraft passed through the boundary of the diamagnetic cavity, a region of compressed plasma and magnetic field was detected upstream of the ion cloud. This region of compressed plasma is believed to be caused by solar wind plasma and magnetic field lines draped around the noise of the ion cloud. Inside the diamagnetic cavity electrostatic emissions were observed in a narrow band centered on the barium ion plasma frequency and in another band at lower frequencies. These waves are believed to be short wavelength ion acoustic waves. Bursts of electrostatic waves were also observed at the boundaries of the diamagnetic cavity, apparently caused by an electron drift current along the boundary. GRA

(Contract F19628-83-C-0123)
(AD-A164636; AFGL-TR-85-0237; SR-2) Avail: NTIS HC A04/MF A01 CSCL 04/1

Part A of the report presents results from our model calculation of the diurnal behavior of the neutral and ionic sodium species. It is shown that the concentration of Na(+) above 90 km exerts a direct influence on the topside scale height of the atomic sodium layer in the mesosphere. The abundance of Na(+) is controlled by the reaction rate for the clustering reaction which is the rate limiting step for the conversion of Na(+) to Na. Downward transport of Na(+) due to ion drift is also effective in reducing the sodium abundance around 90 km. The model can successfully simulate the observed topside scale height of the sodium layer by either using a slow rate for the clustering reaction or incorporating transport of Na(+). Part B assesses the possible impact of sodium species on the stratospheric chlorine cycle. Recent measurements of kinetic rates suggest that the bulk of the sodium species could be in the form of NaCl in the stratosphere. Since the sodium abundance is three orders of magnitude smaller than that of chlorine, NaCl is not likely to be an important chlorine reservoir. Photolysis of NaCl could provide a mechanism for recycling HCl to Cl in the lower stratosphere if it is as fast as 0.001/s. However, the mechanism would not be effective if there exists another more stable form of sodium compound, such as NaHC03 or polymers of NaCl. GRA

GRAVITY GRADIOMETER SURVEY ERRORS Report, Nov. 1984 - Apr. 1985
Steven J. Brzezowski Mar. 1985 37 p
(Contract F19628-83-C-0053)
(AD-A165575; TASC-TR-4423-3; AFGL-TR-85-0066; SR-4) Avail: NTIS HC A03/MF A01 CSCL 08/5

Gradiometer system noise, sampling effects, downward continuation and limited data extent contribute to moving-base gravity gradiometer survey error. This report describes the individual effects of these error sources on a gravity gradiometer survey system currently under development. Special techniques are required to account for downward continuation and limited data extent effects which cannot be adequately modeled as measurement noise in a linear error estimation algorithm. The results reported herein indicate the survey performance improvement which could be realized if each error source were totally eliminated. The sensitivity of total survey error to small changes in the nominal value of each error source is also identified. System performance results are analyzed for several sets of airborne survey conditions. For a typical characterization of the Earth's gravity field, limited data extent generally contributes about one-half of the total error variance associated with recovery of the gravity disturbance vector at the Earth's surface; gradiometer system noise typically contributes about one-third. However, sampling effects are also very significant (and are controlled through the survey track spacing). The findings of this study indicate that a 5-km track spacing provides a reasonable tradeoff between survey cost and errors due to track spacing. Author (GRA)

STUDY OF IONOSPHERIC AND TROPOSPHERIC MODELS Final Report
Karl Rawer, comp. and Dieter Bilitza, comp. Paris ESA Sep. 1985 93 p
(Contract ESA-5375/83-D)
(ESA-CR(P)-2157; ESA-86-96859) Avail: NTIS HC A05/MF A01

To improve Bent's ionospheric model, the source of the NASA model applied by ESOC when computing the ionospheric refraction correction at radio location of satellites, empirical data were compared with the model and with proposed changes. The most important improvements proposed refer to the shape of the electron density profile and to the ionospheric peak parameters. A saturated relation instead of a linear one is proposed for the solar activity effect, and a provisional formula for taking account of the plasmaspheric content is given. Observations made by ESOC ground stations were used to check the models. It is found that the proposed changes are helpful and provide an overall improvement. ESA

EFFECT OF STOCHASTIC PERTURBATIONS ON A SPECTRAL MODEL OF ATMOSPHERIC CIRCULATION
H. E. deSwart and J. Grasman Nov. 1985 21 p Revised Sponsored by Netherlands Foundation for the Technical Sciences
(CWI-AM-R8515; B8578049; ESA-86-97001) Avail: NTIS HC A02/MF A01

The dynamics of a low order spectral model of the barotropic potential vorticity equation, forced by random perturbations, is studied as a function of the memory and intensity of the noise. The unperturbed deterministic system has three equilibria, and for arbitrary initial conditions trajectories in phase space always tend to one of the two stable equilibria representing preferent circulation patterns of the atmosphere. The noise forces the system to visit alternately the two attraction domains of the stable equilibria. During the transition the system remains temporarily in a neighborhood of the unstable equilibrium. Characteristic residence times in the attraction domains and in the domain near the unstable equilibrium are calculated. The alternation of preferent states is studied with a discrete state Markov model. The eigenvalues of the Markov model indicate the time scale over which the effect of the initial state is present in the system. ESA

HC A03/MF A01 CSCL 08E

A new generalized linear regression model, also called mixed model, is presented for the computation of zero-epoch heights and height velocities using releveling observations. The method is compared with the single point velocity model having a multiquadric interpolator for the velocity surface. Tests based on simulated error free and noisy data show slight advantages for the mixed model. The multiquadric technique provides a good interpolation method in the deterministic sense when certain specific precautions are considered. Error statistics of multiquadrics using a stochastic approach through least squares should be interpreted with extreme care. GRA

MEGATREND SOLUTIONS IN PHYSICAL GEODESY
A. Bjerhammar Feb. 1986 35 p
(PB86-173317; NOAA-TR-NOS-116; NGS-34) Avail: NTIS
HC A03/MF A01 CSCL 08E

A technique for renormalization of integral equations is used for obtaining very robust solutions. The number of multiplications used for inverting the integral equations can be reduced dramatically and mostly only weighted means will be needed. Theoretical proportional gain in computer time might be as much as 100,000 for the most favorable cases when using 1,000 unknowns. (Practical gains will be considerably less.) Solutions were obtained with increased accuracy compared with the classical technique of integral equations. Surface elements could be of arbitrary size, but the method is optimal for a global approach with equal area elements. The solutions were found strictly invariant with respect to the depth of the embedded sphere when using simpler models. GRA

HC A03/MF A01 CSCL 04B

Two major themes were pursued during this research period. The first of these involved examining the impacts of satellite-based data and the forecast model used by the Goddard Laboratory for Atmospheres (GLA) on general circulation statistics. For the other major topic, the diabatic heating fields produced by GLA were examined for one month during the FGGE First Special Observing Period. As part of that effort, the three-dimensional distribution of the four component heating fields were studied, namely those due to shortwave radiation, Q sub SW, longwave radiation, Q sub LW, sensible heating, Q sub S, and latent heating, Q sub L. These components were calculated as part of the GLA analysis/forecast system and archived every quarter day; from these archives cross products with temperature were computed to enable the direct calculation of certain terms of the large-scale atmospheric energy cycle, namely those involving the generation of available potential energy (APE). The decision to archive the diabatic heating components separately has enabled researchers to study the role of the various processes that drive the energy cycle of the atmosphere. Author

COMPARISON OF RAINFALL CHARACTERISTICS AT FORTALEZA (CEARA) AND OTHER NEARBY LOCATIONS IN NORTHEAST BRAZIL
R. P. Kane and N. B. Trivedi Apr. 1986 63 p refs Sponsored in part by Fundo Nacional de Desenvolvimento Cientifico e Tecnologico. Submitted for publication
(INPE-3851-PRE/915) Avail: NTIS HC A04/MF A01

The rainfall series of Fortaleza (Ceara) is compared with similar series for several other locations in Northeast Brazil. It is shown that the correlations are good for distances up to about 600 km from Fortaleza. A Master Curve for 1912-1978, obtained by averaging rainfall data for 93 stations having good correlations with Fortaleza, shows very prominent periodicities at T = 5.6, 12.3, and 47.3 years and less prominent periodicities at T = 3.4 and 4.3 years. Predictions from both the Fortaleza series (1849-1976) and the Master Curve (1912-1978) indicated droughts during 1979-1983. This prediction seems to have been realized. In future, droughts during 1992-1994 and 2002-2006 are indicated. Author

HC A03/MF A01 CSCL 04B

Methods for use in the remote estimation of ocean surface sensible and latent heat fluxes were developed and evaluated. Three different techniques were developed for determining these fluxes. These methods are: (1) Obtaining surface sensible and latent heat fluxes from satellite measurements; (2)Obtaining surface sensible and latent heat fluxes from an MABL model; (3) A method using horizontal transfer coefficients. These techniques are not very sensitive to errors in the data and therefore appear to hold promise of producing useful answers. Questions remain about how closely the structure of the real atmosphere agrees with the assumptions made for each of these techniques, and, therefore about how well these techniques can perform in actual use. The value of these techniques is that they promise to provide methods

for the determination of fluxes over regions where very few traditional measurement exist. E.R.

RELATIVE - HUMIDITY PARAMETERIZATION OF THE NAVY AEROSOL MODEL (NAM) Interim Report
Hermann E. Gerber 30 Dec. 1985 16 p
(AD-A163209; NRL-8956) Avail: NTIS HC A02/MF A01 CSCL 04/2

An improved relative-humidity parameterization is described for the lognormal size distributions used in the Navy aerosol model. Approximation formulas are developed for the geometric mean and standard deviation of the distributions for sea-salt, urban, and rural aerosols. The parameterization gives accurate predictions of the size dependence of the aerosol particles for a range in relative humidity from near 0% to 100%, and for dry particle sizes from 0.01 to 10 microns. By neglecting the Kelvin effect, the new formulas reduce to a form similar to the existing humidity parameterization. The range of applicability of the new formula and its reduced form for estimating extinction coefficients are established. GRA

A STUDY OF THE METHODOLOGY OF LOW-ALTITUDE WIND SHEAR DETECTION WITH SPECIAL EMPHASIS ON THE LOW LEVEL WIND SHEAR ALERT SYSTEM CONCEPT Final Report, Oct. 1983 - Jul. 1985
F. W. Wilson, Jr. and John A. Flueck Feb. 1986 112 p
(Contract DTFA01-82-Y-10513)
(AD-A164939; JAWS-NCAR-02-85; FAA-RD-PM-86-4) Avail: NTIS HC A06/MF A01 CSCL 04/2

This basic principles study of the Low Level Wind Shear Alert System (LLWAS) addresses the question of the degree to which a change of algorithm and network geometry can improve the performance of an anemometer-based wind shear detection system to an acceptable level. The performance of the current system seems to be deficient in that it is ineffective for the detection of microburst and that it issues many alarms in situations where pilots do not experience hazardous wind shear. The theoretical basis for this investigation is simulation testing. This process involves testing each combination of algorithm and geometry against a realistic mathematicly generated weather model that includes wind shear events. The binary time series of (event/no event) and (detection/no detection) are computed and the systems that exhibit the best skill are determined. The systems that have the best skills have high probabilities of detection and low probabilities of false alarms. GRA

UPGRADE OF WEATHER FORECAST SUPPORT TO SHUTTLE OPERATIONS Final Status Report
Thomas M. Myers and Billie F. Boyd 11 Apr. 1985 9 p refs
(AD-A164967; Rept-2WS/CP-85/002) Avail: NTIS HC A02/MF A01 CSCL 04/2

The report details the background of a joint USAF and NASA project to upgrade the forecast inputs at the Cape Canaveral Forecast Facility (CCFF) in support of Space Shuttle and missile launch operations at the Eastern Test Range (ETR). Prior to the start of Shuttle Operations, the CCFF had been geared to support missile launches with forecast requirements slanted towards launch pad safety (lightning, high winds, toxic diffusion) and upper air wind shears. Shuttle support added the problems of forecasting safe conditions (visibility, ceilings, crosswinds, precipitation and turbulence) for Shuttle emergency landing immediately following a launch attempt or for normal end of mission landing at the Kennedy Space Center Shuttle Landing Facility. The short range and microscale forecast requirements for Shuttle could not be met with the inplace technology. To deal with this support capability shortfall, NASA and the USAF (Det 11, 2WS and the Eastern Space and Missile Center) initiated a Meteorological Systems Modernization Program (MSMP) The intent of this weather support upgrade is to minimize the impacts of the environment on the Shuttle by providing the most accurate possible forecast advice to support managers during processing, launch, and recovery operations. Shuttle weather sensitivities are presented along with the architecture of the forecast support system being assembled to meet these challenges. Author (GRA)

WEATHER RADAR STUDIES Quarterly Technical Summary Report, 1 Apr. - 30 Jun. 1985
James E. Evans 30 Jun. 1985 65 p
(Contracts DTFA01-80-Y-10546; F19628-85-C-0002)
(AD-A165221; DOT/FAA/PM-85-28) Avail: NTIS HC A04/MF A01 CSCL 04/2

FFA-funded Doppler weather radar activities during the period 1 April to 30 June 1985 are reported. The test-bed Doppler weather radar system making measurements in Olive Branch, Mississippi, was fully operational. Additionally, the University of North Dakota C-band Doppler weather radar commenced measurements. Weather measurements were conducted on a number of cold front passages with attendent prefrontal lines of showers and thunderstorms and on scattered air mass thunderstorms. Some 17 microbursts were observed during the radar operation with the bulk of the microburst occurring in late June. Thirty-one gust fronts were observed as well. The University of North Dakota Citation aircraft made airborne turbulence measurements on eight days in the period mid-May to mid-June. The Lincoln mesonet was fully operational throughout the period. The 1984 peak wind speed data from the mesonet and the Memphis International Airport LLWSAS data have been analyzed to determine ground level wind-shear characteristics in the Memphis area. Doppler weather radar data from the National Center for Atmospheric Research JAWS program and the National Severe Storms Laboratory are being analyzed to develop low-altitude wind-shear detection algorithms. Analysis continued of the data collected in the 1983 Boston area coordinated aircraft-Doppler weather radar turbulence experiment. Work continued on the development of weather radar products for the Central Weather Processor. Author (GRA)

GENESIS OF MAJOR DUST STORMS IN WEST AFRICA DURING THE SUMMER OF 1974
M. Estoque, J. Fernandez-Partagas, D. M. Helgren, and J. M. Prospero Jan. 1986 60 p
(Contract DAAG29-83-K-0082)
(AD-A165457; ARO-19684.2-GS) Avail: NTIS HC A04/MF A01 CSCL 04/2

The occurrence of major dust clouds over the western Sahara is associated with several characteristic features of the large scale synoptic conditions, including the isalloberic pattern as well as the flow patterns at the 850 to 700 mb layer and the surface. A necessary ingredient for the occurrence of dust appears to be the existence of a well developed and intense surface cyclone along the ITF south of the dust source region. These three features are incorporated in three synoptic models for dust generation. The models are: the general model (GM), the model without a trough (NTM) and the model with a trough (TM). Conditions resembling those in the TM appear to be the ones most frequently observed during dust episodes in GATE. Author (GRA)

TECHNIQUES FOR THE AUTOMATED OBSERVATION OF CLOUDS Final Scientific Report
James I. Metcalf 10 Oct. 1985 23 p refs
(AD-A165573; AFGL-TR-85-0253; AFGL-ERP-932) Avail: NTIS HC A02/MF A01 CSCL 04/2

This report surveys techniques for cloud detection to assess their suitability for meeting the requirements of the Automated Observation System (AOS). A microwave sensor is essential because of the requirements for observing cloud top heights and documenting multiple cloud layers. Wavelengths between 3 cm and 8.6 mm could be used for this application, and a detailed sensor design study is recommended to evaluate the availability, cost, performance, and reliability of components and systems. Pulsed or continuous-wave radars could meet most of the requirements, although measurements of cloud base with high accuracy at low altitude may be difficult with some pulsed systems. GRA

MODEL VALIDATION RESEARCH: COMPARISON OF SIMULATED AND OBSERVED CLIMATE PATTERNS FOR THE PAST 18,000 YEARS Progress Report, 1 Feb. 1985 - 31 Jan. 1986
T. Webb, III Dec. 1985 26 p
(Contract DE-FG02-85ER-60304)
(DE86-004631; DOE/ER-60304/1) Avail: NTIS HC A03/MF A01

Research during 1985 was organized within four major tasks with a primary objective of testing the ability of the National Center for Atmospheric Research (NCAR) Community Climate Model (CCM) to simulate past climates. Because changes in the global mean temperature during the past 18,000 years have been similar in magnitude to those predicted for carbon dioxide doubling, the comparison of the model results with paleoclimatic data provides a useful test of the NCAR CCM, which is being used in carbon dioxide research. In particular, the data/model comparisons reveal certain of the model responses to past variations in the seasonal radiation budget. Key results included: (1) a description of a series of experiments with NCAR CCM to simulate climate for 18,000 y B.P. to present, (2) descriptions of available sea-surface temperature data from the tropics and of a global paleoclimatic data base for 6000 y B.P., (3) development of polynomial regression equations to estimate pollen percentages for temperature and precipitation data, and (4) favorable comparisons between paleoclimatic data and model results for the period 18,000 y B.P. in North America and for 18,000 B.P. to present in the Northern Hemisphere tropics. VERTICAL MODES AND ENERGETICS OF GRAVITATIONAL AND ROTATIONAL MODES IN A MULTILEVEL GLOBAL SPECTRAL MODEL Ph.D. Thesis
S. D. Ko 1985 247 p refs Prepared in cooperation with Michigan Univ., Ann Arbor
(Grant NSF ATM-82-17015)
(PB86-160165; NCAR/CT-95) Avail: NTIS HC A11/MF A01 CSCL 04B

An energetics analysis is made based on the NCAR Community Climate Model. One difficulty, which is studied hear for the first time, is that the discrete vertical structure equation is not unique. For some typical vertical profiles of temperature and pressure, the solutions of the differential and integral vertical equations are compared. The difference between these solutions is smaller for lower baroclinic modes but larger for higher modes. The distributions of available potential energy and divergent and nondivergent kinetic energy are investigated both globally and in the tropics. New concepts of the balanced energy (BE), transient energy (TE), and balanced gravitational energy (BGE) are introduced. It is more appropriate to express the energy in terms of vertical modes rather than zonal waves in order to examine whether the energy is balanced or not during the initialization. GRA

CLOUD BASE HEIGHTS FROM LIDAR, ROTATING BEAM CELLOMETER AND PILOT REPORTS COMPARED BY EXPERIMENT AND THEORY
W. L. Eberhard Jan. 1986 58 p refs
(PB86-159894; NOAA-TM-ERL-WPL-129) Avail: NTIS HC A04/MF A01 CSCL 04B

An experiment is described, wherein cloud signals from a range-corrected ruby lidar and a rotating beam ceilometer showed excellent agreement in the height at which peak signal occurred. To develop an understanding of the relationships between ceilometer signals and pilot visibility, the physical bases of these signals and of pilot's perceptions are analyzed. A relationship is derived that connects pilot optical depth with an idealized lidar's signal profile by applying reasonable approximations to the cloud structure (with or without precipitation). The view angle of the pilot, the lidar's pointing direction, and the vertical distribution of the obscuring particles control the relationship. GRA

MOISTURE MODEL FOR THE LOCAL AFOS MOS (AUTOMA-

TION OF FIELD OPERATIONS AND SERVICES MODEL OUTPUT STATISTICS) PROGRAM
D. A. Unger Dec. 1985 49 p
(PB86-151305; NOAA-TM-NWS-TDL-77) Avail: NTIS
HC A03/MF A01 CSCL 04B

The moisture model used for the Local AFOS MOS Program (LAMP) is described. The model predicts the degree of saturation in the single layer between 1000 and 500 mb by a moisture parameter known as the saturation deficit. Moisture is advected under the assumption that no evaporation or condensation occurs along the trajectory. The thickness and elevation of the advected air column determine the degree of saturation. Precipitation is forecast when the air column is saturated. The model forecasts for instantaneous precipitation were compared to those of persistance and advection of initial precipitation. GRA

LAWEB (LAKE WEATHER BROADCAST): DATA PROCESSING FOR THE GREAT LAKES
W. C. Randel and M. R. Peroutka Mar. 1986 96 p
(PB86-176658; NOAA-NWS-ERCP-36) Avail: NTIS
HC A05/MF A01 CSCL 04B

A program is described which gathers all of the available observations on the Great Lakes and presents them in two, unified formats. The first format is a broadcast text which is read over the Great Lakes VHF radio system every six hours during the shipping season. The text contains wind and wave reports as well as weather and visibility when the visibility is less than four miles. The second format is that of a standard AFOS plot file, complete with sea level pressure, temperature, dew point, water temperature and wave height, when available. National Weather Service (NWS) offices can produce customized graphic displays and analyses from this file using the PMOD system of programs and various mesoscale analysis routines. A great effort has been made to produce a program which will allow major revisions of the output products without altering the FORTRAN code. GRA

SEVERE THUNDERSTORM CASES OF 1985
J. E. Hales and H. G. Crowther Feb. 1986 61 p
(PB86-174125; NOAA-TM-NWS-NSSFC-11) Avail: NTIS
HC A04/MF A01 CSCL 04B

Severe thunderstorms occurrences are relatively infrequent in much of the United States. Realizing the importance that experience plays and difficulty involved for a meteorologist to study past cases, a summary was compiled of all the organized severe thunderstorm episodes of June 1985. Included in each case were the times and locations of the severe weather along with specifics of the more noteworthy events. The objective was to give an overview to a forecaster as to what ingredients went into severe development with a more detailed analysis being left up to the reader. GRA

OBJECTIVE ANALYSIS OF TIDAL FIELDS IN THE ATLANTIC AND INDIAN OCEANS
Breulio V. Sanchez, Desiraju B. Rao (National Meteorological Center, Washington, D.C.), and Stephen D. Steenrod (Applied Research Corp., Landover, Md.) Jun. 1986 25 p refs
(NASA-TM-87773; NAS 1.15:87773; Rept-86B0195) Avail: NTIS
HC A02/MF A01 CSCL 08C

An objective analysis technique has been developed to extrapolate tidal amplitudes and phases over entire ocean basins using existing gauge data and the altimetric measurements which are now beginning to be provided by satellite oceanography. The technique was previously tested in the Lake Superior basin. The method has now been developed and applied in the Atlantic-Indian ocean basins using a 6 deg x 6 deg grid to test its essential features. The functions used in the interpolation are the eigenfunctions of the velocity potential (Proudman functions) which are computed numerically from a knowledge of the basin's bottom topography, the horizontal plan form and the necessary boundary conditions. These functions are characteristic of the particular basin. The gravitational normal modes of the basin are computed as part of the investigation, they are used to obtain the theoretical forced solutions for the tidal constituents, the latter provide the simulated data for the testing of the method and serve as a guide in choosing the most energetic modes for the objective analysis. The results of the objective analysis of the M2 and K1 tidal constituents indicate the possibility of recovering the tidal signal with a degree of accuracy well within the error bounds of present day satellite techniques. (NASA-CR-177310; NAS 1.26:177310) Avail: NTIS
HC A02/MF A01 CSCL 10C

The relationships between the discharge of the Yukon River to the currents and biological productivity in the northern Bering Sea were studied. Specific objectives were: to develop thermal, sediment, and chlorophyll surface maps using Thematic Mapper (TM) data of the discharge of the Yukon River and the Alaskan Coastal Current during the ice free season; to develop a historical model of the distribution of the Yukon River discharge and the Alaskan Coastal Current using LANDSAT Multispectral band scanner (MSS) and NOAA satellite imagery; and to use high resolution TM data to define the surface dynamics of the front between the Alaskan Coastal Current and the Bering Shelf/Anadyr Current. LANDSAT MSS, TM, and Advanced Very High Resolution Radiometer (AVHRR) data were recorded during the 1985 ice free period. The data coincided with shipboard measurements acquired by Inner Shelf Transfer and Recycling (ISTAR) project scientists. An integrated model of the distribution of turbid water discharged from the Yukon River was compiled. A similar model is also being compiled for the Alaskan Coastal and Bering Shelf/Anadyr water masses based on their thermal expressions seen on AVHRR imagery. B.G.

INFRASONIC AMBIENT OCEAN NOISE SPECTRA FROM FREELY DRIFTING SENSORS Summary Report
Richard L. Culver 30 Oct. 1985 51 p
(Contract N00014-82-K-0147)
(AD-A163413; MPL-U-52/85; SIO-REF-85-22) Avail: NTIS
HC A04/MF A01 CSCL 08/10

Self-contained Swallow Floats can record very low frequency (VLF) ambient ocean noise over extended periods of time. The autonomous buoys measure and record the components of particle velocity in the 1-10 Hz band. They can be ballasted to neutral buoyancy at a desired depth. The buoys generate and

receive high frequency acoustic signals which may be used to determine their relative positions. The deployment of several of these units forms a freely drifting array of sensors. Individual element time series may be combined coherently off-line using a beamformer, e.g., the MPL dynamic Beamformer. The Swallow float design minimizes self-noise which can limit accurate ambient ocean noise measurements. The floats drift freely and are not subject to flow noise or cable strumming. They measure particle velocity and are therefore insensitive to variations in local pressure. MPL has conducted Swallow float deployments annually since 1982. The 1982 deployment tested only the acoustic positioning system. Between 12 and 14 July 1983, three Swallow floats were deployed at a location approximately 50 miles west of San Diego. California and southeast of San Clemente Island (32'N, 118'W). Sea state during the deployment varied between 1 and 2. Water depth was approximately 1900 meters. Two of the floats deployed to a depth of about 1400 meters and the third deployed to the bottom. Measurements recorded by float 3 which deployed to 1400 meters have been analyzed and results are reported. GRA

CHANGES IN THE OCEAN MIXED LAYER FOLLOWING EXTRAORDINARY ATMOSPHERIC FORCING M.S. Thesis
Theodore R. Mettlach Dec. 1985 95 p
(AD-A164703) Avail: NTIS HC A05/MF A01 CSCL 08/10

A one dimensional ocean planetary boundary layer model is used to predict the evolution of the thermal structure of the ocean mixed layer at six locations in the ocean following the hypothetical effects on the atmosphere of a major nuclear war. The inputs to the ocean model are the heat and momentum fluxes computed from a 3D climate model designed to simulate nuclear winter effects in the atmosphere. The experiment gives evidence that the summertime mixed layer can cool 5 C within 30 days and that the effect of increased wind along coastal regions due to sudden ocean-land temperture differences will deepen the mixed layer 20 to 30 meters. The scientific literature on the subject of nuclear winter is reviewed and interpreted to trace the evolution of the nuclear winter hypothesis and to assess the quality of the results of the mixed layer experiment. OCEAN FRONTAL AREAS. PHYTOPLANKTON ENUMERATION AND BIOMASS ESTIMATES -- OPERATION GUIDING LIGHT (APRIL - MAY 1985) Final Report
Gary Anderson and Daniel Gustafson Jan. 1986 76 p refs
(Contract N00014-85-K-0353)
(AD-A164985; AD-E751128) Avail: NTIS HC A05/MF A01 CSCL 06/3

During the pilot field exercise for Operation Guiding Light (April to May, 1985), 39 phytoplankton samples were collected in the continental shelf slope frontal region and 72 phytoplankton samples were collected in the Gulf Stream frontal region (both survey areas are located in the western North Atlantic Ocean). Samples were obtained using either a towed underwater pumping system (TUPS) at a depth of two meters or a rosette sampler (various depths) and were preserved for subsequent analysis. For each sample we identified (to species, where possible) enumerated and estimated biomass of the phytoplankton present. GRA

This report details the kinematic analysis of sea ice motion data collected during the Arctic Ice Dynamics Joint Experiment (AIDJEX) in the Beaufort Sea. In addition, relationships between the ice kinematic parameters and associated ambient noise are presented. These relationships were determined by an extensive correlation process between the noise and ice motion time histories. Time scales of the various modes of ice motion were calculated by season. Also, seasonal time and space scales were calculated for ambient noise at 10 Hz, 32 Hz, and 1000 Hz. Contents of this section include: Seasonal Arctic Ambient Noise Variations, Beaufort Sea, 1975-1976; Two-Dimensional Contour Maps of Arctic Ambient Noise Variations, 8-9 August 1975 (Summer); and Two-Dimensional Contour Maps of Arctic Ambient Noise Variations, 16-17 November 1975 (Fall). DATA TABULATIONS AND ANALYSIS OF DIURNAL SEA SURFACE TEMPERATURE VARIABILITY OBSERVED AT LOTUS (LONG-TERM UPPER OCEAN STUDY)
Clarke M. Bowers, James F. Price, Robert A. Weller, and Melbourne G. Briscoe Feb. 1986 55 p
(Contracts N00014-76-C-0197; N00014-84-C-0134)
(AD-A165406; WHOI-86-5) Avail: NTIS HC A04/MF A01 CSCL 08/10

Air/sea measurements from the Long-Term Upper Ocean Study (LOTUS) buoy in the Sargasso Sea are analyzed to learn how the diurnal response of sea surface temperature, delta T sub s, is related to the surface heating, H, and the wind stress, S. Data are taken from the LOTUS-3 and LOTUS-5 records which span the summers of 1982 and 1983. The basic data are shown in monthly plots, and the analyzed daily values of delta T sub s, H, and S are given in tables and in figures. Analyzed data show a clear trend of delta T sub s increasing with H and decreasing with S. A best-fit, three-parameter, empirical function can account for 90% of the variance in a screened subset of the LOTUS data (172 days) and 81% of the variance of the full data set (361 days). The analyzed data are also compared with a theoretical model function now used for ocean predictions in the Diurnal Ocean Surface Layer model (DOSL) of Fleet Numerical Oceanography Center. The DOSL model function was derived from the assumption that wind-mixing occurs by a mechanism of shear flow instability. It is fully predictive and shows a parameter dependence consistent with the LOTUS data over a wide range of H and S. THE DOSL model function can account for almost as much variance as the best-fit empirical function. GRA

REMOTE SENSING AND OCEANOGRAPHIC EQUIPMENT TECHNOLOGY: SOME PRESENT SYSTEMS AND FUTURE NEEDS, REVISED
1 Aug. 1985 24 p Sponsored by NOAA

(Grant NA84AA-D-00046)
(PB86-156502; MITSG-85-21; OPPORTUNITY-BRIEF-41) Avail: NTIS HC A02/MF A01 CSCL 08C

Satellite sensing systems offer new capabilities for obtaining synoptic data which can be used for understanding the dynamics of the ocean. While satellites have expanded our potential for exploring the ocean, they have also increased the demand for extensive in situ measurements (footprints or 'ground truth') to calibrate the remotely observed data. Used together with computer models, in situ measurements and satellite measurements provide new insights into the dynamics of the ocean, such as the motions of warm core rings north of the Gulf Stream. Modelling, satellite imagery and in situ measurements are being combined in ways which promise very significant advances in studying natural phenomena. GRA

IDENTIFICATION MANUAL FOR PHYTOPLANKTON OF THE UNITED STATES ATLANTIC COAST Final Report
H. G. Marshall Jan. 1986 144 p refs
(PB86-151222; EPA-600/4-86-003) Avail: NTIS HC A07/MF A01 CSCL 08A

The phytoplankton identification manual is designed for general usage by individuals who have not had formal training in phytoplankton systematics or access to the numerous keys and taxonomic references usually necessary to identify marine phytoplankton. The manual contains 173 species, representing 9 taxonomic groups, that the author considers among the more common species found on the United States eastern coast. The user is also provided with a list of additional identification references for the major taxonomic groups, phytoplankton studies for the United States east coast, and recommended collection and preparation techniques. BIOTECHNICA '85 INTERNATIONAL CONGRESS FOR BIOTECHNOLOGY
Claire E. Zomzely-Neurath 27 Feb. 1986 24 p Congress held in Hannover, East Germany, 8-10 Oct. 1985
(AD-A165415; ONRL-C-13-85) Avail: NTIS HC A02/MF A01 CSCL 06/1

The First International Congress and Exhibition, Biotechnica! '85, which took place from 8 through 10 October 1985 at the Hannover Exhibition Grounds, was designed to provide an insight into the structure and growth potential of the relatively new biotechnology market. The congress, which included exhibitions, seminars, workshops, and panel discussions, focused on the commercial and industrial applications of biotechnology. The congress received support from the European Community because of its emphasis on fostering contacts between industry and academia. Over 170 companies, as well as research institutes and universities from 15 countries, disseminated information about current developments in research, laboratory equipment, and production techniques. The topics in the scientific program presented at the symposia sessions were divided into three general areas: (1) measurement of process control and development of models; (2) biocatalyst preparation, utilization, and improvement; and (3) animal and plant cell cultures. DEVELOPMENT, GROWTH AND TIME
Paul M. B. Vitanyi Aug. 1985 20 p Revised Submitted for publication
(CWI-CS-R8516; B8575498; ESA-86-97007) Avail: NTIS HC A02/MF A01

A simple mathematical model for filamentous growth and development is proposed. The model relates stereotype elemental (cellular) behavior to empirically observed overall growth curves. The sigmoidal growth curves are obtained. The separation of subjective or physiological time of the organism from objective or absolute, and the relation between them are emphasized. The underlying philosophy is related to Lindenmayer's developmental model. ESA

THE ROLE OF THE OCEANS IN THE ATMOSPHERIC CYCLE OF CARBONYL SULFIDE
James Elmer Johnson 1985 111 p
Avail: Univ. Microfilms Order No. DA8529909

The magnitude of the global air-sea flux of carbonyl sulfide (OCS) was assessed. Air and seawater concentrations of OCS from the equator to the Aleutian Islands were measured. The Henry's law constant of solubility for OCS was measured in the laboratory for filtered and boiled seawater at three temperatures. These measurements show: (1) the atmospheric concentration of OCS is very constant and the latitudinal gradient, if any, is small, with a maximum gradient of 7% between 50 deg N and the equator; (2) the ocean surface layer is supersaturated with OCS and is therefore a source for the atmosphere instead of a sink; (3) there appears to be a subsurface maximum in the OCS concentration in the oceanic mixed layer in tropical waters; (4) values for the solubility of OCS in seawater are 10% lower than reported elsewhere; (5) a history of measurements of atmospheric OCS by four groups shows that any secular trend in atmospheric OCS is less than 3%/ yr; (6) the budget for atmospheric OCS is still not well understood. Dissert. Abstr.

Low-level microwave energy at a frequency of 2.45 GHz has

been previously observed to alter the firing frequency of Aplysia californica neurons. This study was undertaken to search out the mechanism of this microwave effect by examining the influences of microwave energy on specific ion currents across the cell membrane that influence the cell's firing frequency. Late outward K(+) current was examined and showed no statistically significant change during microwave exposure. The membrane current shape during voltage clamping (the summation of several different ionic currents) also showed no change during exposure except in one instance when exposure was concurrent with the application of Na(+) free artificial sea water. This is the Final Report dealing with development of stable isotope approaches for the study of water-electrolyte balance dynamics in relation to exercise in heat. This progress report describes the development of analytical chemistry of labeled water (H2O18) and rubidium as tracers for the measurement of body water and its dynamics and intracellular mass and its correlates. The methods used in these studies are based on Isotope Ratio Mass Spectrometry (IR/MS) and Inductively Coupled Plasma Mass Spectrometry (ICP/MS). It is shown clearly that both these methods can be used effectively for simultaneous measurement of body water and body rubidium and their correlates in human adults. Author (GRA)

PERCEPTUAL AND PHYSIOLOGICAL RESPONSES DURING EXERCISE IN COOL AND COLD WATER
Michael M. Toner, Lawrence L. Drolet, and Kent B. Pandolf 1986 11 p
(AD-A165491) Avail: NTIS HC A02/MF A01 CSCL 06/19

This investigation examined the interaction of exposure to cold water stress with both perceived exertion and thermal sensation during exercise. Eight male volunteers performed arm, leg and combined arm and leg exercise for 45 min in water at 20 and 26 C. Exercise was performed at a low (n = 7) and a high (n = 8) intensity relative to the ergometer specific peak oxygen uptake (VO2 peak). In general, percent VO2 peak did not differ (p greater than 0.05) between type of exercise in either 20 or 26 C water. During low intensity exercise when power output was matched across water temperature (T sub w), percent VO2 peak was greater (P less than 0.05) in 20 C water (52%) compared to 26 C water (42%). Ratings of perceived exertion (RPE) did not differ (p greater than 0.05) between T sub w. During high intensity exercise when percent VO2 peak was matched across T sub w, RPE was low (P less than 0.01) during exercise in 20 C (X = 12.9) compared to 26C (X = 13.9). Multiple correlation analyses comparing both final RPE and thermal sensation (TS) with physiological and thermal measures were performed across type of exercise and T sub w. These data suggest that the change in oxygen uptake associated with exercise in cold water does not add to the overall perception of exertion. This perception appears to be related to cardiopulmo nary variables rather than thermal measures, whereas thermal sensation is related to thermal measures and not cardiopulmonary variables. GRA

IMAGE INTENSIFIERS: PAST AND PRESENT c35
Robert W. Verona *In* AGARD Visual Protection and Enhancement Dec. 1985 5 p (For primary document see N86-26802 17-52)
Avail: NTIS HC A11/MF A01

The evolution of the image intensifier is presented from the first through the third generation. Technological advancements during the past two decades, such as the microchannel plate and the gallium arsenide photocathodes, have significantly improved the image intensifier's projected life time and performance capabilities. Improved manufacturing techniques have contributed to the intensifier's extended life and expanded performance capabilities. This continued progress attests that the image intensifier continues to be a viable sensory extension helping man achieve his goal, the conquest of darkness. Author

FLIR, NVG AND HMS/D SYSTEMS FOR HELICOPTER OPERATION: REVIEW c74
H.-D. V. Boehm *In* AGARD Visual Protection and Enhancement Dec. 1985 27 p refs (For primary document see N86-26802 17-52)
Avail: NTIS HC A11/MF A01

In the last decade, electro-optical systems have been used successfully in military and civil applications. They extend the scope of operation of ground vehicles, helicopters and fixed wing aircraft from daytime into nighttime, with a 24 hour readiness covering even bad weather conditions. The visual aids fall into two physical categories: the image intensifiers, which amplify reflected residual light in the near infrared and the thermal imager, which detect the thermal radiation of all bodies mainly in the 8 to 12 micrometer atmospheric window for bodies with T approx. 20 C. During the last five years, the investigator has carried out helicopter flight trials at night using examples of all these visionic aids (FLIR, LLLTV, NVG, HMS/D and Direct View Optics) for piloting and observation tasks. The detection, recognition and identification range of nine different FLIR were tested in ground and laboratory tests. The evaluation of an optical sensor platform location in the helicopter nose-, roof- and mast-mounted versions, the comparison of thermal and intensifier images and the NVG compatible cockpit were topics of the tests. The optical sensors are described with their limitations and some results of the trials are given, with regard to the pilot's stress situation and eye safety. Author

OPERATIONAL EXPERIENCES WITH NIGHT VISION GOGGLES IN HELICOPTER LOW-LEVEL FLIGHT AT NIGHT c54
Hermann Haidn *In* AGARD Visual Protection and Enhancement Dec. 1985 8p refs (For primary document see N86-26802 17-52)
Avail: NTIS HC A11/MF A01

The operational marginal conditions are described with regard to the threat analysis in the Central European theater. This is supplemented by a presentation of the technological and physical aspects of the available visual sensors, such as helmet mounted night vision goggles, low light level television, and forward looking infrared and their employment as pilotage aids within the helicopter cockpit. Also, a description is given of the work capabilities and limitations inherent with the employment of electro-optical vision aids. This involves a comparison of the visual capabilities of the unaided eye during low level flight with Moon illumination at night, conditions during reduced light levels, and viewing the same scene with electro-optical sensors. The requirement for glare protection within the cockpit is discussed and different solutions are represented. An exceptional and difficult problem to solve is currently presented by positive position fixing under the given circumstances. Aids and procedures to improve navigation were devised and are now successfully in use. Finally, the results of interviews with helicopter pilots, who have long term experience with the use of helmet mounted night vision goggles are discussed. Author

EVALUATION OF HELICOPTER HELMET-MOUNTED DISPLAY MOCK-UP c06
Guy Santucci and Claude Valot *In* AGARD Visual Protection and Enhancement Dec. 1985 14 p refs (For primary document see N86-26802 17-52)
Avail: NTIS HC A11/MF A01

A psychophysiological investigation was conducted on a mockup to evaluate a helmet mounted FLIR display. This experiment included laboratory and inflight testing. Laboratory testing included angular visual acuity, contour perception and stereoscopic acuity. Electrooculography was used to test binocular behavior under monocular stimulation (interocular synergy, binocular rivalry, optokinetic nystagmus). Results showed decreased angular and stereoscopic acuity, and provided a better understanding of eye activity components in this situation. Inflight testing: stressful perception was evidenced during low level helicopter flight, which can be either an overestimation of distances and altitude by active pilots, or an underestimation of these parameters by passive pilots. An illusory sensation was observed under certain binocular uses of helmet mounted displays. It concerns contour vision. Hypotheses are formulated for these various sensory changes. Author

VISUAL AND SPECTRORADIOMETRIC PERFORMANCE CRITERIA FOR NIGHT VISION GOGGLES (NVG) COMPATIBLE AIRCRAFT INTERIOR LIGHTING c54
William A. Breitmaier and Ferdinand Reetz, III *In* AGARD Visual Protection and Enhancement Dec. 1985 11 p refs (For primary document see N86-26802 17-52)
Avail: NTIS HC A11/MF A01

A draft military specification for NVG-compatible aircraft interior lighting was developed. The specification is based on the utilization of a specific type of NVG, the AN/AVS-6 Aviators Night Vision Imaging System (ANVIS). The performance requirements and testing methodology established in the specification and the rationale for developing these requirements are described. The performance requirements are affected by three factors: luminance, chromaticity, and ANVIS compatibility. Luminance requirements do not change drastically from the requirements that presently exist for interior lighting. However, the chromaticity requirements of green for primary and secondary lighting, and yellow for both master caution and warning indicators are different from those that presently exist. The reason for this change is that any lighting with a significant amount of red energy cannot be used in a cockpit that is required to be ANVIS compatible. The implications for this new color design for cockpit lighting are discussed together with the rationale for the chromaticity coordinates and limits chosen. ANVIS compatibility is defined in terms of the spectral sensitivity of the ANVIS and the combination of spectral radiance of the cockpit lighting and the outside world night radiance. Quantitative testing methodology for determining ANVIS compatibility of cockpit lighting is also discussed. A thorough description of all analytic and laboratory studies performed in support of this specification development is presented. Author

NIGHT VISION SUPPORT DEVICES: HUMAN ENGINEERING INTEGRATION c74
Louis V. Genco *In* AGARD Visual Protection and Enhancement Dec. 1985 8 p (For primary document see N86-26802 17-52)
Avail: NTIS HC A11/MF A01

Although NVGs extend the luminance range over which vision can be used, current AN/PVS systems require special cockpit lighting to be fully effective, reduce visual depth of field and diminish the field of view. All three of these factors are extremely important to pilots performing night operations. The results of several operationally oriented efforts conducted by the U.S. Air Force to improve visual performance, cockpit lighting, and flight information transfer in conjunction with the use of NVGs are described. The efforts include an operational definition of NVG compatible lighting, a recommended approach to improving depth of focus, an attempt to expand field of view, and a description of a NVG HUD using optically injected flight data. All efforts center around using or modifying current AN/PVS NVGs used by US forces. Author

Navigation of aircrafts depends on visual acuity and optical perception in the main. Therefore ophthalmological evaluation is of major importance in aviation medicine. Each country uses its own national medical standards for the three different pilot classes. But there still remain applicants not exactly meeting these standards. In West Germany, a special expert board is competent for these borderline cases in civil aviation. Some examples are given from the practice of this board showing the particular problems of appropriate decisions. Also the major differences of national regulations between West Germany and the USA are discussed, comparing civil and Air Force standards. Author

Avail: NTIS HC A11/MF A01

Presbyopia is a physiological condition starting by an age of about 40 and increasing steadily with age until accommodation ceases around 55. This means that the naked eye is not able to read instruments and charts in near distance. In a fighter cockpit the information of the head-up display is projected on to the windscreen. Therefore, the pilot has to share his attention between infinity and the projected image of the head-up display, focussing and defocussing very quickly between both distances, always looking straight. This reaction slows down with age. In an experimental study an attempt was made to investigate this complex problem and to test certain solutions. A group of untrained presbyopic subjects were asked to perform specifically designed tasks of assembling small parts and were fitted with different multifocal glasses. In three different ranges and different levels, approximately according to the distance in a cockpit, they had to differentiate and to grasp small electronic elements and to fix them on an electronic plate. The time needed and the mistakes were noted and compared. The evaluation showed much better results for those subjects which had with their glasses the greatest visual field for each specific range and level. E.R.

CONTACT LENSES FOR PILOTS AND AIRCREW IN THE SERVICES
J. K. Cloherty *In its* Visual Protection and Enhancement Dec. 1985 12 p (For primary document see N86-26802 17-52)
Avail: NTIS HC A11/MF A01

After working for five years in the contact lens department of Moorsfields Eye Hospital in London and after fitting and monitoring forty volunteers in the RAF Aircrew Soft Contact Lens Trial, it is the opinion of the author that high water content soft contact lenses, or silicone lenses, used as extended wear lenses, are the only contact lenses which are suitable in an aircrew service environment. The fitting and monitoring of such lenses must be carried out by experts in the field of contact lenses. Author

DYNAMIC BEHAVIOUR OF SPHERICAL AND ASPHERICAL CONTACT LENSES EXPOSED TO +Gz-ACCELERATION FORCES c54
H. Punt, A. C. H. vandenHeuvel, H. H. vandenBiggelaar (Royal Netherlands Air Force, The Hague.), G. J. Hoekstra, and A. J. P. Rouwen (Militair Hospitaal Dr. A. Mathijsen, Utrecht (Netherlands).) *In* AGARD Visual Protection and Enhancement Dec. 1985 5 p (For primary document see N86-26802 17-52)
Avail: NTIS HC A11/MF A01

A study was made of the behavior of two types of hard contact lenses fitted to a young myopic pilot and exposed to +Gz-acceleration forces. The degree of dislocation of the hard lenses was studied as was the pathological phenomena of the cornea under increasing +Gz-forces. The two types of the evaluated contact lenses are a conventional spherical polymethylmethacrylate (PMMA) lens and an aspherical gas-permeable lens. In a human centrifuge a test person was exposed to +Gz-forces increasing from +1 to +9 Gz. In the gondola a videotelecamera was focussed at the head of the test person during the total test session. It could be concluded that the aspherical gas-permeable contact lenses maintained an optimal concentration under all circumstances. The conventional hard contact lenses with a spherical base curve and a smaller diameter showed downward decentration under increasing +Gz-loads from +6 Gz to a peak value of 8.6 Gz. However, the dislocation never caused the contact lens to leave the cornea. The results are discussed in relation to practical consequences for pilot flying high performance aircraft. Author

EFFECTS OF BROAD-BANDED EYE PROTECTION ON DARK ADAPTATION
H. Zwick, T. A. Garcia, E. S. Beatrice, and K. R. Bloom *In* AGARD Visual Protection and Enhancement Dec. 1985 8 p (For primary document see N86-26802 17-52)
Avail: NTIS HC A11/MF A01

Modern combat scenarios require soldiers to perform military tasks under night time conditions. While image enhancement devices are vital to such military performance, unimpaired human night vision retinal mechanisms are essential for performance success. Protection of the human biological sensor is of utmost importance. In this investigation, earlier findings indicating that sunglasses could prevent deleterious effects of bright light on dark adaptation are reexamined. It was found that the use of broad band attenuating spectacles could improve absolute visual thresholds but they had minimal effect on central retinal mechanisms. Dark adaptation functions measured with long wavelength light showed no significant sunglass effect; whereas, such functions measured with intermediate spectral light decreased in final visual thresholds. These differential effects were obtained under environmental light conditions insufficient to produce an evaluation in final visual thresholds for control group subjects not provided with

sunglasses. The results strongly support previous arguments for providing standard visible and near ultraviolet protection to personnel required to perform military tasks under extremely bright environmental light. Author

EYE PROTECTION AGAINST INTENSE LIGHT SOURCES
Donald N. Farrer *In* AGARD Visual Protection and Enhancement Dec. 1985 3 p (For primary document see N86-26802 17-52)
Avail: NTIS HC A11/MF A01

The assessment of modern techniques for the protection of the eyes against laser radiation must begin with the careful evaluation of these stimuli within the context of impairment of useful work. Occupational safety and health standards were designed to define exposure limits of laser systems to prevent damage. However, an eye hazard may not exist within some exposure conditions (e.g., glare, dazzle, or reversible scotoma) in which functional vision impairment could result in job performance failures. Additionally, eye protection devices should not induce impairment properties. It is within this context that this research program was designed. The identification of laser threats, effects on functional vision and eye protective device properties are important considerations for successful aircrew performance. The vast array of intense light sources which represent threats to functional vision, introduces significant challenges for this research area. Author

CALCULATIONS ON TECHNICAL REQUIREMENTS FOR PROTECTION DEVICES AGAINST A NUCLEAR LIGHT FLASH
W. Rehmann and H. Sesterhenn *In* AGARD Visual Protection and Enhancement Dec. 1985 11 p (For primary document see N86-26802 17-52)
Avail: NTIS HC A11/MF A01

Preliminary calculations on the requirements for protective devices against permanent retinal burns caused by nuclear detonations were based on a simplified model which was also used for this study. Computations concerning the reversible flash blindness of flight crews caused by a nuclear explosion is studied as well as the resultant technical requirements to be met by antiflash eye protection systems. In the low yield nuclear range the computations led to shutter times which are technically unfeasible at the present time. Therefore, additional computations were made to determine the periods of blindness occurring when technically feasible antiflash eye protection systems are used. They were then compared with the periods of blindness to be expected under identical conditions but without antiflash eye protection systems. Author

Avail: NTIS HC A11/MF A01

A research program was conducted on the feasibility of flash blindness protection by liquid crystal techniques. The result was the development of a reversible fast optical shutter basically consisting of a liquid crystal cell enclosed in 2 crossed polarizers, which provided promising data for an application for flash blindness protection. Shutter times were in the range of 50 to 80 microseconds, an open state transmittance of 0.25 to 0.30 is state of the art. The closed state transmittance amounts to .0001 to .00001. Author

FOVEAL FLASHES AND HUMAN PERFORMANCE
D. I. Randolph, E. T. Schmeisser, and E. S. Beatrice *In* AGARD Visual Protection and Enhancement Dec. 1985 6 p (For primary document see N86-26802 17-52)
Avail: NTIS HC A11/MF A01

The role of several variables in the production of a flash which would reduce the ability of humans to detect and discriminate targets, functions which are required of both air and ground troops is determined. Four volunteers were exposed to xenon gas discharge tubes with different retinal spot sizes and flash durations. The task consisted of a reaction time experiment in which the subjects detected both the presence and orientation of a striped grating which subtended 0.57 deg at the retina. Three grating contrasts at three pattern-background contrasts were presented in a pseudo random order. Three flash conditions were used. The results showed that the larger image size and longer flash durations produced significantly poorer performance on both the detection and discrimination tasks. For the smallest retinal spot size, and the shortest flash condition, the detection but not the discrimination times were faster than the nonflash trials. This indicated that while the flash may have acted as a preparatory signal, more complex pattern processing remained sensitive to the flash. Author

PERMANENT VISUAL CHANGE ASSOCIATED WITH PUNCTATE FOVEAL LESIONS
H. Zwick, K. R. Bloom, and E. S. Beatrice *In* AGARD Visual Protection and Enhancement Dec. 1985 8 p (For primary document see N86-26802 17-52)
Avail: NTIS HC A11/MF A01

In order to understand battlefield hazards of laser exposure under field conditions, it has been necessary to evaluate effects of small punctate foveal lesions on visual function of nonhuman primates. Previous experiments have found a correlation between functional loss and foveal damage. The present investigation showed that detecting the effects of small foveal lesions is not an easy task. From the results, the possibility that considerable foveal damage could occur before a measurable change in visual function could be detected with presently available visual function testing procedures is apparent. It is recommended that more sensitive visual function test procedures, such as clinical tests that measure both spectral and spatial resolution under threshold contrast conditions. Author

HUMAN FACTORS: THE CINDERELLA DISCIPLINE IN COCKPIT INTERFACE DESIGN **c54**
K. W. Martin and J. Laycock (Royal Aircraft Establishment, Farnborough, England) *In* AGARD Visual Protection and Enhancement Dec. 1985 10 p (For primary document see N86-26802 17-52)
Avail: NTIS HC A11/MF A01

The present trend in military aircraft design towards compact cockpits, multifunction controls and displays, and integrated systems within more agile and smaller airframes, has resulted in a greater need for human factors involvement in the design of the man machine interface. The cockpit of the modern military aircraft is inevitably a compromise of conflicting design disciplines, and one in which human factors fails to achieve any long term influence because the discipline lacks the absolute argument necessary for survival in the industrial environment. If human factors are to establish the degree of influence the current levels of research justify, then a new approach is necessary. This approach must recognize the practical problems associated with the design and manufacture of the integrated weapons delivery system that future aircraft represent. One possible approach may be the generation of human factors design tools, for use by engineers, which incorporate human sensory emulations and provide outputs that can be integrated into the engineering discipline. DRIVING PERFORMANCE THE DAY AFTER USE OF LOPRAZOLAM, FLUNITRAZEPEM AND PLACEBO
E. R. Volkerts, G. deVries, T. Meijer, and J. F. OHanlon Jun. 1984 66 p Revised Sponsored in part by Netherlands' Ministerie van Onderwijs en Wetenschappen and Roussel-UCLAF, France
(VK-83-04; ISBN-90-6807-005-3; B8561714; ISSN-0167-8590; ESA-86-96948) Copyright. Avail: Issuing Activity

In order to determine if loprazolam, a mild hypnotic drug, has residual effects on driving performance and if a dose-effect relationship exists, 16 female subjects performed a driving test in 1 of 4 conditions. Loprazolam was administered in doses of 1 mg and 2 mg in conditions 1 and 2; flunitrazepam in a dose of 2 mg was administered as the active drug control in the third condition; and a placebo was given in the fourth condition. Nightly doses of loprazolam 1 mg and flunitrazepam 2 mg can slightly degrade driving performance the following day, but the degree of impairment seems insufficient to preclude the drugs' use by drivers. Nightly doses of loprazolam 2 mg can seriously degrade driving performance for up to 17 hours and this dose is not recommended for use by drivers. ESA

THE EFFECTS OF THE ANTIDEPRESSANTS OXAPROTILINE, MIANSERIN, AMITRYPTILINE AND DOXEPIN UPON ACTUAL DRIVING PERFORMANCE
Jan Willem Louwerens, Karel A. Brookhuis, and James F. OHanlon Jun. 1984 77 p Sponsored in part by Netherlands' Ministerie van Onderwijs en Wetenschapsbeleid and Ciba-Geigy AG, Basle, Switzerland
(VK-83-05; ISBN-90-6807-006-1; B8561711; ISSN-0167-8590; ESA-86-96949) Copyright. Avail: Issuing Activity

The effects of antidepressants and a placebo were compared using a driving test. Five treatments were administered to 20 healthy young male volunteers on separate days, spaced at least 5 days apart. These were: oxaprotiline, amitryptiline and doxepin 75 mg (25 mg tid); mianserin 30 mg (10 mg tid); and placebo. Doses of each drug and placebo were administered 10, 6, and 2 hours before tests. Oxaprotiline is generally without adverse acute effects upon driving performance, but may produce either impairment or improvement in particular individuals. Amitryptiline, mianserin and doxepin, in that order, have adverse acute effects on driving performance. Individuals suffering impairment as a consequence of antidepressants' acute effects can recognize the implications for driving safety and cease driving, while others cannot, and continue driving with progressively deteriorating performance until their safety is seriously compromised. COMPONENTS OF VERBAL INTELLIGENCE Final Report, 1 Oct. 1982 - 30 Sep. 1985
Robert J. Sternberg 30 Dec. 1985 47 p
(Contract N00014-83-K-0013)
(AD-A163359) Avail: NTIS HC A03/MF A01 CSCL 05/10

This project develops and tests a theory of the components of verbal intelligence. Alternative theoretical frameworks for understanding verbal intelligence are reviewed, and then a componential theory of verbal comprehension is proposed. The theory specifies the information-processing components, context cues, and mediating variables underlying acquisition of word meanings from context. A number of experiments testing and supporting the theory are described, including experiments involving both internal and external context. Instructional experiments are also described, and it is concluded that the theory is well supported by the data, and moreover, that it can serve as a useful basis for training people in how to learn meanings of words from context. The theory is extended to novel kinds of concepts as well, and it is shown that the learning of novel concepts involves an interaction between linguistic and conceptual unfamiliarity. In a series of experiments on causal inference involving verbal versus symbolic-abstract materials, it is shown that although a core of logical operations is applied to both verbal and abstract materials, special processes are involved when people reason about meaningful verbal materials. ACQUIRING PROCEDURAL SKILLS FROM LESSON SEQUENCES Final Report, 1 Jan. 1982 - 15 Jun. 1985
Kurt A. Vanlehn 13 Aug. 1985 53 p
(Contract N00014-82-C-0067)
(AD-A164580; ISL-9) Avail: NTIS HC A04/MF A01 CSCL 05/10

This report provides an informal overview of a theory that describes how people learn certain procedural skills, such as arithmetic and algebra, from multi-lesson curricula. The central hypothesis is that students and teachers obey conventions that cause the goal hierarchy of the acquired procedure to be a particular structural function of the sequential ordering of lessons. This learning theory is an extension of Repair Theory, which describes how people mix interpretation and a certain type of meta-level problem solving as they try to solve practice problems. The learning theory has been embedded in a program that generates detailed predictions about the products of published curricula. The predictions have been tested against data from several thousand mathematics students. GRA

CHANGES IN NAVAL AVIATION BASIC INSTRUMENT FLIGHT TRAINING: AN ANALYSIS M.S. Thesis
James Y. Wallace, III Dec. 1985 108 p
(AD-A164738) Avail: NTIS HC A06/MF A01 CSCL 05/9

This thesis evaluates a modification to the Navy's Basic Instrument flight instruction, the performance of two groups of student aviators was compared. The modifications consisted of a lecture concentrating on the fundamentals of attitude instrument flight. One group of 100 students received the new training while a control group of 100 students did not. Analysis of the flight grades of the two groups revealed no significant difference in

their performance. Based on the results of this research it was concluded that the modified basic instrument training did not improve the performance of student naval aviators. However, the modified lecture and training did improve the student's understanding of basic instrument fundamentals. The study recommended that the modified lecture should be continued as part of the syllabus because the benefits from affording the student aviators with additional training exceed the small costs involved. ign, Flight skills acquisition. INTERACTION OF IMAGE CHARACTERISTICS OF STEREOSCOPIC FORMS DURING DEPTH PERCEPTION Final Report, 1 Oct. 1980 - 30 Jun. 1984
Robert Fox Aug. 1985 35 p refs
(Contract N00014-81-C-0001)
(AD-A164895; N14-0001-85C-0001) Avail: NTIS HC A03/MF A01 CSCL 06/16

The primary objective of this research program was to determine the degree of congruence between the apparent or perceived depth position of a stereoscopic form and the position predictable from the physical conditions of stimulation. This topic, which bears directly on the veridicality or validity of depth information presented in a stereoscopic or 3-d display, has been investigated previously under restricted laboratory conditions that yield results of limited generality. For that reason, the present inquiry was pursued under naturalistic conditions similar to those that would obtain during the routine operation of visual displays. To gain insights into potential interactions between depth position (X-axis) and stimulus configuration (X- and Y-axes), stereoscopic forms were created from dynamic random element stereograms continuously generated electronically. This approach precluded the occurrence of non-stereoscopic cues that can arise in conventional depth displays. GRA

THE HEALTHY MOTIVATION TO FLY: NO PSYCHIATRIC DIAGNOSIS Final Report, 1 Jul. - 31 Aug. 1985
Robert R. Adams and David R. Jones Nov. 1985 15 p refs
(AD-A164944; USAFSAM-TR-85-77) Avail: NTIS HC A02/MF A01 CSCL 05/10

Aircrew mission effectiveness may uniquely be influenced by subtle psychological factors, not ordinarily brought to the attention of psychiatrists. Pilots tend to be bright, articulate, and anxious to resume their aviation duties when grounded. However, these patients are usually well defended, and rarely psychologically attuned or introspective. Greater insight into what constitutes the normal, healthy motivation to fly will help those who make judgements regarding the return of grounded aviators to flying duty. A review of associated birth order, personality theory, industrial and business psychology, aerospace, and psychoanalytic literature is presented. Highlighted are the difficulties inherent in examining the motivation of a healthy, well-defended population. Our conclusion: an examiner's countertransferential feelings are the best available tool for measurement of healthy motivation. GRA

THE ROLE OF ELABORATIONS IN INSTRUCTIONAL TEXTS: LEARNING TO USE THE APPROPRIATE PROCEDURE AT THE APPROPRIATE TIME Technical Report, Jan. - Oct. 1985
Davida H. Charney 14 Feb. 1986 85 p
(Contracts N00014-84-K-0063; NR Proj. RR0-4206)
(AD-A165211; TR-86-2-ONR) Avail: NTIS HC A05/MF A01 CSCL 05/9

This research investigates the kinds of information that should be included in instructional texts that teach skills (such as manuals or textbooks). It focuses on an important subcomponent of skill learning: choosing the right procedure at the right time. Learning to choose the right procedure is difficult in skills such as using a computer because the connection between real-world goals and the generic procedures described in a manual is often obscure. Furthermore, when several procedures have similar functions, it is difficult to tell which one is best for a particular situation. In order to facilitate the decision process, instructional tests may include advice about when to use particular procedures and may illustrate the advice with examples. The research reported here investigated the effect of various forms of advice on learners' strategies for choosing a procedure. Subjects read one of four versions of a manual for a computer game called Box-World. Three versions contained advice about when to use particular game procedures; the advice was either stated as a simple verbal rule or elaborated with one of two types of examples. The fourth version contained no advice. Subjects then performed three tasks: a recall task, a recognition task (i.e., discriminating between correct and incorrect applications of the advice), and a decision task (i.e., solving problems for which the advice was relevant). FLURAZEPAM HCL'S RESIDUAL (HANGOVER) EFFECTS UPON ACTUAL DRIVING PERFORMANCE
J. F. OHanlon, E. R. Volkerts, G. deVries, A. vanArkel, M. Wiethoff, and T. Meijer Nov. 1984 58 p Revised Sponsored in part by Netherlands' Ministerie van Onderwijs en Wetenschapsbeleid and F. Hoffmann-La Roche and Co., Ltd., Basle, Switzerland
(VK-83-02; B8462753; ISBN-90-353-0030-0; ISSN-0167-8590; ESA-86-96947) Avail: NTIS HC A04/MF A01

The effects on driver performance of taking a hypnotic drug (flurazepam HCL) were assessed on 40 female subjects aged between 25 and 40. An acute experiment wherein a larger group's performance was assessed following 2 nights of drug or placebo treatment; and a subchronic experiment wherein a smaller group's performance was assessed, before, during and after 8 consecutive nights of treatment with flurazepam 30 mg were conducted. Flurazepam doses of 15 mg and 30 mg were administered in different treatment conditions of the acute experiment. Secobarbital 200 mg was administered in another condition as the active drug control, and a placebo was administered in the final condition. Flurazepam 30 mg impairs driving performance for at least 17 hours following drug intake. Flurazepam's residual effect is dose-dependent. Serious impairment can occur. ESA

A MODEL AND EXPERIMENTAL ANALYSIS OF PILOT DECISION MAKING BEHAVIOR FOR VARIOUS AUTOMATIC APPROACH CONDITIONS
R. C. vandeGraaf and P. H. Wewerinke 5 Apr. 1984 48 p
(Contracts NIVR-1857; BMFT-0101-ZA/WF/WRD-174/4)
(NLR-TR-84037-U; ESA-86-96980) Avail: NTIS HC A03/MF A01

Four experienced airline pilots monitored stabilized automatic approaches in a flight simulator, to assess a failure detection model. The tasks comprised the detection of excessive longitudinal and lateral windshears, and of system failures on the glideslope and localizer indicators. Two failure probability conditions were included to investigate the effect of the subject's failure expectancy on the detection performance. Good agreement between the model predictions and the experimental results of two subjects is obtained. The failure detection times of the two other subjects are larger, especially for the windshear conditions, due to a more conservative detection strategy. Results indicate the usefulness of an analytical capability for investigating relative effects of aircraft design parameters, such as display integrity, configuration, and format on failure detection performance. BASELINE EXPERIMENTS IN TELEOPERATOR CONTROL
Walter W. Hankins, III and Randolph W. Mixon Jul. 1986 65 p
(NASA-TP-2547; L-15963; NAS 1.60:2547) Avail: NTIS
HC A04/MF A01 CSCL 05H

Studies have been conducted at the NASA Langley Research Center (LaRC) to establish baseline human teleoperator interface data and to assess the influence of some of the interface parameters on human performance in teleoperation. As baseline data, the results will be used to assess future interface improvements resulting from this research in basic teleoperator human factors. In addition, the data have been used to validate LaRC's basic teleoperator hardware setup and to compare initial teleoperator study results. Four subjects controlled a modified industrial manipulator to perform a simple task involving both high and low precision. Two different schemes for controlling the manipulator were studied along with both direct and indirect viewing of the task. Performance of the task was measured as the length of time required to complete the task along with the number of errors made in the process. Analyses of variance were computed to determine the significance of the influences of each of the independent variables. Comparisons were also made between the LaRC data and data taken earlier by Grumman Aerospace Corp. at their facilities. Author

DESIGN AND PRODUCTION OF DAMAGE-RESISTANT TRAY PACK CONTAINERS Final Report, 13 Apr. 1984 - 31 Jul. 1985
Richard D. Cummings Jul. 1985 242 p refs
(Contract DAAK60-84-C-0011; DA Proj. 1L1-62724-AH-99)
(AD-A164595; NATICK-TR-86/008) Avail: NTIS
HC A11/MF A01 CSCL 06/8

The tray pack is a food container that serves the functions of food storage vessel; food heating vessel; and food serving vessel. The lid is drawn from 90-pound per base box (0.010-inch-thick) steel. The bottom or can is drawn from 90-pound per base box (0.010-inch-thick) steel. Both top and bottom have a polymeric inner linear and an outer organic coating. The cause of tray pack damage were determined to be: prestressing caused by vacuum packing and underfilling; hydrodynamic forces induced by relative fluid motion within the tray pack at the moment of impact during dropping; and denting of the thin tray body material. The inability of the tray pack shipping container to withstand stacking loads was determined to be caused by poor tolerances of the shipping containers and denting of separation pads by the tray lid sealing seam. Test results show that damage can be prevented by avoiding vacuum packing, making the tray packs from 98-pound material, using a tray pack design employing reinforcing beads, using pads that nest within the sealing seam of the tray pack, and packing the tray packs so that the lids of the bottom two face down and top two face up. Test results also show that unit loads of tray packs can be stacked four high by using a properly dimensioned telescoping shipping container, the nesting pads and the two-up, two-down packing technique. DEMOGRAPHIC AND ANTHROPOMETRIC ASSESSMENT OF US ARMY ANTHROPOMETRIC DATA BASE Interim Report, Sep. 1984 - Apr. 1985
Bruce Bradtmiller, Jyoti Ratnaparkhi, and Tebbetts, Ilse Aug. 1985 83 p
(Contract DAAK60-84-C-0086; DA Proj. 1L1-62723-AH-98)
(AD-A164637; NATICK-TR-86/004) Avail: NTIS
HC A05/MF A01 CSCL 05/2

It has been nearly 20 years since the last anthropometric survey of Army males was conducted and about eight years since the last survey of Army females. The purpose of this report is to assess the extent to which the Army's existing anthropometric data base is representative of the current Army active duty force, both demographically and anthropometrically. The demographic variables of age, sex, and race are compared for the Army's existing anthropometric data base, the current active duty force, and the projected force of the 1990s. The changes in these variables occurring in the Army population are also contrasted with those occurring in the U.S. population at large. The anthropometric variables of stature and weight are compared for the existing data base and current active duty officers. Other anthropometric variables that are affected by race and age are also examined. Differences in anthropometric variables between the existing data base and the current active duty force are discussed in the context of secular trends in anthropometric measures from the U.S. population at large and other military populations. The implications of using the Army's existing anthropometric data base in the design and sizing of clothing and personal equipment are examined in light of the present and projected demographic composition of the Army active duty force. A LIGHTWEIGHT IMPERMEABLE SUIT FOR CHEMICAL PROTECTION IN WARM CONDITIONS: A PRELIMINARY LOOK AT THE CONCEPT
R. I. Tilley, Jill M. Standerwick, Geoffrey J. Long, and Hugh D. Crone Aug. 1985 22 p refs
(AD-A164687; MRL-R-972) Avail: NTIS HC A02/MF A01 CSCL 15/2

A lightweight overgarment made of spun-bonded polyethylene was compared with the UK No. 1 Mk 3 NBC suit in terms of the heat burden imposed on wearers. The physiological responses of volunteers exercising in warm conditions were measured for both clothing ensembles and were found to be similar. These results suggested that the concept of a lightweight impermeable NBC suit for wear in jungle conditions was worthy of close investigation. Results also confirmed previous observations that soldiers wearing NBC clothing in warm and humid conditions could do little more than adopt a defensive position if they were not to become heat stress casualties. This report summarizes several experiments investigating the impact of mental models and cognitive consistency on user/expert system interaction. Results indicate that user/expert system combined problem solving performance significantly improves if the user has a good mental model of expert system processes. Furthermore, cognitive consistency between the user and system problem solving procedures only degrades performance in situations where users do not have a good mental model. Some practical implications of this research is discussed. Author (GRA)

This report recommends a comprehensive range of tests for the integration and viability of an aircrew personal protective ensemble (PPE) or an item of PPE for use in an aircraft. It is emphasized that these tests are additional to any type test schedules for individual items of PPE. A test described in this report should be completed satisfactorily before the item or assembly is submitted for flight test evaluation. GRA

(AD-A165398; PAR-85-108) Avail: NTIS HC A03/MF A01 CSCL 09/2

Previous research in the area of user/expert system interaction has shown that the quality of problem solving with a general expert system (ES) is associated with mental model, a user's conceptual understanding of the basic principle of an ES's problem solving process. The current paper describes an experiment with MYCIN, a medical knowledge-based expert system, that lends additional support to the link between problem solving quality and mental model. GRA

Avail: NTIS HC A07/MF A01 CSCL 06C

The carbon isotopic composition of individual organic compounds of meteoritic origin remains unknown, as most reported carbon isotopic ratios are for bulk carbon or solvent extractable fractions. The researchers managed to determine the carbon isotopic ratios for individual hydrocarbons and monocarboxylic acids isolated from a Murchison sample by a freeze-thaw-ultrasonication technique. The abundances of monocarboxylic acids and saturated hydrocarbons decreased with increasing carbon number and the acids are more abundant than the hydrocarbon with the same carbon number. For both classes of compounds, the C-13 to C-12 ratios decreased with increasing carbon number in a roughly parallel manner, and each carboxylic acid exhibits a higher isotopic number than the hydrocarbon containing the same number of carbon atoms. These trends are consistent with a kinetically controlled synthesis of higher homologues for lower ones. Author

Those particles that were designated cometary are aggregates of amorphous materials including carbon, iron-magnesium silicates, sulfides, metal and trace amounts of unusual phases. Most aggregates are carbon-rich with major and minor element abundances similar to a fine grained matrix of carbonaceous chondrites. Several particles were analyzed by a laser microprobe. The negative ionic species identified to date include carbon clusters, protonated carbon clusters, CN-, HCN-, CNO-, PO2-, PO3-, S-, S2- asnd OH-. These species are similar to those observed in cometary spectra and they support the assumption that organic materials are present. The occurance of phosphate ions suggests the presence of apatite or whitlockite. Cometary particle characteristics may indicate that the component grains represent primitive unaltered dust whose overall properties are extremely similar to altered primitive dust in carbonaceous chondrites. The present research includes searches for important new interstellar constituents; observations relevant to differentiating between different models for the chemical processes that are important in the interstellar environment; and coordinated studies of the chemistry, physics, and dynamics of molecular clouds which are the sites or possible future sites of star formation. Recent research has included the detection and study of four new interstellar molecules; searches which have placed upper limits on the abundance of several other potential constituents of interstellar clouds; quantitative studies of comparative molecular abundances in different types of interstellar clouds; investigation of reaction pathways for astrochemistry from a comparison of theory and the observed abundance of related species such as isomers and isotopic variants; studies of possible tracers of energenic events related to star formation, including silicon and sulfur containing molecules; and mapping of physical, chemical, and dynamical properties over extended regions of nearby cold molecular clouds. Avail: NTIS HC A07/MF A01 CSCL 06C

Both observational and theoretical studies of molecular clouds are hindered by many difficulties. One way to partially circumvent the difficulties of characterizing the chemistry within these objects is to study the relative abundances of isomers which are synthesized from a common set of precursors. Unfortunately, only one such system has been confirmed, the HCN/HNC pair of isomers. While the basic outlines of its chemistry have been known for some years, there are still many aspects of the chemistry which are unclear. Another potential pair of isomers is HCO+/HOC+; HCO+ is an abundant instellar molecule and a tentative identification of HOC+ has been made in Sgr B2. This identification is being challenged, however, based on theoretical and laboratory evidence that HOC+ reacts with H2. Another potential pair of interstellar isomers is methyl cyanide (CH3CN, acetonitrile) and methyl isocyanide (CH3NC). The cyanide is well known, however the isocyanide has yet to be observed despite theoretical predictions that appreciable quantities should be present. Author

PHOTOLYSIS PRODUCTS OF CO, NH3 AND H2O AND THEIR SIGNIFICANCE TO REACTIONS ON INTERSTELLAR GRAINS
James P. Ferris *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 44 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

With the increase in evidence that interstellar grains are the basic building blocks of comets and with the realization that comet collisions with the earth have probably occured at a much higher frequency than earlier assumed it may be presumed that interstellar dust chemistry played an important role in the early chemistry of the earth. As a part of the study of the photochemical processes taking place on interstellar grains the photolysis of mixtures of CO, NH3 and H2O was performed at 10 K, 77K and 298K. The reaction products were determined by GC/MS and HPLC analysis to be lactic acid, glycolic acid, hydroxyacetamide, urea, biuret, oxamic acid, oxamide, glyceric acid and glyceramide. Ethylene glycol and glycerol were also detected but is is not clear at present whether these are true photoproducts or contaminants. The mechanism of formation of these molecules are discussed as well as their possible significance to the origins of life. Author

The Earth's atmosphere absorbs partially or completely many ultraviolet, infrared and submillimeter wavelengths. Atmospheric seeing distorts small images, imposing a limit on the achievable angular resolution at optical and infrared wavelengths that is much poorer than the intrinsic capability of telescope optics. The atomic and molecular species of the atmosphere confuse or prevent the spectral studies of similar compounds outside of the terrestrial environment. Telescopes placed in orbit above the atmosphere avoid these problems and enjoy a unique view of the universe. There are many complex questions pertaining to the origin and evolution of the biogenic elements and compounds and the existence of terrestrial types of planets elsewhere that can be only tackled from orbiting facilities. The detailed nature of the spacecraft, platforms and instrumentation most likely to be launched by the United States and Europe in the near future in an attempt to determine what observational programs would be tractable and which areas of interest to exobiology required hardware capabilities beyond those currently envisioned are considered. Recent atmospheric calculation suggest that the prebiological atmosphere was most probably composed of nitrogen, carbon dioxide, and water vapor, resulting from volatile outgassing, as opposed to the older view of a strongly reducing early atmosphere composed of methane, ammonia, and hydrogen. Photochemical calculations indicate that methane would have been readily destroyed via reaction with the hydroxyl radical produced from water vapor and that ammonia would have been readily lost via photolysis and rainout. The rapid loss of methane and ammonia, coupled with the absence of a significant source of these gases,

suggest that atmospheric methane and ammonia were very short lived, if they were present at all. An early atmosphere of N2, CO2, and H2O is stable and leads to the chemical production of a number of atmospheric species of biological significance, including oxygen, ozone, carbon monoxide, formaldehyde, and hydrogen cyanide. Using a photochemical model of the early atmosphere, the chemical productionof these species over a wide range of atmospheric parameters were investigated. These calculations indicate that early atmospheric levels of O3 were significantly below the levels needed to provide UV shielding. The fate of volcanically emitted sulfur species, e.g., sulfur dioxide and hydrogen sulfide, was investigated in the early atmosphere to assess their UV shielding properties. The photochemical calculations show that these species were of insufficient levels, due in part to their short photochemical lifetimes, to provide UV shielding. Author

THE ORGANIC AEROSOLS OF TITAN

B. N. Khare, C. Sagen, W. R. Thompson, E. T. Arakawa, F. Suits, T. A. Calcott, M. W. Williams, S. Shrader, H. Ogino, T. O. Willingham et al *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 48 Submitted for publication (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

A dark reddish organic solid, called tholin, is synthesized from simulated Titanian atmospheres by irradiation with high energy electrons in a plasma discharge. The visible reflection spectrum of this tholin is found to be similar to that of high altitude aerosols responsible for the albedo and reddish color of Titan. The real (n) and imaginary (k) parts of the complex refractive index of thin films of Titan prepared by continuous dc discharge through a 0.9 N2/0.1 CH4 gas mixture at 0.2 mb is determined from X-ray to microwave frequencies. Values of n (approx. 1.65) and k (approx. 0.004 to 0.08) in the visible are consistent with deductions made by groundbased and spaceborne observations of Titan. Many infrared absorption features are present in k(lambda), including the 4.6 micrometer nitrile band. Molecular analysis of the volatile components of this tholin was performed by sequential and nonsequential pyrolytic gas chromatography/mass spectrometry. More than one hundred organic compounds are released; tentative identifications include saturated and unsaturated aliphatic hydrocarbons, substituted polycylic aromatics, nitriles, amines, pyrroles, pyrazines, pyridines, pyrimidines, and the purine, adenine. In addition, acid hydrolysis produces a racemic mixture of biological and nonbiological amino acids. Many of these molecules are implicated in the origin of life on Earth, suggesting Titan as a contemporary laboratory environment for prebiological organic chemistry on a planetary scale. Author

THE D TO H RATIO ON TITAN AND THE PLANETS: IMPLICATIONS FOR ORIGIN AND EVOLUTION OF PLANETARY ATMOSPHERES

J. P. Pinto, J. I. Lunine (California Inst. of Tech., Pasadena), S.-J. Kim, and Y. L. Yung *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 49 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

Measurements of deuteratad methane show that Titan's atmosphere is enriched by at least several times in deuterium compared to the major planets. Potential causative factors for this enrichment are condensation to form tropospheric methane clouds, fractionation occuring over a hypothetical CH4-C2H2 ocean and between the ocean and the clathrate crust beneath, fractionation which occurred during the formation of Titan and fractionation occuring as a result of the evolution of Titan's atmosphere. The greater part of the observed fractionation is probably derived from the formation of Titan and the subsequent evolution of Titan atmosphere driven by photochemistry. The latter process is developed here for the first time. The D/H ratio in a planetary atmosphere is one readily available measure of the origin and evolution of the hydrogen bearing volatiles on the planet. Comparison between D/H ratio in the inner solar system and the outer solar system may pose important constraints on current theories. Author

MEASUREMENTS OF PHYSICAL PROPERTIES OF MODEL TITAN ATMOSPHERES c91

Thomas W. Scattergood (State Univ. of New York, Stony Brook.), Sherwood Chang, Chris McKay, Bonnie OHara and Glenn Carle *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 50 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

One aspect of the study of Titan's atmosphere is the elucidation of the chemical and physical nature of the aerosols. In order to facilitate this, a program to produce laboratory synthesized model materials for Titan's aerosol and to study their chemical and physical properties is now in progress. Various processes, including electric discharge, photolysis by ultraviolet light, and irradiation by energetic particles, will be used to produce the materials. A first set of experiments where a nominal Titan mixture (97% N2, 3% CH4, 0.2% H2) was subjected to pulsed high temperature shocks yielded a reddish brown waxy solid. This material was subjected to pyrolysis/gas chromatography, a technique that has been proposed as a method for analysis of the Titan aerosols. Preliminary results show the material to consist of simple hydrocarbons but little else, at least up to temperatures of 600 C. Since the material was colored, compounds other than those mentioned above must be present. Author

EXPERIMENTAL BASIS FOR A TITAN PROBE ORGANIC ANALYSIS c91

C. P. McKay, T. W. Scattergood (State Univ. of New York Stony Brook.), W. J. Borucki, J. F. Kasting, and S. L. Miller (California Univ., San Diego, La Jolla) *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 52 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

The recent Voyager flyby of Titan produced evidence for at least nine organic compounds in that atmosphere that are heavier than methane. Several models of Titan's atmosphere, as well as laboratory simulations, suggest the presence of organics considerably more complex that those observed. To ensure that the in situ measurements are definitive with respect to Titan's atmosphere, experiment concepts, and the related instrumentation, must be carefully developed specifically for such a mission. To this end, the possible composition of the environment to be analyzed must be bracketed and model samples must be provided for instrumentation development studies. Laboratory studies to define the optimum flight experiment and sampling strategy for a Titan entry probe are currently being conducted. Titan mixtures are being subjected to a variety of energy sources including high voltage electron from a DC discharge, high current electric shock, and laser detonation. Gaseous and solid products are produced which are then analyzed. Samples from these experiements are also provided to candidate flight experiments as models for instrument development studies. Preliminary results show that existing theoretical models for chemistry in Titan's atmosphere cannot adequetely explain the presence and abundance of all trace gases observed in these experiments. Author

A GAS CHROMATOGRAPH EXPERIMENT FOR A TITAN ENTRY PROBE

Glenn C. Carle, Daniel R. Kojiro, Bonnie J. OHara, Jose R. Valentin, Verne R.s W. Oberbeck, and Thomas W. Scattergood (State Univ.

of New York, Stony Brook) *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 53 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

Development of a gas chromatographic technique for analysis of aerosols and volatile organics from a Titan probe is now in progress. Preliminary investigations of aerosol collectors have shown that an electrostatic device should be the most efficient for the particle sizes expected in Titan's atmosphere. Such a device particularly lends itself to development of a simple pyrolyzer which can be used to break down any collected organic conglomerate structures into volatile fragments. Those fragments can subsequently be analyzed by GC providing information about the original chemical structure of the aerosols. Studies show that as little as 1 to 5 micrograms of model aerosol can be successfully analyzed. High altitude atmospheric gas sampling will also be important on Titan due to the great depth of the atmosphere. Studies show that a GC analysis of model Titan atmospheres at pressures approximating this altitude can be made with a sensitivity of a few ten's of parts-per-billion for the trace gases of interest. Author

MOLECULAR AND ELEMENTAL DUST ANALYZER (MEDA) FOR THE COMET RENDEZVOUS ASTEROID FLYBY MISSION

Bonnie J. OHara, Glenn C. Carle, and Benton C. Clark (Martin Marietta Aerospace, Denver, Colo.) *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 54 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

Comets are some to the most primitive bodies in the solar system and therefore should contain elemental, chemical, and isotopic records of the early history of the solar system. An opportunity to perform in situ analyses of a comet nucleus exists with the Comet Rendezvous Asteroid Flyby (CRAF) mission. An integrated gas chromatograph/X-ray fluorescence instrument (MEDA), being proposed for inclusion onboard the CRAF spacecraft, will measure the molecular and elemental constituents of collected dust grains and ices. The gas chromatograph, employing helium ionization detectors and three columns designed to separate light gases, polar gases, and hydrocarbons will measure the volatile compounds of the biogenic elements thermally released from collected dust grains. The sensitivity of the GC for compounds of interest is at the picogram level. X-ray fluorescence utilized cryogenically cooled Si(Li) solid state detectors of nominal 150 eV resolution at 5.9 keV. Based on laboratory work with carbonaceous meteorites, both the GC and XRF can perform meaningful analyses with a few micrograms of collected comet dust. Author

INVESTIGATION OF POROUS POLYMER GAS CHROMATOGRAPHIC PACKINGS FOR ATMOSPHERIC ANALYSIS OF EXTRATERRESTRIAL BODIES

Glenn E. Pollock *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 55 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

Measurement of the permanent gases in the atmospheres of mission targets is a major objective. A 16 meter long Porapak N column was used on the Venus probe and required a rather high carrier gas flow rate. The researchers have, therefore, surveyed commercial porous polymer types which had some ability to resolve nitrogen, oxygen, argon and carbon monoxide gases. Porapaks N and Q appeared superior to most. Batch to batch variation, however, was quite wide, so the researchers learned how to synthesize porous polymer and investigated some of the factors affecting the separations. A polymer was synthesized which was superior to all commercial products and allowed at least a 50% reduction in length and flow rate of carrier gas. Similar studies were made concerning the separation of hydrocarbons and new porous polymers have been synthesized which represent significant improvements in time of analysis, column, and carrier gas flow rate. Author

MINIATURE METASTABLE IONIZATION DETECTORS FOR EXOBIOLOGY FLIGHT EXPERIMENTS

Fritz H. Woeller *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 56 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

The Metastable Ionization Detector (MID) is three orders of magnitude more sensitive than the thermal conductivity detectors used on previous flight instruments. The miniature MID provides scientists with a much smaller and highly sensitive detector for flight gas chromatographs. A miniature MID featuring an unconventional triaxial electrode configuration was developed and used routinely in the laboratory. Although much smaller and lighter than the commercial MID, its performance characteristics parallel those of the traditional design. The detector is compatible with the modulated voltage circuitry, also developed here, and thus can perform over an expanded response range of more than 7 orders magnitude. A micro volume version of a miniature MID, with an internal volume of less than 8 microliter, was recently designed is now being tested. The micro volume MID uses carrier gas flow rates of approx. 2cc/min thus eliminating the need for makeup gas when capillary columns are used. Author

MULTIPLEX GAS CHROMATOGRAPHY: A NOVEL ANALYTICAL TECHNIQUE FOR FUTURE PLANETARY STUDIES

Jose R. Valentin, Glenn C. Carle, and John B. Phillips (University of Southern Illinois, Carbondale) *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 57 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

Determination of molecular species comprised of the biogenic elements in the atmospheres of planets and moons of the solar system is one the foremost requirements of the exobiologist studying chemical evolution and the origin of life. Multiplex chromatography is a technique where many samples are pseudo-randomly introduced to the chromatograph without regard to elution of preceding components. The resulting data are then reduced using mathematical techniques such as cross correlation or Fourier Transforms. To demonstrate the utility of this technique for future solar system exploration, chemical modulators were developed. Several advantages were realized from this technique in combination with these modulators: improvement in detection limits of several orders of magnitude, improvement in the analysis of complex mixtures by selectively modulating some of the components present in the sample, increase in the number of analyses that can be conducted in a given period of time, and reduction in the amount of expendables needed to run an analysis. In order to apply this technique in a real application, methane in ambient air was monitored continuously over a period of one week. By using ambient air as its own carrier all expendables beyond power were eliminated. Author

ION MOBILITY DRIFT SPECTROMETER (IMDS) AS A FLIGHT ANALYTICAL INSTRUMENT TECHNIQUE

Daniel R. Kojiro and Glenn C. Carle *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 58 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

A detailed knowledge of the history and abundances of the biogenic elements and their compounds throughout the solar system can provide the exobiologists with a basis for understanding

the conditions necessary for chemical evolution and the origin of life. The Ion Mobility Drift Spectrometer is an ion molecule reactor coupled with an ion drift spectrometer. Sample molecules are ionized to form product ions in the reactant region. An electric field moves the ions through a drift region against the flow of a drift gas where they are separated according to their size and structure producing an ion mobility spectrum. These spectra provide the IMDS with virtually universal sample identification capability. To conform to the rigid limits of weight, volume and consumables placed on flight instrumentation, several aspects of the IMDS must be studied and redesigned for flight use. In addition to miniaturization of the instrument, a reduction in the high flow rates used for the drift gas is an obvious necessary consideration. The effect of drastically reduced drift flow rates on IMDS spectra was investigated by lowering flow rates from 500ml/min to 50ml/min. Changes in peak shape, drift time and total spectra were studied at each flow rate. Author

NEW TECHNIQUES FOR THE DETECTION AND CAPTURE OF MICROMETEOROIDS c91

John H. Wolfe (San Jose State Univ., Calif.), Theodore E. Bunch, and Glenn C. Carle *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 59 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

In order to understand the origin and distribution of the biogenic elements and their compounds in the solar system, it will be necessary to study material from many classes of objects. Chemical, elemental, and isotopic measurements of returned samples of comets, asteroids, and possibly extra-solar system dust clouds would provide information on a particularly important class: the primitive objects. Extraterrestrial micron-sized particles in the vicinity of earth are one source of such materials that might otherwise be inaccessible. The Space Station appears to be an eminently suitable platform from which to collect and detect these various particles. The primary challenge, however, is to collect intact, uncontaminated particles which will be encounted at tens of kilometers per seconds. A concept for a micrometeoroid detector that could be deployed at a Space Station has been developed which uses a large area detector plate implanted with acoustic transducers. When an impact event occurs, the resulting signal is subjected to spectral analysis providing positive detection, momentum information, and angle of incidence. The primary advantage of this detector is the large area which increases the probability of measuring events. Author

ENERGY YIELDS IN THE PREBIOTIC SYNTHESIS OF HYDROGEN CYANIDE AND FORMALDEHYDE

Roscoe Stribling and STanley L. Miller *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 61 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

Prebiotic experiments are usually reported in terms of carbon yields, i.e., the yield of product based on the total carbon in the system. These experiments usually involve a large input of energy and are designed to maximize the yields of product. However, large inputs of energy result in multiple activation of the reactants and products. A more realistic prebiotic experiment is to remove the products of the activation step so they are not exposed a second time to the energy source. This is equivalent to transporting the products synthesized in the primitive atmosphere to the ocean, and thereby protecting them from destruction by atmospheric energy sources. Experiments of this type, using lower inputs of energy, give energy yields (moles of products/joule) which can be used to estimate the relative importance of the different energy sources on the primitive earth. Simulated prebiotic atmospheres containing either CH4, CO or CO2 with N2, H2O and variable amounts of H2 were subjected to a high frequency Tesla coil. Samples of the aqueous phase were taken at various time intervals from 1 hr to 7 days, and the energy yields were obtained by extrapolation to zero time. The samples were analyzed for HCN with the cyanide electrode and for H2CO by chromotropic acid. The spark energy was estimated by calorimetry. The temperature rise in an insulated discharge flask was compared with the temperature rise from a resistance heater in the same flask. These results will be compared with calculated production rates of HCN and H2CO from lightning and a number of photochemical processes on the primitive Earth. Author

Studies of the various processes that may have given rise to life on the Earth have demonstrated the appropriateness of an approach that makes use of analysis and synthesis. Analysis of extraterrestrial samples in the form of meteorites has demonstrated the presence of several precursors of biomolecules, most notably a full suite of nucleic acid bases and nucleotides of biological significance. These species were determined after exhaustive extraction of the sample and subsequent analysis using HPLC, GC, MS, and GC-MS. Procedural blanks indicate that these molecules are likely not the result of contamination during the extraction and analysis process. Similar species were found as products of spark discharge experiments in atmospheres thought to mimic primitive Earth conditions. These results indicate that the basic chemistry underlying these syntheses is common, and that life may not be unique to the Earth. Studies underway in the laboratory make use of proton nuclear magnetic resonance spectroscopy as a probe to assess associations between selected amino acids and any of several nucleotides comprising their genetic code and genetic anticode sequences. These studies demonstrate a clear selectivity by the anticode sequences, thus confirming the hydrophobicity studies performed by Lacey et al. These studies further support the contention that life is likely a natural result of the physics and chemistry of the universe. Author

ISOTOPIC CHARACTERISATION OF PREBIOTIC SYNTHESIS OF ORGANIC MATERIAL

John F. Kerridge (California Univ., Los Angeles.) and Sherwood Chang *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 63 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

Many primitive meteorites contain an insoluble organic material, much like terrestrial kerogen, whose mode of origin is currently unknown. When sujbected to stepwise decomposition, this material, unlike its terrestrial counterpart, reveals characteristic release patterns for the stable isotopes of carbon, hydrogen and nitrogen as a function of fractional release of each element. The purpose of this study is to try to match those release patterns using organic matter synthesised in the laboratory under controlled conditions. If successful, such a study would shed light on the origin of kerogen-like organic matter in the early solar system and, by extension, on prebiotic organic synthesis in general. The range of possible syntheses, starting materials and reaction conditions to be investigated is considerable. Samples analysed to date include: a heavy oil produced by Fischer-Tropsch-type catalysis of CO + H2; a solid residue generated by a plasma discharge in CO + H2 + N2; a solid deposited on the electrodes of a Miller-Urey synthesis operating on CH4 + H2O + N2; and a solid residue formed by polymerization of light hydrocarbons procured by a Miller-Urey discharge acting on CH4. Significant structure is observed in the

release patterns for the carbon and hydrogen isotopes from the synthetic samples, though there is little evidence for isotopic fractionation during the analysis itself. Author

ORIGIN OF LIFE AND IRON-RICH CLAYS
Hyman H. Hartman *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 pen1] 64 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

The premise that life began with self-replicating iron-rich clays is explored. In association with these clays and UV light, polar organic molecules, such as oxalic acid, were synthesized. The carbonaceous chondrites have both iron-rich clays and organic molecules. It is convenient to classify meteoritic organic matter into 3 categories: insoluble polymer, hydrocarbons and polar organics (soluble in water). Recent work on the delta D, delta N-15 and delta C-13 has made it clear that these three fractions have been made by three different mechanisms. A significant fraction of the insoluble polymer has a delta-D which suggests that it was made in an interstellar medium. The hydrocarbons seem to have been made on a parent body by a Fischer-Tropsch mechanism. The polar organics were probably synthesized in a mixture of carbonate (NH4)2CO3, Fe(++) ion and liquid water by radiolysis. In a set of experiments the radiolysis of (NH4)2CO3 in the presence and absence of Fe(++) ion has been examined. The synthesis of glycine in the presence of Fe(++) ion is 3-4 times that in the absence of ferrous ion. The effects of the addition of hydrocarbons to this mixture are explored. Iron-rich clays at low temperature and pressure are synthesized. So far the results are not sufficiently crystalline to look for replication. It should be noted that organic chelating agents such as oxalic acid do increase the crystallinity of the clays but not sufficiently. The hydrothermal synthesis of iron-rich clays is being examined. Clays have been implicated in the origin of terrestrial life since the 1950's. Originally they were considered agents which aid in selecting, concentrating and promoting oligomerization of the organic monomeric substituents of cellular life forms. However, more recently, it has been suggested that minerals, with particular emphasis on clays, may have played a yet more fundamental role. It has been suggested that clays are prototypic life forms in themselves and that they served as a template which directed the self-assembly of cellular life. If the clay-life theory is to have other than conceptual credibility, clays must be shown by experiment to execute the operations of cellular life, not only individually, but also in a sufficiently concerted manner as to produce some semblance of the functional attributes of living cells. Current studies are focussed on the ability of clays to absorb, store and transfer energy under plausible prebiotic conditions and to use this energy to drive chemistry of prebiotic relevance. Conclusions of the work are applicable to the role of clays either as substrates for organic chemistry, or in fueling their own life-mimetic processes. Author

FURTHER WORK ON SODIUM MONTMORILLONITE AS CATALYST FOR THE POLYMERIZATION OF ACTIVATED AMINO ACIDS
Frederick R. Eirich and Mella Paecht-Horowitz (Hebrew Univ. of Jerusalem, Rehovot (Israel).) *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 66 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

When the polycondensation of amino acid acylates was catalyzed with Na-montmorillonite, the polypeptides were consistently found to exhibit a distribution of discrete molecular weights, for as yet undiscovered reasons. One possible explanation was connected to the stepwise mode of monomer addition. New experiments have eliminated this possibility, so that there is the general assumption that this discreteness is the result of a preference of shorter oligomers to add to others of the same length, a feature that could be attributed to some structure of the platelet aggregates of the montmorillonite. The production of optical stereoisomers is anticipated when D,L-amino acids are polymerized on montmorillonite. Having used an optically active surface, the essence of the results lies not only in the occurrence of optically active oligomers and polymers, but also in the fact that the latter exhibit the same molecular weight characteristics as the D,L-polymers. Preparatory to work contemplated on a parallel synthesis of amino acid and nucleotide oligomers, studies were continued on the co-adsorption of amino acids, nucleotides, and amino acid-nucleotides on montmorillonite. ADSORPTION AND CONDENSATION OF AMINO ACIDS AND NUCLEOTIDES WITH SOLUBLE MINERAL SALTS
James Orenberg and Noam Lahav (Hebrew Univ. of Jerusalem, Rehovot (Israel).) *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 67 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

The directed synthesis of biopolymers in an abiotic environment is presumably a cyclic sequence of steps which may be realized in a fluctuating environment such as a prebiotic pond undergoing wetting-drying cycles. Soluble mineral salts have been proposed as an essential component of this fluctuating environment. The following sequence may be considered as a most primitive mechanism of information transfer in a fluctuating environment: (1) adsorption of a biomolecule onto a soluable mineral salt surface to act as an adsorbed template; (2) specific adsorption of biomonomers onto the adsorbed template; (3) condensation of the adsorbed biomonomers; and (4) desorption of the elongated oligomer. In this investigation, the salts selected for study were CaSO4.2H2O(gypsum), SrSO4, and several other metal sulfates and chlorides. Adsorption of the monomeric species, gly, 5'AMP 5'GMP, and 5'CMP was investigated. The adsorbed template biopolymers used were Poly-A, Poly-G, Poly-C, and Poly-U. The results of studies involving these experimental participants, the first two steps of the proposed primitive information transfer mechanism, and condensation of amino acids to form oligomers in a fluctuating environment are to be reported. The chemistry and mineralogy of soils reflects the chemistry of the atmosphere below which they develop. Today the presence of a cover of land plants can obscure the signature of a highly oxidizing atmosphere. Prior to the advent of higher land plants ca. 400 m.y. ago the obscuring effect of a biological interface should have been minor. It can be shown that under such conditions the behavior of ferrous iron during weathering depends on the relationship between the ratio of the net concentration of oxidants to the concentration of acids in rainwater, and on the ratio of the oxygen demand to the acid demand for complete weathering of the parent rock. An analysis of the behavior of iron in some 15 paleosols between 1.0 and 2.9 b.y. in age showed some time ago that iron was retained, or largely retained, in paleosols developed on rocks with a low ratio of oxidant demand to acid demand (R value) and was lost from paleosols with a high R value. The results indicate that between 1.1 and 2.9 b.y.b.p. the ratio of the net concentration of oxidants to CO2 in rainwater was less than ca. 1/600 of the present-day value. Work during the

past year has sought to extend the data base for paleosols and to define more precisely the relationships between the composition of paleosols and the chemistry of the atmosphere below which they developed. Author

In order to understand how self-reproducing molecules could have originated on the primitive Earth or extraterrestrial bodies, it would be useful to find laboratory models of simple molecules which are able to carry out processes of catalysis and templating. Furthermore, it may be anticipated that systems in which several components are acting cooperatively to catalyze each other's synthesis will have different behavior with respect to natural selection than those of purely replicating systems. As the major focus of this work, laboratory models are devised to study the influence of short peptide catalysts on template reactions which produce oligonucleotides or additional peptides. Such catalysts could have been the earliest protoenzymes of selective advantage produced by replicating oligonucleotides. Since this is a complex problem, simpler systems are also studied which embody only one aspect at a time, such as peptide formation with and without a template, peptide catalysis of nontemplated peptide synthesis, and model reactions for replication of the type pioneered by Orgel. The possibility of reconstructing plausible sequences of events in prebiotic molecular evolution is limited by the lack of fossil remains. However, with hindsight, one goal of molecular evolution was obvious: the development of molecular systems that became constituents of living systems. By understanding the interactions among molecules that are likely to have been present in the prebiotic environment, and that could have served as components in protobiotic molecular systems, plausible evolutionary sequences can be suggested. When stable aggregations of molecules form, a net decrease in free energy is observed in the system. Such changes occur when solvent molecules interact among themselves, as well as when they interact with organic species. A significant decrease in free energy, in systems of solvent and organic molecules, is due to entropy changes in the solvent. Entropy-driven interactions played a major role in the organization of prebiotic systems, and understanding the energetics of them is essential to understanding molecular evolution. Author

INTRAMOLECULAR INTERACTIONS IN AMINOACYL NUCLEOTIDES: IMPLICATIONS REGARDING THE ORIGIN OF GENETIC CODING AND PROTEIN SYNTHESIS
J. C. Lacey, Jr., D. W. Mullins, Jr., C. L. Watkins, and L. M. Hall *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 71 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

Cellular organisms store information as sequences of nucleotides in double stranded DNA. This information is useless unless it can be converted into the active molecular species, protein. This is done in contemporary creatures first by transcription of one strand to give a complementary strand of mRNA. The sequence of nucleotides is then translated into a specific sequence of amino acids in a protein. Translation is made possible by a genetic coding system in which a sequence of three nucleotides codes for a specific amino acid. The origin and evolution of any chemical system can be understood through elucidation of the properties of the chemical entities which make up the system. There is an underlying logic to the coding system revealed by a correlation of the hydrophobicities of amino acids and their anticodonic nucleotides (i.e., the complement of the codon). Its importance lies in the fact that every amino acid going into protein synthesis must first be activated. This is universally accomplished with ATP. Past studies have concentrated on the chemistry of the adenylates, but more recently we have found, through the use of NMR, that we can observe intramolecular interactions even at low concentrations, between amino acid side chains and nucleotide base rings in these adenylates. The use of this type of compound thus affords a novel way of elucidating the manner in which amino acids and nucleotides interact with each other. In aqueous solution, when a hydrophobic amino acid is attached to the most hydrophobic nucleotide, AMP, a hydrophobic interaction takes place between the amino acid side chain and the adenine ring. The studies to be reported concern these hydrophobic interactions. Author

The object of our research program is to understand how polynucleotide replication originated on the primitive Earth. This is a central issue in studies of the origins of life, since a process similar to modern DNA and RNA synthesis is likely to have formed the basis for the most primitive system of genetic information transfer. The major conclusion of studies so far is that a preformed polynucleotide template under many different experimental conditions will facilitate the synthesis of a new oligonucleotide with a sequence complementary to that of the template. It has been shown, for example, that poly(C) facilitates the synthesis of long oligo(G)s and that the short template CCGCC facilities the synthesis of its complement GGCGG. Very recently we have shown that template-directed synthesis is not limited to the standard oligonucleotide substrates. Nucleic acid-like molecules with a pyrophosphate group replacing the phosphate of the standard nucleic acid backbone are readily synthesized from deoxynucleotide 3'-5'-diphosphates on appropriate templates. STEREOSELECTIVE AMINOACYLATION OF RNA
D. A. Usher, M. C. Needels, and T. Brenner *In* NASA, Washington Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 73 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

Prebiotic chemistry is faced with a major problem: how could a controlled and selective reaction occur, when there is present in the same solution a large number of alternative possible coreactants? This problem is solved in the modern cell by the presence of enzymes, which are not only highly efficient and controllable catalysts, but which also can impose on their substrates a precise structural requirement. However, enzymes are the result of billions of years of evolution, and we cannot invoke them as prebiotic catalysts. One approach to solving this problem in the prebiotic context is to make use of template-directed reactions. These reactions increase the number of structural requirements that must be simultaneously present in a molecule for it to be able to react, and thereby increase the selectivity of the reaction. They also can give a large increase in the rate of a reaction, if the template constrains two potential coreactants to lie close together. A third benefit is that information that is present in the template molecule can be passed on to the product molecules. If

the earliest organisms were based on proteins and nucleic acids, then the investigation of peptide synthesis on an oligonucleotide template is highly relevant to the study of the origin of life. Author

Avail: NTIS HC A07/MF A01 CSCL 06C

All organisms require energy in a chemical form for maintenance and growth. In contemporary life this chemical energy is obtained by the synthesis of the phosphoanhydride bonds of ATP. Among the biological processes that yield ATP, fermentation is generally considered primitive, because it operates under anaerobic conditions by substrate-level phosphorylation which does not require compartmentation by membranes. Fermentation by the glycolytic pathway, which is found in almost every living cell, is an especially attractive energy source for primitive life. Glycolysis not only produces useful chemical energy (ATP), but intermediates of this pathway are also involved in amino acid synthesis and photosynthetic carbon-fixation. It is believed that energy and substrates needed for the origin of life were provided by nonenzymatic chemical reactions that resemble the enzyme-mediated reactions of glycolysis. These nonenzymatic reactions would have provided a starting point for the evolutionary development of glycolysis. Author

A COMPARATIVE STUDY OF PREBIOTIC AND PRESENT DAY TRANSLATIONAL MODELS

R. Rein, G. Raghunathan, J. McDonald, M. Shibata, and S. Srinivasan *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 75 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

It is generally recognized that the understanding of the molecular basis of primitive translation is a fundamental step in developing a theory of the origin of life. However, even in modern molecular biology, the mechanism for the decoding of messenger RNA triplet codons into an amino acid sequence of a protein on the ribosome is understood incompletely. Most of the proposed models for prebiotic translation lack, not only experimental support, but also a careful theoretical scrutiny of their compatibility with well understood stereochemical and energetic principles of nucleic acid structure, molecular recognition principles, and the chemistry of peptide bond formation. Present studies are concerned with comparative structural modelling and mechanistic simulation of the decoding apparatus ranging from those proposed for prebiotic conditions to the ones involved in modern biology. Any primitive decoding machinery based on nucleic acids and proteins, and most likely the modern day system, has to satisfy certain geometrical constraints. The charged amino acyl and the peptidyl termini of successive adaptors have to be adjacent in space in order to satisfy the stereochemical requirements for amide bond formation. Simultaneously, the same adaptors have to recognize successive codons on the messenger. This translational complex has to be realized by components that obey nucleic acid conformational principles, stabilities, and specificities. This generalized condition greatly restricts the number of acceptable adaptor structures. Author

PROTOBIOLOGICAL INFORMATION, BIDIRECTIONAL RECOGNITION AND REVERSE TRANSLATION

Sidney W. Fox, Tadayoshi Nakashima, Aleksander Przybylski, and Graham Vaughan *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 76 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

Emergence of protobiological information has been suggested by experiments in which heated mixtures of alpha-amino acids order themselves into a self limited array of thermal proteins. The polymers display selective catalytic, hormonal, and other activities. Interactions of varied cationic thermal proteins with polynucleotides indicate selective recognition in both directions. Reverse translation is partly a missing link in the molecular evolution flowsheet. The self ordering of amino acids serves conceptually as a deterministic evolutionary precursor of the modern coding mechanism. The possibility for the evolution of information at an early nontemplated protein stage is supported by findings of electrical signals from proteinoid microspheres prepared with no DNA/RNA in their history. The deposition of thermal copolyamino acids on lipid membranes in the Mueller-Rudin apparatus has here been found to produce electrical behavior like that evoked by bacterial EIM polypeptide. A new procedure is to make a film of membrane on the electrode; the results provide maximal repeatability. The principle of nonrandom biomacromolecular specificity identified by these studies in molecular evolution have been extrapolated to principles of evolution of advanced organisms. Author

PHOTOCHEMICAL REACTIONS OF VARIOUS MODEL PROTOCELL SYSTEMS

Clair E. Folsome *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 77 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

Models for the emergence of cellular life on the primitive Earth, and for physical environments of that era have been studied that embody these assumptions: (1) pregenetic cellular forms were phase-bounded systems primarily photosynthetic in nature, and (2) the early Earth environment was anoxic (lacking appreciable amounts of free hydrogen). It was found that organic structures can also be formed under anoxic conditions (N_2, $CO_3^{=}$, H_2O) by protracted longwavelength UV radiation. Apparently these structures form initially as organic layers upon $CaCO_3$ crystalloids. The question remains as to whether the UV photosynthetic ability of such phase bounded structures is a curiosity, or a general property of phase bounded systems which is of direct interest to the emergence of cellular life. The question of the requirement and sailient features of a phase boundary for UV photosynthetic abilities was addressed by searching for similar general physical properties which might be manifest in a variety of other simple protocell-like structures. Since it has been shown that laboratory protocell models can effect the UV photosynthesis of low molecular weight compounds, this reaction is being used as an assay to survey other types of structures for similar UV photosynthetic reactions. Various kinds of structures surveyed are: (1) proteinoids; (2) liposomes; (3) reconstituted cell membrane spheroids; (4) coacervates; and (5) model protocells formed under anoxic conditions. M.G.

In simple terms a living entity is a negentropic system that replicates, mutates and evolves. A number of suggestions have been made, such as directed panspermia, atmospheric photosynthesis, genetic overtaking from inorganic processes, etc., as alternative models to the accepted Oparin-Haldane-Urey model of the origin of life on Earth. This has probably occurred because in spite of tremendous advances in the prebiotic synthesis of biochemical compounds, the fundamental problem of the appearance of the first life--a primordial replicating cell-ancestral to all other forms of extant life, has remained elusive. This is indeed a

reflection on the different fundamental nature of the problem involved. Regardless of which were the fundamental processes which occurred on the primitive Earth, it has to end up with the fundamental characteristics of an ancestral protocell. The problem of the emergence of the first ancestral cell was one of synergistic macromolecular cooperation, as it has been discussed by authors recently (COSPAR XXV Plenary Meeting). An analogous situation must have occurred at the time of the appearance of the first eucaryotic organism. Procaryotic life appeared probably during the first 600 million years of Earth history when the Earth was sufficiently cool and continually bombarded (in the late accretion period) by comets and minor bodies of the solar system, when the sea had not yet acquired its present form. BASE PAIRING AND BASE MIS-PAIRING IN NUCLEIC ACIDS

Andrew H.-J. Wang and Alexander Rich *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 78 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

In recent years we have learned that DNA is conformationally active. It can exist in a number of different stable conformations including both right-handed and left-handed forms. Using single crystal X-ray diffraction analysis we are able to discover not only additional conformations of the nucleic acids but also different types of hydrogen bonded base-base interactions. Although Watson-Crick base pairings are the predominant type of interaction in double helical DNA, they are not the only types. Recently, we have been able to examine mismatching of guanine-thymine base pairs in left-handed Z-DNA at atomic resolution (1A). A minimum amount of distortion of the sugar phosphate backbone is found in the G x T pairing in which the bases are held together by two hydrogen bonds in the wobble pairing interaction. Because of the high resolution of the analysis we can visualize water molecules which fill in to accommodate the other hydrogen bonding positions in the bases which are not used in the base-base interactions. Studies on other DNA oligomers have revealed that other types of non-Watson-Crick hydrogen bonding interactions can occur. In the structure of a DNA octamer with the sequence d(GCG-TACGC) complexed to an antibiotic triostin A, it was found that the two central AT base pairs are held together by Hoogsteen rather than Watson-Crick base pairs. Similarly, the G x C base pairs at the ends are also Hoogsteen rather than Watson-Crick pairing. Hoogsteen base pairs make a modified helix which is distinct from the Watson-Crick double helix. CARBON EXCHANGE BETWEEN THE MANTLE AND THE CRUST AND ITS EFFECT UPON THE ATMOSPHERE: TODAY COMPARED TO ARCHEAN TIME

David DesMarais *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 81 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

Paleobiologists now recognize that the Earth's biosphere has been profoundly affected by geologic processes. One very important process is the dissipation of heat which has been generated by radioactivity and/or stored within the Earth. Heat flow is responsible for crustal movements and therefore it is the principal architect for constructing the environments (e.g. shallow marine, continental, etc.) wherein life developed and flourished. Heat flow has also influenced the movements of volatile elements (e.g. C, N, H, S, rare gases, etc.) both within the Earth's crust and between the crust and mantle. The inventory of these elements in the Earth's crust is important, not just because some of them constitute the building blocks of organic matter, but also because they influence the biosphere's climate. The purpose of this work is to evaluate how the decline of heat flow over the course of the Earth's history has influenced the carbon inventory in the Earth's crust. Such an evaluation must first consider whether the rate at which carbon is presently being exchanged between the mantle and crust is sufficient to play an important role in controlling the crustal inventory. Secondly, this exchange of carbon must be reevaluated in the context of the Precambrian Earth's environment. One very important consideration is that the upper mantle was perhaps 300 C hotter 3 b.y. ago than it is today. Author

EARTH'S EARLY ATMOSPHERE AS SEEN FROM CARBON AND NITROGEN ISOTOPIC ANALYSIS OF ARCHEAN SEDIMENTS

Everett K. Gibson, Jr., L. P. Carr, I. Gilmour (Open Univ., Milton, England), and C. T. Pillinger *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 82 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

The origin and evolution of the Earth's early atmosphere has long been a topic of great interest but determination of actual compositions over geologic time is a difficult problem. However, recent systematic studies of stromatolite deposits (Precambrian Paleobiology Research Group) has extended our knowledge of Archean ecosystems. It has been shown that many stromatolite deposits have undergone negligible alteration since their time of formation. The discovery of primary fluid inclusions within unaltered 3.5 b.y. old Archean sediments and the observation that the 3.3 b.y. old Barberton cherts have remained closed to argon loss and have not been subjected to thermal metamorphism suggests that an opportunity exists for the direct measurement of the volatile constituents present at their time of formation. Of primary interest to this study was the possibility that the stromatolites and other Archean sediments might retain a vestige of the atmosphere and thus afford an indication of the variations in carbon dioxide and nitrogen isotopic compositions with time. A suite of essentially unaltered Archean stromatolites and the cherts of different ages and geologic sites have been analyzed for their trapped carbon dioxide and nitrogen compositions by the stepped combustion extraction tech nique utilizing static mass spectrometers for the isotope measurements. USE OF LABORATORY SIMULATED PYROLYSIS IN TRACING THE HISTORY OF SEDIMENTARY ORGANIC MATTER

I. R. Kaplan, E. Tannenbaum, and B. E. Huizinga *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 82 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

Results from laboratory simulated pyrolyses experiments show that in addition to depth of burial, preservation of kerogen, and hence any morphologic structure in it, is also dependent on the mineral matrix with which it is associated. In the presence of clay minerals, and especially under dry conditions, extractable lipids released during kerogen decomposition are more rapidly destroyed than in the presence of calcite or chert matrices. The result is production of gas, polar bitumen and pyrobitumen and destruction of biomarkers. During such an early reorganization of the kerogen, the biomarker constituents can be destroyed, or unrecognizably altered. The above process of organic residues maturation appears to be inhibited in the presence of water and is significantly reduced where kerogen is hosted in limestones, dolomites or cherts. These minerals have been characteristically found to be the most reliable in yielding morphological fossils and small quantities of extractable bitumen in Archean and Proterozoic rocks. To understand the validity of chemical and morphological fossils, in the early geologic record, it will be necessary to understand the process of kerogen in sedimentary rocks. To test the role of various minerals on the preservation process, kerogen extracted from a variety of rocks has been heated together with montmorillonite, illite and calcite. The kinetics of the process has been monitored and the products quantitatively identified. M.G.

ISOTOPIC, PETROLOGIC AND BIOGEOCHEMICAL INVESTIGATIONS OF BANDED IRON-FORMATIONS

J. M. Hayes, A. J. Kaufman, C. Klein (New Mexico Univ., Albuquerque), S. A. Studley, M. E. Baur (California Univ., Los Angeles), and M. R. Walter (Bureau of Mineral Resources, Geology and Geophysics, Canberra, Australia) *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 84 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

It is recognized that the first occurrence of banded iron-formations (BIFs) clearly predates biological oxygenation of the atmosphere-hydrosphere system and that their last occurrences extend beyond plausible dates of pervasive biological oxygenation. For this reason, and because enormous quantities of oxidizing power have been sequestered in them, it is widely thought that these massive, but enigmatic, sediments must encode information about the mechanism and timing of the rise of atmospheric O2. By coupling isotopic analyses of iron-formation carbonates with biogeochemical and petrologic investigations, we are studying (1) the mechanism of initial sedimentation of iron; (2) the role of iron in microbially mediated diagenetic processes in fresh iron-formation sediments; and (3) the logical integration of mechanisms of deposition with observed levels of banding. Thus far, it has been shown that (1) carbonates in BIFs of the Hamersley Group of Western Australia are isotopically inhomogenous; (2) the nature and pattern of isotopic ordering is not consistent with a metamorphic origin for the overall depletion of C-13 observed in the carbonates; (3) if biological, the origin of the C-13 depleted carbonate could be either respiratory or fermentative; (4) iron may have been precipitate d as Fe(3+), then reduced to Fe(2+) within the sediment; and (5) sedimentary biogeochemical systems may have been at least partially closed to mass transport of carbonate species. THE LUNAR NODAL TIDE AND THE DISTANCE TO TNE MOON DURING THE PRECAMBRIAN ERA

James C. G. Walker and Kevin J. Zahnle *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 85 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

The origin and early evolution of life on Earth occurred under physical and chemical conditions distinctly different from those of the present day. The broad goal of this research program is to characterize these conditions. One aspect involves the dynamics of the Earth-Moon system, the distance of the Moon from the Earth, and the length of the day. These have evolved during the course of Earth history as a result of the dissipation of tidal energy. As the moon has receded the amplitude of oceanic tides has decreased while the increasing length of the day should have influenced climate and the circulation of atmosphere and ocean. A 23.3 year periodicity preserved in a 2500 million year old banded iron-formation was interpreted as reflecting the climatic influence of the lunar nodal tide. The corresponding lunar distance would then have been approx. 52 Earth radii. The influence of the lunar nodal tide is also apparent in rocks with an age of 680 million years B.P. The derived value for lunar distance 2500 million years ago is the only datum on the dynamics of the Earth-Moon system during the Precambrian era of Earth history. The implied development of Precambrian tidal friction is in accord with more recent paleontological evidence as well as the long term stability of the lunar orbit. Author

HIGHER-ORDER STRUCTURE OF rRNA

R. R. Gutell and C. R. Woese *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 88 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

A comparative search for phylogenetically covarying basepair replacements within potential helices has been the only reliable method to determine the correct secondary structure of the 3 rRNAs, 5S, 16S, and 23S. The analysis of 16S from a wide phylogenetic spectrum, that includes various branches of the eubacteria, archaebacteria, eucaryotes, in addition to the mitochondria and chloroplast, is beginning to reveal the constraints on the secondary structures of these rRNAs. Based on the success of this analysis, and the assumption that higher order structure will also be phylogenetically conserved, a comparative search was initiated for positions that show co-variation not involved in secondary structure helices. From a list of potential higher order interactions within 16S rRNA, two higher-order interactions are presented. The first of these interactions involves positions 570 and 866. Based on the extent of phylogenetic covariation between these positions while maintaining Watson-Crick pairing, this higher-order interaction is considered proven. The other interaction involves a minimum of six positions between the 1400 and 1500 regions of the 16S rRNA. Although these patterns of covariation are not as striking as the 570/866 interaction, the fact that they all exist in an anti-parallel fashion and that experimental methods previously implicated these two regions of the molecule in tRNA function suggests that these interactions be given serious consideration. THE rRNA EVOLUTION AND PROCARYOTIC PHYLOGENY

George E. Fox *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 89 (For primary document see N86-26844 17-55)

Avail: NTIS HC A07/MF A01 CSCL 06C

Studies of ribosomal RNA primary structure allow reconstruction of phylogenetic trees for prokaryotic organisms. Such studies reveal major dichotomy among the bacteria that separates them into eubacteria and archaebacteria. Both groupings are further segmented into several major divisions. The results obtained from 5S rRNA sequences are essentially the same as those obtained with the 16S rRNA data. In the case of Gram negative bacteria the ribosomal RNA sequencing results can also be directly compared with hybridization studies and cytochrome c sequencing studies. There is again excellent agreement among the several methods. It seems likely then that the overall picture of microbial phylogeny that is emerging from the RNA sequence studies is a good approximation of the true history of these organisms. The RNA data allow examination of the evolutionary process in a semi-quantitative way. The secondary structures of these RNAs are largely established. As a result it is possible to recognize examples of local structural evolution. Evolutionary pathways accounting for these events can be proposed and their probability can be assessed. Author

Avail: NTIS HC A07/MF A01 CSCL 06C

Mycoplasma capricolum was found by Osawa et al. to use UGA as the code of tryptophan and to contain 75% A + T in its DNA. This change could have been from evolutionary pressure to replace C + G by A + T. Numerous studies have been reported of evolution of proteins as measured by amino acid replacements that are observed when homologus proteins, such as hemoglobins from various vertebrates, are compared. These replacements result from nucleotide substitutions in amino acid codons in the corresponding genes. Simultaneously, silent nucleotide substitutions take place that can be studied when sequences of the genes are compared. These silent evolutionary changes take place mostly in third positions of codons. Two types of nucleotide substitutions are recognized: pyrimidine-pyrimidine and purine-purine interchanges (transitions) and pyrimidine-purine interchanges (transversions). Silent transitions are favored when a corresponding transversion would produce an amino acid replacement. Conversely, silent transversions are favored by probability when transitions and transversions will both be silent. Extensive examples of these situations have been found in protein genes, and it is evident that transversions in silent positions predominate in family boxes in most of the examples studied. In associated research a streptomycete from cow manure was found to produce an extracellular enzyme capable of lysing the pseudomurein-contining methanogen Methanobacterium formicicum. Author

IS THE ATPase FROM HALOBACTERIUM SACCHAROVORUM AN EVOLUTIONARY RELIC?
Lawrence I. Hochstein, Wijaya Altekar (Bhabha Research Center (India).), and Hordur Kristjansson *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 91 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

The ATP Synthase Complex present in the membranes of mitochondria, chloroplasts or bacteria is composed of 2 sectors: FO, an integral membrane protein consisting of 3 subunits mediating proton translocation across the membrane and F1, the catalytic component composed of 5 non-identical subunits. The apparent early origin of the ATP Synthase Complex, as implied by its ubiquitous distribution, seems inconsistent with its structural and functional complexity and raises the question if simpler versions of the ATP Synthase exist. Such an ATP Synthase has been searched for in various Archaebacteria. A purified halobacterial ATPase activity which possesses certain properties consistent with those of an ATP Synthase but which has a different subunit structure is described. M.G.

FUNCTIONAL AND EVOLUTIONARY RELATIONSHIPS BETWEEN BACTERIORHODOPSIN AND HALORHODOPSIN IN THE ARCHAEBACTERIUM, HALOBACTERIUM HALOBIUM
Janos K. Lanyi *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 92 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

The archaebacteria occupy a unique place in phylogenetic trees constructed from analyses of sequences from key informational macromolecules, and their study continues to yield interesting ideas on the early evolution and divergence of biological forms. It is now known that the halobacteria among these species contain various retinal-proteins, resembling eukaryotic rhodopsins, but with different functions. Two of these pigments, located in the cytoplasmic membranes of the bacteria, are bacteriorhodopsin (a light-driven proton pump) and halorhodopsin (a light-driven chloride pump). Comparison of these systems is expected to reveal structure/function relationships in these simple (primitive?) energy transducing membrane components and evolutionary relationships which had produced the structural features which allow the divergent functions. Findings indicate that very different primary structures are needed for these proteins to accomplish their different functions. Indeed, analysis of partial amino acid sequences from halo-opsin shows already that few if any long segments exist which are homologous to bacterio-opsin. Either these proteins diverged a very long time ago to allow for the observed differences, or the evolutionary clock in the halobacteria runs faster than usual. M.G.

THIOREDOXINS IN EVOLUTIONARILY PRIMITIVE ORGANISMS
Bob B. Buchanan *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 93 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

Thioredoxins are low molecular weight redox proteins, alternating between the S-S (oxidized) and SH (reduced) states, that function in a number of biochemical processes, including DNA synthesis, DNA replication, and enzyme regulation. Until recently, reduced ferredoxin was known to serve as the source of reducing power for the reduction of thioredoxins only in oxygenic photosynthetic cells. In all other organisms, the source of hydrogen (electrons) for thioredoxin reduction was considered to be NADPH. It was found that Clostridium pasteurianum, an anaerobic organism normally living in the soil unexposed to light, resembles photosynthetic cells in using ferredoxin for the reduction of thioredoxin. The results reveal the existence of a pathway in which ferredoxin, provides the reducing power for the reduction of thioredoxin via the flavoprotein enzyme, ferredoxinthioredoxin reductase. In related studies, it was found that Chromatium vinosum, an anaerobic photosynthetic purple sulfur bacterium, resembles evolutionarily more advanced micro-organisms in having an NADP-thioredoxin system composed of a single thioredoxin which is reduced by NADPH via NADP-thioredoxin reductase. The adoption of the NADP-thioredoxin system by Chromatium seems appropriate in view of evidence tha the organi sm utilizes ATP-driven reverse electron transport. Finally, results of research directed towards the identification of target enzymes of the ferredoxin/thioredoxin system in a cyanobacterium (Nostoc muscorum), show that thioredoxin-linked photosynthetic enzymes of cyanobateria are similar to those of chloroplasts. It now seems that the ferredoxin/thioredoxin system functions in regulating CO2 assimilation via the reductive pentose phosphate cycle in oxygenic but not anoxygenic photosynthetic cells. M.G.

BIOSYNTHETIC PORPHYRINS AND THE ORIGIN OF PHOTOSYNTHESIS
David Mauzerall, Arthur Ley, and Janet A. Mercer-Smith (Los Alamos National Lab., N. Mex.) *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 94 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

Since the prebiotic atmosphere was anaerobic, if not reducing, a useful function of primordial photosynthesis would have been to photooxidize reduced substrates such as Fe(+2), S(-2) or reduced organic molecules and to emit hydrogen. Experiments have shown that the early biogenic pigments uroporphyrin and coproporphyrin do photooxidize organic compounds and emit hydrogen in the presence of a platinum catalyst. These experiments were carried out in dilute aqueous solution near neutral pH under anaerobic atmosphere, and quantum yields near 10-2 were obtained. Thus relevant prebiotic conditions were maintained. Rather then to further optimize conditions, attempts were made to replace the platinum catalyst by a more prebiotically suitable catalyst. Trials with an Fe4S4(SR)4 cluster, in analogy to the present hydrogenase and

nitrogenase, were not successful. However, experiments using cobalt complexes to catalyze the formation of hydrogen are promising. In analogy with biological photosynthetic systems which group pigments, electron transfer molecules and enzymes in clusters for efficiency, it was found that binding the biogenic porphyrins to the polyvinyl alcohol used to support the platinum catalyst did increase the quantum yield of the reaction. It was also found that ultraviolet light can serve to photo-oxidize porphyrinogens to porphyrins under anaerobic conditions. Thus the formation of the colorless porphyriogens by the extraordinarily simple biosynthetic pathway would not be a problem because of the prevalence of UV light in the prebiotic, anoxic atmosphere. OXYGEN AND THE EVOLUTION OF METABOLIC PATHWAYS
Linda L. Jahnke *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 95 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

While a considerable amount of evidence has been accumulated about the history of oxygen on this planet, little is known about the relative amounts to which primitive cells might have been exposed. One clue may be found in the metabolic pathways of extant microorganisms. While eucaryotes are principally aerobic organisms, a number are capable of anaerobic growth by fermentation. One such eucaryotic microorganism, Saccharomyces cerevisiae, will grow in the complete absence of oxygen when supplemented with unsaturated fatty acid and sterol. Oxygen-requiring enzymes are involved in the synthesis of both of these compounds. Studies have demonstrated that the oxidative desaturation of palmitic acid and the conversion of squalene to sterols occur in the range of 10-(3) to 10(-2) PAL. Thus, if the oxygen requirements of these enzymatic processes are an indication, eucaryotes might be more primitive than anticipated from the microfossil record. Results of studies on the oxygen requirements for sterol and unsaturated fatty acid synthesis in a more primitive procaryotic system are also discussed. M.G.

EVOLUTION OF THIOL PROTECTIVE SYSTEMS IN PROKARYOTES
Robert C. Fahey and Gerald L. Newton *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 96 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

Biological thiols are essential elements in most aspects of cell function but undergo rapid oxidation to disulfides in the presence of oxygen. The evolution of systems to protect against such oxygen toxicity was essential to the emergence of aerobic life. The protection system used by eukaryotes is based upon glutathione (GSH) and GSH-dependent enzymes but many bacteria lack GSH and apparently use other mechanisms. The objective of this research is to elaborate the thiol protective mechanisms employed by prokaryotes of widely divergent evolutionary origin and to understand why GSH became the central thiol employed in essentially all higher organisms. Thiol-selective fluorescent labeling and HPLC analysis has been used to determine key monothiol components. M.G.

MICROFOSSILS IN THE ANTARCTIC COLD DESERT: POSSIBLE IMPLICATIONS FOR MARS
E. Imre Friedmann and Roseli Ocampo-Friedmann (Florida Agricultural and Mechanical Univ., Tallahassee) *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 97 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

In the Ross Desert of Antarctica, the principal life form is the cryptoendolithic microbial community in the near-surface layers of porous sandstone rocks. Biological, geological, and climatic factors interact in a complex and precarious balance, making life possible in an otherwise hostile environment. Once this balance is tipped, fossilization sets in. In the reverse case, new colonization of the rock surface may be initiated. As a result, fossilization is contemporary with modern life and both may be simultaneously present in a mosaic pattern. Also, different stages of fossilization are present. The process of fossilization takes place in a nonaquatic environment. If primitive life ever appeared on Mars, it is possible that with increasing aridity, life withdrew into an endolithic niche similar to that in the Antarctic desert. Fossilization in a nonaquatic environment may have set in with the result that traces of past life could be preserved. If such was the case, the study of the fossilization process in Antarctica may hold useful information for the analysis of Martian samples for microfossils. Author

EVOLUTIONARY SIGNIFICANCE OF OSMOREGULATORY MECHANISMS IN CYANOBACTERIA
John H. Yopp, John H. Pavlicek, and Marion H. Sibley *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 98 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

Physiological processes of all life forms on this planet are intrinsically related to their intracellular water potential. The overall goal was the elucidation of the mechanism(s) whereby the first oxygenic photoautotrophs (the cyanobacteria) adjust their water potential to that of a changing external water potential (that is, osmoregulate). Osmoregulation is achieved by intracellular adjustment of inorganic and/or organic solutes (osmolytes) involving specific biochemical mechanisms. Structural and biochemical evolution within the cyanobacteria is believed completed (and fixed in present day forms) by the end of the Precambrain eon. Therefore, research using cyanobacteria of all three structural types (unicellular, filamentous, and branched), each grown in the photoautotrophic (PA), photoheterotrophic (PG), and chemotrophic (CH) modes of nutrition, should provide insight into the origin and evolution of the photosynthetically related osmoregulatory mechanisms of eukaryotic organisms. The chloroplasts of these organisms are phylogenetically related to the cyanobacteria. Author

MICROBIAL CONTRIBUTIONS TO THE PRECAMBRIAN EARTH
Lynn Margulis, David Bermudes, and Robert Obar *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 99 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

Life has existed on Earth for approximately 3.5 billion years. For most of this time, prokaryotic communities provided the major biological forces changing the Earth. Many changes in atmospheric gas composition occurred during the Archean and Proterozoic eons as a result of microbial activity. Extant microbial communities were used to help understand the dynamics which contributed to these atmospheric changes. The microbial mat communities were characterized according to the organismic constituents. Symbiosis in microbial communities is recognized as a major force in cell evolution. Among the evolutinary enigmas investigated is the problem of the origin of the undulipodia. Undulipodial microtubules are still deployed for major cellular processes such as mitosis and meiosis. Several prokaryotes were tested for the presence of the S1-type protein, so far only spirochetes were found to possess it. The S1-type protein is being sought in cyanobacteria reported to contain microtubules. B.G.

ORGANIC S13C VALUES VARY SLIGHTLY WITH SALINITY IN MICROBIAL MATS AT GUERRERO NEGRO, BAJA CALIFORNIA SUR, MEXICO: IMPLICATIONS FOR STROMATOLITE S13C

VALUES
David J. DesMarais, Etta Peterson, Emil Kwong, and Hua Bui *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 100 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

Stromatolites, layered sedimentary rock structures produced by communities of microorganisms, constitute the most abundant early evidence of life on Earth. Microbial mats, which are found most frequently in hypersaline marine or hot spring environments, serve as useful modern analogs of stromatolitic communities. Biochemical studies of mats were conducted to assist in the interpretations of stromatolites. The data suggest that salinity effects are insufficient by themselves to cause the C-13 differences observed between Precambrian stromatolites and modern microbial mats. Author

THE FOSSIL RECORD OF EVOLUTION: ANALYSIS OF EXTINCTION
David M. Raup *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 102 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

There is increasing evidence that events in space have had direct effects on Earth history and on the history of life on Earth. Nowhere is this more evident than in mass extinction. The biosphere has undergone repeated devastation caused by relatively short-lived environmental stress, with species kill rates up to 80 and 95%. For five of the mass extinctions, geochemical or other evidence was reported suggesting large body impact as the cause of the environmental stress producing the extinctions. It was argued on statistical ground that the major extinction events are uniformly periodic in geological time. If it is true that large body impact is a principal cause of mass extinctions and if the periodicity is real, than a cosmic driving mechanism is inescapable. Paleontological data sets were developed which detail the ranges in geological time of about 4,000 families and 25,000 genera of fossil marine organisms. Analyses to date have concentrated on the most recent 250 million years. Associated with these studies are analyses of other aspects of Earth history which may have signatures indicative of extraterrestrial effects. Author

THE FOSSIL RECORD OF EVOLUTION: DATA ON DIVERSIFICATION AND EXTINCTION
J. John Sepkoski, Jr. *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 102 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

Synoptic studies of the fossil record of complex life on Earth indicate increasingly that extinction, and especially mass extinction, were extremely important driving forces in the history of life. Analysis of a new compilation of geologic ranges for 25,000 genera of marine animals suggests that extinction events were much more frequent in occurrence and variable in magnitude than previously suspected. At least 30 well documented and potential mass extinctions were identified in the dataset. The most recent event, distributed over 260 to 0 ma. exhibit a stationary periodicity of 26.1 + or - 1 ma, implicating a cosmological forcing mechanism. Earlier events, especially in the 575 to 450 ma interval, are more frequent, possibly indicating either a breakdown of periodicity in the more distant past; and as yet undemonstrated diminution of the period length; or frequent aperiodic terrestrial perturbations of a less stable biota superimposed upon the cosmological periodicity. GEOCHEMICAL ANOMALIES, BOLIDE IMPACTS AND BIOLOGICAL EXTINCTIONS ON THE EARTH
Frank Asaro, Luis W. Alvarez, H. V. Michel, and W. Alvarez (California Univ., Berkeley.) *In* NASA, Washington Second Symposium in Chemical Evolution and the Origin and Evolution of Life May 1986 p 104 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

Geochemical and mineralogical techniques are used to search for evidence of extraterrestrial impacts associated with mass and lesser biological extinction peaks in the geological record. Studies of the Cretaceous-Tertiary boundary serve as a baseline for evaluating geochemical data from the extinction horizones. Other studies were generally concentrated on rock strata corresponding to the periodic extinction peaks noted by Raup and Sepkoski. A significant iridium anomaly in late Eocene marine sediments associated with extinctions of radiolaria in low latitudes and attributed to an extraterrestrial source is widely distributed in 8 to 9 sites around the world. CLIMATIC CONSEQUENCES OF VERY HIGH CO2 LEVELS IN EARTH'S EARLY ATMOSPHERE
James F. Katsing *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 105 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

Earth has approximately 60 bars of carbon dioxide tied up in carbonate rocks, or roughly 2/3 the amount of CO2 of the atmosphere of Venus. Two different lines of evidence, one based on thermodynamics and the other on geochemical cycles, indicate that a substantial fraction of thes CO2 may have resided in the atmosphere during the first few hundred million years of the Earth's history. A natural question which arises is whether this much CO2 would have resulted in a runaway greenhouse effect. One dimensional radiative/convective model calculations presented showed that the surface temperature of a hypothetical primitive atmosphere containing 20 bars of CO2 was less than 100 C; thus no runaway greenhouse effect would have occurred. The climatic stability of the early atmosphere is a consequence of three factors: reduced solar luminosity at that time, an increase in planetary albedo caused by Rayleigh scattering by CO2, and the stabilizing effects of a moist convection. The latter two factors are sufficient to prevent a CO2 induced runaway greenhouse effect on the present Earth as well, for CO2 levels up to 100 bars. Further studies are being undertaken to determine whether a runaway greenhouse effect could have occurred during the latter stages of the accretion process and, if so, whether it would have collapsed one the influx of material slowed down. A DECADE OF SETI OBSERVATIONS
Robert S. Dixon *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 107 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

A full time dedicated search for extraterrestrial radio signals of intelligent origin has been in progress at the Ohio State University Radio Observatory since 1973. The radio telescope has a collecting area of 2200 square meters, which is equivalent to a circular dish 175 feet in diameter. The search concentrates on a 500 kHz bandwidth centered on the 1420 MHz hydrogen line, Doppler corrected to the galactic standard of rest. A large portion of the sky visible from Ohio was searched, with particular emphasis on the galactic center region and the M31 Andromeda galaxy. The survey is largely computer automated, and all data reduction is done in real time. Two distinct populations of signals were detected. The first is a relatively small number of signals which persist for over a minute and which are clearly extraterrestrial in origin. The second is the large number of signals which persist less than 10 seconds whose locations are anticorrelated with the galactic plane but show clumps along the galactic axis. None of these signals were observed to recur, despite repeated observations. The cause of these signals were not determined. Author

THE BERKELEY SERENDIP PROJECT
Stuart Bowyer, Dan Werthimer, Jill Tarter, and Rachael Buhse *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 108 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

An automated system was designed to perform a real time search for narrow band radio signals in the spectra of sources in a regularly scheduled, non-SETI astronomical observing program. The system will compute the power spectrum using a 65, 536 channel fast Fourier transform processor with a real time bandwidth of 128 KHz and 2 Hz per channel resolution. After search for peaks in a 100 KHz portion of the IF band of the radio telescope, the system will move to the next 100 KHz portion using a programmable frequency synthesizer. When the whole IF band is scanned, the process will start again. Unidentified peaks in the power spectra are candidates for further study and their celestial coordinates will be recorded along with the time and power, IF and RF frequency, and bandwidth of the peak. Most of the hardware was developed and the machine software is in the process of being finalized. A number of means for identifying and rejecting power spectra peaks which have a high likelihood of being nonuseful are being investigated. Author

AN INFRARED SEARCH FOR EXTRATERRESTRIAL LASER SIGNALS
Albert Betz *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 109 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

The focus of project SETI is on microwave frequencies, where receivers fundamentally have the best sensitivity for the detection of narrow band signals. Such receivers, when coupled to existing radio telescopes, form an optimum system for broad area searches over the sky. Detection of narrow band infrared signals is best done with a laser heterodyne reciever similar in function to a microwave spectral line receiver. A receiver was built for astrophysical observations at 30 THz (10 microns) and the spectrometer is being adapted for SETI work. The receiver uses a small CO2 laser as the local oscillator, a HgCdTe diode as the photomixer, and a multichannel intermediate frequency (IF) filterbank. An advanced multichannel IF processor is now being built to detect infrared line radiation in 1000 spectral channels each 1 MHz wide. When completed this processor will be used with a ground based telescope next year for a survey of several hundred selected stars for narrow band CO2 laser signals at 30 THz. Author

USING THE IRAS DATA TO SEARCH IN THE ASTEROID BELT FOR ANY POTENTIAL EVIDENCE OF GALACTIC COLONIZATION
Michael D. Papagiannis *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 110 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

The end product of the biological evolution seems to be the appearance of technological civilizations, which are characterized by superior technology that supercedes biological capabilities. The Search for Extraterrestrial Intelligence (SETI) has gained scientific recognition in recent years. The concept of galactic colonization is debated extensively, with opinions ranging from the impossible to the inevitable, but without a clear resolution. Answers can be obtained only with experimental tests and not with endless debates. A search for large space colonies in the asteroid belt, an ideal source of raw materials for a spaceborne civilization, is a test of the galactic colonization theory. The catalogue of solar system objects obtained form the Infrared Astronomy Satellite (IRAS) observations at 12, 25, 60, and 100 microns, is an ideal source for such a search. The catalog is expected to be ready at the end of 1985 and will contain more than 10,000 objects. B.G.

OVERVIEW OF THE NASA SETI PROGRAM
Bernard M. Oliver *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 111 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

The NASA Search of Extraterrestrial Intelligence (SETI) program plan is to scan the microwave window from 1 to 10 GHz with existing radio telescopes and sophisticated signal processing equipment looking for narrow band features that might represent artificial signals. A microwave spectrometer was built and is being field tested. A pattern recognition computer to search for drifting continuous wave signals and pulse trains in the output spectra is being designed. Equipment to characterize the radio frequency interference environment was also built. The plan is to complete the hardware and software by FY-88. Then, with increased funding, this equipment will be replicated in Very Large Scale Integration form. Observations, both a complete sky survey and a search fo nearby solar type stars, will begin in about 1990. The hypothesis that very powerful signals exist or that signals are being beamed at us will be tested. To detect the kinds of signals radiated at distances of 100 light years will require a collecting area kilometers in diameter. Author

STANFORD HARDWARE DEVELOPMENT PROGRAM
Allen Peterson, Ivan Linscott, and Jim Burr *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 112 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

Architectures for high performance, digital signal processing, particularly for high resolution, wide band spectrum analysis were developed. These developments are intended to provide instrumentation for NASA's Search for Extraterrestrial Intelligence (SETI) program. The real time signal processing is both formal and experimental. The efficient organization and optimal scheduling of signal processing algorithms were investigated. The work is complemented by efforts in processor architecture design and implementation. A high resolution, multichannel spectrometer that incorporates special purpose microcoded signal processors is being tested. A general purpose signal processor for the data from the multichannel spectrometer was designed to function as the processing element in a highly concurrent machine. The processor performance required for the spectrometer is in the range of 1000 to 10,000 million instructions per second (MIPS). Multiple node processor configurations, where each node performs at 100 MIPS, are sought. The nodes are microprogrammable and are interconnected through a network with high bandwidth for neighboring nodes, and medium bandwidth for nodes at larger distance. The implementation of both the current mutlichannel spectrometer and the signal processor as Very Large Scale Integration CMOS chip sets was commenced. Author

GOLDSTONE FIELD TEST ACTIVITIES: TARGET SEARCH
Jill Tarter *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 113 Prepared in cooperation with Search for Extraterrestrial Intelligence Inst., Los Altos, Calif. (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

In March of this year prototype SETI equipment was installed at DSS13, the 26 meter research and development antenna at NASA's Goldstone complex of satellite tracking dishes. The SETI equipment will remain at this site at least through the end of the summer so that the hardware and software developed for signal detection and recognition can be fully tested in a dynamic observatory environment. The field tests are expected to help understand which strategies for observing and which signal recognition algorithms perform best in the presence of strong man-made interfering signals (RFI) and natural astronomical sources. GOLDSTONE FIELD TEST ACTIVITIES: SKY SURVEY
Samuel Gulkis and Edward T. Olsen *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life May 1986 p 114 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

The goals are to conduct a research and development program aimed at determining the most effective way to do SETI within the constraints of current technology and estimated budgets. The general search strategy adopted is that which is recommended by the SETI Science Working Group. The strategy for an all sky survey for SETI was further developed over the last year. Scan patterns, scan rates, and signal detection algorithms were developed. Spectral power measurement instrumentation was tested at the Venus Station of the Goldstone Deep Space Communication Complex. A specially designed radio frequency interference (RFI) measurement system was built and installed at the Venus Station. A data base management system for storage and retrieval of the RFI data was partially implemented on a VAX 750 computer at the Jet Propulsion Laboratory. Author

JPL'S ROLE IN THE SETI PROGRAM
Michael J. Klein *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin of Life May 1986 p 115 (For primary document see N86-26844 17-55)
Avail: NTIS HC A07/MF A01 CSCL 06C

The goal of the JPL SETI Team is to develop the strategies and the instrumentation required to carry out an effective, yet affordable, SETI Microwave Observing Program. The primary responsibility for JPL is the development and implementation of the Sky Survey component of the bimodal search program recommended by the SETI Science Working Group (NASA Technical Paper 2244, 1983). JPL is also responsible for the design and implementation of microwave analog instrumentation (including antenna feed systems, low noise RF amplifiers, antenna monitor and control interfaces, etc.) to cover the microwave window for the Sky Survey and the Target Search observations. The primary site for the current SETI Field Test activity is the Venus Station of the Goldstone Deep Space Communication Complex. A SETI controller was constructed and installed so that preprogrammed and real time SETI monitor and control data can be sent to and from the station controller. This unit will be interfaced with the MCSA. A SETI Hardware Handbook was prepared to describe the various systems that will be used by the project at the Venus Station; the handbook is frequently being expanded and updated. The 65,000 channel FFT Spectrum analyzer in the RFI Surveillance System was modified to permit operation with variable resolutions (300 Hz to less than 1 Hz) and with real-time accumulation, which will enhance the capability of the system for testing Sky Survey search strategies and signal detection algorithms. Some parallel processing environments provide for asynchronous execution and completion of general purpose parallel computations from a single computational phase. When all the computations from such a phase are complete, a new parallel computational phase is begun. Depending upon the granularity of the parallel computations to be performed, there may be a shortage of available work as a particular computational phase draws to a close (computational rundown). This can result in the waste of computing resources and the delay of the overall problem. In many practical instances, strict sequential ordering of phases of parallel computation is not totally required. In such cases, the beginning of one phase can be correctly computed before the end of a previous phase is completed. This allows additional work to be generated somewhat earlier to keep computing resources busy during each computational rundown. The conditions under which this can occur are identified and the frequency of occurrence of such overlapping in an actual parallel Navier-Stokes code is reported. A language construct is suggested and possible control strategies for the management of such computational phase overlapping are discussed. Author

The CFS is a centralized file management and file storage for the Los Alamos Integrated Computing Network (ICN). The ICN is composed of over 70 computers running 5 different timesharing operating systems. CFS has been operational since June 1979 in a scientific computing environment (primarily interactive but including batch), using the latest supercomputers. CFS allows controlled data sharing between the network computers and between users, as any file stored in CFS can be retrieved on any

of the network computers provided the user has access to the file and meets security rules. The user interface to CFS is simple and flexible and was designed for optimum performance with an interactive user. The network interface is also simple and flexible. This is a better approach than a network storage system that is integrated with the operating systems of the network computers. The ICN is constantly changing, so the interfaces between the components must be simple. Most of the CFS user interface decision is placed at the user level to allow the user to retain the maximum control and flexibility. DOE

CFT COMPILER OPTIMIZATION AND CRAY X-MP VECTOR PERFORMANCE
I. Y. Bucher and M. L. Simmons 1985 9 p Presented at the Cray Users Group Meeting, Montreal, Quebec, 30 Sep. - 3 Oct. 1985
(Contract W-7405-eng-36)
(DE86-004746; LA-UR-85-4404; CONF-8509219-1) Avail: NTIS HC A02/MF A01

The motivation for this paper was the observation that Cray X-MP vector performance has not always improved. It is well known that vector performance of register-to-register vector computers is strongly compiler dependent. The compiler is responsible for properly sequencing vector load, arithmetic, and store operations, and for scheduling necessary scalar operations in such a way that they take place while vector operations are in progress and therefore do not consume any additional time. We have analyzed vector performance data for CFT compiler versions 1.10 through 1.14. In spite of the great performance improvements achieved by version 1.14 of CFR, further speedups are possible by eliminating the slowdowns introduced in version 1.11. DOE

We give a simple, yet very general definition for distributed protocols. We then define notions of knowledge and common knowledge appropriate for these protocols. We study how changes in the states of knowledge relate to more standard notions of computation. We find that by restricting our formulas to certain sets of global states we can realize different, appropriate definitions of knowledge with fundamentally different properties. GRA

(AD-A163236; GIT-ICS-85/05-Suppl) Avail: NTIS HC A06/MF A01 CSCL 09/2

The motivation for this session of the ITEA symposium is to demonstrate some good examples of software testing in the DoD and to update the test community on some current activities of the DoD to improve the testing of software. The session is organized around three technical areas: 1) The Software T&E Policy and Guidance section is concerned with presenting policy level changes to DoDD 5000.3 that will improve the visibility and accountability of softwafe in major systems acquisitions. Included in this section is a presentation of a guidebook that will be issued to aid in implementing DoD policy. 2) The Software Test Management section presents two perspectives of the management of software testing during development test and operational test. 3) The Software Test Tools section describes the effectiveness of using software test tools on two DoD programs. In addition, it describes the to-be-issued DoD-StD-SDS and SOS, the new Joint Logistics Commanders Standards for software development and software quality assurance. GRA

Design guidelines for expert systems are developed. These guidelines relate problem characteristics to appropriate artificial intelligence (AI) implementation techniques. They were developed by (1) collecting claims about the appropriate use of techniques from the published literature on expert systems, (2) circulating these draft guidelines among experienced expert systems builders for their comments and additions, and (3) revising the draft guidelines in response to these comments. This report includes the resulting 47 guidelines along with excerpts from the published literature that justify and support each guideline. The report also contains descriptions of 44 problems readers can be expected to encounter if they decide to use some of the AI techniques that are recommended. A glossary that defines 53 of the AI techniques and an index are also included. Author (GRA)

INTERPROCESSOR COMMUNICATION ISSUES IN FAT-TREE ARCHITECTURES
Alexander Toichi Ishii Oct. 1985 43 p
(Contract N00014-80-C-0622)
(AD-A163425) Avail: NTIS HC A03/MF A01 CSCL 09/2

In recent years, it has become increasingly evident that conventional computer architectures will be unable to perform, in an acceptable time frame, many of the computational functions that we would desire of them. Consequently, much research has been devoted to the concept of constructing super-computers, which will be able to exploit the potential for parallel computation intrinsic to many large computational problems. Recently, Leiserson has proposed a multiprocessor scheme based on Leighton's tree of meshes, called a fat-tree. Conceptually, such a multiprocessor would be comprised of a set of n processing elements each situated as a leaf in a complete binary tree. Internal modes would be high speed switches which route messages being passed between processing elements, while edges between nodes would be bundles of constant bandwidth communication paths. The purpose of this document will be to address and define some of the issues which effect interprocessor communication within a fat-tree multiprocessor. Specifically, it covers the following topics: (1) Addressing in a fat-tree; (2) Generation of addresses in a fat-tree; and (3) Allocation of communication resources in a fat-tree. GRA

The design of high-speed systems and the automation of the design tasks involved is the topic of this thesis. In particular, the focus is on the use of pipelining and general overlapped execution in order to speed up the systems being implemented. This thesis contains new techniques for speed-up, and describes the implementation of these techniques in a set of design automation programs. The new techniques produce designs which share resources and time in a manner which is more complex that used as common practice in working systems. The manual design of such complex hardware would be virtually impossible; thus, automated design is a key aspect of the proposed design

methodology. The specific problem the thesis addresses is the following: the determination of the point in time each operation in a set of tasks is to be performed, and the manner in which the operators which execute each operation are reused from cycle to cycle. Three topics are investigated: 1) clocking scheme synthesis; 2) synthesis of pipelined data paths; and, 3) the insertion of delays into pipelined systems to avoid resources conflicts while increasing performance. MODERN HARDWARE TECHNOLOGIES AND SOFTWARE TECHNIQUES FOR ON-LINE DATABASE STORAGE AND ACCESS M.S. Thesis
Christopher V. Feudo Dec. 1985 297 p refs
(AD-A164993) Avail: NTIS HC A13/MF A01 CSCL 09/2

Computerized data processing applications have grown over the past thirty years to a point where they have now become a pervasive influence in our society. As the range of applications has grown, a continuing concern has been the cost and access time of data storage. A wide range of technologies have been investigated to address this problem. The purpose of this thesis is to examine high volume, on-line storage media of current and emerging technologies and software techniques for supporting these on-line, high capacity storage media. In the first part, we analyze such media as vertical magnetic recording, thin film media, optical data disks, magneto-optic disks, bubble and Bernoulli-effect disks. Then, comparisons and evaluations of products and product categories are illustrated. In the second part, we review the modern software techniques for on-line database storage and access. THE FEASIBILITY OF AUTOMATIC STORAGE RECLAMATION WITH CONCURRENT PROGRAM EXECUTION IN A LISP ENVIRONMENT M.S. Thesis
Kevin G. Cassidy Dec. 1985 108 p
(AD-A165184) Avail: NTIS HC A06/MF A01 CSCL 09/2

Storage reclamation is the process of reclaiming discarded information and returning the memory space occupied by that discarded information to an available area or list in memory that is available to be utilized by programmers. This increased interest in storage reclamation is a result of the increasing use of list-processing environments. A list-processing environment is a system in which the language manipulates data structures called lists. In classical LISP implementations, program execution/computation continues until there is no more memory available (i.e., the free list of available cells has become exhausted). When this happens, user program(s) HALT and then storage reclamation, in the form of garbage collection, takes over. This halting of programs in the midst of their computation is not only frustrating to programmers and researchers but can also be of crucial importance in other applications. This thesis investigates the feasibility of allowing concurrent program execution with garbage collection. LISP has been selected because it has been estimated that typical LISP programs take 10%-30% of their processing time to perform garbage collection. GRA

DEMONSTRATION OF A STATISTICAL METHOD FOR ISOLATING TIMESHARING COMPONENTS
Alvah C. Bittner, Jr. and Diane L. Damos Jan. 1986 21 p
(AD-A165417; NBDL-86R001) Avail: NTIS HC A02/MF A01 CSCL 09/2

An objective statistical method for isolating timesharing components of performance is described and demonstrated. During the first stage of this method, partial correlation analysis is used to remove the variance attributable to the single-task measures. During the second stage, the resulting dual-task partial correlations are subjected to a form of factor analysis. Data from both Sverko (1977) and Wickens, Mountford, and Schreiner (1981) were reanalyzed and the results compared with their earlier analyses, as well as with the reanalysis of the later study by Ackerman, Schneider and Wickens (1984). The characterization of timesharing factors and the question of a general timesharing factor are also discussed. Using the proposed method, substantial evidence for multiple timesharing components was found. Author (GRA)

A LATERAL GUIDANCE ALGORITHM TO REDUCE THE POST-AEROBRAKING BURN REQUIREMENTS FOR A LIFT-MODULATED ORBITAL TRANSFER VEHICLE M.S. Thesis
Glen Charles Herman Jun. 1986 155 p
(Contract NAS9-17560)
(NASA-CR-177295; NAS 1.26:177295; CSDL-T-912) Avail: NTIS HC A08/MF A01 CSCL 09B

A lateral guidance algorithm which controls the location of the line of intersection between the actual and desired orbital planes (the hinge line) is developed for the aerobraking phase of a lift-modulated orbital transfer vehicle. The on-board targeting algorithm associated with this lateral guidance algorithm is simple and concise which is very desirable since computation time and space are limited on an on-board flight computer. A variational equation which describes the movement of the hinge line is derived. Simple relationships between the plane error, the desired hinge line position, the position out-of-plane error, and the velocity out-of-plane error are found. A computer simulation is developed to test the lateral guidance algorithm for a variety of operating conditions. The algorithm does reduce the total burn magnitude needed to achieve the desired orbit by allowing the plane correction and perigee-raising burn to be combined in a single maneuver. The algorithm performs well under vacuum perigee dispersions, pot-hole density disturbance, and thick atmospheres. The results for many different operating conditions are presented. Author

AN ADAPTIVE GUIDANCE ALGORITHM FOR AN AERODYNAMICALLY ASSISTED ORBITAL PLANE CHANGE MANEUVER M.S. Thesis
James A. Blissit May 1986 229 p
(Contract NAS1.18061)
(NASA-CR-177296; NAS 1.26:177296; CSDL-T-902) Avail: NTIS HC A13/MF A01 CSCL 09B

Using analysis results from the post trajectory optimization program, an adaptive guidance algorithm is developed to compensate for density, aerodynamic and thrust perturbations during an atmospheric orbital plane change maneuver. The maneuver offers increased mission flexibility along with potential fuel savings for future reentry vehicles. Although designed to guide a proposed NASA Entry Research Vehicle, the algorithm is sufficiently generic for a range of future entry vehicles. The plane change analysis provides insight suggesting a straight-forward algorithm based on an optimized nominal command profile. Bank angle, angle of attack, and engine thrust level, ignition and cutoff times are modulated to adjust the vehicle's trajectory to achieve the desired end-conditions. A performance evaluation of the scheme demonstrates a capability to guide to within 0.05 degrees of the desired plane change and five nautical miles of the desired apogee altitude while maintaining heating constraints. The algorithm is tested under off-nominal conditions of + or -30% density biases, two density profile models, + or -15% aerodynamic uncertainty, and a 33% thrust loss and for various combinations of these conditions. ERROR PROPERTIES OF HARTLEY TRANSFORM ALGORITHMS
Avideh Zakhor Oct. 1985 204 p
(Contract N00014-81-K-0742; Grant NSF ECS-84-07285; NR Proj. 049-506)
(AD-A163217; TR-511) Avail: NTIS HC A10/MF A01 CSCL 12/1

In this thesis, the error properties of various discrete Hartley transform (DHT) algorithms are investigated theoretically and experimentally. More specifically, the author analyzes the arithmetic roundoff error characteristics of DHT algorithms proposed by Bracewell and Wang and develops and analyzes a new DHT algorithm. Statistical models for roundoff errors and linear system noise theory are employed to estimate output noise variance for these DHT algorithms. By considering the overflow constraint in conjunction with these noise analyses, output noise to signal ratios are derived for both fixed and floating-point arithmetic. Experiments are used to support the theoretical predictions obtained via the statistical models. The empirical results are found to be in excellent agreement with the predictions based on the models. Comparing Bracewell's, Wang's and the new algorithm in terms of their error properties, it is found that Bracewell's algorithm exhibits the most desirable error characteristics. These results were found to hold for both frequency and decimation-in-time and for a variety of different radices. For a given radix, the total operation count for all algorithms is found to be identical.to be identical Author (GRA)

A user's guide for the Computer Aided Design System, CADS. CADS is a pre and post processor for structural analysis and optimization programs based on the finite element method is presented. The system supports five functional modules controlled by an Executive Monitor. All of these modules communicate with a data base through a data manager. In addition a post output translator, CADSPP, is available which processes output from finite element programs, e.g. NASTRAN, directly into the data base. Also given is a detailed description of all user commands available in CADS and CADSPP. A sample session is provided which shows the user commands applied to a variety of sample problems. USER'S MANUAL FOR THE PROTOTYPE ADA (TRADEMARK) COMPILER EVALUATION CAPABILITY (ACEC), VERSION 1 Final Report
Audrey A. Hook, Gregory A. Riccardi, Michael Vilot, and Stephen Welke Oct. 1985 69 p refs
(Contract MDA903-84-C-0031)
(AD-A163272; AD-E500741; IDA-P-1879; IDA/HQ-85-30428) Avail: NTIS HC A04/MF A01 CSCL 09/2

The purpose of the Prototype Ada Compiler Evaluation Capability (ACEC) is to provide users with 1) an organized suite of compiler performance tests, and 2) support software for executing these tests and collecting performance statistics. These performance tests were collected by the Ada Evaluation and Validation (E&V) Team from several sources. The test programs, which have been in the public domain for some time, have been organized as a test suite according to categories which are explained in Section II. The strategy for measuring test performance and obtaining differential statistics is described in Section III. Section IV describes the entire support software architecture, including machine-dependent modules. General instructions for executing the Prototype ACEC are provided in Section V. GRA

CIRCE: A NATURAL LANGUAGE RULE TRANSLATION SYSTEM FOR INTERSENSOR
James R. Ellis and C. Ann Dent Nov. 1985 49 p
(AD-A163279; DREA-TC-85/314) Avail: NTIS HC A03/MF A01 CSCL 09/2

CIRCE is a set of functions written in LISP as an experiment in natural language processing. It was developed for knowledge acquisition by the Intersensor system, a sonar knowledge-based inference system. The main function of CIRCE inputs from either the keyboard or a file a rule written in English and converts it into a LISP-like data structure. This conversion takes place in two steps: the English text is first parsed, and then the relevant information is extracted from the resulting list and assembled into rules. These rules are then written to a file where they can be used directly by the inference mechanism of Intersensor without further processing. The paper briefly reviews prior research at DREA in this area, and contrasts the current system with its predecessors. Implementation problems are discussed, and suggestions for improvements are given. Author (GRA)

APPLICATION OF FLUX-CORRECTED TRANSPORT TO TTCP JOINT LAUNCH BLAST COMPUTATIONAL EFFORT
P. S. Kamath, S. Eidelman, M. A. Fry, J. D. Baum, and D. L. Book 31 Dec. 1985 135 p
(AD-A163332; NRL-MR-5701) Avail: NTIS HC A07/MF A01 CSCL 19/4

The method of Flux-Corrected Transport (FCT) was developed as a means for solving systems of hyperbolic equations in such a way that physically positive quantities like mass and energy density remain positive. Its principal application has been to compressible fluids, i.e., fluids in which some of the flow speeds are comparable with or greater than the local speed of propagation of waves in the medium. During the past decade the method has been extended and generalized in a number of important respects. A general-purpose FCT hydrocode was used to treat two muzzle blast test problems. Analysis of the results and comparison with data indicates that the results are physically realistic and, within the modeling assumptions, highly accurate. The FCT simulation model used runs on the Cray-1 and on smaller mainframe computers including the VAX and the multitasking array processors in our Graphical and Array Processing System. GRA

(AD-A163345; Rept-3285-2-15.2) Avail: NTIS HC A03/MF A01 CSCL 09/2

This Validation Summary Report presents the results and conclusions of performing standardized tests on the Verdix Ada compiler (VADS). The VADS is hosted on the VAX-11/785 computer operating under ULTRIX 1.0. The suite of tests known as the Ada Compiler Validation Capability (ACVC), Version 1.5, was used. The ACVC suite of tests is used to validate conformance of the compiler to ANSI/MIL-STD-1815A (ADA). The purpose of

the testing is to ensure that the compiler properly implements legal language constructs and that it identifies, rejects from processing, and labels illegal language constructs. The testing also identifies implementation-dependent behavior permitted by the standard. Six classes of tests are used. These tests are designed to perform checks at compile time, during execution, and at link time. GRA

A NONPARAMETRIC STATISTICAL APPROACH TO THE VALIDATION OF COMPUTER SIMULATION MODELS
William E. Baker and Malcolm S. Taylor Nov. 1985 38 p
(AD-A163376; BRL-TR-2696) Avail: NTIS HC A03/MF A01 CSCL 09/2

Initially the authors completed a literature search in order to identify existing methods of computer simulation validation. Nonparametric statistical techniques were subsequently adapted to both deterministic and stochastic simulations, and these procedures were applied to a computer model currently in use at the Ballistic Research Laboratory. Monte-Carlo methods provided an indication of the power of these tests, and a mention of future work concerning attempts to increase this power has been included in this report. Author (GRA)

SPACE-EFFICIENT ALGORITHMS FOR COMPUTATIONAL GEOMETRY M.S. Thesis
Cynthia A. Phillips Oct. 1985 34 p
(Contract N00014-80-C-0622)
(AD-A163426) Avail: NTIS HC A03/MF A01 CSCL 09/2

For the VLSI design to be reliably produced as a working chip, various features on the chip must be separated by minimum distances to ensure the proper operation of transistors and interconnections. The design rule checker program verifies that these and other geometric constraints are satisfied and signals an error if it finds two features that violate the design rules. For a chip composed of millions of rectangles, design rule checking is a time-consuming process which cannot be done entirely within the primary memory of many computers. This thesis presents an efficient algorithm for finding the connected components of rectangles in the plane using a machine model incorporating the secondary disk memory where the VLSI design is stored. By running this algorithm simultaneously on each layer of a VLSI chip design, a design rule checker can determine which features of a chip design are electrically equivalent, i.e., are effectively part of the same wire. The determination of electrical equivalence allows the design rule checker to avoid reporting the many aliasing errors which occur when two electrically equivalent features are mistaken for electrically distinct features. For example, two wires might be too close together, but if they are actually the same wire, it does not matter. GRA

SCHEMA: AN ARCHITECTURE FOR KNOWLEDGE BASED CAD
C. G. Clark and R. E. Zippel Oct. 1985 4 p
(Contract N00014-80-C-0622)
(AD-A163437) Avail: NTIS HC A02/MF A01 CSCL 09/2

Schema provides an integrated environment for all aspects of the synthesis and analysis of electronic designs from PC boards through circuit and mask design of VLSI devices. It simplifies the development of synthesis and analysis tools by using uniform data structures and by making available libraries of standard routines and advanced control structures appropriate for CAD tool development. Because all tools in the Schema environment utilize the same abstract data structures it is easy for tools to interchange data about a design or even pieces of the design itself. Schema also permits much of the design to be done in a technology independent fashion by allowing the designer to delay implementation decisions until the last possible moment. The information associated with a particular component of a design is organized as a module. Modules contain schematics, icons, topologies, layouts, simulation results, and other descriptive information for this component. The descriptions contained in modules are implemented as procedures which utilize other modules in a hierarchical fashion. Author (GRA)

USE OF COLOR IN DIFFERENTIATING FACTOR LEVELS IN SIMULATION OUTPUT (PRELIMINARY REPORT)
Peter A. W. Lewis Jan. 1986 13 p
(AD-A164651; NPS55-86-001) Avail: NTIS HC A02/MF A01 CSCL 09/2

A simulation is essentially a multi-factor statistical sampling experiment through which approximate answers to questions about some aspect of a system or statistic are obtained. Unfortunately the multi-factor aspect of the simulation is usually downplayed because of the difficulties of organizing and displaying the output as a function of various factors. Some graphical procedures using color are suggested for assessing the effect of the factors on the output. This is done in the context of an example of a multiserver queue. Classical analysis of variance techniques are usually not appropriate for this analysis because the data is non-normal and the mean is seldom an adequate or complete characterization of the output. GRA

VERIFYING TEMPORAL PROPERTIES WITHOUT USING TEMPORAL LOGIC
Bowen Alpern and Fred B. Schneider Dec. 1985 43 p
(Contract N00014-86-K-0092; Grant NSF DCR-83-20274)
(AD-A164820; CU-CSD-TR-85-723) Avail: NTIS HC A03/MF A01 CSCL 09/2

A new approach for proving temporal properties of concurrent programs is presented. The approach does not use temporal logic. To show that a program satisfies a given temporal property, the property is first decomposed into proof obligations. These obligations are then discharged by devising suitable invariant assertions and variant functions for the program. The approach is quite general - it handles a superset of the properties that can be expressed in linear-time temporal logic. Author (GRA)

TOP-DOWN PARSING SYNTAX ERROR RECOVERY M.S. Thesis
Paul E. Hallowell, Jr. Dec. 1985 179 p
(AD-A164859) Avail: NTIS HC A09/MF A01 CSCL 09/2

Compiler writers continue to search for a reliable method of syntactic error recovery. Spurious error reports and confusing diagnostics are common problems confronting the programmer.

innumerable error possibilities have made recovery design a frustrating task. This thesis implements a method of syntactic error recovery using recursive calls on the error recovery routine. Parsing is accomplished by traversing transition diagrams which are created from syntax charts. Key language symbols and dynamically generated recovery positions are used in restoring the parse. High-quality error diagnostics give a clear, accurate, and thorough description of each error, providing an excellent instuctional software tool. Approach and implementation issues are discussed, and sample output listings are included. Author (GRA)

(AD-A164897; BBN-6135) Avail: NTIS HC A03/MF A01 CSCL 09/2

Most current parallel programming languages are designed with a sequential programming language as the base language and have added constructs that allow parallel execution. We are experimenting with an applicative base language that has implicit parallelism everywhere, and then we introduce constructs that inhibit parallelism. The base language uses pure LISP as a foundation and blends in interesting features of Prolog and FP. Proper utilization of available machine resources is a crucial concern of programmers. We advocate several techniques of controlling the behavior of functional programs without changing their meaning or functionality: program annotation with constructs that have benign side-effects, program transformation and adaptive scheduling. This combination yields us a semi-applicative programming language and an interesting programming methodology. This paper deals with context-free parsing as an illustration of semi-applicative programming. Starting with the specification of a context-free recognizer, we have been successful in deriving variants of the recognition algorithm of Cocke-Kasami-Younger. GRA

METHODOLOGY INVESTIGATION: MULTILINGUAL STATIC ANALYSIS TOOL (MSAT) Final Report
Edward L. Anderson Nov. 1985 81 p
(AD-A164956) Avail: NTIS HC A05/MF A01 CSCL 09/2

The Multilingual Static Analysis Tool (MSAT) investigation was conducted to develop a software tool to automate the collection and reporting of software design and quality characteristics in a multilingual milieu. The goal of MSAT is to minimize the manual effort associated with the static software assessment of a target software system's design, structure, maintainability, modifications, and conformance with documented design and development standards. MSAT consists of a flexible, language-independent data collection component which extracts and stores items of interest in a DBMS; static analysis/report generation components for calculating and presenting software metrics and reports; and an executive control component which provides a user-friendly interface. SOFTWARE TEST AND EVALUATION MANUAL. VOLUME 1: GUIDELINES FOR THE TREATMENT OF SOFTWARE IN TEST AND EVALUATION MASTER PLANS Final Report
Oct. 1985 71 p
(Contracts DAAH01-85-D-A005; F33657-82-G-2083)
(AD-A165208; GIT-ICS-85/26-Vol-1) Avail: NTIS HC A04/MF A01 CSCL 09/2

The Software Test and Evaluation Manual provides guidance to DoD components in the area of software test and evaluation for defense system acquisition. It was prepared by the Software Test and Evaluation Project (STEP) in response to tasking by the Director Defense Test and Evaluation (OSD/USDR&E). Volume I is intended to support the review of Test and Evaluation Master Plans (TEMPs) for systems that contain mission critical software components, are software intensive, or present software testing issues that significantly affect risk. It consists of a checklist or series of questions that are keyed to the major paragraphs of a TEMP, and an accompanying set of explanatory notes that are brief commentaries on the questions and the significance of the possible responses to them. The primary audience for this manual consists of those individuals who are responsible for evaluating TEMPs. However, it should also prove useful to program offices, independent test organizations, contractors, and others who review, prepare, or provide data for inclusion in TEMPs. GRA

CHARACTERIZATION OF AN Ada SOFTWARE DEVELOPMENT
Victor R. Basili, Elizabeth E. Katz, Nora M. Panlilio-Yap, Connie L. Ramsey, and Shih Chang Sep. 1985 13 p Previously announced in IAA as A85-48023
(Contract N00014-82-K-0225)
(AD-A165320) Avail: NTIS HC A02/MF A01 CSCL 05/9

This article examines the use of Ada in a software project developed by the General Electric Company. The project was monitored by the University of Maryland and GE to identify areas of success and difficulty in learning and using Ada as both a design and a coding language. Since production-quality Ada translators were not readily available, the study focused on training and early software development. Our study also presents the major factors to consider before using Ada in software development, particularly when training in Ada is necessary. Our study attempts to meet several goals. The first focuses on characterization of the effort, the changes, and the errors of the project. The second considers how Ada was used on the project. The third concerns evaluation of the data collection and validation process, while the fourth concentrates on the development of measures for the Ada Programming Support Environment. GRA

SOFTWARE METRICS FOR Ada Final Report
Victor R. Basili 3 Feb. 1986 4 p
(Contract N00014-82-K-0225)
(AD-A165321) Avail: NTIS HC A02/MF A01 CSCL 09/2

The investigators monitored a software development project written in Ada by integrating measurement into the software development process. Their goal is to identify areas of success and difficulty in learning and using Ada as a design and coding language. The underlying process and the evolving product are measured, and the resulting information characterizes this project's successes and failures. It may be used to make recommendations about training, methodology, and metrics to the Ada users community. This experience with data collection and metrics will aid in the selection of a general set of measures and measurement procedures for any software development project. The project studied involved the redesign and reimplementation, at the General Electric Company, of a portion of a satellite ground control system originally written in FORTRAN. GRA

MONITORING AND Ada SOFTWARE DEVELOPMENT PROJECT
Victor Basili, John Gannon, Elizabeth Katz, Marvin Zelkowitz, and John Bailey 1986 4 p
(Contract N00014-82-K-0225)
(AD-A165324) Avail: NTIS HC A02/MF A01 CSCL 09/2

As any science matures, the role of measurement, analysis and experimentation grows. The software engineering community has seen the continued development of new software development methods and tools and their use in various environments. The evaluation of methods and tools began with subjective criteria and has been developing toward more objective data collection, measurement and controlled experiments. While this trend is encouraging, these evaluation studies have largely been on a one-shot basis. What has been missing is a systematic approach which defines a longe-range program for the study, analysis and evaluation of a specific method or tool. The emergence of Ada provides a focal point for developing such a systematic study. As a first step, research teams from the University of Maryland and General Electric have embarked upon an eighteen-month collaborative effort. The purpose of this effort is to monitor the use of Ada on a realistically large and complex software development project within industry. GRA

METRICS FOR Ada PACKAGES: AN INITIAL STUDY
J. D. Gannon, E. E. Katz, and V. R. Basili 1985 16 p
(Contract N00014-82-K-0225)
(AD-A165336) Avail: NTIS HC A02/MF A01 CSCL 09/2

Many novel features of Ada (e.g., packages, generics, tasking, and exception handling) were included in the language to improve readability, aid modification, or encourage reusability. Since they have not been available in other widely used languages, packages present programmers with a fairly formidable learning task. We studied four first-time Ada programmers as they developed a ground-support satellite system. Metrics are presented which characterize their use of Ada packages, indicating where program structure may make changes difficult, and suggesting how the structure may be improved. The findings suggest that a good background in the software engineering practices supported by Ada is necessary to learn to use the features of the language –

simply teaching professional programmers Ada is not enough. GRA

Ada is a high order language (HOL) developed by the Department of Defense (DoD) to be used in programming embedded systems. It is anticipated that use of Ada will significantly reduce the costs associated with defense software by providing more maintainable code. One of the goals of this workbook is to illustrate how to use the features of the Ada language to help produce more maintainable code. Ada Primer is the first of a series of three workbooks. The other two workbooks are entitled respectively, Advanced Ada and Real-Time Ada. Ada Primer leads the novice through the fundamentals of Ada by addressing the so-called Pascal subset of Ada. This workbook may be used in conjunction with module L202, Basic Ada Programming. A student, having completed L202 in conjunction with this workbook, shall be able to use an Ada package and code Ada subprograms using the Pascal subset of Ada. With the exception of Section 1 of this workbook, each workbook is organized as a series of Ada exercises to be solved by the reader. Taken sequentially as presented in the workbook, the exercises expose the student to the features of Ada in a logical fashion. In order to gain full benefit from this workbook, it is strongly recommended that the exercises be completed in the order presented. The solution to a specific exercise is located directly following the exercise. GRA

SOFTWARE TESTING OF MULTIPROCESSOR SYSTEMS Final Methodology Investigation Report
Edward L. Anderson Oct. 1985 68 p
(AD-A165387) Avail: NTIS HC A04/MF A01 CSCL 09/2

The increasing complexity of battlefield automated systems (BAS) has dictated the need to use multiple processors to enhance system reliability and to provide timely processing in systems that process large volumes of data. One such system, Position Location Reporting System (PLRS), has completed developmental testing; several more (Remotely Piloted Vehicle (RPV), Facility Intrusion Detection System (FIDS), and All Source Analysis System (ASAS)) are in the development phase. Additionally, the trend is toward distributive processing systems which will have multiple interactive processors and common software functions. Very little has been done to establish comprehensive test procedures for evaluating these systems, particularly under full load conditions. The objective of this investigation was to establish methods and procedures for evaluation of software for systems containing multiple interactive processors. A number of multiprocessor monitors/debuggers were examined for function and design approach. The investigation resulted in the development of a hybrid monitor concept: the integration of both hardware and software monitor capabilities into a central monitor system. This phase of the investigation resulted in revision of the specification documents and continued design and implementation of the prototype hybrid monitor. GRA

IMPLEMENTATION OF A NATURAL LANGUAGE PROCESSOR USING FUNCTIONAL GRAMMAR M.S. Thesis
Fred G. Orchard Dec. 1985 81 p
(AD-A165428) Avail: NTIS HC A05/MF A01 CSCL 09/2

This thesis presents the design and implementation of a natural language processor using Functional Grammar. Traditionally, grammars have consisted of a set of words and a set of semantic and syntactic rules which combine the words to form sentences. Thus, the language is looked at as a syntactic structure which is used to derive meaning. Functional Grammar looks at language as a means of social interaction and applies the syntactic and semantic rules only after the meaning, based on pragmatics, of the sentence has been established. Prolog has been used to demonstrate how Functional Grammar can be used to provide that meaning. GRA

DESIGN METHODOLOGY FOR EMBEDDED SYSTEMS Final Report
David Lefkovitz 15 Nov. 1985 140 p
(Contract N62269-80-D-0025)
(AD-A165497; TR-1500.21) Avail: NTIS HC A07/MF A01 CSCL 09/2

This contract has explored the multidimensional problem of the development of embedded software systems. In its reports and presentations the work has characterized these problems in various ways, but to view them as multidimensional is helpful inasmuch as the problems may be separated into different solution domains. These have been identified as: communication; principles and practices; technology, and compiler (Ada) language structure and capability. Its contents are as follows: The Domain of Solutions; Integration of the Four Solution Domains; Tools; Program Architectural Designs; The Embedded Software Design Simulator (ESDS). GRA

A THEORY OF PARTIAL SYSTEMS
F. J. Polster Oct. 1985 116 p
(KfK-3982; ISSN-0303-4003; ESA-86-96911) Avail: NTIS HC A06/MF A01

The notion of fragment system is introduced as a formalization of the properties of interconnections among fragments of code used to implement parts of a computer program. It is a model for system families, where the members of a system family (the partial systems) are composed of a subset of a collection of shared system components (the fragments). An algorithm for the construction of a characteristic set CF is presented: CF is a minimal subset of fragments with the property, that it is sufficient to indicate for the fragments of CF only, whether or not they are relevant for a partial system. An explicit representation of the set of partial system is developed as a subset of (0,1) [CF], the elements of which satisfy Boolean expressions, called restrictions. Restrictions are inherent to the fragment system and can be algorithmically derived. Restrictions may also be employed to model semantics of the system interface. ESA

COMPUTER AIDED MANUFACTURING (CAM) DATA BASES: REQUIREMENTS AND SURVEY
Alfons Kemper Aug. 1985 18 p refs
(Rept-17/85; ESA-86-96930) Avail: NTIS HC A02/MF A01

The most common representation schemes for modeling solid geometric objects in a computer, including the constructive solid geometry model and the boundary representation model are investigated from a data structure point of view, i.e., investigating the requirements which such schemes impose on a database management system. Developments in engineering databases with regard to supporting these representation schemes are discussed. Systems considered are extensions to the relational data model. The investigation is carried out by defining the (skeleton) schemes for the representation methods in the particular data base management system. ESA

OPERATIONAL SEMANTICS OF A PARALLEL OBJECT-ORIENTED LANGUAGE
Pierre America (Philips Gloeilampenfabrieken N. V., Eindhoven, Netherlands), Jaco deBakker, Joost N. Kok, and Jan Rutten Aug. 1985 22 p Revised Sponsored by European Economic Commission Esprit Project 415
(CWI-CS-R8515; B8575492; ESA-86-97006; ISSN-0167-8590) Avail: NTIS HC A02/MF A01

The semantics of the programming language POOL is described. The language integrates the object-oriented structure of languages like Smalltalk-80 with facilities for concurrency and communication like the ones in Ada. The semantics is described in an operational way: it is based on transition systems. By using a way of representing parallel processes that is different from the traditional one, it is possible to overcome difficulties pertaining to the latter. The resulting semantics shows a close resemblance with the informal language description, and there are good prospects that it can serve as a secure guide for the implementation of the language. ESA

A CONCEPTUAL MODELING EXPERT SYSTEM
M. L. Kersten, H. Weigand (Vrije Universiteit, Amsterdam, Netherlands), F. Dignum, and J. Boom Sep. 1985 17 p Revised
(CWI-CS-R8518; B8575499; ESA-86-97009) Avail: NTIS HC A02/MF A01

The architecture of an interactive conceptual modeling expert system, called ACME is described. The input to ACME is a natural language description of the application domain, decomposed by a parser into so-called predications. From these predications a preliminary EAR model can be extracted readily, which is subsequently improved by the EAR modeling expert using structural and semantic rules stored in a knowledge base. In an iterative process the user resolves the inconsistency and ambiguity problems discovered by ACME and enhances the conceptual model. ESA

AN OPERATIONAL SEMANTICS FOR PROCESS ALGEBRA
J. C. Baeten, J. A. Bergstra (Amsterdam Univ., Netherlands), and J. W. Klop Sep. 1985 33 p Revised report of RUU-CS-85-3 Submitted for publication Sponsored in part by European Economic Commission ESPRIT Project 432
(CWI-CS-R8522; B8575497; ESA-86-97013) Avail: NTIS HC A03/MF A01

Operational rewrite rules, expressing the dynamic behavior of configurations of objects are considered. This gives an algebraic way to generalize Petri net theory. Operational rewrite rules for process algebras are described, and it is shown that in each case the operational semantics thus obtained is equivalent to the regular denotational semantics of processes. This theory can be used to describe features like true concurrency and real-time behavior for concurrent, communicating processes. ESA

PRINTER MULTIPLEXING AMONG MULTIPLE Z-100 MICROCOMPUTERS M.S. Thesis
Kwang J. Choi and Ju K. Lee Dec. 1985 79 p
(AD-A165179) Avail: NTIS HC A05/MF A01 CSCL 09/2

This thesis describes the detailed design and implementation of a printer server in the laboratory environment of sharing resources among multiple Zenith Z-100 microcomputers. The Printer Server System is a controller box which consists of a power supply, a single board computer, and the BLC 8538 eight channel I/O expansion boards. Each Z-100 microcomputer is connected to the controller thru the RS-232C port. The Printer Server System has three software utilities: BOOT, CONTROL, and SPOOL. The BOOT process, resident in the controller, downloads the CONTROL file from any one of multiple Z-100's which is turned on. The CONTROL process allows the printer to be used by any one of multiple Z-100's at a time. The SPOOL process sends the data thru the CONTROL process to the printer or saves the data on the disk file. Author (GRA)

DISTRIBUTED MATCHMAKING FOR PROCESSES IN COMPUTER NETWORKS
Sape J. Mullender and Paul M. B. Vitanyi Aug. 1985 25 p Presented at 4th ACM SIGACT-SIGOPS Symposium on Principles of Distributed Computing, Minaki, Ontario, 5-7 Aug. 1985 Revised
(CWI-CS-R8513; B8575501; ESA-86-97004) Avail: NTIS HC A02/MF A01

The problem of setting up communication when needed between processes in a multiprocessor network where processes have names but no permanent addresses is investigated. Establishing communication between a process asking for a service and a process giving that service, without centralized control in a distributed environment with mobile processes, constitutes the problem of distributed matchmaking. Logically, such a matchmaking phase precedes routing in store-and-forward computer networks of this type. Algorithms for distributed matchmaking are developed and their complexity is investigated in terms of message passes and storage needed. The theoretical limitations of distributed match-making are established and the techniques are applied to network topologies. ESA

(Contracts DAAG29-84-K-0005; N00014-77-C-0532)
(AD-A165498; LIDS-P-1534; ARO-20980.42-MA) Avail: NTIS HC A02/MF A01 CSCL 17/2

The usual slotted ALOHA model, under the infinite source assumption and ternary feedback is considered. In more detail, there is an infinite number of stations and, at the beginning of any time slot, each station may have at most one packet to transmit. Any station with an available packet may decide to attempt transmission (possibly using a probabilistic rule) or to decide to defer this attempt for later. The objective is to find a probabilistic rule that lets each station decide at any given time, using only the information available to it, whether it will transmit or not (of course this rule will be used only by those stations that have an available packet.) GRA

ON THE SOLUTION OF INTEGRAL EQUATIONS WITH A GENERALIZED CAUCHY KERNEL
A. C. Kaya and F. Erdogan Mar. 1986 22 p refs
(Grants NGR-39-007-011; NSF MEA-84-14477)
(NASA-CR-176685; NAS 1.26:176685) Avail: NTIS HC A02/MF A01 CSCL 12A

In this paper a certain class of singular integral equations that may arise from the mixed boundary value problems in nonhomogeneous materials is considered. The distinguishing feature of these equations is that in addition to the Cauchy singularity, the kernels contain terms that are singular only at the end points. In the form of the singular integral equations adopted, the density function is a potential or a displacement and consequently the kernel has strong singularities of the form (t-x) sup-2, x sup n-2 (t+x) sup n, (n > or = 2, 0<x,t>b). The complex function theory is used to determine the fundamental function of the problem for the general case and a simple numerical technique is described to solve the integral equation. Two examples from the theory of elasticity are then considered to show the application of the technique. Author

N86-26988*# Lehigh Univ., Bethlehem, Pa.
ON THE SOLUTION OF INTEGRAL EQUATIONS WITH STRONGLY SINGULAR KERNELS
A. C. Kaya and F. Erdogan Sep. 1985 25 p refs
(Grants NGR-39-007-011; NSF MEA-82-09083)
(NASA-CR-176687; NAS 1.26:176687) Avail: NTIS HC A02/MF A01 CSCL 12A

In this paper some useful formulas are developed to evaluate integrals having a singularity of the form (t-x) sup-m, m> or = 1. Interpreting the integrals with strong singularities in Hadamard sense, the results are used to obtain approximate solutions of singular integral equations. A mixed boundary value problem from the theory of elasticity is considered as an example. Particularly for integral equations where the kernel contains, in addition to the dominant term (t,x) sup-m, terms which become unbounded at the end points, the present technique appears to be extremely effective to obtain rapidly converging numerical results. REGULARITY ESTIMATES UP TO THE BOUNDARY FOR ELLIPTIC SYSTEMS OF DIFFERENCE EQUATIONS
J. C. Strikwerda, B. A. Wade (Wisconsin Univ., Madison.), and K. P. Bube (California Univ., Los Angeles.) May 1986 66 p refs
Sponsored in part by Gulf Research and Development Co.
(Contracts NAS1-17070; NAS1-18107; Grants NsG-5034; NsG-5130; Contract DAAG29-80-C-0041; Grant NSF MCS-76-07039)
(NASA-CR-178107; ICASE-86-31; NAS 1.26:178107) Avail: NTIS HC A04/MF A01 CSCL 12A

Regularity estimates up to the boundary for solutions of elliptic systems of finite difference equations were proved. The regularity estimates, obtained for boundary fitted coordinate systems on domains with smooth boundary, involve discrete Sobolev norms and are proved using pseudo-difference operators to treat systems with variable coefficients. The elliptic systems of difference equations and the boundary conditions which are considered are very general in form. The regularity of a regular elliptic system of difference equations was proved equivalent to the nonexistence of eigensolutions. The regularity estimates obtained are analogous to those in the theory of elliptic systems of partial differential equations, and to the results of Gustafsson, Kreiss, and Sundstrom (1972) and others for hyperbolic difference equations. A SPECTRAL MULTIDOMAIN METHOD FOR THE SOLUTION OF HYPERBOLIC SYSTEMS
David Kopriva May 1986 48 p refs
(Contracts NAS1-17070; NAS1-18107)
(NASA-CR-178105; ICASE-86-28; NAS 1.26:178105) Avail: NTIS HC A03/MF A01 CSCL 12A

A multidomain Chebyshev spectral collocation method for solving hyperbolic partial differential equations were developed. Though spectral methods are global methods, an attractive idea is to break a computational domain into several domains, and a way to handle the interfaces is described. The multidomain approach offers advantages over the use of a single Chebyshev grid. It allows complex geometries to be covered, and local refinement can be used to resolve important features. For steady state problems it reduces the stiffness associated with the use of explicit time integration as a relaxation scheme. Furthermore, the proposed method remains spectrally accurate. Results showing performance of the method on one dimensional linear models and one and two dimensional nonlinear gas dynamics problems are presented. Author

CONTROL, STATE ESTIMATION AND PARAMETER IDENTIFICATION OF NONLINEAR DISTRIBUTED PARAMETER SYSTEMS USING FIXED POINT TECHNIQUES: A SURVEY
J. A. M. FelippedeSouza Apr. 1986 8 p refs Presented at the 4th IFAC Symposium on Control of Distributed Parameter Systems, Los Angeles, Calif. 29 Jun. - 3 Jul. 1986
(INPE-3855-PRE/919) Avail: NTIS HC A02/MF A01

Fixed point theorems have been an important tool used by mathematicians in the study of the existence of a solution of nonlinear differential equations, and nonlinear operator equations in general, since the beginning of the century. The last seven years has seen the appearance of some papers which extended the basic idea of this tool to solve problems of control, state estimation, and parameter identification of nonlinear systems, including distributed parameter systems. The present paper attempts to survey the fixed point techniques used in nonlinear distributed parameter systems in papers already published on this subject. The fact that most of these papers concentrate on theoretical results is emphasized. Though several of them bring creative ideas, they are poor in practical results or concrete examples of applications. Author

THE DESIGN AND IMPLEMENTATION OF COST-EFFECTIVE ALGORITHMS FOR DIRECT SOLUTION OF BANDED LINEAR SYSTEMS ON THE VECTOR PROCESSOR SYSTEM 32 SUPERCOMPUTER
Augustine S. Samba 1985 48 p
(Grant NAG1-544)
(NASA-CR-17681; NAS 1.26:176811) Avail: NTIS HC A03/MF A01 CSCL 12A

The problem of solving banded linear systems by direct (non-iterative) techniques on the Vector Processor System (VPS) 32 supercomputer is considered. Two efficient direct methods for solving banded linear systems on the VPS 32 are described. The vector cyclic reduction (VCR) algorithm is discussed in detail. The performance of the VCR on a three parameter model problem is also illustrated. The VCR is an adaptation of the conventional point cyclic reduction algorithm. The second direct method is the Customized Reduction of Augmented Triangles' (CRAT). CRAT has the dominant characteristics of an efficient VPS 32 algorithm. CRAT is tailored to the pipeline architecture of the VPS 32 and as a consequence the algorithm is implicitly vectorizable. Author

EXACT INTEGRATION ALGORITHM FOR USE WITH MODAL ANALYSIS
R. Rodeman 1985 6 p Presented at the 4th International Modal Analysis Conference, Los Angeles, Calif., 3 Feb. 1986
(Contract DE-AC04-76DP-00789)
(DE85-018533; SAND-85-2121C; CONF-860224-2) Avail: NTIS HC A02/MF A01

A modal analysis integration algorithm which is exact for a piecewise-linear excitation has been developed. Since virtually all field excitations are represented in digitized form, a piecewise-linear representation is appropriate. The integration algorithm is obtained by constructing a recursive, ramp-invariant digital filter. The recursive form is simple; only five additions and five multiplications are necessary to determine a new response point. This algorithm is compared with the Newmark-beta, central difference, trapezoidal rule, and linear-acceleration algorithms. It is shown that the new algorithm has a marked superiority. It is also shown that the classical algorithms can produce poor results. DOE

A RECURSIVE BOUNDARY ELEMENT WITH INITIAL ERROR INVESTIGATION Final Report, Oct. 1984 - Sep. 1985
J. V. Cox and T. A. Shugar Dec. 1985 49 p
(AD-A163563; NCEL-TN-1730) Avail: NTIS HC A03/MF A01 CSCL 12/1

A recursive numerical integration technique is developed for the boundary element method. The initial implementation is within an indirect formulation for two-dimensional elastostatics. A numerical study investigates the error field near a single boundary element in the infinite plane using different orders of numerical integration. The difficulty of integrating the singular kernal functions with discrete integration points is eliminated with a recursive algorithm that adaptively subdivides elements that are in close proximity to the internal response point. The recursive technique allows calculation of internal responses arbitrarily close to the boundary subdivision based on boundary geometry and anticipated boundary response gradients without regard for the numerical integration accuracy of responses near the boundary. The gradient of the artificial tractions must ordinarily be considered when modeling problems with the indirect formulation. GRA

THE ORDINARY LEAST SQUARES ESTIMATION FOR THE GENERAL-LINK LINEAR MODELS, WITH APPLICATIONS Technical Summary Report
Naihua Duan and Ker-Chau Li Oct. 1985 34 p refs
(Contract DAAG29-80-C-0041; Grant NSF MCS-83-01587)
(AD-A163599; MRC-TSR-2880) Avail: NTIS HC A03/MF A01 CSCL 12/1

For a general link linear model (GLLM), we show that the OLS estimate of the slope vector is strongly consistent up to a multiplicative scale, even though the model might actually be nonlinear. Furthermore, the estimated slope vector is strongly consistent for the average slope vector, the average of the pointwise slope vectors on the response surface. For a GLLM with a completely specified link function, we can solve for the multiplicative scalar and estimate the intercept and Cox and Snell's generalized residuals. We then estimate the response surface and the pointwise slopes using a generalization of the smearing estimate in Duan (1983). The results can be applied to a number of important subclasses of GLLM, including general transformation models, general scaled transformation models, dichotomous regression, and Tobit regression. MARCHING DIFFERENCE SCHEMES FOR ILL POSED INITIAL VALUE PROBLEMS Final Report, 16 Jul. 1982 - 30 Sep. 1985
Alfred S. Carasso 30 Nov. 1985 6 p refs
(Contract MIPR-ARO-63-82)
(AD-A164012; ARO-19643.4-MA) Avail: NTIS HC A02/MF A01 CSCL 12/1

This final report summarizes work accomplished on the development of marching algorithms for the numerical computation of ill-posed initial value problems. Applications include nonlinear inverse heat transfer in gun barrels, and the detection of flaws in metallic plates by ultrasonic testing. A new systematic approach to pulse probing and characterization of linear time invariant systems was discovered. This theory uses tools from probability theory related to the Central Limit Theorem. Important computational experiments were successfully performed on reconstructing singular elastic Green's functions. Author (GRA)

DENSITY FUNCTIONAL THEORY FOR EXCITED STATES IN A QUASI LOCAL DENSITY APPROXIMATION Technical Report, Jun. - Dec. 1985
W. Kohn 10 Feb. 1986 11 p
(Contract N00014-84-K-0548)
(AD-A164474; TR-9) Avail: NTIS HC A02/MF A01 CSCL 07/4

The starting point of this paper is a recent extension by A.K. Theophilou of the Hohenberg-Kohn-Sham(HKS) density functional theory to ensembles of systems consisting of the M lowest eigenstates, equally weighted. As in the HKS theory the key quantities are the exchange correlation energy, E(supM, sub xc) [n (r')] and potential v sup M, sub xc (r; [n (r')]). This paper provides expressions for these quantities, valid for systems of slowly varying density. Even for such systems, however, there are essential non-local effects. Nevertheless, both E (sup M, sub xc) and v (sup M, sub xc) can be calculated in terms of quantities characteristic of appropriate uniform thermal ensembles. This theory is the analog of the ground state local density approximation and allows calculation of excited state energies and densities. GRA

END-POINT CORRECTED TRAPEZOIDAL QUADRATURE RULES FOR SINGULAR FUNCTIONS
V. Rokhlin Nov. 1985 16 p
(Contract N00014-82-K-0184)
(AD-A163242; YALEU/DCS/RR-441) Avail: NTIS HC A02/MF A01 CSCL 12/1

A group of quadrature formulae for end-point singular functions is presented generalizing classical end-point corrected trapezoidal quadrature rules. The actual values of the end-point corrections are obtained for each singularity as a solution of a system of linear algebraic equations. The algorithm is applicable to a wide class of monotonic singularities and does not require that an analytical expression for the singularity be known; only the knowledge of its first several moments and the ability to evaluate it on the interval of integration are needed Author (GRA)

(AD-A163344; TR-461; TR-85-10-ONR) Avail: NTIS HC A03/MF A01 CSCL 12/1

The error correction model for a vector valued time series has been proposed and applied in the economic literature with the papers by Sargan (1964), Davidson et al. (1978), Hendry and von Ungern-Sternberg (1981) and has been given a formal mathematical treatment by Granger (1983). He introduced the notion of cointegratedness of a vector process and showed the relation between cointegration and error correction models. This paper defines a general error correction model, that encompasses the usual error correction model as well as the integral correction model by allowing a finite number of error correction terms which correspond to linear combinations of the vector process that are integrated of different order. It is shown that this structure is inherent in the model if it is given in autoregressive form or moving average form by exploiting the singularity of the matrix function that defines the model. The theory is applied to some examples discussed by Davidson (1983) and Harvey (1982). Author (GRA)

ON DENSITY ESTIMATION FROM CENSORED DATA BY PENALIZED LIKELIHOOD METHODS
V. K. Klonias and John C. Wierman Jun. 1985 28 p
(Contract N00014-79-C-0801)
(AD-A163388; TR-418; ONR-TR-85-3) Avail: NTIS HC A03/MF A01 CSCL 12/1

Estimators for the probability density function, cumulative distribution function, and hazard function are proposed in the random censorship setting. The estimators are derived from the Kaplan-Meier product limit estimator by maximum penalized likelihood methods. The authors establish the existence and uniqueness of the estimates, which are exponential splines with knots at the uncensored observations, and provide an efficient algorithm for their numerical evaluation. They prove the consistency, in probability and almost surely, of the density estimates in the Hellinger distance, the L sub p norms for p =1, 2, infinity, and the Sobolev norm. The corresponding hazard rate estimator converges uniformly on bounded intervals. Author (GRA)

The problem of evaluating multivariate probabilities arises in many areas of statistics, such as in the construction of confidence regions for the mean vector or regression parameters in a general linear model, the determination of critical regions for certain tests, multiple comparisons, reliability, etc. Because these probabilities are hard to evaluate numerically, a thorough study of the nature of, say, the distribution function is needed to suggest good approximations and inequalities. For example, tables for selected values of parameters are available, and one usually interpolates linearly to get an approximation; if we know that the tabulated function is convex or concave, we also get a bound for the quantity of interest. The cumulative and rectangular probabilities for elliptically contoured distributions are increasing functions of the correlations, but the rate of increase has not yet been studied. This paper proves some results concerning the convexity in correlations of the distribution functions of random vectors with elliptically contoured distributions, and their absolute values. Sections 2-5 describe the bivariate case, and the last section contains extensions to the multivariate case; the results here are not as strong as for the bivariate case, as the computations are much harder. A NOTE ON CONVERGENCE OF FUNCTIONS OF RANDOM ELEMENTS
Robert J. Serfling Nov. 1985 12 p
(Contract N00014-79-C-0801)
(AD-A163405; TR-459; TR-85-8-ONR) Avail: NTIS HC A02/MF A01 CSCL 12/1

Convergence of g(xi sub n) to g (xi) is considered when xi sub n approaches limit of xi distribution or in probability, without the usual restriction that g be continuous a.s. under the distribution of xi. It is shown that the covergence g (xi sub n) approaches limit of g (xi) holds for arbitrary Borel-measurable g, if in addition to the assumed convergence xi sub n approaches limit of xi the corresponding measures (p sub N) of (xi sub) are contiguous to the measure of P of xi in a certain very weak sense. Some statistical applications are indicated. GRA

METASTABILITY AND COMPENSATED COMPACTNESS IN CONTINUUM THEORIES Final Report, 1 Dec. 1984 - 30 Nov. 1985
Hans Weinberger and George R. Sell 23 Jan. 1986 13 p
(Contract DAAG29-85-K-0021)
(AD-A164634; ARO-21859.1-MA) Avail: NTIS HC A02/MF A01 CSCL 12/1

Historically, one of the most important problems in continuum mechanics has been the understanding of hyperbolic conservation laws. This is because such systems arise from the underlying balance laws of mass, momentum, and energy. Their nonlinearity and hyperbolicity arise from the simplest constitutive assumptions, even in an ideal gas. The goal of this workshop was to examine the implications of compensated compactness and dispersion in the analysis and numerical analysis of such equations. The influence of viscosity and fluctuation mechanisms in nature was discussed as well. A second workshop focused on metastability and incompletely posed problems. GRA

MEASURES OF IMBALANCE FOR UNBALANCED MODELS
Andre I. Khuri Jan. 1986 26 p
(Contract N00014-86-K-0059)
(AD-A164638; TR-255) Avail: NTIS HC A03/MF A01 CSCL 12/1

This paper presents a procedure to measure the degree of imbalance of an unbalanced data set. The procedure is based on choosing an appropriate loglinear model for the subclass frequencies of the data. A measure of imbalance is then introduced as some function of the chi-squared statistic used in the goodness-of-fit test for the loglinear model. The proposed procedure can also be used to measure departures from certain types of balance, such as proportionality of subclass frequencies, partial balance, and last-stage uniformity. Author (GRA)

ON FREQUENCY POLYGONS AND AVERAGE SHIFTED HISTOGRAMS IN HIGHER DIMENSIONS
Nils L. Hjort Feb. 1986 55 p
(Contract N00014-83-K-0472)
(AD-A164680; SU-LCS-TR-22) Avail: NTIS HC A04/MF A01 CSCL 12/1

Scott has recently studied two simple variations on the ordinary histogram, namely the frequency polygon and the average shifted

histogram, and found that they are able to compete with for example kernel density estimators in performance while retaining the advantage of being conceptually and computationally simple. The present paper proposes a way of generalizing frequency polygons to d-dimensional space that performs better than Scott's generalization. Expressions for integrated mean squared error and for integrated mean absolute deviation plus integrated absolute bias are obtained for generalized frequency polygons, for average shifted histograms, and for generalized frequency polygons of average shifted histograms. These expressions are used to give guidelines for window sizes. GRA

A REVIEW OF MAXIMUM ENTROPY SPECTRAL ANALYSIS AND APPLICATIONS TO FOURIER SPECTROSCOPY
Edmond M. Dewan 3 Apr. 1985 80 p
(AD-A164698; AFGL-TR-85-0091; AFGL-ERP-911) Avail: NTIS HC A05/MF A01 CSCL 12/1

There are many situations where a great increase in the resolution of power spectral densities, PSD's, would solve important problems. The problem areas range from radar, speech compression, seismic signal processing, to spectral analysis of optical signals. The maximum entropy method (MEM) can, under certain circumstances, provide an order of magnitude increase in resolution over conventional techniques. The fundamental concepts and mathematical background are given and, most importantly, the peculiarities and new features introduced by the MEM technique are explained. Some signals are good candidates for this technique while others are not; thus, methods are described to distinguish between the two. After the techniques to obtain the MEM-PSD are explained, an application to Fourier Spectroscopy is given to illustrate the results (as compared to conventional means). This review employs certain features to make the MEM approach accessible to those without previous knowledge about it. These features include: a short history of the PSD which describes the evolution over time of the basic concepts; a discussion of the higher principle of maximum entropy in the context of probability theory; a simple introduction to the Z-transform and how it introduces the basic spectral line shape of the MEM-PSD as well as other peculiarities of the method which distinguish it from the conventional approach; the physics behind the reflection coefficients which are introduced by MEM; and an extensive annotated bibliography. A UNIFYING APPROACH TO LINEAR AND NONLINEAR ARRAY PROCESSING: A TUTORIAL Final Report, Oct. 1984 - Sep. 1985
Charles L. Byrne 30 Dec. 1985 31 p
(AD-A164777; NRL-8959) Avail: NTIS HC A03/MF A01 CSCL 12/1

The concept of linear filtering is the focus of a unifying approach to linear and nonlinear array processing methods. A number of well-known methods (conventional, optimal, maximum likelihood) are typically discussed within the context of linear filtering, while others (maximum entropy, linear predictor, generalized eigenvector) are not usually presented in this way. Through rederivation of these methods in terms of constrained filtering, we are able to relate performance of the methods to imposed (or neglected) constraints. Each filter discussed is linearly constrained in the look direction and then optimized using quadratic forms based on noise and sidelobe structure. Each filter is more complicated than the ones preceding it, as we consider additional aims and impose additional constraints. Stability of the methods to mismatches is considered, and techniques for improving stability are presented. Appendixes on Fourier transform approximation, array gain and detection, and complex Gaussian random variables are included. Author (GRA)

TIME DOMAIN FILTERING OF TWO-DIMENSIONAL FLUORESCENCE DATA Interim Technical Report
Maria Vicsek, Sharon L. Neal, and Isiah M. Warner 10 Feb. 1986 27 p Submitted for publication
(Contract N00014-83-K-0026; Grant NSF CHE-82-01886; NR Proj. 051-841)
(AD-A164954) Avail: NTIS HC A03/MF A01 CSCL 05/8

Four time domain filtering methods are applied to simulated and experimental two dimensional fluorescence data in order to evaluate their performance. The methods that were evaluated are: (1) moving average, (2) Savitsky Golay polynomial smoothing, (3) Chebyshev filtering, and (4) Bicubic spline filtering. The methods are compared using mean square error analysis and the difference in the amplitudes of the filtered noisy and ideal data. The two dimensional version of the Savitsky Golay filtering and the spline method produced the best overall results. GRA

THE FRACTAL GEOMETRY OF NATURE; ITS MATHEMATICAL BASIS AND APPLICATION TO COMPUTER GRAPHICS M.S. Thesis
Michael E. Gaddis and Michael J. Zyda Jan. 1986 131 p
(AD-A165185; NPS52-86-008) Avail: NTIS HC A07/MF A01 CSCL 12/1

Fractal Geometry is a recent synthesis of old mathematical constructs. It was first popularized by complex renderings of terrain on a computer graphics medium. Fractal geometry has since spawned research in many diverse scientific disciplines. Its rapid acceptance has been achieved due to its ability to model phenomena that defy discrete computation due to roughness and discontinuities. With its quick acceptance have come problems. Fractal geometry is a misunderstood idea that is quickly becoming buried under grandiose terminology that serves no purpose. Its essence is induction using simple geometric constructs to transform initiating objects. The fractal objects that we create with this process often resemble natural phenomena. The purpose of this thesis is to present fractal geometry to the graphics programmer as a simple workable technique. We hope to demystify the concepts of fractal geometry and make it available to all who are interested. Author (GRA)

SPONTANEOUS SYMMETRY BREAKING AND NEUTRAL STABILITY IN THE NONCANONICAL HAMILTONIAN FORMALISM
P. J. Morrison and S. Eliezer Oct. 1985 36 p
(Contract DE-FG05-80ET-53088)
(DE86-004562; DOE/ET-53088/212; IFSR-212) Avail: NTIS HC A03/MF A01

The noncanonical Hamiltonian formalism is based upon a generalization of the Poisson bracket, a particular form of which is possessed by continuous media fields. Associated with this generalization are special constants of motion called Casimirs. These are constants that can be viewed as being built into the phase space, for they are invariant for all Hamiltonians. Casimirs are important because when added to the Hamiltonian they yield an effective Hamiltonian that produces equilibrium states upon variation. The stability of these states can be ascertained by a second variation. Goldstone's theorem, in its usual context, determines zero eigenvalues of the mass matrix for a given vacuum state, the equilibrium with minimum energy. Here, since for fluids and plasmas the vacuum state is uninteresting, we examine symmetry breaking for general equilibria. Broken symmetries imply directions of neutral stability. Two examples are

presented: the nonlinear Alfven wave of plasma physics and the Korteweg-de Vries soliton. DOE

AN EFFICIENT DECISION-MAKING-FREE FILTER FOR PROCESSES WITH ABRUPT CHANGES
H. A. P. Blom 10 Sep. 1984 10 p Presented at 7th IFAC Symposium on Identification and System Parameter Estimation, York, England, 3-7 Jul. 1985
(NLR-MP-84080-U; B8578435; ESA-86-96970) Avail: NTIS HC A02/MF A01

The system of linear stochastic difference equations with Markovian coefficients was generalized to cover processes in R sup n which jump simultaneously with the coefficients. The additional modeling potential of this generalized system is illustrated. For filtering partial observations of the generalized system, the Interacting Multiple Model (IMM) algorithm is given. It consists of a bank of N interacting Kalman-like filters which cooperate with a filter for the N state Markov process and is free of any decision making mechanism. Comparisons with other algorithms for processes with abrupt changes show that the IMM algorithm performs very well at the cost of a relatively low computational load. Due to the generalization, the IMM algorithm is a serious competitor of decision directed filters for processes in R sup n with additive jumps. ESA

ON THE LIKELIHOOD RATIO TEST FOR A CHANGE POINT IN A SEQUENCE OF INDEPENDENT EXPONENTIALLY DISTRIBUTED RANDOM VARIABLES
Patsy Haccou (Leiden Univ., Netherlands), Evert Meelis, and Sara vandeGeer Aug. 1985 34 p refs
(CWI-MS-R8507; B8573005; ESA-86-96986) Avail: NTIS HC A03/MF A01

Let x1, ..., xn + 1 be independent exponentially distributed random variables, and let xi have intensity lambda 1 for i < or = tau, and intensity lambda 2 for i > tau, where tau is an unknown instant and lambda 1 and lambda 2 are also unknown. It is proved that the asymptotic null-distribution of the likelihood ratio statistic for testing lambda 1 = lambda 2 (or, equivalently, tau = 0 or n + 1) is an extreme value distribution, by application of theorems concerning the normed uniform quantile process. The rate of convergence is studied with Monte Carlo methods. Since it appears very low, simulated 5% critical values are given. It is shown that the test is optimal in the sense of Bahadur. Simulation results indicate a good power for values of n that are relevant for most applications. The likelihood ratio test is compared with a test which has the same asymptotic null-distribution. It is proved that this test has Bahadur efficiency zero. The simulation results confirm that the likelihood ratio test is superior to the latter test. ESA

RESIDUE FORMULAS FOR MEROMORPHIC MATRICES
J. M. Schumacher Sep. 1985 16 p Revised Submitted for publication
(CWI-OS-R8506; B8577117; ESA-86-96988) Avail: NTIS HC A02/MF A01

Derivation of the so-called participation matrices which govern the energy distribution over the resonance modes in vibration analyses of mechanical systems is discussed. These matrices appear as residue matrices for certain meromorphic matrix-valued functions (transfer matrices from forces to displacements), the poles of which correspond to the resonance frequencies. These poles are simple as a consequence of the law of conservation of energy. The problem comes down to the computation of the residue at a simple pole of a meromorphic matrix. A residue formula (and variants) for matrices in fractional form is given. In all versions, a normalizing matrix which is invertible if and only if the pole considered is simple is constructed, and a formula for the residue which features the inverse of the normalizing matrix is written. Proofs are based on the local Smith form for meromorphic matrices. The normalizing matrix can also be used in stability tests. ESA

WAITING-TIME APPROXIMATIONS FOR CYCLIC-SERVICE SYSTEMS WITH SWITCHOVER TIMES
O. J. Boxma and B. Meister (IBM Research Lab., Zurich, Switzerland) Sep. 1985 19 p Revised Submitted for publication
(CWI-OS-R8510; B8577110; ESA-86-96992) Avail: NTIS HC A02/MF A01

Mean waiting-time approximations are derived for a single-server multiqueue system with nonexhaustive cyclic service. Nonzero switchover times of the server between consecutive queues are assumed. A pseudo-conservation law was found by Watson (1984). The approximation is simpler and, as extensive simulations show, more accurate than existing approximations. It gives very good insight into the qualitative behavior of cyclic-service queueing systems. ESA

A DOUBLE INTEGRAL CONTAINING THE MODIFIED BESSEL FUNCTION: ASYMPTOTICS AND A DEVICE FOR COMPUTATION
N. M. Temme Apr. 1985 10 p Revised Submitted for publication
(CWI-AM-R8507; B8578041; ESA-86-96993) Avail: NTIS HC A02/MF A01

A two-dimensional integral containing exp (- xi - eta)I0(2 root xi eta) is considered; I0(z) is the modified Bessel function and the integral is taken over the rectangle 0 < or = xi < or = x, 0 < or = eta < or = y. The integral is difficult to compute when x and y are large, especially when x and y are almost equal. Computer programs based on existing series expansions are inefficient in this case. A representation in terms of the error function (normal distribution function) from which more efficient and reliable algorithms can be constructed is given. ESA

AN ABSTRACT DELAY-DIFFERENTIAL EQUATION MODELING SIZE DEPENDENT CELL GROWTH AND DIVISION
M. Gyllenberg (Helsinki Univ., Finland) and H. J. A. M. Heijmans

Apr. 1985 18 p Revised
(CWI-AM-R8508; B8578042; ESA-86-96994) Avail: NTIS
HC A02/MF A01

A two-phase model for the growth of a single cell population structured by size is formulated and analyzed. The model takes the form of a delay-differential equation in a Banach space. Using positivity arguments, the spectrum of the infinitesimal generator of the semigroup associated with solutions is described. Under a certain condition on the growth rate of individual cells the semigroup is compact after finite time. This is used to determine the ultimate behavior of solutions and prove the existence of a stable size distribution. ESA

THE SIZE AND SCAR DISTRIBUTIONS OF THE YEAST SACCHAROMYCES CEREVISIAE
Mats Gyllenberg (Helsinki Univ., Finland) May 1985 21 p Revised Submitted for publication
(CWI-AM-R8509; B8578043; ESA-86-96995) Avail: NTIS
HC A02/MF A01

A model for the growth of populations of Saccharomyces cerevisiae is formulated and analyzed. The probability of bud emergence is assumed to depend on the size of the cell. Under certain conditions on birth size the model can be reduced to a single renewal equation. Using Laplace transform techniques and renewal theory, the existence of a stable scar and size distribution under certain conditions on the growth rate of individual cells is established. The steady state values for the relative frequencies of unbudded and budded cells in the various scar classes are given. ESA

A DIFFERENTIAL-INTEGRAL EQUATION MODELING THE DYNAMICS OF POPULATIONS WITH A RANK STRUCTURE
Horst R. Thieme (Heidelberg Univ., West Germany) Jul. 1985 25 p Revised Submitted for publication Sponsored by Deutsche Forschungsgemeinschaft
(CWI-AM-R8511; B8578045; ESA-86-96997) Avail: NTIS
HC A02/MF A01

In order to illustrate the stabilizing potential of rank structures for the development of populations, a differential-integral equation (differentiation in time, integration over rank) modeling the dynamics of rank-structured (e.g., territorially or hierarchically organized) populations is proposed. After establishing existence and uniqueness of solutions, it is proved that, under biologically interpretable conditions, the population either dies out or tends towards a uniquely determined nonzero equilibrium state. Which of these alternatives actually occurs depends on the reproductive potential of the population and the permeability of the rank structure. ESA

READY TRACE SEMANTICS FOR CONCRETE PROCESS ALGEBRA WITH PRIORITY OPERATOR
J. C. M. Baeten (Amsterdam Univ., Netherlands), J. A. Bergstra (Utrecht State Univ., Netherlands), and J. W. Klop Aug. 1985 25 p Revised Submitted for publication Sponsored by European Economic Commission ESPRIT Project 432
(CWI-CS-R8517; B8575500; ESA-86-97008) Avail: NTIS
HC A02/MF A01

A process semantics intermediate between bisimulation semantics and readiness semantics, called ready trace semantics is considered. The advantage of this semantics is that, while retaining the simplicity of readiness semantics, it is possible to augment this process model with the mechanism of atomic actions with priority (theta operator). It is shown that in readiness semantics, and a fortiori in failure semantics, such an extension with theta is impossible. Ready trace semantics is considered in the setting of concrete process algebra, i.e., without abstraction (no silent moves) and for finite processes only. For such finite processes without silent moves, a complete axiomatization of ready trace semantics is given via the method of process graph transformations. ESA

GLOBAL RENAMING OPERATORS IN CONCRETE PROCESS ALGEBRA Annual Report, 1984
J. C. M. Baeten and J. A. Bergstra Sep. 1985 33 p Revised report of RUU-CS-85-3 Submitted for publication Sponsored in part by European Economic Commission ESPRIT Project 432
(CWI-CS-R8521; B8575494; ESA-86-97012) Avail: NTIS
HC A03/MF A01

Renaming operators are introduced in concrete process albegra (i.e., abstraction and silent moves are not considered). Examples of renaming operators are given: encapsulation, pre-abstraction, and localization. It is shown that renamings enhance the defining power of concrete process algebra by using the example of a queue. The trace set of a process is defined, and it is shown when equality of trace sets implies equality of processes. Trace sets are used to define the restriction of a process. Processes with actions that have a side effect on a state space are described, and how to use them for translation of computer programs into process algebra is outlined. ESA

ESTIMATES OF CIRCULAR ERROR PROBABILITIES
M. Evans, Z. Govindarajulu, and J. Barthoulot 5 Dec. 1985 25 p
(Contract N00014-76-C-0475)
(AD-A163257; SU-TR-367) Avail: NTIS HC A02/MF A01 CSCL 19/5

The general problem of the estimation of P sub theta (C) where C is some fixed event and P sub theta is unknown in some class is considered. The various available estimation procedures seem to involve the choice of some random probability measure. In particular we consider this problem when C is a disk in Sq R centered at o and P sub theta is restricted to be bivariate normal. Details concerning the implementation of the estimation procedures and a Monte Carlo study are discussed for this case. This particular problem arises when we are concerned with assessing the accuracy of a targeting procedure. Author (GRA)

A BAHADUR REPRESENTATION FOR QUANTILES OF EMPIRICAL DFs GENERALIZED U-STATISTIC STRUCTURE
Robert J. Serfling Nov. 1985 21 p
(Contract N00014-79-C-0801)
(AD-A163311; TR-453; TR-85-6-ONR) Avail: NTIS
HC A02/MF A01 CSCL 12/1

A wide class of c-sample statistics can be represented conveniently as quantiles of a nonclassical empirical df having the structure of a generalized U-statistic. A key tool in studying classical quantiles has been the Bahadur representation. This paper provides a suitable extension of that tool to the generalized setting. As auxiliary lemmas, some new results for generalized U-statistics are developed. Also, some further results for empirical df's of generalized U-statistic structure and their corresponding quantiles are provided. Author (GRA)

ASYMPTOTIC NORMALITY OF U-STATISTICS BASED ON TRIMMED SAMPLES

Paul Janssen, Robert Serfling, and Noel Veraverbeke Nov. 1985 20 p

(Contract N00014-79-C-0801)

(AD-A163346; TR-450; ONR-85-5) Avail: NTIS HC A02/MF A01 CSCL 12/1

For robust estimation of location, the ordinary sample mean is too sensitive to outliers. A classical and successful alternative is the trimmed mean, for which asymptotic normality was established by Bickel (1965). As discussed by Bickel and Lehmann (1975), for example, the trimmed mean remains relatively efficient with respect to the untrimmed mean even in the absence of outliers. Viewing the trimmed mean as simply the ordinary mean defined on a trimmed sample, we are motivated to consider other common statistics as well in this regard. This paper studies U-statistics in such fashion. The class of U-statistics, introduced by Hoeffding (1948), contains a wealth of statistics of interest in their own rights and also contains statistics which serve as approximations to statistics of more complicated type. A very significant broadening of the scope of robust statistical inference is achieved, therefore, by consideration of the class of U-statistics on trimmed samples.

A SOLUTION METHOD FOR THE SET PACKING PROBLEM WITH POLYHEDRAL CHARACTERISTICS

Sjored M. Baas and Martin C. Bonvanie May 1984 21 p

(Memo-446; ESA-86-96964) Avail: NTIS HC A02/MF A01

The concept of solving combinatorial problems with the help of relevant information on the facetial structure of the underlying polytope is used in connection with Set Packing (SP) problems. An algorithm is presented in which a standard list of simple facet inequalities is investigated as to its efficiency to solve a general SP problem of average size (40 to 60 variables) in a limited number of iterations. Within each iteration relevant facet inequalities are derived by considering the corresponding intersection graph. Precise expressions for these inequalities can be established with the help of a specific sequential facet lifting procedure. ESA

A LUMPED PARAMETER MATHEMATICAL MODEL FOR SIMULATION OF SUBSONIC WIND TUNNELS

Susan M. Krosel, Gary L. Cole, William M. Bruton, and John R. Szuch May 1986 50 p refs

(NASA-TM-87324; E-3065; NAS 1.15:87324) Avail: NTIS HC A03/MF A01 CSCL 12B

Equations for a lumped parameter mathematical model of a subsonic wind tunnel circuit are presented. The equation state variables are internal energy, density, and mass flow rate. The circuit model is structured to allow for integration and analysis of tunnel subsystem models which provide functions such as control of altitude pressure and temperature. Thus the model provides a useful tool for investigating the transient behavior of the tunnel and control requirements. The model was applied to the proposed NASA Lewis Altitude Wind Tunnel (AWT) circuit and included transfer function representations of the tunnel supply/exhaust air and refrigeration subsystems. Both steady state and frequency response data are presented for the circuit model indicating the type of results and accuracy that can be expected from the model. Transient data for closed loop control of the tunnel and its subsystems are also presented, demonstrating the model's use as a control analysis tool. Author

GAMMA PROCESSES
Peter A. W. Lewis, E. McKenzie, and D. K. Hugus Jan. 1986 37 p
(AD-A165390; NPS55-86-002) Avail: NTIS HC A03/MF A01 CSCL 12/1

The Beta Gamma transformation is described and is used to define a very simple first order autoregressive Beta Gamma process, BGAR(1). Maximum likelihood estimation is discussed for this model, as well as moment estimators. The first-order structure is extended to include moving average processes and mixed first-order autoregressive, pth-order moving average processes. It is shown that these Gamma processes are time-reversible and, therefore, too narrow for general physical modelling. A dual process to the BGAR(1) process, DBGAR(1), is introduced, as well as an iterated process which combines the Beta-Gamma process and the GAR(1) process of Gaver and Lewis (1980). Some properties of these extended autoregressive processes are derived. Several highly nonlinear extensions of these processes which produce negative correlation are given. GRA

KINETIC STABILIZATION OF FIELD-REVERSED CONFIGURATIONS
J. L. Schwarzmeier, H. R. Lewis, D. C. Barnes, and C. E. Seyler 1985 5 p Presented at the 7th US-Japan Workshop on Compact Toroids, Bellevue, Wash., 12-13 Nov. 1985 Prepared in cooperation with Cornell Univ., Ithaca, N.Y.
(Contract W-7405-eng-36)
(DE86-003655; LA-UR-85-4077; CONF-8511118-3) Avail: NTIS HC A02/MF A01

The tilt instability in field-reversed configurations (FRC's) may be roughly divided into two categories, depending on the nature of the unstable eigenfunction. The internal tilt instability, which could also be called an n = 1 ballooning mode, is defined here to be an instability in which the displacement of the flux surfaces is confined to the closed region of magnetic field and the separatrix remains fixed in time. Since, for a fixed separatrix, the only destabilizing term in delta W is proportional to the pressure gradient times the parallel curvature of the magnetic field, the internal tilt could be considered a pressure driven mode. The external tilt is defined here to be an instability in which the entire closed field line FRC rotates rigidly about some axis perpendicular to the symmetry axis of the FRC. The external tilt results from magnetic interactions involving the toroidal plasma current. In spheromaks (at zero beta) the tilt instability is due to these same interactions, so in this sense the external mode might be considered current driven. However, since in FRC's the toroidal current comes solely from having finite plasma pressure, the distinction between pressure and current driven instabilities in FRC's is not meaningful (there is no parallel current). For oblate FRC's the eigenfunction of the external tilt is a rigid rotation of the closed field line FRC. For FRC's that are only moderately prolate the distinction between internal and external tilt modes is not clear, and the eigenfunction of the tilt mode may be a combination of internal and external displacements of the flux surfaces. DOE

A PARADIGM FOR RELIABLE CLOCK SYNCHRONIZATION
Interim Report
Fred B. Schneider Feb. 1986 22 p
(Contract N00014-86-K-0092; Grant NSF DCR-83-20274)
(AD-A164819; CU-CSD-TR-86-735) Avail: NTIS HC A02/MF A01 CSCL 09/2

Existing fault-tolerant clock synchronization protocols are shown to result from refining a single clock synchronization paradigm. In that paradigm, a reliable time source periodically issues messages that cause processors to resynchronize their clocks. The reliable time source is aproximated by reading all clocks in the system and using a convergence function to compute a fault-tolerant average of the values read. The performance of a clock synchronization algorithm based on the paradigm can be quantified in terms of the two parameters that characterize the behavior of the convergence function used: accuracy and precision. GRA

EFFECT OF MAGNETOSTRICTION ON REMANENT MAGNETIZATION
Gerald F. Dionne 5 Dec. 1985 19 p refs
(Contract F19628-85-C-0002)
(AD-A165450; TR-737; ESD-TR-85-292) Avail: NTIS HC A02/MF A01 CSCL 20/3

Magnetostriction effects of remanent magnetization are examined in a phenomenological model that is used to design a high magnetization polycrystalline spinel ferrite with excellent square hysteresis loop properties. Isotropic magnetostriction is compensated by substituting Mn(3+) ions for 0.2 Fe(3+) ions per formula unit of Ni.65Zn.35Fe2O4 host material. As predicted by theory, the magnetostriction reduction dramatically increases the remanent magnetization and removes most of its external stress sensitivity. The resulting remanent magnetization, which approaches 4000 G, represents an increase of more than a factor of 2 over that of the host composition, with no significant deterioration in other magnetic and dielectric properties. The remanence ratio improvement is in general accord with estimates predicted by the theoretical model. GRA

PRESSURE PROBE AND HOT-FILM PROBE RESPONSES TO ACOUSTIC EXCITATION IN MEAN FLOW
Tony L. Parrott and Michael G. Jones (PRC Kentron, Inc., Hampton, Va.) Jun. 1986 56 p refs
(NASA-TP-2581; L-16079; NAS 1.60:2581) Avail: NTIS HC A04/MF A01 CSCL 20A

An experiment was conducted to compare the relative responses of a hot-film probe and a pressure probe positioned in a flow duct carrying mean flow and progressive acoustic waves.

The response of each probe was compared with that of a condenser-type microphone flush mounted in the duct wall for flow Mach numbers up to about 0.5. The response of the pressure probe was less than that of the flush-mounted microphone by not more than about 2.1 dB at the highest centerline Mach number. This decreased response of the probe can likely be attributed to flow-induced impedance changes at the probe sensor orifices. The response of the hot-film probe, expressed in terms of fluctuating pressure, was greater than that of the flush-mounted microphone by as much as 6.0 dB at the two higher centerline Mach numbers. Removal of the contribution from fluctuating temperature in the hot-film analytical model greatly improved the agreement between the two transducer responses. Author

(Contract N00014-83-K-0593)
(AD-A163431; ARL-TR-85-41) Avail: NTIS HC A02/MF A01 CSCL 20/1

Experiments to study sound propagation in a shallow water wedge were conducted in a tank. Results confirm the assumption of adiabatic normal mode theory that the mode shapes adjust continuously to the local water depth. Mode coupling, if it exists, is negligible. For upslope propagation, the energy of a mode traveling beyond its cutoff depth is directed into the bottom with negligible coupling to lower modes. For downslope propagation, the normal modes in a wedge propagate with curved wavefronts and not with the straight vertical wavefronts of simple adiabatic normal mode theory. In addition, normal modes not present at the source can be captured when the water depth is sufficient to support them. GRA

X-RAY GENERATED ULTRASOUND Summary Report, 15 Apr. 1985 - 15 Jan. 1986
Wolfgang Sachse and Kwang Y. Kim 30 Jan. 1986 64 p refs
(Contract N00014-85-K-0263)
(AD-A164581; TAM-TR86-1) Avail: NTIS HC A04/MF A01 CSCL 20/1

This report describes the mechanisms by which ultrasonic signals are generated by an intense, pulsed X-ray source interacting with a material and how the associated contrast mechanisms can be used to image and characterize material microstructures. The existence of X-ray generated acoustic signals was verified and the beam-current dependence of the X-ray generated acoustic signals was established. The amplitudes of the acoustic signals appear to be linearly related to the electron beam current of the synchrotron and hence the X-ray intensity. Thus, the X-ray/acoustic phenomenon could form the basis of an X-ray beam monitor sensor. The X-ray acoustic signals were also found to depend linearly on the beam size. The generated X-ray/acoustic signals show a directivity pattern resembling that of the thermoelastic signals generated by a pulsed thermal laser source and they appear to be independent of beam width. A newly developed double modulation measurement technique analogous to existing photo-acoustic spectroscopy (PAS) measurements is described. It was found that the X-ray/acoustic spectra are material dependent. The measured scanned fields vary spatially, with features apparently related to the effects of the transducer or elastic wave resonances in the specimen. A preliminary test was completed with a new differential X-ray/acoustic measurement technique by which transducer and specimen wave propagation effects were removed so that spatial features in a specimen could be clealy identified. GRA

COLOSSUS REVISITED: A REVIEW AND EXTENSION OF THE MARSH-SCHULKIN SHALLOW WATER TRANSMISSION LOSS MODEL (1962) Interim Report, 1 Aug. 1984 - 31 Jul. 1985
M. Schulkin and J. A. Mercer Dec. 1985 41 p refs
(Contract N00014-84-K-0646)
(AD-A164588; APL-UW-8508) Avail: NTIS HC A03/MF A01 CSCL 20/1

This report reviews the Marsh-Schulkin (M-S), or Colossus, model of acoustic transmission loss in shallow water in light of new information and techniques that have emerged since its introduction in 1962. The M-S model, a semiempirical model based on extensive measurements taken off the Atlantic Coast, uses several concepts; (1) refractive cycle, or skip distance; (2) deflection of energy into the bottomat high angles by scattering from the sea surface; and (3) a simplified Rayleigh two-fluid model of the bottom for sand or mud sediments. With a few free parameters, including water depth, about 100,000 measurements from 100 Hz to 10 kHz were fitted within stated error bounds. The chief criticisms of the model have been that it could not be adjusted for arbitrary negative sound-speed gradients, and that it uses empirical bottom loss values. The M-S model yields good predictions when applied properly; it is not to be used for all environments. The M-S model is compared with Rogers' semiempirical model based on numerical calculations of the normal-mode solutions to the wave equation for propagation in shallow water. The M-S model is also extended to treat arbitrary negative and bilinear sound-speed gradients by using new general expressions for skip distance, near-field anomaly, and reflection coefficients. The reflection coefficients are calculated from the Morse-Mackenzie relations for loss per bounce. GRA

(AD-A164589) Avail: NTIS HC A02/MF A01 CSCL 08/11

This is a Marine seismic system (MSS) progress report. It discusses the following tasks: identify events detected and phases observed in MSS data; catalog pertinent MSS information and preliminary analysis; compare MSS and OBS data and site characteristics; analyze the Wake Island hydrophone array data. Preliminary findings suggest MSS detection threshold for unfiltered teleseismic events is rather high and that 180 regional events were recorded. GRA

A SYNOPSIS OF RESEARCH ON SUBBOTTOM EFFECTS ON UNDERWATER ACOUSTIC PROPAGATION Final Report, 1 Jun. 1982 - 30 Sep. 1984
Robert A. Koch, Jo B. Lindberg, and Paul J. Vidmar 14 Nov. 1985 30 p
(Contract N00014-82-K-0679)
(AD-A165420; ARL-TR-85-40) Avail: NTIS HC A03/MF A01 CSCL 20/1

This report investigates some effects of the subbottom on underwater acoustic propagation. Our major accomplishment was solving the problem of ordering and counting the normal modes of propagation in the ocean waveguide when the seafloor is described by an impedance boundary condition. The boundary condition, derived from the plane wave reflection coefficient, introduces mathematical complexities since it is a function of the separation parameter in the acoustic wave equation. As a natural extension of our theoretical approach, the relationship between mode concepts of normalization and cycle distance, and geometrical ray concepts of beam displacement and time delay were rigorously established. Additional work was also done to examine ray and normal mode approaches for predicting propagation in a sloping geometry. GRA

HC A06/MF A01 CSCL 17/1

Propogation of acoustic normal modes at excitation frequencies of 50 to 50000 Hz in a shallow stratified ocean overlaying a transverse isotropic poro-elastic sediment bed is modeled. The Biot-Willis stiffness matrix of the poro-elastic anisotropy is defined in terms of physical properties of sediments to model the bed. Propagator matrix method is used to solve the differential equations for the motion stress vectors in both layered sediment and water. The effects of sediment properties on the dispersion and attenuation of acoustic waves are examined numerically. Using the relaxation principle it is observed that the energy loss is maximum at frequency referred to as relaxation frequency of the porous media given by f sub ri = (beta)(nu)/3 pi k (sub si), where beta is the porosity, nu is the kinematic viscosity of the pore fluid and k (sub si) is the anisotropic permeability coefficient. The phase speed of compressional and shear waves in the sediment becomes highly dispersive around this frequency. The sandy bottom's relaxation frequency is the range of several hundred hertz to several kilo hertz. This report presents the derivation of the mathematical expressions used in the model and a complete description of the computer program. Four examples of numerical calculations are provided. GRA

INVESTIGATIONS OF ULTRASONIC WAVE INTERACTIONS AT BOUNDARIES SEPARATING ANISOTROPIC MATERIALS Progress Report
L. Adler Nov. 1985 7 p
(Contract DE-FG02-84ER-45057)
(DE86-004953; DOE/ER-45057/1) Avail: NTIS HC A02/MF A01

The studies of the interaction of waves with interfaces between generally anisotropic media were supported experimentally. Two boundary conditions on the interface were considered: rigid, and slip. The latter boundary condition describes dislocation boundaries and slip on grain boundaries. It was shown that reflection from such an interface is much stronger than from a rigid bond. A device was designed based on the diffraction of waves on periodic gratings. An anomalous phenomenon was found in the reflection of elastic waves from an interface between anisotropic crystals. It was found that the domain of permissible incident angles splits into disjoint pieces for certain crystal cuts. In this way, a new branch for the reflection coefficient was found. A sample from a Ni crystal was prepared. Another experiment was carried out on critical angles in backscattering. The general computer programs are being adapted to interactive algorithms for the PDP-11 with real time plotting of results on graphic displays. The Schlieren Visualization System was improved by adding capabilities for visualization of impulse ultrasonic signals. DOE

CONTINUOUS ULTRASONIC WAVES TO DETECT STEAM BUBBLES IN WATER UNDER HIGH PRESSURE
H. J. M. Hulshof, F. Schurink, and A. J. vanLoon, ed. 1985 13 p
Information brochure presented at 2nd UN Conf. on the Exploration and Peaceful Uses of Outer Space (UNISPACE), Vienna, Aug. 1982 -12 Nov. 1985 Sponsored by Netherlands Central Organization TNO, Delft, Gals, Switzerland and Energy Research Laboratory
(S/T-Rept-Vol-3-No-5; B8574250; ISBN-90-353-0028-9;
ISSN-0167-8590; ESA-06-96944) Avail: NTIS HC A02/MF A01

A detector using continuous ultrasonic waves to detect bubbles in water in steel tubes is described. The variation of the transmitted wave caused by the bubbles was determined by demodulation. The results meet the objectives set for cold water with air bubbles. A clear indication of the presence of steam bubbles is found in fast-flowing hot water in a steel tube with a diameter of 60 mm. A change in the low-frequency region of the modulation is the only indication of the presence of steam bubbles in the large-diameter downcomer of the water-separator drum of a boiler in an electrical power plant. Possible causes of the differences in the results obtained are discussed on the basis of differences in bubble sizes, and in focusing and reflection of the ultrasonic waves. ESA

QUASI-PARTICLE SPECTRUM OF THE HUBBARD MODEL
Ram Kishore Apr. 1986 24 p Submitted for publication
(INPE-3869-PRE/927) Avail: NTIS HC A02/MF A01

The quasi-particle spectrum of the Hubbard model is studied by using a projection operator formalism of the Green's function. In weak electron correlation regime, the exact results are obtained up to the second order in the intra-atomic interaction. For strong electron correlations, the quasi-particle spectrum consists of two bands. For each band, quasi-particle energy is obtained exactly up to the first order in the transfer integral. Also, a semiclassical approximation is proposed which gives the above mentioned exact results in proper limits. Author

THEORETICAL ELEMENTARY PARTICLE STUDIES Final Report, Sep. 1983 - Jul. 1985
J. C. Collins 1985 8 p
(Contract DE-AC02-80ER-10712)
(DE86-001165; DOE/ER-10712/5) Avail: NTIS HC A02/MF A01

The work done during the period September 1983 to July 1985 covers several areas of the theory of the strong interactions of elementary particles, mostly in the area characterized as perturbative QCD. The specific topics are: the proof of factorization for hard processes, such as the Drell-Yan process; calculation of transverse-momentum distributions for these processes; investigation of the small-x region; demonstration of the applicability of perturbative QCD (quantum chromodynamics) to the production of heavy quarks; and improved methods of calculation of the effects of heavy quarks in hard processes, and in particular of their distribution functions in hadrons (structure functions). VARIABLE ENERGY, HIGH FLUX, GROUND-STATE ATOMIC OXYGEN SOURCE Patent Application
Ara Chutjian, Inventor (to NASA) (Jet Propulsion Lab., California Inst. of Tech., Pasadena.) and Otto J. Orient, Inventor (to NASA)
Filed 10 Apr. 1986 17 p Sponsored by NASA
(NASA-Case-NPO-16640-1-CU; NAS 1.71:NPO-16640-1-CU;
US-Patent-Appl-SN-852468) Avail: NTIS HC A02/MF A01 CSCL 20H

A variable energy, high flux atomic oxygen source is described which is comprised of a means for producing a high density beam of molecules which will emit O(-) ions when bombarded with

electrons; a means for producing a high current stream of electrons at a low energy level passing through the high density beam of molecules to produce a combined stream of electrons and O(-) ions; a means for accelerating the combined stream to a desired energy level; a means for producing an intense magnetic field to confine the electrons and O(-) ions; a means for directing a multiple pass laser beam through the combined stream to strip off the excess electrons from a plurality of the O(-) ions to produce ground-state O atoms within the combined stream; an electrostatic deflection means for deflecting the path of the O(-) ions and the electrons in the combined stream; and a means for stopping the O(-) ions and the electrons and for allowing only the ground-state O atoms to continue as the source of the atoms of interest. The method and apparatus are also adaptable for producing other ground-state atoms and/or molecules. NASA

RESONANCE FLUORESCENCE OF A TWO-LEVEL ATOM NEAR A ROUGH METAL SURFACE Interim Technical Report
Xi-Yi Huang, Ki-Tung Lee, and Thomas F. George Jan. 1986 33 p
(Contract N00014-86-K-0043)
(AD-A163219; URochester/DC/85/TR-4) Avail: NTIS HC A03/MF A01 CSCL 07/5

Surface-dressed optical Bloch equations are solved for a two-level atom near or adsorbed on a rough surface, which is modeled as a hemispheroid protrusion on a perfectly-conducting surface. Effects of the laser bandwidth are included by means of a phase-diffusion model. The presence of the surface roughness generates a dephasing broadening mechanism on the adatomic resonance fluorescence spectrum, which can be strongly enhanced by plasma resonances depending on the shape of the hemispheroid. The dependence of the electrodynamics of the adatom on the adatom-hemispheroid distance is also evaluated. GRA

ION TRANSPORT ACROSS SYNTHETIC AND BIOLOGICAL MEMBRANES: IONOPHORE-MEDIATED TRANSPORT Final Report, May 1982 - Sep. 1985
Lea Elau 21 Oct. 1985 19 p
(Contract N00014-82-K-0437)
(AD-A163269; AD-E500743) Avail: NTIS HC A02/MF A01 CSCL 06/16

The objectives of this study were: to set-up a research laboratory; to initiate membrane related research; to investigate ionophore-mediated transport and to involve students in research. Synthetic compounds, the lariat ethers, and a non-cyclic di-n-propyl diamide were investigated. These compounds were known to form complexes with cations in organic solvents. However, their ionophoretic activity in model membranes has not been previously demonstrated. It was shown that some lariat ethers mediate potassium transport across phosphatidylcholine bilayers, and that the diamide induced calcium movement across lipid membranes. The polyether carboxylic acids A23187 and X537A were extensively investigated. The inital rates of calcium movement across lipid bilayers were measured as a function of the ionophore and calcium concentration. It has been found that the transported complex has a stoichiometry of ionophore:calcium 2:1 and 1:1 for A23187 and X537A respectively. However, esterification of the carboxylic group of A23187 to yield the appropriate methyl ester reduced the potency more than 200 fold and the stoichiometry was changed to ionophore:calcium 1:1. GRA

CALCULATIONS OF THE GEOMETRY AND BINDING ENERGY OF AROMATIC DIMERS: BENZENE, TOLUENE, AND TOLUENE-BENZENE
Mark Schauer and E. R. Bernstein 15 Apr. 1985 26 p refs
(Contract N00014-79-C-0647)
(AD-A164570; TR-17) Avail: NTIS HC A03/MF A01 CSCL 20/8

Calculations of the geometries and energies of the benzene, toluene, and toluene-benzene dimers using a combination of atom-atom and multipolar potentials are presented and discussed. An exponential-six atom-atom potential plus a molecular quadrupole-quadrupole interaction term gives the reported parallel displaced C2h benzene dimer geometry. The excited state behavior of the benzene dimer can be qualitatively understood based on this calculation. The toluene-benzene dimer is well modeled by these terms in addition to a dipole-quadrupole interaction term. Both parallel displaced and perpendicular configurations are obtained in agreement with the experimental data. Using exponential-six, dipole-dipole, quadrupole-quadrupole, and dipole-quadrupole interactions the toluene dimer can be satisfactorily modeled. The calculations generally suggest that excitation of parallel displaced dimers can lead to rearrangement (and possible excimer formation) in the excited state. GRA

THE USE OF ION IMPLANTATION FOR MATERIALS PROCESSING Annual Progress Report, 1 Oct. 1983 - 30 Sep. 1984
F. A. Smidt 6 Mar. 1986 241 p
(AD-A165432; AD-F250510; NRL-MR-5716) Avail: NTIS HC A11/MF A01 CSCL 13/8

This report is the sixth in a series of Progress Reports on work conducted at the Naval Research Laboratory (NRL) to investigate the use of ion implantation for materials processing. The objective of the program is to develop the capabilities of ion implantation and ion beam activated deposition for new and improved surface treatment techniques of interest to Navy and DOD applications. Attainment of this objective requires both fundamental research to provide an understanding of the physical and metallurgical changes taking place in the implanted region of a material and applications oriented research to demonstrate the benefits of ion implantation. The purpose of this report is to make available from one source the results of all studies at NRL related to the use of ion implantation for materials processing so as to provide a more comprehensive picture of the scope and interrelationship of the research and to expedite technology transfer to the civilian industrial sector. The report consists of four sections describing the research and a cummulative bibliography of published papers and reports. This report describes the important factors in ion implantation science and technology and reports progress in the use of ion implantation to modify friction, wear, fatigue, corrosion, optical and magnetic properties of materials. HC A02/MF A01

A deep, synchronous pipeline architecture has been selected for a computing device with a power of 500 million floating point operations per second (Mflops). The device calculates the forces and energy due to pair-wise interactions of many objects in a system. Considerations relating to application specific high-performance computer architectures are addressed. In addition, topics specifically relating to very deep, synchronous unidirectional pipelines are discussed. A key element of the device, a quadratic interpolator based on a lookup table, has been developed and tested. Five of these interpolators with a total computing power of 280 Mflops will be employed in the device. DOE

(DE86-003673; LA-UR-85-3999; CONF-8510203-3) Avail: NTIS
HC A02/MF A01

The Wakefield accelerator concept consists of utilizing the electric field generated by the motion of one group of particles to accelerate another group of particles. Essentially, the Wakefield accelerator is a transformer which transfers the energy in a large number of relatively low energy particles to a smaller number of particles, resulting in acceleration of these particles to high energy. The basic physics of Wakefield acceleration is described, and issues relevant to SDI applications. For such applications the amount of total energy in the beam must be maximized. Specific Wakefield concepts are described - RF cavity and slow-wave structure Wakefield and the plasma Wakefield accelerator. DOE

OPTICAL MODEL CALCULATIONS OF HEAVY-ION TARGET FRAGMENTATION
Lawrence W. Townsend, John W. Wilson, Francis A. Cucinotta (Old Dominion Univ., Norfolk, Va.), and John W. Norbury Jul. 1986 15 p refs
(NASA-TM-87692; L-16113; NAS 1.15:87692) Avail: NTIS
HC A02/MF A01 CSCL 20H

The fragmentation of target nuclei by relativistic protons and heavy ions is described within the context of a simple abrasion-ablation-final-state interaction model. Abrasion is described by a quantum mechanical formalism utilizing an optical model potential approximation. Nuclear charge distributions of the excited prefragments are calculated by both a hypergeometric distribution and a method based upon the zero-point oscillations of the giant dipole resonance. Excitation energies are estimated from the excess surface energy resulting from the abrasion process and the additional energy deposited by frictional spectator interactions of the abraded nucleons. The ablation probabilities are obtained from the EVA-3 computer program. Isotope production cross sections for the spallation of copper targets by relativistic protons and for the fragmenting of carbon targets by relativistic carbon, neon, and iron projectiles are calculated and compared with available experimental data. MELTING NUCLEAR FUEL
C. D. Andriesse and A. J. vanLoon, ed. 1985 25 p
(S/T-Rept-Vol-3-No-7; B8575584; ISBN-90-353-0030-0; ISSN-0167-8590; ESA-86-96946) Avail: NTIS HC A02/MF A01

Transport of fission products in overheated reactor fuel is discussed. The relevance of this transport for the determination of the source term at severe accidents with a nuclear reactor is outlined. Experimental data on the release of fission products from UO2 at high temperatures are analyzed. A model explaining these data in terms of basic transport processes is applied to predict releases at accidents, and is compared to releases measured in tests with severe damage of fuel or calculated in core-melt studies. It appears that the behavior of nonvolatile fission products needs further study. Assumptions and approximations in the model are reviewed. Release is described as a result of intragranular diffusion, either in an interstitial mode (for unbound fission products) or in a substitutional mode (for bound products). A theory for the diffusion entropy of the interstitial mode is provided. ESA

ALTERNATIVE METHODS FOR DISPOSAL OF LOW-LEVEL RADIOACTIVE WASTES
R. D. Bennett Oct. 1985 102 p
(Contract NRC-FIN-D1001)
(TI81-900254; NUREG/CR-3775-Vol-5) Avail: NTIS
HC A06/MF A01

Current practice in the U. S. for disposal of commercial low level radioactive wastes (LLW) is burial in shallow trenches. Although shallow land burial in trenches may continue to be practiced, it is likely that techniques for engineered disposal will be introduced to the National Regulatory Commission or states for licensing consideration within the next few years. The shaft disposal alternative is one of several methods that may be proposed. The term shaft disposal refers to a near surface disposal alternative in which the wastes would be disposed of in shafts or boreholes augered, bored, or sunk by any other conventional method. A generic description of the features, components, and operation of a shaft disposal facility is provided. Features and components that could enhance the long term performance are also described, including site conditions for which they would be

applicable. The existing criteria developed for near surface disposal were assessed for applicability to the shaft disposal method. B.G.

NON-THERMAL ELECTRON VELOCITY DISTRIBUTION MEASURED BY ELECTRON CYCLOTRON EMISSION IN ALCATOR C TOKAMAK
K. Kato and I. H. Hutchinson Oct. 1985 15 p refs
(Contract DE-AC02-78ET-51013)
(DE86-004402; PFC/JA-85-37) Avail: NTIS HC A02/MF A01

The non-thermal electron velocity distribution of lower hybrid RF heated plasmas in the Alcator C tokamak is deduced from measurements of electron cyclotron emission using a specialized vertical viewing optics arrangement. At a density of anti n(sub e) = 0.7 × 10 to the 29th power/cu m, the reconstructed

distribution function in the range 50keV less than or equal to E less than or equal to 230keV shows enhancement in the parallel direction with a perpendicular spread equivalent to T(sub perpendicular) approx. = 30keV. The line average energetic electron density in this energy range is approximately 7 x 10 to the 15th power/cu m during the RF. DOE

ELECTRON BERNSTEIN WAVE CURRENT DRIVE IN THE START-UP PHASE OF A TOKAMAK DISCHARGE
A. Montes and G. O. Ludwig 2 Jul. 1986 20 p Submitted for publication
(INPE-3868-PRE/926) Avail: NTIS HC A02/MF A01

Current drive by electron Bernstein waves in the start-up phase of tokamak discharges is studied. A general analytical expression is derived for the figure of merit J/P sub d associated with these waves. This is coupled with a ray tracing code, allowing the calculation of the total current generated per unit incident power in realistic tokamak conditions. The results show that electron Bernstein waves can drive substantial currents even at very low electron temperature. Author

IN SITU MEASUREMENTS OF THE PLASMA BULK VELOCITY NEAR THE IO FLUX TUBE
Alan Barnett Oct. 1985 43 p refs Sponsored by JPL, Pasadena, Calif.
(NASA-CR-176810; NAS 1.26:176810; CSR-P-85-6) Avail: NTIS HC A03/MF A01 CSCL 20I

The flow around the Io flux tube was studied by analyzing the eleven spectra taken by the Voyager 1 Plasma Science (PLS) experiment in its vicinity. The bulk plasma parameters were determined using a procedure that uses the full response function of the instrument and the data in all four PLS sensors. The mass density of the plasma in the vicinity of Io is found to be 22,500 + or - 2,500 amu/cu cm and its electron density is found to be 1500 + or - 200/cu cm. The Alfven speed was determined using three independent methods; the values obtained are consistent and taken together yield V sub A = 300 + or - 50 km/sec, corresponding to an Alfven Mach number of 0.19 + or - 0.02. For the flow pattern, good agreement was found with the model of Neubauer (1980), and it was concluded that the plasma flows around the flux tube with a pattern similar to the flow of an incompressible fluid around a long cylinder obstacle of radius 1.26 + or - 0.1 R sub Io. THE RESPONSE FUNCTION OF MODULATED GRID FARADAY CUP PLASMA INSTRUMENTS
Alan Barnett and Stanislaw Olbert 1986 37 p refs Submitted for publication
(Grant NsG-22-009-015)
(NASA-CR-177312; NAS 1.26:177312; CSR-P-85-5) Avail: NTIS HC A03/MF A01 CSCL 20I

Modulated grid Faraday cup plasma analyzers are a very useful tool for making in situ measurements of space plasmas. One of their great attributes is that their simplicity permits their angular response function to be calculated theoretically. An expression is derived for this response function by computing the trajectories of the charged particles inside the cup. The Voyager Plasma Science (PLS) experiment is used as a specific example. Two approximations to the rigorous response function useful for data analysis are discussed. The theoretical formulas were tested by multi-sensor analysis of solar wind data. The tests indicate that the formulas represent the true cup response function for all angles of incidence with a maximum error of only a few percent. Author

During the Spacelab 2 mission the Plasma Diagnostics Package (PDP) performed a fly-around of the shuttle at distances of up to 300 meters while an electron beam was being ejected from the shuttle. This paper discusses a magnetic conjunction of the shuttle and the PDP while the electron gun was operating in a steady (DC) mode. During this conjunction the PDP detected a very clear funnel-shaped emission that is believed to be caused by whistler-mode emission from the beam. Ray path calculations show that the shape of the funnel can be accounted for by whistler-mode waves propagating near the resonance cone. Since the beam and waves are propagating in the same direction, the radiation must be produced by a Landau, omega(k parallel) = V sub b, interaction with the beam. Other types of waves generated by the beam are also described. GRA

FEATURES OF SPHERICAL TORUS PLASMAS
Y. K. M. Peng and D. J. Strickler Dec. 1985 32 p
(Contract DE-AC05-84OR-21400)
(DE86-004642; ORNL/FEDC-85/6) Avail: NTIS HC A03/MF A01

The spherical torus is a very small aspect ratio (A less than 2) confinement concept obtained by retaining only the indispensable components inboard to the plasma torus. MHD equilibrium calculations show that spherical torus plasmas with safety factor q greater than 2 are characterized by high toroidal beta ((BETA)/sub t/ greater than 0.2), low poloidal beta ((BETA)/sub p/ less than 0.3), naturally large elongation (kappa greater than or equal to 2), large plasma current with I/sub p//(aB/sub t0/) up to about 7 MA/mT, strong paramagnetism (B/sub t//B/sub t0/ greater than 1.5), and strong plasma helicity (F comparable to THETA). A large near-omnigeneous region is seen at the large-major-radius, bad-curvature region of the plasma in comparison with the conventional tokamaks. These features combine to engender the spherical torus plasma in a unique physics regime which permits compact fusion at low field and modest cost. Because of its strong paramagnetism and helicity, the spherical torus plasma shares some of the desirable features of spheromak and reversed-field pinch (RFP) plasmas, but with tokamak-like confinement and safety factor q. The general class of spherical tori, which includes the spherical tokamak (q greater than 1), the spherical pinch (1 greater

than q greater than O), and the spherical RFP (q less than O), have magnetic field configurations unique in comparison with conventional tokamaks and RFPs. DOE

HIGHLIGHTS FROM THE ASSEMBLY OF THE HELICAL FIELD COILS FOR THE ADVANCED TOROIDAL FACILITY
R. D. Benson 1985 4 p Presented at the 11th Symposium on Engineering Problems in Fusion Research, Austin, Tex., 18 Nov. 1985
(Contract DE-AC05-84OR-21400)
(DE86-004758; CONF-851102-59) Avail: NTIS HC A02/MF A01

The helical field (HF) coils in the Advanced Toroidal Facility (ATF) device consist of a set of 24 identical segments connected to form a continuous pair of helical coils wrapped around a toroidal vacuum vessel. Each segment weighs approximately 1364 kg (3000 lb) and is composed of 14 water-cooled copper plate conductors bolted to a cast stainless steel structural support member with a T-shape cross section (known as the structural tee). The segment components are electrically insulated with Kapton adhesive tape, G-10, Tefzel, and rubber to withstand 2.5 kV. As a final insulator and structural support, the entire segment is vacuum impregnated with epoxy. This paper offers a brief overview of the processes used to assemble the component parts into a completed segment, including identification of items that required special attention. DOE

ADVANCED TOROIDAL FACILITY
R. L. Johnson 1985 4 p Presented at the 11th Symposium on Engineering Problems in Fusion Research, Austin, Tex., 18 Nov. 1985
(Contract DE-AC05-84OR-21400)
(DE86-004805; CONF-851102-57) Avail: NTIS HC A02/MF A01

The Advanced Toroidal Facility (ATF) is a new magnetic confinement plasma device under construction at the Oak Ridge National Laboratory (ORNL) that will lead to improvements in toroidal magnetic fusion reactors. The ATF is a type of stellerator, known as a torsatron, which theoretically has the capability to operate at greater than or equal to 8% beta in steady state. The ATF plasma has a major radius of 2.1 m, an average minor radius of 0.3 m, and a field of 2 T for a 2 s duration or 1 T steady state. The ATF device consists of a helical field (HF) coil set, a set of poloidal field (PF) coils, an exterior shell structure to support the coils, and a thin, helically contoured vacuum vessel inside the coils. The ATF replaces the Impurities Studies Experiment (ISX-B) tokamak at ORNL and will use the ISX-B auxiliary systems including 4 MW of electron cyclotron heating. The ATF is scheduled to start operation in late 1986. An overview of the ATF device is presented, including details of the construction process envisioned. DOE

BIFURCATION, INTERMITTANCY AND CHAOS IN A DRIVEN THREE WAVE SYSTEM
E. Raeuchle Dec. 1984 30 p
(IPF-84-11; ESA-86-96921) Avail: NTIS HC A03/MF A01

A dissipative system consisting of three waves in which one wave is excited additionally from outside is considered. The amplitude of the external wave is modulated in time. This model can be considered as a general element of turbulence theory. It corresponds formally to a driven dissipative nonlinear oscillator, where subharmonics and chaos are observed, e.g., for the Duffing equation and the Helmholtz equation. For the system investigated, all these nonlinear phenomena appear similarly. The solutions of this system are characterized by bifurcations, intermittency and chaos. ESA

ASSESSMENT OF THE POSSIBLE USE OF THE KE 1 THOMSON SCATTERING COLLECTION OPTICS FOR AN ADDITIONAL LIDAR SYSTEM
K. Hirsch and H. Salzmann 10 Feb. 1985 67 p
(IPF-85-1; ESA-86-96922) Avail: NTIS HC A04/MF A01

The possibility of using parts of the KE 1 Thomson scattering system simultaneously for a lidar type backscattering plasma diagnostic is discussed. In the KE 1 system the laser beam is passed vertically through the plasma. The scattered light is collected by a large Newtonian mirror optics. This optics consists of a closely spaced array of seven mirrors collecting the scattered light through a corresponding array of windows. The modification consists in using the central window of the array as laser input window. If the lidar laser beam is reflected into the torus by a large mirror located on the backside of the small Newtonian mirror of the KE 1 system, the central mirror of the KE 1 collection system is screened. The modification produces a solid angle of collection for the unvignettedly observed plasma center 10 times larger than the unmodified lidar design. Wall material ablation, and vignetting along the spatial chord are possible. ESA

ELECTRONIC TRANSPORT IN BORON CARBIDES
D. Emin 1985 22 p refs Presented at Conf.
(Contract DE-AC04-76DP-00789)
(DE86-003721; SAND-85-1340C; CONF-850786-8) Avail: NTIS HC A02/MF A01

The electronic transport of boron carbides, B/sub 1-x/C/sub x/ with 0.1 less than or equal to x less than or equal to 0.2, between 300 K and 1200 K is inconsistent with conventional models of both itinerant and hopping transport. While the thermally activated conductivities and the low weakly activated Hall mobilities suggest the hopping of a high density (approx. 10(21) cm(-3)) of small polarons, the spin densities are orders of magnitude smaller than this. Furthermore, the p-type Seebeck coefficients are both large (>100 (MU)V/K) and strongly increasing functions of temperature, rather than being small and weakly temperature dependent as expected of degenerate semiconductors. Finally, unlike standard hopping systems, the electrical conductivity decreases with applied pressure. This is due to a pressure dependent increase of the conductivity activation energy. The anomalous thermoelectric, magnetic, and pressure-dependent transport properties are attributed to the charge carriers being hole-like small singlet bipolarons which hop between inequivalent B11C icosahedra. The aim of this program is to fabricate field effect transistors in Si and GaAs in which the doping in the channel is varied as a function of distance from source to drain. The focused ion beam machine is a unique tool which is capable of producing such graded implants. In achieving this goal alignment procedures of the focused ion beam to existing features on the wafer have to developed, and the focused ion beam implants must be characterized and compared to conventional implants. In addition, models of the behavior of the graded channel devices must be developed. GRA

For application to the growth of gallium arsenide (GaAs) by metal-organic chemical vapor deposition, the dependence of surface morphology and hillock formation on crystal orientation, AsH3/TMG ratio, and oxide contamination was investigated. Layers of GaAs were deposited on undoped liquid-encapsulated Czochralski (LEC) GaAs substrates oriented either (100) or (100)+ 2 deg yields <110>. Substrate orientation was checked by Laue X-ray diffraction. Surface features were observed by phase contrast optical microscopy and surface profilometry. To examine the relationship of hillock formation to oxide contamination, GaAs substrate surfaces were exposed to water vapor prior to epitaxial growth. GRA

Low electronegativity metals such as Sm, Cs, and Na have been examined in the search for metal with strong catalytic activity in promoting the oxidation of semiconductor surfaces. A preliminary study shows that Sm overlayers appear to yield the maximum oxidation promotion observed to date on the Si(111) surface. The Sm chemisorption process, following a peculiar two-step sequence on Si(111) and GaAs (110) surfaces, is examined. At submonolayer metal coverage Sm atoms are in a mostly divalent state. At higher metal coverages trivalent Sm species dominate.At least in the case of Si the oxidation promotion effect appears related to the appearance of the trivalent state. This complex chemisorption process is still far from being completely understood. In this paper we present a simple experimental technique to study the electronic structure of metals in cluster or thin film form on ideally inert substrates. We apply this technique to Sm and we make systematic comparisons of the results for Sm chemisorption onto semiconductor surfaces and Sm adsorption onto inert substrates (solid Xe). In this first preliminary paper we give a very brief summary of the experimental technique and present selected results on cluster-size induced valence transition and on size-dependent metal screening during Sm adsorption on Xe. CLASSICAL DERIVATION OF NONLINEAR SUSCEPTIBILITIES FOR THE 32 CRYSTAL CLASSES IN THE HARMONIC OSCILLATOR APPROXIMATION
Clyde A. Morrison and Mary S. Tobin Jan. 1986 85 p refs
(AD-A164536; HDL-TR-2078) Avail: NTIS HC A05/MF A01 CSCL 20/2

New applications relating to optical information processing, optical limiting, and frequency-agile laser systems have produced a resurgence of interest in nonlinear optical materials. In this work, we extend the classical anharmonic analysis to describe the nonlinear optical properties of the 32 crystal classes. We derive expressions for and relationships between the nonlinear susceptibility tensor elements in terms of the anharmonic force constants according to the crystal class symmetry. We show that all the susceptibilities thus derived (Chi (1), Chi (2), and Chi (3)) obey the Kleinman conditions. Finally, we discuss the possible application of these results, coupled with a point-charge model, for estimating the nonlinear force constants, in the prediction of potential new nonlinear materials. (Contract N00014-84-K-0545)
(AD-A164560; AR-7) Avail: NTIS HC A04/MF A01 CSCL 07/4

In recent years a number of metal overlayers on silicon have been shown to yield an increase in silicon oxidation rate when the surface is exposed to an oxidizing atmosphere. Metals as diverse as Au, AG, Cu, Pd all give rise to promotion effects, with the production of Si-oxide phases of variable stoichiometry. In the case of Au and Cr, the Si-oxide appears to nucleate on top of the metal overlayer. To the extent that the metal atoms increase the surface reaction kinetics and do not appear directly involved in the reaction product, i.e., the surface silicon oxide, they play the role of a catalyst. Since the magnitude of the effect depends on the overlayer-silicon interface morphology, in the absence of a more precise denomination we refer to such phenomena as interface catalytic effects. The main goal of our program is to investigate the microscopic mechanisms which determine these effects, characterize the electronic and structural modifications that accompany the surface reactions, determine the stoichiometry of the reaction products and/or the interface composition profile, and ultimately obtain and enhanced control of the kinetics of surface reactions with gaseous species and metals. Long term practical aplications include the synthesis of new insulating and metallic epitaxial layers on Si and GaAs and enhanced control of interdiffusion and contact stability. GRA

STABILITY AND PROPERTIES OF COMPOSITIONALLY MODU-

LATED FILMS Interim Report
R. C. Cammarata, S. M. Prokes, and F. Spaepen Nov. 1985 31 p refs
(Contract N00014-85-K-0023)
(AD-A164574; TR-28) Avail: NTIS HC A03/MF A01 CSCL 20/12

The thermodynamics and kinetics governing the stability of compositionally modulated materials are reviewed. Typical results of experiments on fcc and amorphous metals are presented to demonstrate the effects of interdiffusion. Two coarsening mechanisms are analyzed, as is the stability of orthogonal waves in phase separating systems. The interdiffusivity between amorphous Si and Ge in the temperature range 550 to 630 K is 1.07x10 to the minus 10th power exp(-1.6 ev/kT)m2 1/s, for a modulation wavelength of 5.83 nm. No crystallization occurred during the anneals. The theories for the enhancement of the elastic modulus in crystalline compositionally modulated films are reviewed. Both the Fermi sphere-Brillouin zone interaction model and the coherency stress model are found to be inadequate and insufficiently developed. Author (GRA)

FIELD INDUCED DIPOLE REORIENTATION AND PIEZOELECTRICITY IN HEAVILY PLASTICIZED NYLON 11 FILMS
J. I. Scheinbeim, S. C. Mathur, and B. A. Newman 6 Jan. 1986 27 p refs
(Contract N00014-80-C-0795)
(AD-A164683; TR-6) Avail: NTIS HC A03/MF A01 CSCL 09/3

Nylon 11 films with very low initial crystallinity were made by dissolving the nylon 11 in 2-Ethyl 1,3 Hexanedoil at 150 C. Films were cast from the solution and excessive plasticizer was removed in a vacuum oven. Films were then melt-pressed and quenched to yield heavily plasticized nylon 11 films containing 30% by weight of the plasticizer. These films were poled under vacuum to allow the plasticizer to evaporate in the presence of an electric field. A high piezoelectric response was observed for the films subjected to the maximum electric field while the sample contained a large fraction of plasticizer. Significant development of crystallinity was observed without apparent indication of orientation of the crystallites. These studies suggest that the observed piezoelectric response originates primarily from oriented hydrogen bonds in the amorphous regions of nylon 11. GRA

ELECTRICAL MEASUREMENTS ON ALPHA-QUARTZ CRYSTALS Final Technical Report, Nov. 1981 - Dec. 1984
A. S. Nowick Dec. 1985 53 p
(Contract F19628-82-K-0013)
(AD-A164793; RADC-TR-85-174) Avail: NTIS HC A04/MF A01 CSCL 20/2

This study was aimed at achieving a better understanding of the defects in alpha-quartz crystals that affect their frequency stability. The principal techniques used were electrical conductivity and dielectric loss measurements, both of which are largely controlled by alkalis present to compensate for substitutional Al(3+). In order to deal with just one alkali species at a time, samples studied were swept with either Li+ or Na+. The results involve considerable information about Al-Na and Al-Li bound pairs in the crystal, about alkalis freed from these pairs that give rise to the conductivity, and about the defects (which include electrons and holes) produced by X-ray irradiation of these crystals. The Al-Na pairs can exist in two configurations (alpha and beta) with the Sodium on opposite sides of the AlO4 tetrahedron, off the C2 symmetry axis. In Aluminum-Lithium, however, the Li(+) sits on the C2 axis. The alkalis freed at high temperature give rise to the conductivity and involve a higher activation energy for Li+ and for Na+. Finally, upon irradiation, liberated alkalis form new centers which produce a striking low-temperature dielectric loss peak. The use of computer simulation calculations has also been shown to be a helpful adjunct to the electrical measurements. GRA

SOLID-PHASE EQUILIBRIA IN THE Au-Ga-Sb, Au-In-As, AND Au-In-Sb TERNARIES
C. T. Tsai and R. S. Williams 28 Feb. 1986 36 p Prepared for publication
(Contract N00014-83-K-0612)
(AD-A165469; TR-12) Avail: NTIS HC A03/MF A01 CSCL 20/12

The Au-Ga-As, Au-Ga-Sb, Au-In-As, and Au-In-Sb ternaries were surveyed using X-ray powder diffraction to determine which metallic phases exist at equilibrium with the III-V compound semiconductors. In closed, small-volume systems (i.e., formation of gas-phase products was prevented), Au does not react with GaAs but does react with the other III-V's investigated to produce Au-Group III intermetallic compounds and another solid phase containing the group V element. However, each semiconductor formed pseudobinary systems with at least two different intermetallic compounds. The bulk phase diagrams determined in this study provide frameworks within which much of the experimental data in the literature concerning the products of reactions at Au/III-V interfaces can be understood. ENTROPY-DRIVEN LOSS OF GAS-PHASE GROUP 5 SPECIES FROM GOLD/3-5 COMPOUND SEMICONDUCTOR SYSTEMS
John H. Pugh and R. Stanley Williams Feb. 1986 36 p
(Contract N00014-83-K-0612)
(AD-A165584; TR-11) Avail: NTIS HC A03/MF A01 CSCL 07/2

Temperature dependent chemical interactions between Au and nine 3-5 compound semiconductors (3=A1, Ga, In and V=P, As, Sb) have been calculated using bulk thermodynamic properties. Enthalpic considerations alone are insufficient to predict metal/compound-semiconductor reactivities. The entropy of vaporization of the group 5 elements is shown to be an extremely important driving force for chemical reactions involving the 3-5's, since it enables several endothermic reactions to occur spontaneously under certain temperature and pressure conditions. Plots of either Gibb's free energies of reaction or equilibrium vapor pressure of the group 5 element versus temperature are used to

predict critical reaction temperatures for each of the systems studied. These plots agree extremely well with previous experimental observations of thin film reactions of Au on GaAs. GRA

AMORPHIZATION AND RECRYSTALLIZATION PROCESSES IN MONOCRYSTALLINE BETA SILICON CARBIDE THIN FILMS
J. A. Edmond, S. P. Withrow, H. S. Kong, and R. F. Davis 1985 14 p Presented at the Materials Research Society Meeting Prepared in cooperation with Oak Ridge National Lab., Tenn.
(Contract DE-AC05-84OR-21400)
(DE86-004797; CONF-851217-15) Avail: NTIS HC A02/MF A01

Individual, as well as multiple doses of (27)Al(+), (31)P(+), (28)Si(+), and (28)Si(+) and (12)C(+), were implanted into (100) oriented monocrystalline (BETA)-SiC films. The critical energy of approx. =16 eV/atom required for the amorphization of (BETA)-SiC via implantation of (27)Al(+) and (31)P(+) was determined using the TRIM84 computer program for calculation of the damage-energy profiles coupled with the results of RBS/ion channeling analyses. In order to recrystallize amorphized layers created by the individual implantation of all four ion species, thermal annealing at 1600, 1700, or 1800 C was employed. Characterization of the recrystallized layers was performed using XTEM. Examples of SPE regrown layers containing precipitates and dislocation loops, highly faulted-microtwinned regions, and random crystallites were observed. DOE

OPTICAL IMAGING OF DISLOCATIONS IN STRAINED-LAYER SUPERLATTICES AND LATTICE-MISMATCHED EPILAYERS
P. L. Gourley, R. M. Biefeld, and L. R. Dawson 1985 6 p Presented at the Materials Research Society Meeting, Boston, Mass., 2 Dec. 1985
(Contract DE-AC04-76DP-00789)
(DE86-004620; SAND-85-2664C; CONF-851217-16) Avail: NTIS HC A02/MF A01

We have developed a convenient photoluminescence micro-imaging technique to probe misfit dislocations in epitaxially grown semiconductor alloys and multilayers. Using this technique, we have examined the microscopic optical quality of thick (approx.1 (MU)m) III-V semiconductor epitaxial layers, mismatched to their substrates. The layers include several kinds of [100] strained-layer superlattices (GaP/GaAs/sub x/P/sub 1-x/ on GaP and GaAs/GaAs/sub 1-x/P on GaAs grown by MOCVD, AND GaAs/In/sub x/Ga/sub 1-x/As on GaAs grown by MBE) and associated alloys. For each type of superlattice, we have studied a large number of samples corresponding to different compositions and layer thicknesses. The results show that misfit dislocations can be completely eliminated in the uppermost layers of the strained-layer superlattices if these structures have thin layers, less than the critical thickness for elastic accommodation, and sufficient numbers of interfaces to block threading dislocations. THEORY OF THE REACTION SURFACE WITH FREEZING LEWIS NUMBER NOT EQUAL TO 1 AND ITS APPLICATION IN THE OXIDATION-SUBLIMATION COUPLING PROCESS
Jiakang Zhong 13 Dec. 1985 17 p Transl. into ENGLISH from Lixue Xuebao (China), v. 16, no. 1, Jan. 1984 p 27-35
(AD-A163213; FTD-ID(RS)T-0633-85) Avail: NTIS HC A02/MF A01 CSCL 20/13

A theoretical analysis of the reaction surface of a locally similar laminar boundary layer with addition of mass and chemical reaction is presented. Heat transfer and mass transfer correlations under the condition freezing Lewis Number not equal to 1 are derived. As an application of the theory of the reaction surface, the oxidation sublimation coupling process on the surface material is investigated. The transition mechanism and transformation condition of the oxidation and sublimation processes from rate-controlled to diffusion-controlled regimes are described. The phenomenon that the rate-sublimation is involved in diffusion-controlled oxidation regime is shown. Comparisons with the experimental data are made for the case of graphite stagnation ablation, and quantitative agreement is found. GRA

THE DEMONSTRATION OF THE FEASIBILITY OF THE TUNING AND STIMULATION OF NUCLEAR RADIATION Annual Summary Report, 1 Jan. - 31 Dec. 1985
Carl B. Collins 31 Jan. 1986 43 p
(Contract N00014-81-K-0653)
(AD-A164530) Avail: NTIS HC A03/MF A01 CSCL 20/8

This project concerns the demonstration of the feasibility of the tuning and perhaps even stimulation of nuclear radiation. Theory has indicated that anti-Stokes Raman upconversion of intense but conventional long wavelength sources of radiation produced by scattering from isomeric states of nuclear excitation could lead to significant sources of tunable gamma-radiation characterized by the natural Mossbauer widths of the lines. This would result in lines with sub-Angstrom wavelengths and widths of a few MHz. Whether or not these processes can reach threshold depends upon the resolution of basic issues lying in an interdisciplinary region between quantum electronics and nuclear physics that have not been previously addressed. It was the purpose of this work to study these issues experimentally. GRA

TECHNOLOGY TRANSFER AT DARPA: THE DEFENSE ADVANCED RESEARCH PROJECTS AGENCY. EXECUTIVE SUMMARY

Ronald G. Havelock and David S. Bushnell Dec. 1985 15 p refs

(Contract MDA903-84-K-0031; ARPA Order 5156)

(AD-A164503) Avail: NTIS HC A02/MF A01 CSCL 05/1

Five distinct transfer issues were uncovered, namely: (1) transfer within programs (intra-transfer); (2) transfer to military users (hand-off); (3) transfer to non-military users (spin-off); (4) undesired transfer or leakage (defined as the problem of knowledge containment); and (5) transfer into DARPA from other sources (in-transfer). Five specific recommendations are offered for early action to begin a more coherent and aggressive approach to transfer issues within the Agency. First, the Agency should immediately appoint a technology transfer facilitator to oversee the transition of developed technology to military use. Second, it should develop a state-of-the-art on-line retrieval system for tracking data on all projects and proposals. Third, it should develop a new system of program tracking to identify critical stages and outcomes, which we call transition analysis. Fourth, it should convene a panel on access to unclassified technical knowledge. Finally, it should establish an annual forum for the review of newly emerging technologies. A brief summary of each recommendation is given. GRA

A THEORETICALLY BASED REVIEW OF THEORY AND RESEARCH IN JUDGMENT AND DECISION MAKING

Kenneth R. Hammond Feb. 1986 96 p refs

(Contract N00014-81-C-0591)

(AD-A164914; CRJP-260) Avail: NTIS HC A05/MF A01 CSCL 05/10

Barriers to unification lie in the false dichotomy and rivalry between intuition and analysis, the arbitrary choice of task conditions, and the absence of a theory of successful intuition, as well as in current research practices. A theoretical framework is presented that is intended to overcome these barriers. The theory is anchored in task conditions, specifies the variety of cognitive properties they induce, and indicates subsequent behavior. GRA

THE USE OF FORM, FIT, AND FUNCTION IN THE ACQUISITION OF MAJOR WEAPON SYSTEMS M.S. Thesis

Douglas M. Deets Dec. 1985 102 p refs

(AD-A165000) Avail: NTIS HC A06/MF A01 CSCL 15/5

This thesis was undertaken to analyze the use of Form, Fit, and Function as a second sourcing methodology for major weapon systems. The major objectives of the research were to

determine what the attributes of Form, Fit, and Function were and how it could best be successfully employed. The researcher found that the Form, Fit, and Function would most likely not be used for the reprocurement of entire weapon systems. The real potential of this methodology was in the procurement of components and subsystems. In this regard, it can be used successfully for simple or technically complex items, initial or follow-on buys, and as means of retrofitting existing equipments. Since there is no need to transfer technical data between sources as in the other second sourcing methodologies, Form, Fit, and Function can also be used when the transfer of technology is impossible, impractical or inappropriate. GRA

AN APPLICATION OF COST RISK IN INCENTIVE CONTRACTS M.S. Thesis
Christopher M. McGrath Dec. 1985 96 p
(AD-A165177) Avail: NTIS HC A05/MF A01 CSCL 14/1

This thesis begins with an examination of the literature concerning incentive contract effectiveness and contractor motivation. Citing the most frequently supported conclusions, the researcher integrates these with a cost risk analysis methodology based upon the Beta distribution. The result is a share curve that automatically adjusts the share ratio based upon estimated cost variance. The researcher suggests that this approach is better at reflecting cost risk than the standard linear design. The share curve provides more risk sharing, especially at higher levels of cost variance, and provides both significant rewards and penalties only for significant deviations from target cost. The final conclusion is that the share curve mitigates the defense contractors' risk averse nature, thus allowing the profit motive to become operative in incentivizing the contractor to control or reduce costs. QUALITY CONTROL IN RESEARCH DATA BASES: THE US ENVIRONMENTAL PROTECTION AGENCY NATIONAL SURFACE WATER SURVEY EXPERIENCE
P. Kanciruk, R. J. Olson, and R. A. McCord 1985 29 p Presented at the Research Data Management in the Ecological Sciences Symposium, Georgetown, S.C.
(Contract DE-AC05-84OR-21400)
(DE86-002249; CONF-8511112-1) Avail: NTIS HC A03/MF A01

The usefulness of a research data base is in part determined by the quality of the information it contains. The procedures involved in ensuring the production of a high quality data base are collectively termed quality assurance. To ensure that data are as accurate as possible, the research data base manager ideally should have the research and data management background to be involved from the point of project design, data verification and validation, through the documentation and dissemination of the final data. This ideal is not often realized. One exception, however, is Phase 1 of the US Environmental Protection Agency's National Surface Water Survey. Beginning in the fall of 1984, this 3-month field survey will sample 2100 lakes in the northeast, southeast, and upper midwest regions of the United States. Another 900 western lakes will be sampled in the fall of 1985. The survey uses helicopters to take water samples that are chemically analyzed at remote laboratories. The survey will synoptically define the extent of existing surface water acidification and the number of lakes potentially at risk because of acidic deposition. DOE

PIEZOMETER DATA BASE PACKAGE USER'S GUIDE Final Report
Earl V. Edris, Jr. and Wipawi Vanadit-Ellis Oct. 1985 163 p
(AD-A163264; WES/IR/GL-85-2) Avail: NTIS HC A08/MF A01 CSCL 05/2

A data base package for storage, retrieval, and display of piezometer data for geotechnical projects is described. Detailed instructions are given for using the package for monitoring piezometers, rapid retrieval of data, and display of piezometer locations, time history plots, and piezometer readings with embankment profiles. The package provides for easy, interactive data entry and editing with automatic data checks and error messages when data exceed user specified ranges. Data storage and retrieval are accomplished using the CE-owned SYSTEM 2000 Data Base Management System on the Corps-wide time-sharing service operated (1984) by Control Data Corporation. The data entry and retrieval programs developed for the package are designed for a low skill level and minimum training of personnel. Data entry can also be accomplished on CE District Harris computers. Author (GRA)

THE GEONAMES PROCESSING SYSTEM SYNOPSIS Final Report
Gail Langran Sep. 1985 34 p
(AD-A163366; NORDA-125) Avail: NTIS HC A03/MF A01 CSCL 14/3

The Defense Mapping Agency has recognized a need for digital procedures to store, retrieve, and edit geographic names data and to prepare names for product generation. DMA's stated goal is a 50 to 100 million name digital data base with subsystems to capture names, edit and format names data, and prepare names overlays for maps. NORDA began a geonames processing system design study late in FY82. This report summarizes NORDA's study findings. The four sections in Part One discuss geonames processing functions in turn: names data capture, data base management, editing and formatting, and map names processing.

Each subsystem is described, unresolved issues are highlighted, and recommendations are made. Part Two discusses concerns common to all four geonames processing subsystems. Section 5 defines interfaces between the subsystems. Section 6 weighs the technical possibilities for handling non-Roman alphabets and ideographs. Personnel and space requirements for a comprehensive names processing system are estimated in Section 7. Automated Alphanumeric Data Entry System (AADES); Geographic Names Data Base (GNDB); Advanced Symbol Processing (ASP); and Advanced Type Placement (ATP). GRA

THE DESIGN AND ANALYSIS OF A NETWORK INTERFACE FOR THE MULTI-LINGUAL DATABASE SYSTEM M.S. Thesis
Clemon R. Wortherly Dec. 1985 127 p
(AD-A164756) Avail: NTIS HC A07/MF A01 CSCL 09/2

Traditionally, the design and implementation of a conventional database system begins with the choice of a data model followed by the specifications of a model-based data language. Thus, the database system is restricted to a single data model and a specific data language. An alternative to this traditional approach to database-system development is the multi-lingual database system (MLDS). This alternative approach affords the user the ability to access and manage a large collection of databases, via several data models and their corresponding data languages, without the aforementioned restriction. In this thesis, we present a methodology for supporting network (CODASYL) database management on the MLDS. Specifically, we design an interface which translates CODASYL-DML statements into ABDL requests. We describe the data structures, the control mechanisms, and the functions/procedures necessary to implement such a system. GRA

RELATIONAL MODEL OF A DATA DICTIONARY M.S. Thesis
M. G. Dedeoglu Dec. 1985 85 p refs
(AD-A164998) Avail: NTIS HC A05/MF A01 CSCL 09/2

The data dictionary system is an important tool for supporting information resource management. It facilitates the management and control of data. This thesis will develop a relational model of a data dictionary and implement it on the ORACLE relational data base management system. Then, this data dictionary model will be implemented using the logic-oriented Prolog language. The Prolog model of a data dictionary will demonstrate that logic

programming can be used for relational data base applications and that it provides more powerful dictionary capabilities than the relational model. GRA

A PERSONALIZED AND PRESCRIPTIVE DECISION AID FOR CHOICE FROM A DATABASE OF OPTIONS Interim Technical Report, Jul. 1983 - Feb. 1986
Marvin S. Cohen, Kathryn B. Laskey, and Martin A. Tolcott 4 Mar. 1986 57 p
(Contract N00014-83-C-0485; f66-701)
(AD-A165396; TR-86-1) Avail: NTIS HC A04/MF A01 CSCL 05/10

In many decision-making contexts there is a need for aids which cater flexibly to individual users in their preferred ways of organizing information and solving problems, but which guard against potential errors or biases inherent in common approaches to decision making. DSC has developed principles of personalized and prescriptive decision aiding which respond to this need, and which are based on experimental findings and theoretical models in cognitive psychology. In Phase I of this project, those principles were applied to the development of an aid for attack submarine approach and attack. In Phase 2, the principles have been generalized and extended to the development of a generic personalized and prescriptive evaluation system. The system incorporates five basic cognitive interface modules to customize the user's interaction with the aid and to provide prescriptive guidance, as well as a set of interactive dialogues or guides which blend all five functions in support of specific user-selected decision-making strategies. The aid will be tested and demonstrated in the context of a personnel selection application. Author (GRA)

PUBLIC LAWS OF THE 98TH CONGRESS RELATING TO INFORMATION POLICY
Sandra N. Milevski 14 Mar. 1986 101 p
(CRS-TK-7885-F) Avail: NTIS HC A06/MF A01

Statutes of the 98th Congress treating information related concerns are enumerated. Limited to public laws of a substantive nature, the topical overview of areas of congressional concern is divided into nine sections: Federal Information Resources Management; International Communications and Information Policy; Telecommunication, Broadcasting, and Satellite Transmission; Intellectual Property; Library and Archives Policies; Information Disclosure, Confidentiality and the Right of Privacy; Computer Security and Crime; Information Technology for Education, Innovation, and Competitiveness; and Government Information Systems, Clearinghouses, and Dissemination. Brief considerations of parallel developments in the executive branch and private sector for 1983 to 1984 are included, along with significant laws from the 95th through 97th Congresses. The appendix provides a compilation of information policy public laws, 1977 through 1984. Author

EXPLOITING CAPABILITY CONSTRAINTS TO SOLVE GLOBAL, TWO DIMENSIONAL PATH PLANNING PROBLEMS
R. F. Richbourg, Neil C. Rowe, and Michael J. Zyda Jan. 1986 35 p refs
(AD-A164973; NPS52-86-006) Avail: NTIS HC A03/MF A01 CSCL 17/7

Mobile autonomous vehicles require the capability of planning routes over ranges that are too great to be characterized by local sensor systems. Completion of this task requires some form of map data. Much work has been done concerning planning paths through local areas, those which can be scanned by on-board sensor systems. However, planning paths based on long range map data is a very different problem. Extant solution techniques require the search of discrete, node and link representations which characterize continuous, two dimensional problem environments. The authors assume the availability of topographic data organized into regions of homogenous traversal cost. Given this, they present a solution technique for the long range planning problem which relies on a Snell's Law heuristic to limit a graph search for the optimal solution. GRA

UNITED STATES TECHNOLOGY TRANSFER TO PERU AND VENEZUELA M.S. Thesis
Alfredo Arrisueno and Ramon Peraza Dec. 1985 134 p refs
(AD-A164995) Avail: NTIS HC A07/MF A01 CSCL 05/4

Technology has a decisive influence on the daily lives of most of the world population. Historically, technology has moved from one part of the world to another by a continuous process or transfer. However, the resultant transference has been quite uneven in its geographical impact, and there is a concern that the technology gap between the developed countries and the less developed countries is widening. Concern about the widening of the gap and the need to increase the technology transfer process, is the very essence of the economic growth and development needs of less developed countries. This Thesis will examine the gap, and an attempt will be made to determine guidelines, initiatives, and mechanisms to facilitate the transfer of U.S. technology to Latin America and specifically to Peru and Venezuela. ON ROADS WITH NO OVERTAKING
A. J. Koning Sep. 1985 45 p
(CWI-MS-R8508; B8577114; ESA-86-96987) Avail: NTIS HC A03/MF A01

A road which narrows at bottleneck from an infinite-lane road to a one-lane road is studied with two independent stochastic processes. At the bottleneck an equilibrium headway can be viewed as the maximum of a shifted exponential random variable and a minimum headway. After the bottleneck the situation becomes far more complicated. However, at a sufficently large distance from the bottleneck an equilibrium headway may be approximated by the maximum of a shifted exponential random variable and a minimum headway, with the parameters of the shifted exponential random variable depending on the desired speed of the car. The distance from the bottleneck only affects the location, not the scale. Results are checked by Monte Carlo experiments. ESA

Avail: NTIS HC A05/MF A01 CSCL 03A

Four processes serve to illustrate potential areas of study and their implications for general problems in planetary science. First, accretional processes reflect the success of collisional aggregation over collisional destruction during the early history of the solar system. Second, both catastrophic and less severe effects of impacts on planetary bodies survivng from the time of the early solar system may be expressed by asteroid/planetary spin rates, spin orientations, asteroid size distributions, and perhaps the origin of the Moon. Third, the surfaces of planetary bodies directly record the effects of impacts in the form of craters; these records have wide-ranging implications. Fourth, regoliths evolution of asteroidal surfaces is a consequence of cumulative impacts, but the absence of a significant gravity term may profoundly affect the retention of shocked fractions and agglutinate build-up, thereby biasing the correct interpretations of spectral reflectance data. An impact facility on the Space Station would provide the controlled conditions necessary to explore such processes either through direct simulation of conditions or indirect simulation of certain parameters. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 6 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

The carousel wind tunnel (CWT) can be a significant tool for the determination of the nature and magnitude of interparticlar forces at threshold of motion. By altering particle and drum surface electrical properties and/or by applying electric potential difference across the inner and outer drums, it should be possible to separate electrostatic effects from other forces of cohesion. Besides particle trajectory and bedform analyses, suggestions for research include particle aggregation in zero and subgravity environments, effect of suspension-saltation ratio on soil abrasion, and the effects of shear and shearfree turbulence on particle aggregation as applied to evolution of solar nebula. Avail: NTIS HC A05/MF A01 CSCL 03A

A wide variety of experiments can be conducted on the Space Station that involve the physics of small particles of planetary significance. Processes of interest include nucleation and condensation of particles from a gas, aggregation of small particles into larger ones, and low velocity collisions of particles. All of these processes could be investigated with a general purpose facility on the Space Station. The microgravity environment would be necessary to perform many experiments, as they generally require that particles be suspended for periods substantially longer than are practical at 1 g. Only experiments relevant to planetary processes will be discussed in detail here, but it is important to stress that a particle facility will be useful to a wide variety of scientific disciplines, and can be used to address many scientific problems. A PLANETARY ULTRA HYPERVELOCITY IMPACT MECHANICS AND SHOCK WAVE SCIENCE FACILITY c14
Thomas J. Ahrens *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 5 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

Using the concept of intercepting orbits from a pair of Space Station serviced free flyers, a class of impact and shock wave experiments pertinent to planetary science can be performed. One proposed free flying vehicle is an impactor dispensor, and the second is the impact laboratory. How collision is achieved by utilizing essentially twice orbital velocity is demonstrated. The impactor dispensor contains a series of small flyer plates or other projectiles which are launched into the trajectory of the impactor laboratory at appropriate positions. The impactor laboratory is a large impact tank similar to those in terrestrial gun laboratories, except that it contains a supply of targets and instrumentation such as high speed cameras, flash X-ray apparatus and digital recorders. Shock and isentropic pressures of up to 20 Mbar are achievable with such a system which provides 15 km/sec impact velocities for precisely oriented projectiles. B.G.

PROPOSED EARTH BASED CRATERING EXPERIMENTS AT LOW G IN HARD VACUUM c91
Thomas J. Ahrens *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 3 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

In order to address the question of whether the cratering scale which was developed can be extrapolated to low velocity (of planetesimals appropriate for conditions during accretion of the planets and the impact mechanics of encounters of both asteroids and the solid objects which comprise the rings of the outer major planets), a series of experiments at low gravity and at high vacuum are proposed. Specific issues which could be addressed include: the effect of very low gravity on cratering efficiency and final crater shape; and the dynamics of impact into a strengthless spherical and ellipsoidal liquid target. MASS LOADING OF THE EARTH'S MAGNETOSPHERE BY MICRON SIZE LUNAR EJECTA. 1: EJECTA PRODUCTION AND ORBITAL DYNAMICS IN CISLUNAR SPACE c90
W. M. Alexander, W. G. Tanner, P. D. Anz, and A.-L. Chen *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 3 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

Particulate matter possessing lunar escape velocity sufficient to enhance the cislunar meteroid flux was investigated. While the interplanetary flux was extensively studied, lunar ejecta created by the impact of this material on the lunar surface is only now being studied. Two recently reported flux models are employed to calculate the total mass impacting the lunar surface due to sporadic meteor flux. There is ample evidence to support the contention that the sporadic interplanetary meteoroid flux enhances the meteroid flux of cislunar space through the creation of micron and submicron lunar ejecta with lunar escape velocity. B.G.

MASS LOADING OF THE EARTH'S MAGNETOSPHERE BY MICRON SIZE LUNAR EJECTA. 2: EJECTA DYNAMICS AND ENHANCED LIFETIMES IN THE EARTH'S MAGNETOSPHERE c90
W. M. Alexander, W. G. Tanner, P. D. Anz, and A.-L. Chen *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 3 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

Extensive studies were conducted concerning the indivdual mass, temporal and positional distribution of micron and submicron lunar ejecta existing in the Earth-Moon gravitational sphere of influence. Initial results show a direct correlation between the position of the Moon, relative to the Earth, and the percentage of lunar ejecta leaving the Moon and intercepting the magnetosphere of the Earth at the magnetopause surface. It is seen that the Lorentz Force dominates all other forces, thus suggesting that submicron dust particles might possibly be magnetically trapped in the well known radiation zones. B.G.

LOW-GRAVITY IMPACT EXPERIMENTS: PROGRESS TOWARD A FACILITY DEFINITION c91
Mark J. Cintala *In its* Space Station Planetology Experiments (SSPEX) May 1986 3 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

Innumerable efforts were made to understand the cratering process and its ramifications in terms of planetary observations, during which the role of gravity has often come into question. Well known facilities and experiments both were devoted in many cases to unraveling the contribution of gravitational acceleration to cratering mechanisms. Included among these are the explosion experiments in low gravity aircraft, the drop platform experiments, and the high gravity centrifuge experiments. Considerable insight into the effects of gravity was gained. Most investigations were confined to terrestrial laboratories. It is in this light that the Space Station is being examined as a vehicle with the potential to support otherwise impractical impact experiments. The results of studies performed by members of the planetary cratering community are summarized. Author

COSMIC DUST COLLECTION WITH A SUB-SATELLITE TETHERED TO A SPACE STATION c90
G. J. Corso *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 2 p Prepared in cooperation with Northwestern Univ., Evanston, Ill. (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

The number concentration and density of 1 micron and submicron sized grains in interplanetary space, as well as their relation to the larger zodical dust particles, and the importance of the Beta meteoroid phenomenon are currently being questioned. The best approach to collecting large numbers of intact micron and submicron sized cosmic dust particles in real time while avoiding terrestrial and man made contamination would be to employ a tethered subsatellite from a space station down into the Earth's atmosphere. Such a subsatellite tied to the space shuttle by a 100 km long tether is being developed. It is also possible that a permanent space station would allow the use of a tether even longer that 100 km. It should be noted that the same tethered collectors could also be employed to study the composition and

flux of man made Earth orbiting debris in any direction within 100 km or so of the space station. B.G.

SPACE STATION SCIENCE LAB MODULE **c18**
D. L. DeVincenzi *In* NASA. Lyndon B. Johnson Space Center Space Statiaon Planetology Experiments (SSPEX) May 1986 5 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

The Science Lab Module (SLM), a key component of the proposed Space Station (SS) orbiting complex, is undergoing intensive study during the project design phase which is currently underway. The SLM is one of the two laboratory modules which, together with two habitation modules, comprise the core elements of the SS reference configurations. Current project emphasis is to configure the SLM as a national science laboratory module facility which would have four major functions: maximize life sciences research potential, support operations of attached payloads, provide shirtsleeve environment for other payload instrument servicing, and support other science requirements. The design studies are focusing on outfitting a common module basic design to accommodate the four specific functions. Although design work for outfitting the SLM for life sciences research is underway, science requirements for the other sciences and functions are not as well developed. Author

ELECTRICAL CONDUCTIVITY OF CARBONACEOUS CHONDRITES AND ELECTRIC HEATING OF METEORITE PARENT BODIES **c91**
Al Duba *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 2 p refs (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

The electrical conductivity of samples of the Murchison and Allende carbonaceous chondrites is 4 to 6 magnitudes greater than rock forming minerals such as Olivine up to 700 C. The remarkably high electrical conductivity of these meteorites is attributed to carbon at grain boundaries. The environment in the wake of the space station can be exploited to produce conditions which will allow pyrolysis of carbonaceous chondrites. An experimental package consisting of a one square meter shield attached to a 15 cm diameter by 40 cm long furnace and tied to a conductance bridge, furnace controller, and digital voltmeter inside the space station via umbilical cable could make the required measurements. Since heating rates as low as 0.1 C/hour are required to study kinetics of the pyrolysis reations which are the cause of the high conductivity of the carbonaceous chondrites, experimental times up to 3 months will be needed. B.G.

N86-27149*# Rice Univ., Houston, Tex. Dept. of Space Physics and Astronomy.
THE ORBIT PROPERTIES OF COLLIDING CO-ORBITING BODIES **c90**
John W. Freeman *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 3 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

It is generally assumed that an ensemble of small bodies located in similar Keplarian orbits will, because of collisions, tend to disperse into more and more dissimilar orbits. For example, it is thought that the asteroids may represent the remnants of a few larger bodies that broke up or failed to fully accrete. A proposed experiment using the space station consists of an ensemble of small bodies or particles released gently from a central location in a large chamber, much like the breaking of billiard balls. The particles would them co-orbit and occasionally collide. Their subsequent behavior could be monitored by several video recorders, their linear and angular velocities before and after collision calculated, and their general behavior studied. This experiment could yield results of fundamental importance for theories of the origin of the planets, asteroids, comets, and probably ring systems. B.G.

SMALL LINEAR WIND TUNNEL SALTATION EXPERIMENTS: SOME EXPERIENCES **c09**
D. A. Gillette and P. R. Owen *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 2 p Prepared in cooperation with Imperial College of Science and Technology, London, England (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

Since the wind tunnels proposed to be used for the Space Station Planetology Experiments are of a rather limited size, some experience and techniques used for saltation experiments in a small linear wind tunnel may be of interest. Three experiments will be presented. The first concerns a length effect of saltation mass flux in which the size of the wind tunnel exaggerates the physical process taking place. The second experiment concerns a nonoptical technique that does not interfere with flow and by which momentum flux to the floor may be measured. The technique may also be used to calculate saltation flux (using appropriate assumptions). The third experiment concerns the use of the momentum equation to estimate momentum fluxes by difference. Author

IMPACT EXPERIMENTATION AND THE MICROGRAVITY ENVIRONMENT: AN OVERVIEW **c90**
Richard A. F. Grieve *In* NASA. Lyndon B. Johnson Space Center Sapce Station Planetology Experiments (SSPEX) May 1986 2 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

Impact is an ubiquitous physical process in the solar system. It occurs on all solid bodies and operates over a spectrum of scales, influencing geologic processes ranging from accretion, the early evolution of planetary bodies, the petrogenetic and spatial relations of lunar samples, the surface characteristics and interpretation of spectral data of asteroidal bodies, to the nature of some meteorites. Understanding impact phenomena is therefore paramount in constraining and underpinning a large number of research efforts into fundamental planetary geology. Gravity is an important parameter in impact processes. The physical environment offered by the Space Station represents an unique opportunity to extend the experimental aspect of impact studies into the microgravity (less than 1 g) regime. Through the use of free floating targets, it may be possible to explore in detail phenomena associated with the collision of bodies. Such experiments can address questions regarding early and late accretional processes, catastrophic disruption and asteroidal evolution, as well as the effects of large impacts on the momentum and spin of the target bodies. The last question is of considerable topical interest with respect to the hypothesized origin of the moon by a Mars-sized impact on Earth. B.G.

N86-27152*# National Aeronautics and Space Administration, Washington, D.C.
EXOBIOLOGY EXPERIMENT CONCEPTS FOR SPACE STATION **c55**
L. D. Griffiths (Management and Technical Services Co., Washington, D.C.) and D. L. DeVincenzi *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 1 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

The exobiology discipline uses ground based and space flight resources to conduct a multidiscipline research effort dedicated to understanding fundamental questions about the origin, evolution, and distribution of life and life related molecules throughout the universe. Achievement of this understanding requires a methodical research strategy which traces the history of the biogenic elements from their origins in stellar formation processes through the

chemical evolution of molecules essential for life to the origin and evolution of primitive and, ultimately, complex living species. Implementation of this strategy requires the collection and integration of data from solar system exploration spacecraft and ground based and orbiting observatories and laboratories. The Science Lab Module (SLM) of the Space Station orbiting complex may provide an ideal setting in which to perform certain classes of experiments which form the cornerstone of exobiology research. These experiments could demonstrate the pathways and processes by which biomolecules are synthesized under conditions that simulate the primitive Earth, planetary atmospheres, cometary ices, and interstellar dust grains. Exobiology experiments proposed for the Space Station generally fall into four classes: interactions among gases and grains (nucleation, accretion, gas-grain reactions), high energy chemistry for the production of biomolecules, physical and chemical processes occurring on an artificial comet, and tests of the theory of panspermia. Author

N86-27153*# Iowa State Univ. of Science and Technology, Ames. Dept. of Aerospace Engineering.
SEDIMENT-TRANSPORT EXPERIMENTS IN ZERO-GRAVITY **c12**
James D. Iversen and Ronald Greeley (Arizona State Univ., Tempe) *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 3 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

One of the important parameters in the analysis of sediment entrainment and transport is gravitational attraction. The availability of a laboratory in Earth orbit would afford an opportunity to conduct experiments in zero and variable gravity environments. Elimination of gravitational attraction as a factor in such experiments would enable other critical parameters (such as particle cohesion and aerodynamic forces) to be evaluated much more accurately. A Carousel Wind Tunnel (CWT) is proposed for use in conducting experiments concerning sediment particle entrainment and transport in a space station. In order to test the concept of this wind tunnel design a one third scale model CWT was constructed and calibrated. Experiments were conducted in the prototype to determine the feasibility of studying various aeolian processes and the results were compared with various numerical analysis. Several types of experiments appear to be feasible utilizing the proposed apparatus. Author

N86-27154*# Arizona State Univ., Tempe.
DESIGN AND CALIBRATION OF THE CAROUSEL WIND TUNNEL **c09**
R. N. Leach, R. Greeley, J. Iversen (Iowa State Univ. of Science and Technology, Ames), B. White (California Univ., Davis.), and J. R. Marshall *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 2 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

In the study of planetary aeolian processes the effect of gravity is not readily modeled. Gravity appears in the equations of particle motion along with interparticle forces but the two terms are not separable. A wind tunnel that would permit variable gravity would allow separation of the forces and aid greatly in understanding planetary aeolian processes. The design Carousel Wind Tunnel (CWT) allows for a long flow distance in a small sized tunnel since the test section is a continuous circuit and allows for a variable pseudo gravity. A prototype design was built and calibrated to gain some understanding of the characteristics of the design and the results presented. B.G.

N86-27155*# Rice Univ., Houston, Tex. Dept. of Space Physics and Astronomy.
A MAGNETOSPHERIC SIMULATION AT THE SPACE STATION **c14**
R. E. Lopez, J. W. Freeman, and F. C. Michel *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 1 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

It is proposed that a strong magnet (terrella) be flown at or near the Space Station to create an artificial magnetosphere in a laboratory setting. The relative flow of the ionosphere past the terrella will constitute a plasma wind that will interact with the magnetic field of the terrella to produce a localized magnetosphere. This object could then be extensively studied using diagnostic probes attached to the Space Station, or with free flyers. The space and storage requirements would be minimal, since the experiment would be conducted outside the space station. The total equipment would consist of several terrella (with varying surface conductivities), approximately 3 small magnetometer/plasma diagnostic packages, and several gas canisters for upstream seeding. Power requirements would be approximately 60 watts. Several track mounted tethers, each approximately or > 200 m long in length, with track parallel to the orbital motion and 100 m long, are also needed. Astronaut time needed would be minimal in the tethered configuration (approximately 4 man hours/week). A free flying configuration, while not needing the tether track, would require much more human interaction. Author

N86-27156*# Arizona State Univ., Tempe. Dept. of Geology.
ELECTROSTATIC AGGREGATION OF FINELY-COMMINUTED GEOLOGICAL MATERIALS **c12**
J. R. Marshall and R. Greeley *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 2 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

Electrostatic forces are known to have a significant effect on the behavior of finely comminuted particulate material: perhaps the most prevalent expression of this being electrostatic aggregation of particles into relatively coherent clumps. However, the precise role of electrostatic attraction and repulsion in determining the behavior of geological materials (such as volcanic ash and aeolian dust) is poorly understood. Electrostatic aggregation of fine particles is difficult to study on Earth either in the geological or laboratory environment principally because the material in an aggregated state remains airborne for such a short period of time. Experiments conducted in the NASA/JCS - KC135 aircraft are discussed. The aircraft experiments are seen as precursors to more elaborate and scientifically more comprehensive Shuttle or Space Station activities. B.G.

THE INITIATION OF GRAIN MOVEMENT BY WIND **c46**
W. G. Nickling *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 2 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

When air blows across the surface of dry, loose sand, a critical shear velocity must be achieved to inititate motion. Since most natural sediments consist of a range of grain sizes, fluid threshold for any sediment cannot really be defined by a finite value but should be viewed as a threshold range which is a function of the mean size, sorting, and packing of the sediment. In order to investigate the initiation of particle movement by wind, a series of wind tunnel tests were carried out on a range of screened sands and commercially available glass beads of differing sizes, sorting, and shape characteristics. In addition, individual samples of the glass beads were mixed to produce rather poorly sorted bimodal distributions. Test results suggest that when velocity is slowly increased over the sediment surface the smaller or more exposed grains are first entrained by the fluid drag of the air either in surface creep or in saltation. As velocity continues to rise, the larger more protected grains may also be moved by fluid drag. The data also indicate that predicted values based on the modified Bagnold equation fall within the range of threshold values defined by the transition section of the grain movement/shear velocity plots. Moreover, the predicted values are very similar to the threshold values derived for the point maximum inflection on the curves. Author

Avail: NTIS HC A05/MF A01 CSCL 03A

A simple experimental apparatus is described in which a wide variety of vapor phase nucleation studies of refractory materials could be performed aboard NASA's KC-135 Research Aircraft. The chief advantage of a microgravity environment for these studies is the expected absence of thermally driven convective motions in the gas. The absence of convection leads to much more accurate knowledge of both the temperature distribution in the system and the time evolution of the refractory vapor concentration as a function of distance from the crucible. The evolution of the apparatus will be described as more experience is gained with the microgravity environment. Such experiments will be used to prepare for similar ones carried out aboard either the shuttle or Space Station where considerably longer duration experiments are possible. Author

It is proposed to carry out slitless spectroscopy at ultraviolet wavelengths from orbit of meteoric debris associated with comets. The Eta Aquarid, Orionid/Halley, and the Persied/1962 862 Swift-Tuttle showers would be principal targets. Low light level, ultraviolet video technique will be used during night side of the orbit in a wide field, earthward viewing mode. Data will be stored in compact video cassette recorders. The experiment may be configured as a GAS package or in the HITCHHIKER mode. The latter would allow flexible pointing capability beyond that offered by shuttle orientation of the GAS package, and doubling of the data record. The 1100 to 3200 A spectral region should show emissions of atomic, ionic, and molecular species of interest on cometary and solar system studies. Author

LOW GRAVITY FACILITIES FOR SPACE STATION PLANETOLOGY EXPERIMENTS **c14**
Paul A. Penzo *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 2 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

For experimentation, space offers a unique environment which is unobtainable on Earth. One characteristic is a gravity force less than 1 g, where g is the mean Earth gravity acceleration of 9.8 m/sq s. The production of uniform gravity levels above zero g in space is discussed in relationship to experimental needs. For planetology experiments, providing gravity in space will make it possible to more nearly simulate conditions on natural bodies. The g-level is but one parameter involved in the design of a specific experiment. Other requirements may be: g-level range; g-level tolerance value; Coriolis tolerance value; volume requirement; g-level duration; power and materials for the experiment; and automated or man-tended operation. These requirements, and certainly others, will dictate the type of facility which should be considered. The use of the Space Station or the Tethered Satellite System configurations is discussed. DEBRIS-CLOUD COLLISIONS: ACCRETION STUDIES IN THE SPACE STATION **c90**
P. H. Schultz and D. E. Gault (Murphys Center of Planetology, Calif.) *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 2 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

The growth of planetesimals in the Solar system reflects the success of collisional aggregation over disruption. Recent experiments performed at the NASA-Ames Vertical Gun Range are discussed using the production of debris cloud impaction to model protoplanetary accretion. The impact experiment assessed the differences between clustered and single body impacts on particulate surfaces. The preliminary results would indicate that collisions between two debris clouds might produce aggregates, thereby increasing particle sizes, whereas a single particle impacting a particle results in disruption and comminution. Such an experiment could provide new insight for early planetary growth processes and for interpreting the record of this stage. The use of the microgravity environment of the Space Station to further the research is discussed. B.G.

IMPACTS OF FREE-FLOATING OBJECTS: UNIQUE SPACE STATION EXPERIMENTS **c12**
P. H. Schultz and D. E. Gault (Murphys Center of Planetology, Calif.) *In* NASA. Lyndon B. Johnson Space Center Space STation Planetology Experiments (SSPEX) May 1986 2 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

The transfer of momentum and kinetic energy between planetary bodies forms the basis for wide ranging problems in planetary science ranging from the collective long term effects of minor perturbations to the catastrophic singular effect of a major collision. Although the collisional transfer of momentum and energy was discussed over the last two decades, major issues remain that largely reflect current limitations in Earth based experimental conditions and 3-D numerical codes. Two examples with potential applications in a Space Station laboratory, are presented: asteroid spin rates and orientations, and planetary disruption/spin rates. Asteroid spin rate and orientation experiments are needed wherein free floating nonspining and spining objects of varying strength, porosity, and volatility are impacted at varying velocities and angles. A space station platform also could provide an opportunity to test important facets of planetary disruption/spin rate models by allowing freely suspended spherical targets of varying viscosities, internal density gradients, and spin rates. HOW TO MAKE A COMET **c90**
James Stephens, R. Stephen Saunders, and Fraser Fanale (Hawaii Univ., Honolulu) *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 3 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

The primary mandate of NASA is the study of the nature and origin of the solar system. The study of comets provides information about conditions and processes at the beginning of the solar system. Short period comets and their relatives, the near Earth asteroids may prove to be second only to the Sun in importance to the long term survival of civilization for two reasons: as a possible candidate for the cause of mass extinctions of life on Earth and as the material means for the expansion of civilization into the solar system and beyond. In the mean time comets are studied

by remote means. Laboratory investigations using synthetic cometary materials may add to the knowledge of these interesting objects. Dust and mantle formation are currently being studied by the use of comet sublimation experiments. Results of these experiments are discussed. B.G.

GRAIN DYNAMICS IN ZERO GRAVITY c12
B. T. Werner and P. K. Haff *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 3 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

The dynamics of granular materials has proved difficult to model, primarily because of the complications arising from inelastic losses, friction, packing, and the effect of many grains being in contact simultaneously. The kinetic model of granular systems is similar to the kinetic theory of gases, except that collisional energy losses are always present in the former and must be treated explicity. Few granular materials on Earth are describable by this limiting model, since gravity tends to collapse the grains into a high density state where Coulombic friction effects are dominant. The planned Space Station offers an unusual opportunity to test the kinetic grain model and to explore its predictions. Without gravity, the regime of low interparticle velocities (where an elastic description of the collision is still valid) can be investigated. This will allow for direct interpretation by dynamical computer simulations as well as by the kinetic theory. The dynamics of spherical grains inside a clear box would be examined. Results would be compared with the predictions of the kinetic theory and computer simulations. B.G.

AEOLIAN PROCESSES ABOARD A SPACE STATION: SALTATION AND PARTICLE TRAJECTORY ANALYSIS c09
B. R. White, R. Greeley (Arizona State Univ., Tempe), J. D. Iversen (Iowa State Univ. of Science and Technology, Ames), and R. N. Leach (Santa Clara Univ., Calif.) *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) May 1986 3 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

The Carousel wind tunnel (CWT) proposed to study aeolian processes aboard a space station consists of two concentric rotating drums. The space between the two drums comprises the wind tunnel test section. Differential rates of rotation of the two drums would provide a wind velocity with respect to either drum surface. Preliminary results of measured velocity profiles made in a CWT prototype indicate that the wall bounded boundary layer profiles are suitable to simulate flat plate turbulent boundary layer flow. The two dimensional flat plate Cartesian coordinate equations of motion of a particle moving through the air are explained. In order to assess the suitability of CWT in the analysis of the trajectories of windblown particles, a series of calculations were conducted comparing cases for gravity with those of zero gravity. Results from the calculations demonstrate that a wind tunnel of the carousel design could be fabricted to operate in a space station environment and that experiments could be conducted which would yield significant results contributing to the understanding of the physics of particle dynamics. B.G.

A SYSTEM FOR CONDUCTING IGNEOUS PETROLOGY EXPERIMENTS UNDER CONTROLLED REDOX CONDITIONS IN REDUCED GRAVITY c12
R. J. Williams *In its* Space Station Planetology Experiments (SSPEX) May 1986 3 p (For primary document see N86-27136 17-88)
Avail: NTIS HC A05/MF A01 CSCL 03A

The Space Shuttle and the planned Space Station will permit experimentation under conditions of reduced gravitational acceleration offering experimental petrologists the opportunity to study crystal growth, element distribution, and phase chemistry. In particular the confounding effects of macro and micro scale buoyancy-induced convection and crystal settling or floatation can be greatly reduced over those observed in experiments in the terrestrial laboratory. Also, for experiments in which detailed replication of the environment is important, the access to reduced gravity will permit a more complete simulation of processes that may have occurred on asteroids or in free space. A technique that was developed to control, measure, and manipulate oxygen fugacites with small quantities of gas which are recirculated over the sample is described. This system should be adaptable to reduced gravity space experiments requiring redox control. Experiments done conventionally and those done using this technique yield identical results done in a 1-g field. B.G.

In order to understand the origin and distribution of the biogenic elements and their compounds in the solar system, it will be necessary to study material from many classes of objects. Chemical, elemental, and isotopic measurements of returned samples of comets, asteroids, and possibly extrasolar system dust clouds would provide information on a particularly important class: the primitive objects. Extraterrestrial micron-sized particles in the vicinity of Earth are one source of such materials that might otherwise be inaccessible. The Space Station appears to be an eminently suitable platform from which to collect and detect these various particles. The primary challenge, however, is to collect intact, uncontaminated particles which will be encountered at tens of kilometers per seconds. A concept for a micrometeoroid detector that could be deployed from the Space Station was developed which uses a large area detector plate implanted with acoustic transducers. A concept of a nondestructive micrometeoroid collector for the Space Station was also developed. Particles collected would then be returned to Earth for subsequent analysis. Author

Mapping of the Earth from space stations can be approached in two areas. One is to collect gravity data for defining topographic datum using Earth's gravity field in terms of spherical harmonics. The other is to search and explore techniques of mapping topography using either optical or radar images with or without reference to ground central points. Without ground control points, an integrated camera system can be designed. With ground control points, the position of the space station (camera station) can be precisely determined at any instant. Therefore, terrestrial topography can be precisely mapped either by conventional photogrammetric methods or by current digital technology of image correlation. For the mapping experiment, it is proposed to establish four ground points either in North America or Africa (including the Sahara desert). If this experiment should be successfully accomplished, it may also be applied to the defense charting systems. B.G.

SMALL SCALE H I STRUCTURE AND THE SOFT X-RAY BACKGROUND

Keith Jahoda, Dan McCammon, and Felix J. Lockman (National Radio Astronomy Observatory, Charlottesville, Va.) 22 May 1986 15 p refs Submitted for publication
(Grant NAG5-629)
(NASA-CR-176674; NAS 1.26:176674) Avail: NTIS HC A02/MF A01 CSCL 03A

The observed anticorrelation between diffuse soft X-ray flux and H I column density has been explained as absorption of soft X-rays produced in a hot galactic halo, assuming that the neutral interstellar material is sufficiently clumped to reduce the soft X-ray absorption cross section by a factor of two to three. A 21 cm emission line study of H I column density variations at intermediate and high galactic latitudes to 10' spatial resolution has been done. The results confirm conclusions from preliminary work at coarser resolution, and in combination with other data appear to rule out the hypothesis that clumping of neutral interstellar matter on any angular scale significantly reduces X-ray absorption cross sections in the 0.13 - 0.28 keV energy range. It is concluded therefore that the observed anticorrelation is not primarily a consequence of absorption of soft X-rays produced in a hot galactic halo.

After the nominal end of the IRAS mission, in-orbit experiments to demonstrate IRAS reconfigurability aspects and to assess long term performance were initiated. In a computer memory reconfiguration, 3 blocks of 16k 16-bits RAM memory became available for data storage. In the original configuration, 2 blocks of these belonged to the redundant 32k computer system. Since during the operational mission no back-up mode was needed, a ROM implemented back-up mode for the normal safe mode was operated. The back-up mode software in ROM was called by RAM software to provide experiment specific data storage in the extended memories. This approach was also followed for the last experiment in which the satellite recovered from a deliberately saturated reaction wheel (23 Nms). All systems (not including the telescope) operated without substantial degradation. ESA

PHOTOABSORPTION AND PHOTODISSOCIATION OF MOLECULES IMPORTANT IN THE INTERSTELLAR MEDIUM Annual Report, 15 May 1985 - 14 May 1986
Long C. Lee 2 Jun. 1986 34 p refs
(Grant NAGw-319)
(NASA-CR-176828; NAS 1.26:176828) Avail: NTIS HC A03/MF A01 CSCL 03B

In the period from May 15, 1985 to May 14, 1986, the photoabsorption and photodissociation cross sections of the interstellar radical of SO and the interstellar molecules of HCl, H2CO, and CH3CN were measured and the results were reported in scientific papers. In the meantime, a windowless apparatus is used to measure the photoabsorption and photodissociation cross sections of CO in the 90-105 nm region. The optical data obtained in this research program are needed for the determination of the formation and destruction rates of molecules and radicals in the interstellar medium. Accomplishments in this research period are summarized below.

92 SOLAR PHYSICS

Includes solar activity, solar flares, solar radiation and sunspots.

N86-27173*# American Science and Engineering, Inc., Cambridge, Mass.
SAROS: SOLAR ACTIVE REGION OBSERVATIONS FROM SPACELAB Final Report, 11 Feb. 1980 - 11 Nov. 1985
Allen S. Krieger 30 Dec. 1985 27 p refs
(Contract NAS5-26048)
(NASA-CR-177878; NAS 1.26:177878; ASE-5066) Avail: NTIS HC A03/MF A01 CSCL 03B

A definition study of the SAROS investigation was conducted. An instrument design and mode of operation was established which was consistent with the capabilities of the Space Transportation System. Upon completion of the definition phase study the program was placed on hold for approximately five years before being terminated. Consequently, the promise which this investigation held for understanding the heating processes in coronal loops remains unfulfilled. E.R.

OBSERVATIONS OF LOW-DEGREE P-MODE OSCILLATIONS IN 1984. COMMENTS ON TECHNIQUES FOR SPECTRAL DECONVOLUTION
Harald M. Henning and Philip H. Scherrer Sep. 1985 26 p
(Contract N00014-76-C-0207; Grant NSF ATM-77)
(AD-A164780; CSSA-ASTRO-85-23) Avail: NTIS HC A03/MF A01 CSCL 03/2

Global convective flows in the solar convection zone have been predicted by theoretical interpretations of the global-scale ordering of magnetic fields and activity centers and by theoretical analyses of rotating convection zones. Direct evidence of these flows in the photosphere has not previously been found despite several long-term efforts. The signatures of such flows have now been detected by analyzing the daily series of low-resolution Dopplergrams obtained at the Wilcox Solar Observatory at Stanford Univ. The signatures are patterns of alternating east and west flows with amplitudes on the order of 25 m/s and longitudinal extent of about 30 degrees. The patterns move across the solar disc at approximately the solar rotation rate and have lifetimes of at least several rotations. Boundaries of the fast and slow flows are often associated with large magnetic active regions. GRA

DIRECTORY OF MESOSCALE SOLAR RADIATION INFORMATION SOURCES
Nov. 1985 44 p
(Contract DE-AC02-83CH-10093)
(DE85-016868; SERI/SP-271-2715) Avail: NTIS HC A03/MF A01

This directory contains thirty-nine US networks. A network comprises three or more mesoscale sites that concurrently measured solar radiation for at least one year. Mesoscale solar radiation information consists of solar radiation data from sites 20 to 200 km apart. Actual data from the networks are not included but information is provided on their characteristics and on how to obtain the data. The directory also identifies readily available, valuable literature on mesoscale research results. DOE

THEORETICAL STUDY OF THE X-RAY EMISSION FROM ASTROPHYSICAL SHOCK WAVES Semiannual Report, 1 Jun. 1985 - 31 May 1986
John Raymond Jun. 1986 9 p refs
(Grant NAGw-528)
(NASA-CR-177318; NAS 1.26:177318; SAPR-4; SAPR-5) Avail: NTIS HC A02/MF A01 CSCL 03B

Theoretical X-ray emission spectra are needed to interpret the X-ray emission observed by many low and moderate resolution X-ray instruments, and to provide diagnosis of physical conditions for high resolution spectra. Over the past decade, a set of model codes which compute the X-ray and XUV emission for a wide set of physical conditions, including high or low densities, photoionized gas, and time-dependent ionization balance was developed. In the past year, the atomic rate coefficients in the code was improved. Further capabilities were added, and applied to several astrophysical problems. Author

SURVEY OF ATMOSPHERIC RADIATION COMPONENTS FOR THE GAMMA AND COSMIC RAY ASTROPHYSICS BRANCH OF THE SPACE SCIENCE DIVISION OF THE NAVAL RESEARCH LABORATORY Final Report
31 May 1985 111 p
(Contract N00014-84-C-2089)
(AD-A165538) Avail: NTIS HC A06/MF A01 CSCL 03/1

A survey of atmospheric radiation components for the gamma and cosmic ray astrophysics branch of the Naval Research Laboratory has the following contents: Electron Capture Decay of Cosmic Rays; Cosmic Ray Heavy Ions at and Above 40,000 Feet; Neutron Generated Single Event Upsets in the Atmosphere; Nuclear Cross Sections, Cosmic Ray Propagation and Source Composition; Radiation Transport of Cosmic Ray Nuclei in Lunar Material and Radiation Doses; Non-Geometric Behavior of Nucleus Nucleus Total Inelastic Cross Sections; Environmental Models for Single Event Upset Estimation; Uncertainties in Cosmic Ray Source Composition; Late Stage in Acceleration of Cosmic Rays; Ultraheavy Cosmic Rays and Electron Capture; Propagation of Heavy Cosmic Ray Nuclei; On the Abundances of Ultraheavy Cosmic Rays; LET-Distributions and Doses of HZE Radiation Components at Near Earth Orbits; and Radiation Doses and LET (Linear Energy Transfer) Distributions of Cosmic Rays. GRA

99 GENERAL

No abstracts in this category.

Typical Subject Index Listing

The subject heading is the key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension has been added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The NASA accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus* (NASA SP-7053).

A

ABILITIES
Acquiring procedural skills from lesson sequences
[AD-A164580] N86-26829

ABIOGENESIS
Molecular and Elemental Dust Analyzer (MEDA) for the comet rendezvous asteroid flyby mission N86-26857
multiplex gas chromatography: A novel analytical technique for future planetary studies N86-26860
Ion Mobility Drift Spectrometer (IMDS) as a flight analytical instrument technique N86-26861
Adsorption and condensation of amino acids and nucleotides with soluble mineral salts N86-26863
The principle of cooperation and life's origin and evolution N86-26880

ABLATION
Optical model calculations of heavy-ion target fragmentation
[NASA-TM-87692] N86-27063
Theory of the reaction surface with freezing Lewis Number not equal to 1 and its application in the oxidation-sublimation coupling process
[AD-A163213] N86-27104

ABRASION
Paint removal process
[AD-D012167] N86-26436
Optical model calculations of heavy-ion target fragmentation
[NASA-TM-87692] N86-27063

ABRASIVES
The effects of steel profile and cleanliness on coating performance
[AD-A164788] N86-26443

ABSORBERS (MATERIALS)
The application of diffraction optics techniques to laser eye protection N86-26821

ABSORPTION CROSS SECTIONS
Determination of band oscillator strengths of atmospheric molecules from high resolution vacuum ultraviolet cross section measurements
[NASA-CR-177293] N86-26724

ABSORPTION SPECTRA
High-resolution absorption spectrum of the 6(1)S0 (YIELDS) 6(3)P1 transition in mercury with a Cw dye laser
[DE86-003492] N86-26815

ABSORPTIVITY
In situ monitoring of electrochemical reactions by surface enhanced Raman scattering
[PB86-157500] N86-26407
Colossus revisited: A review and extension of the Marsh-Schulkin shallow water transmission loss model (1962)
[AD-A164588] N86-27046

ABSTRACTS
The formal specification of an abstract database: Design and implementation
[AD-A164865] N86-27124
Directory of research publications
[AD-A164875] N86-27125
Compilation of abstracts of theses submitted by candidates for degrees
[AD-A164988] N86-27126

ACCELERATED LIFE TESTS
Bomb crater repair techniques for permanent airfields. Report 3. Series 4 tests
[AD-A164682] N86-26345
Accelerated corrosion testing of graphite/epoxy composites and aluminum alloy mechanically-fastened joints
[AD-A164772] N86-26382

ACCELERATION STRESSES (PHYSIOLOGY)
Dynamic behaviour of spherical and aspherical contact lenses exposed to +Gz-acceleration forces N86-26816

ACCELERATION TOLERANCE
Crash-resistant crewseat limit-load optimization through dynamic testing with cadavers
[AD-A164828] N86-26298

ACCEPTOR MATERIALS
Ionization induced instability in an electron collecting sheath
[AD-A165390] N86-26538

ACCESS CONTROL
Waiting-time approximations for cyclic-service systems with switchover times — local area networks
[CWI-OS-R8510] N86-27021
A double integral containing the modified Bessel function: Asymptotics and a device for computation — local area networks
[CWI-AM-R8507] N86-27022

ACCIDENT INVESTIGATION
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 3 of 1984 accidents
[PB85-916922] N86-26303
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 4 of 1984 accidents
[PB85-916923] N86-26304

ACCIDENT PREVENTION
Pressure systems energy release protection (gas pressurized systems)
[NASA-CR-178090] N86-26826

ACCIDENTS
Development and evaluation of a prototype life preserver
[AD-A163224] N86-26297
Evaluation of charged fog for smoke clearing shipboard fires
[AD-A165551] N86-26300
Thermal response tests of candidate insulation systems for the chlorine tank car
[AD-A165293] N86-26451

ACCUMULATORS
New techniques for the detection and capture of micrometeoroids N86-27187

ACCURACY
Navstar GPS (Global Positioning System) accuracy while surveying arrays of deep ocean transponders
[AD-A163364] N86-26313
A study of the optimization problem for calibrating a Lacoste and Romberg G gravity meter to determine circular errors
[AD-A165218] N86-26807
Estimates of circular error probabilities
[AD-A163257] N86-27028
A paradigm for reliable clock synchronization
[AD-A164819] N86-27040

ACETALS
Acid-catalyzed degradation of Poly(2-Butyl-1,3,6-Trioxocane)
[AD-A165327] N86-26452

ACID RAIN
Biochemical transformations in two plant/soil systems exposed to simulated acidic precipitation
[DE86-004040] N86-26713
Maryland Water Resources Research Center, fiscal year 1984 program report
[PB86-133253] N86-26721
Paleosols and the chemical evolution of the atmosphere N86-26870

ACIDS
Acid-catalyzed degradation of Poly(2-Butyl-1,3,6-Trioxocane)
[AD-A165327] N86-26452

ACOUSTIC ATTENUATION
Energy absorption of polyurethane-based polymer alloys
[AD-A164537] N86-26439
Colossus revisited: A review and extension of the Marsh-Schulkin shallow water transmission loss model (1962)
[AD-A164588] N86-27046

ACOUSTIC EXCITATION
Pressure probe and hot-film probe rsponses to acoustic excitation in mean flow
[NASA-TP-2581] N86-27043

ACOUSTIC MEASUREMENT
Pressure probe and hot-film probe rsponses to acoustic excitation in mean flow
[NASA-TP-2581] N86-27043

ACOUSTIC PROPAGATION
A synopsis of research on subbottom effects on underwater acoustic propagation
[AD-A165420] N86-27048

ACOUSTIC PROPERTIES
Navstar GPS (Global Positioning System) accuracy while surveying arrays of deep ocean transponders
[AD-A163364] N86-26313
A study of sea ice kinematics and their relationship to arctic ambient noise. Part 3, Section 1: Ambient noise. Section 2: Ambient noise
[AD-A165304] N86-26788
A study of sea ice kinematics and their relationship to arctic ambient noise. Part 3, section 3: Ambient noise
[AD-A165305] N86-26789

ACOUSTIC SCATTERING
Colossus revisited: A review and extension of the Marsh-Schulkin shallow water transmission loss model (1962)
[AD-A164588] N86-27046

ACOUSTIC VELOCITY
Colossus revisited: A review and extension of the Marsh-Schulkin shallow water transmission loss model (1962)
[AD-A164588] N86-27046

ACOUSTICS

AIR CONDITIONING EQUIPMENT
Linear resonance cooler
[AD-A165492] N86-26483
AIR CURRENTS
The air-injection method of fixing boundary-layer transition and investigating scale effects — Spacelab human physiology payload
[RAE-TR-85025] N86-26542
AIR DEFENSE
What USAF aircraft should be the Wild Weasel of the 1990's?: An assessment of the F-4G, the F-15WW, and F-16WW
[AD-A164727] N86-26279
Flight simulator: Comparison of resolution thresholds for two light valve video projectors
[AD-A164577] N86-26344
AIR NAVIGATION
A cost-effective night attack system for ground attack aircraft N86-26317
A mission navigation and control system for modern military helicopters N86-26327
Particular problems of airworthiness from an ophthalmological view N86-26812
AIR POLLUTION
Investigation into alternative fuel rating techniques
[DE86-004277] N86-26467
Environmental assessment of NOx control on a compression ignition large bore reciprocating internal combustion engine. Volume 1: Technical results
[PB86-155819] N86-26637
Aircraft engine emissions estimator
[AD-A164552] N86-26715
Nonpoint source pollution: information guide
[PB86-130275] N86-26720
AIR QUALITY
A microcomputer pollution model for civilian airports and Air Force bases
[AD-A163232] N86-26714
User-friendly screening model for point-source impact assessment
[PB86-176369] N86-26722
AIR TRAFFIC CONTROL
Integrated risk/cost planning models for the US Air Traffic system
[NASA-CR-177274] N86-26312
AIR WATER INTERACTIONS
An investigation of the marine boundary layer during cold air outbreak
[NASA-CR-177287] N86-26758
Changes in the ocean mixed layer following extraordinary atmospheric forcing
[AD-A164703] N86-26786
Data tabulations and analysis of diurnal sea surface temperature variability observed at LOTUS (long-term upper ocean study)
[AD-A165406] N86-26790
The role of the oceans in the atmospheric cycle of carbonyl sulfide N86-26796
AIRCRAFT ACCIDENTS
Crash-resistant crewseat limit-load optimization through dynamic testing with cadavers
[AD-A164828] N86-26298
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 3 of 1984 accidents
[PB85-916922] N86-26303
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 4 of 1984 accidents
[PB85-916923] N86-26304
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 5 of 1984 accidents
[PB86-916901] N86-26305
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 6 of 1984 accidents
[PB86-916902] N86-26306
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 7 of 1984 accidents
[PB86-916903] N86-26307
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 8 of 1984 accidents
[PB86-916904] N86-26308
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 9 of 1984 Accidents
[PB86-916905] N86-26309
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 11 of 1984 accidents
[PB86-916907] N86-26310
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 13 of 1984 accidents
[PB86-916909] N86-26311
AIRCRAFT CONFIGURATIONS
Aircraft performance optimization with thrust vector control
[AD-A165388] N86-26334
AIRCRAFT CONTROL
Summary of results of NASA F-15 flight research program
[NASA-TM-86811] N86-26277
Flight test guide for certification of transport category airplanes
[FAA-AC-25-7] N86-26329
Decoupling control synthesis for an oblique-wing aircraft
[NASA-TM-86801] N86-26339
Study on using a digital ride quality augmentation system to trim an engine-out in a Cessna 402B
[NASA-CR-177272] N86-26342
Failures in advanced flight control systems of future transport aircraft — semisubmersible platform
[NLR-TR-84108-U] N86-26343
AIRCRAFT DESIGN
Proceedings of the Conference on Low Reynolds Number Airfoil Aerodynamics
[NASA-CR-177308] N86-26283
Human factors: The Cinderella discipline in cockpit interface design N86-26825
AIRCRAFT DETECTION
An efficient decision-making-free filter for processes with abrupt changes — aircraft tracking
[NLR-MP-84060-U] N86-27018
AIRCRAFT ENGINES
Aircraft engine emissions estimator
[AD-A164552] N86-26715
AIRCRAFT EQUIPMENT
Lightning discharge protection rod
[NASA-CASE-LAR-13470-1] N86-26296
Crash-resistant crewseat limit-load optimization through dynamic testing with cadavers
[AD-A164828] N86-26298
Guidance-Control-Navigation Automation for Night All-Weather Tactical Operations
[AGARD-CP-387] N86-26316
A cost-effective night attack system for ground attack aircraft N86-26317
Cockpit automation requirements derived from mission functions data N86-26318
Synthetic real-time relief display all-weather airborne missions N86-26321
The wide field helmet mounted display N86-26322
A solid-state map display for rapid response operation N86-26323
Applications of digital terrain data in flight operations N86-26324
Use of a CO2 laser lidar for flight and penetration at very low altitudes N86-26326
AIRCRAFT GUIDANCE
Guidance-Control-Navigation Automation for Night All-Weather Tactical Operations
[AGARD-CP-387] N86-26316
A new technique for terrain following/terrain avoidance guidance command generation N86-26325
A mission navigation and control system for modern military helicopters N86-26327
AIRCRAFT HAZARDS
Flammability of aircraft hydraulic fluids: A bibliography
[AD-A165463] N86-26296
Calibration of droplet sizing and liquid water content instruments: Survey and analysis
[NASA-CR-175099] N86-26598
AIRCRAFT INSTRUMENTS
A mission navigation and control system for modern military helicopters N86-26327
AIRCRAFT LANDING
Validation of a new flying quality criterion for the landing task
[NASA-TM-88261] N86-26341
A model and experimental analysis of pilot decision making behavior for various automatic approach conditions
[NLR-TR-84037-U] N86-26835
AIRCRAFT MAINTENANCE
An analysis of S-3 SDLM (Standard Depot Level Maintenance) corrosion documentation procedures
[AD-A165588] N86-26282
AIRCRAFT PERFORMANCE
X-29A technology demonstrator flight test program overview
[NASA-TM-86809] N86-26328
Aircraft performance optimization with thrust vector control
[AD-A165388] N86-26334
Validation of a new flying quality criterion for the landing task
[NASA-TM-88261] N86-26341
AIRCRAFT PILOTS
Automation and pilot interactions in night or all-weather tactical operations N86-26319
The healthy motivation to fly: No psychiatric diagnosis
[AD-A164944] N86-26832
AIRCRAFT RELIABILITY
Flight test guide for certification of transport category airplanes
[FAA-AC-25-7] N86-26329
Aircraft nuclear survivability methods
[AD-A163218] N86-26332
AIRCRAFT SAFETY
Safety report General Aviation Crashworthiness Project. Phase 3: Acceleration loads and velocity changes of survivable general aviation accidents
[PB85-917016] N86-26302
AIRCRAFT STABILITY
Summary of results of NASA F-15 flight research program
[NASA-TM-86811] N86-26277
Six degree-of-freedom LIVE isolation systems, part 1
[NASA-CR-177928] N86-26331
Study on using a digital ride quality augmentation system to trim an engine-out in a Cessna 402B
[NASA-CR-177272] N86-26342
AIRCRAFT SURVIVABILITY
Safety report General Aviation Crashworthiness Project. Phase 3: Acceleration loads and velocity changes of survivable general aviation accidents
[PB85-917016] N86-26302
Aircraft nuclear survivability methods
[AD-A163218] N86-26332
AIRFOIL PROFILES
Viscid/inviscid interaction analysis of subsonic turbulent trailing-edge flows
[AD-A165207] N86-26292
AIRFOILS
Proceedings of the Conference on Low Reynolds Number Airfoil Aerodynamics
[NASA-CR-177308] N86-26283
A computational transonic flutter boundary tracking procedure
[NASA-TM-87708] N86-26284
A study of the unsteady aerodynamic forces generated by a deforming Joukowski airfoil N86-26723
AIRFRAME MATERIALS
Evaluation of the effects of a plastic bead paint removal process on properties of aircraft structural materials
[AD-A165289] N86-26384
Engineering property comparisons for 2324-T39 and 2024-T351 aluminum alloy plate — semisubmersible platform
[NLR-TR-84021-U] N86-26429
The postbuckling behavior of blade-stiffened carbon epoxy panels loaded in compression — semisubmersible platform
[NLR-MP-85019-U] N86-26661
Some tests to assess the effect of crack stoppers on the fatigue life of center-notched specimens — semisubmersible platform
[NLR-TR-84051-U] N86-26662
AIRSPACE
Analyzing the cost effectiveness of using flight simulators in the Israeli Air Force
[AD-A164864] N86-26346

ALASKA
Influence of the Yukon River on the Bering Sea
[NASA-CR-177310] N86-26783
ALBEDO
Investigation of the diffuse ultraviolet background using satellite data: Dynamics explorer guest investigator program
[NASA-CR-178809] N86-26739
ALGAE
Biodeuterated materials: High-temperature lubricants from algae
[AD-A164913] N86-26445
A simulation analysis of the fate of phytoplankton within the mid-Atlantic bight
[NASA-CR-177265] N86-26670
ALGEBRA
Operational soil moisture prediction model
[AD-A165313] N86-26481
An operational semantics for process algebra — turing machines
[CWI-CS-R8522] N86-26981
Global renaming operators in concrete process algebra — turing machines
[CWI-CS-R8521] N86-27027
ALGORITHMS
Uniformly high order accurate essentially non-oscillatory schemes 3
[NASA-CR-178101] N86-26287
Theoretical analysis of the electrical aspects of the basic electro-impulse problem in aircraft de-icing applications
[NASA-CR-176808] N86-26330
Numerical simulation of turbulent flames using vortex methods
[AD-A164060] N86-26390
Spectrum orbit utilization program technical manual SOUP5 Version 3.8
[NASA-CR-174944] N86-26489
Robust and nonparametric detection of fading narrowband signals
[AD-A164924] N86-26512
Compaction with automatic jog introduction
[AD-A163436] N86-26527
Multigrid method for a vortex breakdown simulation
[NASA-CR-178106] N86-26547
On substructuring algorithms and solution techniques for the numerical approximation of partial differential equations N86-26558
Multigrid method for a vortex breakdown simulation N86-26562
Construction of higher order accurate vortex and particle methods N86-26563
Pseudo-time algorithms for the Navier-Stokes equations N86-26564
Some results on uniformly high order accurate essentially non-oscillatory schemes N86-26566
AZTEC: A front tracking code based on Godunov's method N86-26568
Development of a testbed for multisensor distributed decision algorithms
[AD-A164487] N86-26601
History matching by spline approximation and regularization in single-phase areal reservoirs
[NASA-CR-178087] N86-26664
Gravity gradiometer survey errors
[AD-A165575] N86-26749
Goldstone field test activities: Sky survey N86-26912
JPL's role in the SETI program N86-26913
SPECFUN - a portable special function package
[DE86-004060] N86-26929
Algorithms for supercomputers
[DE86-004480] N86-26930
A lateral guidance algorithm to reduce the post-aerobraking burn requirements for a lift-modulated orbital transfer vehicle
[NASA-CR-177295] N86-26932
An adaptive guidance algorithm for an aerodynamically assisted orbital plane change maneuver
[NASA-CR-177296] N86-26933
Error properties of Hartley transform algorithms
[AD-A163217] N86-26934
Application of flux-corrected transport to TTCP joint launch blast computational effort
[AD-A163332] N86-26941
Space-efficient algorithms for computational geometry
[AD-A163426] N86-26945
Surface construction from planar contours
[AD-A164862] N86-26950
Program derivation through transformations: The evolution of list-copying algorithms — turing machines
[CWI-CS-R8520-REV] N86-26980
Research in distributed and parallel systems
[AD-A165486] N86-26984
The design and implementation of cost-effective algorithms for direct solution of banded linear systems on the vector processor system 32 supercomputer
[NASA-CR-178681] N86-26992
Exact integration algorithm for use with modal analysis
[DE85-018533] N86-26993
The solution of nonlinear time-dependent problems using modal coordinates
[AD-A163535] N86-26994
A recursive boundary element with initial error investigation
[AD-A163563] N86-26995
End-point corrected trapezoidal quadrature rules for singular functions
[AD-A163242] N86-27000
On density estimation from censored data by penalized likelihood methods
[AD-A163388] N86-27002
Computation of the stationary values of the product of two Raleigh quotients
[AD-A164586] N86-27005
Approach to error-estimation in the application of dimension algorithms
[DE86-004733] N86-27016
A paradigm for reliable clock synchronization
[AD-A164819] N86-27040
Transverse vorticity measurements using an array of four hot-wire probes
[NASA-CR-178098] N86-27042
ALIGNMENT
Contoured punch tool for removing semi-tubular rivets
[AD-D012172] N86-26631
Focused ion beam fabrication of graded channel FET's in GaAs and Si
[AD-A163475] N86-27089
ALKALIES
Optical and electrochemical study of model zinc electrode pores in alkaline electrolyte
[DE86-002967] N86-26521
Reaction dynamics of electronically excited alkali atoms with simpler molecules
[DE85-014538] N86-27080
Electrical measurements on alpha-quartz crystals
[AD-A164793] N86-27096
ALKANES
Molecular jet study of vanderWaals complexes of flexible molecules: N-Propyl benzene solvated by small alkanes
[AD-A164600] N86-26394
ALKENES
LC-(1)H NMR characterization studies of tricyclic aromatics and olefins in diesel fuels
[AD-A165402] N86-26464
ALKYL COMPOUNDS
Molecular jet study of vanderWaals complexes of flexible molecules: N-Propyl benzene solvated by small alkanes
[AD-A164600] N86-26394
ALL-WEATHER AIR NAVIGATION
Guidance-Control-Navigation Automation for Night All-Weather Tactical Operations
[AGARD-CP-387] N86-26316
Automation and pilot interactions in night or all-weather tactical operations N86-26319
Synthetic real-time relief display all-weather airborne missions N86-26321
The wide field helmet mounted display N86-26322
ALLENDE METEORITE
Electrical conductivity of carbonaceous chondrites and electric heating of meteorite parent bodies N86-27148
ALLOYS
The inhibition of vapor-phase corrosion. A review
[AD-A163430] N86-26417
Energy absorption of polyurethane-based polymer alloys
[AD-A164537] N86-26439
Low-cycle thermal fatigue
[NASA-TM-87225] N86-26651
ALOHA SYSTEM
Analysis of a multiaccess control scheme
[AD-A165496] N86-26986
ALPHANUMERIC CHARACTERS
Computers and data transmission equipment. Alphanumeric codes
[AD-A164794] N86-26923
ALTIMETERS
The study of gravity field estimation procedures
[AD-A164564] N86-26745
ALTITUDE
Factors affecting the vertical motion of a zero-pressure, polyethylene, free balloon
[AD-A164596] N86-26290
ALUMINATES
Evaluation of TWT (Traveling Wave Tube) cathode impregnant manufacturing procedures
[AD-A163360] N86-26526
ALUMINUM
Advanced materials research status and requirements. Volume 1: Technical summary
[AD-A165338] N86-26385
Advanced materials research status and requirements. Volume 2, appendix: Material properties data review
[AD-A165339] N86-26386
Material property and fracture testing of 7075-T6 extruded aluminum
[AD-A164933] N86-26421
Structure and properties of polymers and organosilanes adsorbed onto oxidized aluminum and titanium
[AD-A165210] N86-26449
Transient conductance measurements and heat-flow analysis of pulsed-laser-induced melting of aluminum thin films
[DE86-003928] N86-26613
High strain rate material behavior
[AD-A165214] N86-26659
ALUMINUM ALLOYS
Accelerated corrosion testing of graphite/epoxy composites and aluminum alloy mechanically-fastened joints
[AD-A164772] N86-26382
Evaluation of the effects of a plastic bead paint removal process on properties of aircraft structural materials
[AD-A165289] N86-26384
The delayed fracture of aluminum alloys
[AD-A165203] N86-26422
Engineering property comparisons for 2324-T39 and 2024-T351 aluminum alloy plate — semisubmersible platform
[NLR-TR-84021-U] N86-26429
Effects of cladding and anodizing on flight simulation fatigue of 2024-T3 and 7475-T761 aluminum alloys — semisubmersible platform
[NLR-TR-85006-U] N86-26430
Formation of surface layers of icosahedral Al(Mn)
[DE86-004606] N86-26433
Interframe buckling of aluminium alloy stiffened plating — warship materials
[AMTE(S)-R-85104] N86-26654
Some tests to assess the effect of crack stoppers on the fatigue life of center-notched specimens — semisubmersible platform
[NLR-TR-84051-U] N86-26662
Constant amplitude and flight simulation of fatigue tests on adhesive bonded lap joint specimens of 2024-T3 sheet material — semisubmersible platform
[NLR-TR-84090-U] N86-26663
ALUMINUM ANTIMONIDES
Entropy-driven loss of gas-phase Group 5 species from GOLD/3-5 compound semiconductor systems
[AD-A165584] N86-27100
ALUMINUM COATINGS
Paint removal process
[AD-D012167] N86-26436
ALUMINUM GALLIUM ARSENIDES
Transient transport in binary and ternary semiconductors
[AD-A165464] N86-27098
ALUMINUM GRAPHITE COMPOSITES
Evaluation of the effects of a plastic bead paint removal process on properties of aircraft structural materials
[AD-A165289] N86-26384
ALUMINUM OXIDES
Oxidation and emittance of superalloys in heat shield applications
[NASA-TP-2578] N86-26412
Evaluation of TWT (Traveling Wave Tube) cathode impregnant manufacturing procedures
[AD-A163360] N86-26526
Electron induced conductivity of Al2O3 as pertaining to thermionic integrated circuits
[AD-A165589] N86-26539
AMBIENCE
Infrasonic ambient ocean noise spectra from freely drifting sensors
[AD-A163413] N86-26785
A study of sea ice kinematics and their relationship to arctic ambient noise. Part 3, Section 1: Ambient noise. Section 2: Ambient noise
[AD-A165304] N86-26788
A study of sea ice kinematics and their relationship to arctic ambient noise. Part 3, section 3: Ambient noise
[AD-A165305] N86-26789
AMIDES
A comparative study of prebiotic and present day translational models N86-26877
Ion transport across synthetic and biological membranes: Ionophore-mediated transport
[AD-A163269] N86-27057
AMINES
Structural chemistry of energetic compounds
[AD-A164813] N86-26397
AMINO ACIDS
Stereoselective formation of a 2 prime (3 prime)-aminoacyl ester of a nucleotide
[NASA-CR-176830] N86-26373

Synthesis and analysis in studies of chemical evolution N86-26864
Further work on sodium montmorillonite as catalyst for the polymerization of activated amino acids N86-26866
Adsorption and condensation of amino acids and nucleotides with soluble mineral salts N86-26869
Intramolecular interactions in aminoacyl nucleotides: Implications regarding the origin of genetic coding and protein synthesis N86-26873
Stereoselective aminoacylation of RNA N86-26875
Models of glycolysis: Glyceraldehyde as a source of energy and monomers for prebiotic condensation reactions N86-26876
A comparative study of prebiotic and present day translational models N86-26877
Protobiological informatoin, bidirectional recognition and reverse translation N86-26878
Investigations with methanobacteria and with evolution of the genetic code N86-26890
Functional and evolutionary relationships between bacteriorhodopsin and halorhodopsin in the archaebacterium, halobacterium halobium N86-26892

AMMONIA
Photolysis products of CO, NH3 aND H2O and their significance to reactions on interstellar grains N86-26849

AMMUNITION
Damage prediction of projectile penetration process based on energy dissipation rate
[AD-A163268] N86-26656

AMORPHOUS MATERIALS
Amorphous silicon spatial light modulator
[AD-D012168] N86-26526
Laser-heated CVD process for depositing thin films for low-cost solar cell applications
[DE85-016887] N86-26699
Research on high-efficiency, stacked, multijunction, amorphous silicon alloy thin-film solar cells
[DE85-016875] N86-26707
Field induced dipole reorientation and piezoelectricity in heavily plasticized nylon 11 films
[AD-A164683] N86-27095

AMPLIFICATION
Analysis of helical waveguide
[AD-A163252] N86-26522
Hydraulic power modulation laminar proportional amplifier development
[AD-A163390] N86-26579
Three-dimensional simulations of an XUV free-electron laser
[DE86-003654] N86-26610
A unifying approach to linear and nonlinear array processing: A tutorial
[AD-A164777] N86-27012

AMPLIFIERS
Analysis of helical waveguide
[AD-A163252] N86-26522

AMPLITUDES
Objective analysis of tidal fields in the Atlantic and Indian Oceans
[NASA-TM-87773] N86-26782

AMPTE (SATELLITES)
Waves and electric fields associated with the December 27, 1984, artificial comet
[AD-A163409] N86-26744

ANAEROBES
The principle of cooperation and life's origin and evolution N86-26880
Thioredoxins in evolutionarily primitive organisms N86-26893

ANALOG CIRCUITS
JPL's role in the SETI program N86-26913

ANALYSIS (MATHEMATICS)
Mechanical face seal dynamics
[AD-A164978] N86-26833
The mathematical structure of error correction models
[AD-A163344] N86-27001

ANALYSIS OF VARIANCE
Properties of batch means from stationary ARMA (Autoregressive moving average) time series
[AD-A165187] N86-27033

ANALYTICAL CHEMISTRY
LC-(1)H NMR characterization studies of tricyclic aromatics and olefins in diesel fuels
[AD-A165402] N86-26464

ANALYZERS
TOPAZ - The transient one-dimensional pipe flow analyzer: Equations and numerics
[DE86-005063] N86-26592

ANEMOMETERS
Operational soil moisture prediction model
[AD-A165313] N86-26481
A study of the methodology of low-altitude wind shear detection with special emphasis on the low level wind shear alert system concept
[AD-A164939] N86-26760

ANIONS
Structure/property studies of a heterocyclic conductive polymer
[AD-A164959] N86-26447

ANISOTROPIC FLUIDS
Acoustic normal modes using the propagator matrix technique for a stratified ocean overlaying an inhomogeneous anisotropic porous bed
[AD-A165436] N86-27049

ANISOTROPY
Damage prediction of projectile penetration process based on energy dissipation rate
[AD-A163268] N86-26656
Particle and wave dynamics during plasma injections
[AD-A163210] N86-26742
Investigations of ultrasonic wave interactions at boundaries separating anisotropic materials
[DE86-004953] N86-27050

ANNEALING
Amorphization and recrystallization processes in monocrystalline beta silicon carbide thin films
[DE86-004797] N86-27101

ANNUAL VARIATIONS
Equatorial F region vertical plasma drifts: Seasonal and longitudinal asymmetries in the American sector
[INPE-3839-PRE/909] N86-26736
A study of sea ice kinematics and their relationship to arctic ambient noise. Part 3, Section 1: Ambient noise. Section 2: Ambient noise
[AD-A165304] N86-26788

ANNULAR NOZZLES
Aircraft performance optimization with thrust vector control
[AD-A165368] N86-26334

ANODIZING
Effects of cladding and anodizing on flight simulation fatigue of 2024-T3 and 7475-T761 aluminum alloys — semisubmersible platform
[NLR-TR-85006-U] N86-26430

ANOMALIES
Geochemical anomalies, bolide impacts and biological extinctions on the Earth N86-26903
Colossus revisited: A review and extension of the Marsh-Schulkin shallow water transmission loss model (1962)
[AD-A164588] N86-27046

ANTARCTIC REGIONS
Microfossils in the Antarctic cold desert: Possible implications for Mars N86-26897

ANTENNA ARRAYS
Analysis of an aperture coupled microstrip antenna
[AD-A165283] N86-26537

ANTENNA DESIGN
A loop antenna for a VLF (Very Low Frequency) satellite transmitter
[AD-A164652] N86-26506

ANTENNA FEEDS
Moment method analysis of microstrip antennas over a wide frequency range
[NASA-CR-176842] N86-26485

ANTENNA RADIATION PATTERNS
An E-plane analysis of aperture-matched horn antennas using the moment method and the uniform geometrical theory of diffraction
[NASA-CR-176841] N86-26484
Simulation of an aircraft flying through a ground station to satellite link
[NASA-CR-176845] N86-26487
A loop antenna for a VLF (Very Low Frequency) satellite transmitter
[AD-A164652] N86-26506
Concept study of a multiple beam lens antenna with an internal phase shift mask
[AD-A165277] N86-26535
Radiation of long electromagnetic waves by a modulated electron beam in the ionosphere
[AD-A163306] N86-26743

ANTENNAS
The negligible effect of non-Gaussian surface deviations in large MM-Lambda reflectors' aperture efficiency and the performance of Itapetinga 45-ft antenna at Lambda = 3.3 MM
[INPE-3837-PRE/908] N86-26488
Model studies of surface noise interference in ground-probing radar
[AD-A163206] N86-26500

ANTHROPOMETRY
Demographic and anthropometric assessment of US Army anthropometric data base
[AD-A164637] N86-26838

ANTIBODIES
Macrophage structure and function
[AD-A163314] N86-26793

ANTIGENS
Macrophage structure and function
[AD-A163314] N86-26793

ANTIMISSILE DEFENSE
Wakefield accelerators for SDI
[DE86-003673] N86-27082

APERTURES
An E-plane analysis of aperture-matched horn antennas using the moment method and the uniform geometrical theory of diffraction
[NASA-CR-176841] N86-26484
Simulation of an aircraft flying through a ground station to satellite link
[NASA-CR-176845] N86-26487
Analysis of an aperture coupled microstrip antenna
[AD-A165283] N86-26537
Grating interferometric sensors
[AD-A165593] N86-26609

APPLICATIONS PROGRAMS (COMPUTERS)
TOPAZ - The transient one-dimensional pipe flow analyzer: Equations and numerics
[DE86-005063] N86-26592
LAWEB (Lake Weather Broadcast): Data processing for the Great Lakes
[PB86-176858] N86-26780
A theory of partial systems — software reuse
[KFK-3962] N86-26975

APPROACH
Verifying temporal properties without using temporal logic
[AD-A164820] N86-26948

APPROACH CONTROL
A model and experimental analysis of pilot decision making behavior for various automatic approach conditions
[NLR-TR-84037-U] N86-26835

APPROXIMATION
Stability analysis of intermediate boundary conditions in approximate factorization schemes N86-26554
On substructuring algorithms and solution techniques for the numerical approximation of partial differential equations N86-26558
Some results on uniformly high order accurate essentially non-oscillatory schemes N86-26566
On numerical dispersion by upwind differencing N86-26567
The weak element method applied to Helmholtz type equations N86-26570
History matching by spline approximation and regularization in single-phase areal reservoirs
[NASA-CR-178087] N86-26684
Asymptotic normality of U-statistics based on trimmed samples
[AD-A163346] N86-27032

ARCHITECTURE
Commercial SATCOM subarchitecture assessments and initial concepts
[AD-A165549] N86-26516

ARCHITECTURE (COMPUTERS)
Stanford Hardware Development Program N86-26910
Interprocessor communication issues in fat-tree architectures
[AD-A163425] N86-26921
User's manual for the prototype ADA (trademark) Compiler Evaluation Capability (ACEC), version 1
[AD-A163272] N86-26938
Schema: An architecture for knowledge based CAD
[AD-A163437] N86-26946
Ada (Trademark) training curriculum. Ada (Registered Trademark) for software managers, I201. Volume 2: Teacher's guide
[AD-A165315] N86-26959
Implementation of a natural language processor using functional grammar
[AD-A165426] N86-26972
A conceptual modeling expert system — biological model
[CWI-CS-R8518] N86-26976
Research in distributed and parallel systems
[AD-A165486] N86-26984

ARCTIC OCEAN
A review of methods to track oil in arctic waters
[AD-A164679] N86-26716

ARCTIC REGIONS
A study of sea ice kinematics and their relationship to arctic ambient noise. Part 3, Section 1: Ambient noise. Section 2: Ambient noise
[AD-A165304] N86-26788
A study of sea ice kinematics and their relationship to arctic ambient noise. Part 3, section 3: Ambient noise
[AD-A165305] N86-26789

ARMED FORCES (UNITED STATES)
The General Electric F404 - engine of the RAAF's new fighter
[AD-A164562] N86-26336
Changes in Naval Aviation Basic Instrument flight training: An analysis
[AD-A164738] N86-26830

Demographic and anthropometric assessment of US Army anthropometric data base
[AD-A164837] N86-26636

ARRAYS

Navstar GPS (Global Positioning System) accuracy while surveying arrays of deep ocean transponders
[AD-A163364] N86-26313

Infrasonic ambient ocean noise spectra from freely drifting sensors
[AD-A163413] N86-26786

MQS evaluation. Revision 1
[AD-A164589] N86-27047

ARSENIC COMPOUNDS

The effects of arsine pressure on the compositions, carrier concentrations, mobilities and growth rates of epitaxial layers of Ga(x)In(1-x)As prepared by the VPE (Vapor-Phase Epitaxy)-hydride technique
[AD-A165276] N86-27097

ARTIFICIAL INTELLIGENCE

A demonstration expert system for implementing emergency procedures in a high-performance fighter aircraft
[MAE-1749] N86-26295

Human factors in rule-based systems
[AD-A165309] N86-26840

Choosing architectures for expert systems
[AD-A163343] N86-26920

Semi-applicative programming. Examples of context free recognizers
[AD-A164897] N86-26951

European science notes. Volume 40, number 4
[AD-A165292] N86-27134

ARTIFICIAL SATELLITES

Reliability prediction for spacecraft
[AD-A164747] N86-26359

ASCENT TRAJECTORIES

Factors affecting the vertical motion of a zero-pressure, polyethylene, free balloon
[AD-A164596] N86-26290

ASHES

Proceedings of the Second Annual Heat Engines Contractors Meeting
[DE86-006595] N86-26705

ASPECT RATIO

Free gyroscope experiments of two immiscible liquids in a partially filled cylinder
[AD-A164937] N86-26585

ASPHALT

Bomb crater repair techniques for permanent airfields. Report 3. Series 4 tests
[AD-A164662] N86-26345

Comparative study of nondestructive pavement testing, WES (Waterways Experiment Station) NDT (nondestructive tests) methodologies
[AD-A163379] N86-26480

ASTEROIDS

New techniques for the detection and capture of micrometeoroids N86-26962

Proposed Earth based cratering experiments at low G in hard vacuum N86-27142

ASTRONOMICAL CATALOGS

Investigation of the diffuse ultraviolet background using satellite data: Dynamics explorer guest investigator program
[NASA-CR-176809] N86-26739

Using the IRAS data to search in the asteroid belt for any potential evidence of galactic colonization N86-26906

ASTROPHYSICS

Summer study program in geophysical fluid dynamics, Woods Hole Oceanographic Institution: Chaos
[AD-A164601] N86-26680

Field theoretic investigations on particle physics and cosmology
[DE86-004516] N86-27106

Theoretical study of the X-ray emission from astrophysical shock waves
[NASA-CR-177318] N86-27176

ASYMMETRY

Factors affecting the vertical motion of a zero-pressure, polyethylene, free balloon
[AD-A164596] N86-26290

Viscid/inviscid interaction analysis of subsonic turbulent trailing-edge flows
[AD-A165207] N86-26292

Decoupling control synthesis for an oblique-wing aircraft
[NASA-TM-86801] N86-26339

Study of charge and polarization distribution in polymers
[AD-A164603] N86-26441

ASYMPTOTIC METHODS

Asymptotic normality of U-statistics based on trimmed samples
[AD-A163348] N86-27032

ASYMPTOTIC PROPERTIES

Generalized order statistics, Bahadur representations and sequential nonparametric fixed-width confidence intervals
[AD-A163329] N86-27031

ASYMPTOTIC SERIES

An abstract delay-differential equation modeling size dependent cell growth and division — local area networks
[CWI-AM-R8608] N86-27023

ATCHAFALAYA RIVER BASIN (LA)

The Atchafalaya River Delta. Report 7. Analytical analysis of the development of the Atchafalaya River Delta
[AD-A164931] N86-26673

ATLANTIC OCEAN

A simulation analysis of the fate of phytoplankton within the mid-Atlantic bight
[NASA-CR-177265] N86-26670

Identification manual for phytoplankton of the United States Atlantic coast
[PB86-151222] N86-26792

ATMOSPHERIC BOUNDARY LAYER

Investigations of the micro-turbulence in the bottom of the boundary layer
[AD-A165306] N86-26748

An investigation of the marine boundary layer during cold air outbreak
[NASA-CR-177287] N86-26758

ATMOSPHERIC CHEMISTRY

The neutral/ion chemistry of sodium in the stratosphere and mesosphere
[AD-A164636] N86-26747

Paleocoda and the chemical evolution of the atmosphere N86-26670

ATMOSPHERIC CIRCULATION

Investigations of the micro-turbulence in the bottom of the boundary layer
[AD-A165306] N86-26748

Effect of stochastic perturbations on a spectral model of atmospheric circulation — mathematical model
[CWI-AM-R8515] N86-26751

Generation of available potential energy and the energy cycle during the global weather experiment
[NASA-CR-177872] N86-26756

ATMOSPHERIC COMPOSITION

Determination of band oscillator strengths of atmospheric molecules from high resolution vacuum ultraviolet cross section measurements
[NASA-CR-177293] N86-26724

Kinematics, composition and thermodynamics of the mesopause, turbopause, region of the atmosphere (between 80 and 120 km) related to the Aerocassisted Orbit Transfer Vehicle (AOTV) operations
[NASA-TM-86545] N86-26735

The neutral/ion chemistry of sodium in the stratosphere and mesosphere
[AD-A164636] N86-26747

The role of the oceans in the atmospheric cycle of carbonyl sulfide N86-26796

The production of trace gases by photochemistry and lightning in the early atmosphere N86-26851

Investigation of porous polymer gas chromatographic packings for atmospheric analysis of extraterrestrial bodies N86-26856

Earth's early atmosphere as seen from carbon and nitrogen isotopic analysis of Archean sediments N86-26893

Microbial contributions to the Precambrian Earth N86-26899

ATMOSPHERIC EFFECTS

Environmental effects on the static and fatigue strength of graphite/epoxy structures
[AR-304-044] N86-26378

The inhibition of vapor-phase corrosion. A review
[AD-A163430] N86-26417

ATMOSPHERIC HEAT BUDGET

Three-level energy balance climate model with topography, explicit radiative transfer, and explicit sea ice and snow mass budgets
[PB86-181799] N86-26638

ATMOSPHERIC IONIZATION

Measurements of X-ray energy deposition in the middle atmosphere N86-26726

Review of rocket-borne ion mass spectrometry in the middle atmosphere N86-26730

ATMOSPHERIC MODELS

Three-level energy balance climate model with topography, explicit radiative transfer, and explicit sea ice and snow mass budgets
[PB86-181799] N86-26638

Thermospheric models: A short review on the basic assumptions
[INPE-3823-PRE/999] N86-26738

The neutral/ion chemistry of sodium in the stratosphere and mesosphere
[AD-A164636] N86-26747

Study of ionospheric and tropospheric models — satellite tracking
[ESA-CR(P)-2157] N86-26780

Generation of available potential energy and the energy cycle during the global weather experiment
[NASA-CR-177872] N86-26756

Relative - humidity parameterization of the Navy Aerosol Model (NAM)
[AD-A163209] N86-26759

Changes in the ocean mixed layer following extraordinary atmospheric forcing
[AD-A164703] N86-26798

Measurements of physical properties of model Titan atmospheres N86-26854

Experimental basis for a Titan probe organic analysis N86-26855

Energy yields in the prebiotic synthesis of hydrogen cyanide and formaldehyde N86-26869

ATMOSPHERIC OPTICS

Theoretical N2-, O2- and air-broadened halfwidths of ozone calculated by quantum Fourier transform theory with realistic collision dynamics
[AD-A163276] N86-26391

ATMOSPHERIC PHYSICS

Theoretical N2-, O2- and air-broadened halfwidths of ozone calculated by quantum Fourier transform theory with realistic collision dynamics
[AD-A163276] N86-26391

ATMOSPHERIC PRESSURE

Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Kunsan AB, South Korea
[AD-A165553] N86-26764

Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Indian Mountain AFS, Alaska
[AD-A165554] N86-26765

Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Kelly AFB, Texas
[AD-A165555] N86-26766

Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Tin City AFS, Alaska
[AD-A165556] N86-26767

Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Cape Lisburne, Alaska
[AD-A165557] N86-26768

Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Langley AFB, Virginia
[AD-A165558] N86-26769

Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Talkeetna AFS, Alaska
[AD-A165559] N86-26770

Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Beale AFB, California
[AD-A165560] N86-26771

Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, La Crosse Municipal Airport, Wisconsin
[AD-A165561] N86-26772

Camp Casey, South Korea Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F
[AD-A165562] N86-26773

Westover AFB, Massachusetts Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F
[AD-A165563] N86-26774

Vertical modes and energetics of gravitational and rotational modes in a multilevel global spectral model
[PB86-160165] N86-26777

ATMOSPHERIC RADIATION

Survey of atmospheric radiation components for the Gamma and Cosmic Ray Astrophysics Branch of the Space Science Division of the Naval Research Laboratory
[AD-A165538] N86-27177

ATMOSPHERIC REFRACTION

Investigations of the micro-turbulence in the bottom of the boundary layer
[AD-A165306] N86-26748

ATMOSPHERIC SOUNDING

Middle Atmosphere Program. Handbook for MAP, volume 19
[NASA-CR-176800] N86-26725

ATMOSPHERIC TEMPERATURE

Three-level energy balance climate model with topography, explicit radiative transfer, and explicit sea ice and snow mass budgets
[PB86-181799] N86-26638

Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Indian Mountain AFS, Alaska
[AD-A165554] N86-26755
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Kelly AFB, Texas
[AD-A165555] N86-26766
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Beale AFB, California
[AD-A165560] N86-26771
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, La Crosse Municipal Airport, Wisconsin
[AD-A165561] N86-26772
Camp Casey, South Korea Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F
[AD-A165562] N86-26773
Westover AFB, Massachusetts Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F
[AD-A165563] N86-26774

ATMOSPHERIC TURBULENCE
Kinematics, composition and thermodynamics of the mesopause, turbopause, region of the atmosphere (between 80 and 120 km) related to the Aeroassisted Orbit Transfer Vehicle (AOTV) operations
[NASA-TM-86545] N86-26735

ATOMIC BEAMS
Variable energy, high flux, ground-state atomic oxygen source
[NASA-CASE-NPO-16640-1-CU] N86-27055

ATOMIC STRUCTURE
Topical Meeting on Picosecond Electronics and Optoelectronics: A digest of technical papers
[AD-A164596] N86-27069
Electronic transport in boron carbides
[DE86-009721] N86-27086

ATOMS
Resonance fluorescence of a two-level atom near a rough metal surface
[AD-A163219] N86-27056
Reaction dynamics of electronically excited alkali atoms with simpler molecules
[DE85-014538] N86-27060

ATTENUATION
Attenuation of seismic waves at regional distances
[AD-A164617] N86-26746

ATTITUDE CONTROL
Modelling of a cold gas jet system for satellite attitude control
[INPE-3853-PRE/917] N86-26566
Propulsion apparatus and method using boil-off gas from a cryogenic liquid
[NASA-CASE-MFS-25946-1] N86-26368

ATTITUDE INDICATORS
Changes in Naval Aviation Basic Instrument flight training: An analysis
[AD-A164738] N86-26830

AUGER SPECTROSCOPY
The delayed fracture of aluminum alloys
[AD-A165203] N86-26422

AURORAL IONIZATION
Ionization induced instability in an electron collecting sheath
[AD-A165330] N86-26538

AURORAL ZONES
Interactions measurement payload for shuttle (IMPS) definition phase study
[NASA-CR-177291] N86-26354

AUSTENITIC STAINLESS STEELS
Effects of rapidly pulsed ion bombardment on microstructure and phase stability in a Ti-modified stainless steel
[DE86-004796] N86-26424
Comparison of high temperature steam oxidation behavior of Zircaloy-4 versus austenitic and ferritic steels under light water reactor safety aspects — software reuse
[KFK-3894] N86-26429

AUTOMATIC CONTROL
Decoupling control synthesis for an oblique-wing aircraft
[NASA-TM-88801] N86-26339
Seam tracking performance of a Coaxial Weld Vision System and pulsed welding
[NASA-CR-178816] N86-26827
Baseline experiments in teleoperator control
[NASA-TP-2547] N86-26836
Piezometer data base package user's guide
[AD-A163264] N86-27119

AUTOMATIC FLIGHT CONTROL
A new technique for terrain following/terrain avoidance guidance command generation N86-26325
Executable assertions and flight software NASA-CR-178759 NAS 1.26:178759 CSL-TR-84-258 CRC-TR-84-16 HC A03/MF A01
[NASA-CR-178759] N86-26928

AUTOMATION
Cockpit automation requirements derived from mission functions data N86-26318

AUTOMOBILE FUELS
Investigation into alternative fuel rating techniques
[DE86-004277] N86-26467

AUTOMOBILES
Driving performance the day after use of loprazolam, flunitrazepam and placebo
[VK-83-04] N86-26826
The effects of the antidepressants oxaprotiline, mianserin, amitryptiline and doxepin upon actual driving performance
[VK-83-05] N86-26827
Flunitrazepam HCL's residual (hangover) effects upon actual driving performance
[VK-83-02] N86-26834

AUTOPSIES
Crash-resistant crewseat limit-load optimization through dynamic testing with cadavers
[AD-A164829] N86-26298

AVIATION PSYCHOLOGY
The healthy motivation to fly: No psychiatric diagnosis
[AD-A164944] N86-26832

AVIONICS
Automation and pilot interactions in night or all-weather tactical operations N86-26319

B

BACKSCATTERING
Asymptotic high frequency analysis of the electromagnetic backscattering from an inlet model consisting of piecewise linearly tapered sections
[NASA-CR-178844] N86-26486
Investigations of ultrasonic wave interactions at boundaries separating anisotropic materials
[DE86-004963] N86-27050

BACTERIA
The rRNA evolution and procaryotic phylogeny N86-26889
Investigations with methanobacteria and with evolution of the genetic code N86-26890
Is the ATPase from halobacterium saccharovorum an evolutionary relic? N86-26891
Functional and evolutionary relationships between bacteriorhodopsin and halorhodopsin in the archaebacterium, halobacterium halobium N86-26892
Thioredoxins in evolutionarily primitive organisms N86-26893
Oxygen and the evolution of metabolic pathways N86-26895
Evolution of thiol protective systems in prokaryotes N86-26896
Evolutionary significance of osmoregulatory mechanisms in cyanobacteria N86-26898

BALL BEARINGS
Monoball energy transfer: Test report
[NASA-CR-178812] N86-26551

BALLISTIC MISSILE DECOYS
Aerospace knowledge magazine (selected articles)
[AD-A164720] N86-26278

BALLISTICS
Cars diagnostics of high pressure combustion. 2. Measurements of NO, H2O and high pressure flames
[AD-A164810] N86-26395
Smokeless propellants of improved performance N86-26469

BALLOONS
Factors affecting the vertical motion of a zero-pressure, polyethylene, free balloon
[AD-A164598] N86-26290

BALLS
The analysis, design and performance of a 1.25 inch diameter pneumatic actuator
[AD-A165297] N86-26635

BANACH SPACE
The size and scar distributions of the yeast Saccharomyces cerevisiae — mathematical model
[CWI-AM-R8508] N86-27024

BANDPASS FILTERS
Digitally controlled programmable active filters
[AD-A164999] N86-26534

BANDWIDTH
A comparative analysis of whispered and normally phonated speech using an LPC-10 vocoder
[AD-A163307] N86-26504
Grating interferometric sensors
[AD-A165581] N86-26609
The analysis, design and performance of a 1.25 inch diameter pneumatic actuator
[AD-A165297] N86-26635

BARIUM
Evaluation of TWT (Traveling Wave Tube) cathode impregnant manufacturing procedures
[AD-A163360] N86-26526

BARIUM ION CLOUDS
Waves and electric fields associated with the December 27, 1984, artificial comet
[AD-A163409] N86-26744

BARIUM TITANATES
Application of conductive polymer technology to the production of a novel multilayer capacitor
[AD-A165212] N86-26450

BASALT
Early differentiation of the Moon: Experimental and modeling studies
[NASA-CR-178817] N86-27172

BASES (CHEMICAL)
Base pairing and base mis-pairing in nucleic acids N86-26881
Higher-order structure of rRNA N86-26888

BATCH PROCESSING
Energy absorption of polyurethane-based polymer alloys
[AD-A164537] N86-26436
Properties of batch means from stationary ARMA (Autoregressive moving average) time series
[AD-A165187] N86-27033

BEAMS (RADIATION)
Concept study of a multiple beam lens antenna with an internal phase shift mask
[AD-A165277] N86-26535

BEAMS (SUPPORTS)
Recent research in nonlinear analysis of beams N86-26646

BEARING (DIRECTION)
The effect of air gaps on the propagation of detonation in charges consisting of stacked blocks of cast TNT
[AD-A163398] N86-26459
Hillock formation on (100) GaAs
[AD-A163308] N86-27090

BEARINGS
Linear resonance cooler
[AD-A165492] N86-26483
A centrifugal type gasket for bearings
[AD-A164796] N86-26632

BEAUFORT SEA (NORTH AMERICA)
A study of sea ice kinematics and their relationship to arctic ambient noise. Part 3, Section 1: Ambient noise. Section 2: Ambient noise
[AD-A165304] N86-26786
A study of sea ice kinematics and their relationship to arctic ambient noise. Part 3, section 3: Ambient noise
[AD-A165305] N86-26789

BENZENE
Molecular jet study of vanderWaals complexes of flexible molecules: N-Propyl benzene solvated by small alkanes
[AD-A164600] N86-26394
Calculations of the geometry and binding energy of aromatic dimers: Benzene, toluene, and toluene-benzene
[AD-A164570] N86-27058

BERING SEA
Influence of the Yukon River on the Bering Sea
[NASA-CR-177310] N86-26783

BESSEL FUNCTIONS
An abstract delay-differential equation modeling size dependent cell growth and division — local area networks
[CWI-AM-R8508] N86-27023

BETATRONS
Three-dimensional numerical simulations of FELs by transverse mode spectral method
[AD-A163297] N86-26503

BIAS
Navstar GPS (Global Positioning System) accuracy while surveying arrays of deep ocean transponders
[AD-A163364] N86-26313
Ionization induced instability in an electron collecting sheath
[AD-A165330] N86-26538
On numerical dispersion by upwind differencing N86-26567

BIBLIOGRAPHIES
Aerospace Medicine and Biology: A continuing bibliography with indexes
[NASA-SP-7011(285)] N86-26797
A review of maximum entropy spectral analysis and applications to Fourier Spectroscopy
[AD-A164698] N86-27011
Management: A bibliography for NASA Managers
[NASA-SP-7500(20)] N86-27106

BINARY DATA
Transient transport in binary and ternary semiconductors
[AD-A165464] N86-27098
BINARY MIXTURES
Modeling of a heat pump charged with a non-azeotropic refrigerant mixture
[PB85-166257] N86-26712
BINARY SYSTEMS (MATERIALS)
Effect of liquid composition on enhanced flow due to surface shear in the contact line region: Constant vapor pressure boundary condition
[AD-A165545] N86-26587
BINDERS (MATERIALS)
Bomb crater repair techniques for permanent airfields. Report 3. Series 4 tests
[AD-A164982] N86-26345
Research in energetic compounds
[AD-A164901] N86-26462
BINOCULAR VISION
Visual difficulties associated with future windscreen and HUD integration N86-26824
BIOASSAY
Bioanalytical applications of fluorescence quenching
[AD-A164867] N86-26399
BIOCHEMISTRY
Bioanalytical applications of fluorescence quenching
[AD-A164867] N86-26399
Biochemical transformations in two plant/soil systems exposed to simulated acidic precipitation
[DE86-004040] N86-26713
Evolutionary significance of cenoregulatory mechanisms in cyanobacteria N86-26898
Microbial contributions to the Precambrian Earth N86-26899
BIOCONVERSION
Ocean frontal areas. Phytoplankton enumeration and biomass estimates -- operation guiding light (April - May 1985)
[AD-A164985] N86-26787
BIODYNAMICS
Crash-resistant crewseat limit-load optimization through dynamic testing with cadavers
[AD-A164826] N86-26298
BIOELECTRICITY
Mechanism of electromagnetic energy effects on the nervous system: Voltage-clamp study
[AD-A164653] N86-26798
BIOGEOCHEMISTRY
Isotopic, petrologic and biogeochemical investigations of banded iron-formations N86-26885
Organic S13C values vary slightly with salinity in microbial mats at Guerrero Negro, Baja California Sur, Mexico: Implications for stromatolite S13C values N86-26900
BIOLOGICAL EFFECTS
Aerospace Medicine and Biology: A continuing bibliography with indexes
[NASA-SP-7011(285)] N86-26797
BIOLOGICAL EVOLUTION
Second Symposium on Chemical Evolution and the Origin of Life
[NASA-CP-2425] N86-26844
Characterization of biogenic elements in interplanetary dust particles N86-26846
Boundary conditions for the paleoenvironment: Chemical and Physical Processes in dense interstellar clouds N86-26847
Interstellar isomers N86-26848
Observational exobiology N86-26850
Investigation of porous polymer gas chromatographic packings for atmospheric analysis of extraterrestrial bodies N86-26858
New techniques for the detection and capture of micrometeoroids N86-26862
Energy yields in the prebiotic synthesis of hydrogen cyanide and formaldehyde N86-26863
Synthesis and analysis in studies of chemical evolution N86-26864
Isotopic characterization of prebiotic synthesis of organic material N86-26865
Origin of life and iron-rich clays N86-26866
Clay energetics in chemical evolution N86-26867
Cooperation of catalysts and templates N86-26871
Molecular microenvironments: Solvent interactions with nucleic acid bases and ions N86-26872
Intramolecular interactions in aminoacyl nucleotides: Implications regarding the origin of genetic coding and protein synthesis N86-26873
Molecular replication N86-26874
Models of glycolysis: Glyceraldehyde as a source of energy and monomers for prebiotic condensation reactions N86-26876
A comparative study of prebiotic and present day translational models N86-26877
Protobiological information, bidirectional recognition and reverse translation N86-26878
Photochemical reactions of various model protocell systems N86-26879
The principle of cooperation and life's origin and evolution N86-26880
Base pairing and base mis-pairing in nucleic acids N86-26881
Recent progress in Precambrian paleobiology N86-26887
Higher-order structure of rRNA N86-26888
The rRNA evolution and procaryotic phylogeny N86-26889
Investigations with methanobacteria and with evolution of the genetic code N86-26890
Is the ATPase from halobacterium saccharovorum an evolutionary relic? N86-26891
Functional and evolutionary relationships between bacteriorhodopsin and halorhodopsin in the archaebacterium, halobacterium halobium N86-26892
Thioredoxins in evolutionarily primitive organisms N86-26893
Oxygen and the evolution of metabolic pathways N86-26895
Evolution of thiol protective systems in prokaryotes N86-26896
BIOLOGICAL MODELS (MATHEMATICS)
Development, growth and time -- biological model
[CWI-CS-R8516] N86-26795
The size and scar distributions of the yeast Saccharomyces cerevisiae -- mathematical model
[CWI-AM-R8509] N86-27024
A differential-integral equation modeling the dynamics of populations with a rank structure -- mathematical model
[CWI-AM-R8511] N86-27025
BIOMASS ENERGY PRODUCTION
Solar energy computer models directory
[DE85-006791] N86-26708
Ocean frontal areas. Phytoplankton enumeration and biomass estimates -- operation guiding light (April - May 1985)
[AD-A164985] N86-26787
BIOSYNTHESIS
Biodeuterated materials: High-temperature lubricants from algae
[AD-A164913] N86-26445
Clay energetics in chemical evolution N86-26867
Oxygen and the evolution of metabolic pathways N86-26895
BIOTECHNOLOGY
Biotechnica '85 International Congress for Biotechnology
[AD-A165415] N86-26794
BIREFRINGENCE
Dynamic orientation studies of polymers
[AD-A164611] N86-26440
BISTATIC REFLECTIVITY
Mixed-order finite elements for the solution of three-dimensional electromagnetic fields
[AD-A164786] N86-26509
BITUMENS
Experimental polyurethane foam (PUF) roofing systems. 3. Naval Station, Roosevelt Roads, Puerto Rico, and Naval Facility, Cape Hatteras, North Carolina
[AD-A164833] N86-26444
BIVARIATE ANALYSIS
Convexity of elliptically contoured distributions with applications
[AD-A163389] N86-27003
Estimates of circular error probabilities
[AD-A163257] N86-27026
BLASIUS EQUATION
On similarity solutions of a boundary layer problem with an upstream moving wall N86-26572
A study of the unsteady aerodynamic forces generated by a deforming Joukowski airfoil N86-26723
BLOCKING
Simulation of an aircraft flying through a ground station to satellite link
[NASA-CR-176845] N86-26487
BODY FLUIDS
Fluid-Electrolyte-Mineral interrelations as affecting work performance
[AD-A165325] N86-26799
BODY TEMPERATURE
Perceptual and physiological responses during exercise in cool and cold water
[AD-A165491] N86-26800
BOLTS
Some tests to assess the effect of crack stoppers on the fatigue life of center-notched specimens -- semisubmersible platform
[NLR-TR-84051-U] N86-26862
BOMBER AIRCRAFT
Aerospace knowledge magazine (selected articles)
[AD-A164720] N86-26278
BONDING
The effects of steel profile and cleanliness on coating performance
[AD-A164788] N86-26443
BOOSTER ROCKET ENGINES
Minuteman 3, stage 3 surveillance
[AD-A164840] N86-26351
BOREHOLES
Alternative methods for disposal of low-level radioactive wastes
[TI81-900254] N86-27067
BOREL SETS
A note on convergence of functions of random elements
[AD-A163405] N86-27004
BORIDES
Monolithic cathodes
[AD-A163282] N86-26523
BORN APPROXIMATION
Exact calculations of first order contributions to the incoherent intensity
[AD-A164927] N86-26513
BORON CARBIDES
High resolution imaging of boron carbide microstructures
[DE86-001751] N86-26387
Electronic transport in boron carbides
[DE86-003721] N86-27088
BOROSILICATE GLASS
Investigation and development of advanced surface microanalysis techniques and methods
[AD-A163616] N86-26389
BOUNDARIES
Multiple steady states for characteristic initial value problems N86-26558
Effect of liquid composition on enhanced flow due to surface shear in the contact line region: Constant vapor pressure boundary condition
[AD-A165545] N86-26587
A synopsis of research on subbottom effects on underwater acoustic propagation
[AD-A165420] N86-27048
BOUNDARY ELEMENT METHOD
Boundary force method for analyzing two-dimensional cracked bodies
[NASA-TM-87725] N86-26847
A recursive boundary element with initial error investigation
[AD-A163563] N86-26905
BOUNDARY LAYER CONTROL
A computational transonic flutter boundary tracking procedure
[NASA-TM-87708] N86-26284
Active control of boundary layer transition and turbulence
[NASA-CASE-LAR-13532-1] N86-26575
BOUNDARY LAYER EQUATIONS
Self-adaptive difference method for the effective solution of computationally complex problems of boundary layer theory
[NASA-TM-88440] N86-26549
BOUNDARY LAYER FLOW
The air-injection method of fixing boundary-layer transition and investigating scale effects -- Spacelab human physiology payload
[RAE-TR-85025] N86-26542
Comparison of measured and computed boundary layers at the tail-end of two axisymmetric bodies in the ARE quiet wind tunnel -- gear box wear
[AMTE(N)-TM-84063] N86-26574
Three-dimensional separation and vortical wakes over a prolate spheroid
[AD-A164781] N86-26583
BOUNDARY LAYER SEPARATION
Three-dimensional separation and vortical wakes over a prolate spheroid
[AD-A164781] N86-26583
BOUNDARY LAYER TRANSITION
Analysis of transitional separation bubbles on infinite swept wings
[NASA-CR-3956] N86-26288
Active control of boundary layer transition and turbulence
[NASA-CASE-LAR-13532-1] N86-26575
BOUNDARY LAYERS
Tables for correcting airfoil data obtained in the Langley 0.3-meter transonic cryogenic tunnel for sidewall boundary-layer effects
[NASA-TM-87723] N86-26289
On similarity solutions of a boundary layer problem with an upstream moving wall
[NASA-CR-176104] N86-26548

Investigations of the micro-turbulence in the bottom of the boundary layer
[AD-A165306] N86-26748

BOUNDARY VALUE PROBLEMS
Uniformly high order accurate essentially non-oscillatory schemes 3
[NASA-CR-178101] N86-26287
A fundamental mathematical theory for thermal explosions in rigid solids and in gases
[AD-A164692] N86-26396
On similarity solutions of a boundary layer problem with an upstream moving wall
[NASA-CR-178104] N86-26548
Advances in numerical and applied mathematics
[NASA-CR-178076] N86-26552
Convergence to steady state of solutions of Burgers' equation N86-26553
Stability analysis of intermediate boundary conditions in approximate factorization schemes N86-26554
Multiple steady states for characteristic initial value problems N86-26555
A minimum entropy principle in the gas dynamics equations N86-26556
A spectral multidomain method for the solution of hyperbolic systems N86-26557
On substructuring algorithms and solution techniques for the numerical approximation of partial differential equations N86-26558
Multiple laminar flows through curved pipes N86-26559
Calculations of the stability of some axisymmetric flows proposed as a model of vortex breakdown N86-26560
Construction of higher order accurate vortex and particle methods N86-26563
Pseudo-time algorithms for the Navier-Stokes equations N86-26564
Some results on uniformly high order accurate essentially non-oscillatory schemes N86-26566
AZTEC: A front tracking code based on Godunov's method N86-26568
Least squares finite element simulation of transonic flows N86-26569
The weak element method applied to Helmholtz type equations N86-26570
On similarity solutions of a boundary layer problem with an upstream moving wall N86-26572
On the advantages of the vorticity-velocity formulation of the equations of fluid dynamics N86-26573
Megatrend solutions in physical geodesy
[PB86-173317] N86-26754
Computational methods for the control of distributed parameter systems
[NASA-CR-178108] N86-26915
On the solution of integral equations with a generalized cauchy kernel
[NASA-CR-178685] N86-26987
On the solution of integral equations with strong ly singular kernels
[NASA-CR-178687] N86-26988
Regularity estimates up to the boundary for elliptic systems of difference equations
[NASA-CR-178107] N86-26989
A recursive boundary element with initial error investigation
[AD-A163563] N86-26995
Marching difference schemes for ill posed initial value problems
[AD-A164012] N86-26997

BRANCHING (MATHEMATICS)
Multigrid method for a vortex breakdown simulation
[NASA-CR-178106] N86-26547
Summer study program in geophysical fluid dynamics, Woods Hole Oceanographic Institution: Chaos
[AD-A164601] N86-26580
Bifurcation, intermittancy and chaos in a driven three wave system — software rause
[IPF-84-11] N86-27084

BRAZIL
Wheat area estimation using digital LANDSAT MSS data and aerial photographs
[INPE-3824-PRE/900] N86-26667
Comparison of rainfall characteristics at Fortaleza (CEARA) and other nearby locations in Northeast Brazil
[INPE-3851-PRE/915] N86-26757

BRIGHTNESS
Investigation of the diffuse ultraviolet background using satellite data: Dynamics explorer guest investigator program
[NASA-CR-176809] N86-26739

BRILLOUIN EFFECT
A brillouin light scattering study of magnetic excitations
[AD-A164716] N86-27070

BRILLOUIN ZONES
A brilouin light scattering study of magnetic excitations
[AD-A164716] N86-27070

BROADBAND
Cars diagnostics of high pressure combustion. 2. Measurements of NO, H2O and high pressure flames
[AD-A164610] N86-26395

BROADCASTING
LAWEB (Lake Weather Broadcast): Data processing for the Great Lakes
[PB86-176658] N86-26780

BROKEN SYMMETRY
Spontaneous symmetry breaking and neutral stability in the noncanonical Hamiltonian formalism
[DE86-004562] N86-27015

BRONZES
Development of high field superconductors for fusion energy applications
[DE86-004834] N86-27103

BUBBLES
Analysis of transitional separation bubbles on infinite swept wings
[NASA-CR-3956] N86-26288
Factors affecting the vertical motion of a zero-pressure, polyethylene, free balloon
[AD-A164506] N86-26290
Pointed bubbles rising in a two-dimensional tube
[AD-A163624] N86-26577
Continuous ultrasonic waves to detect steam bubbles in water under high pressure — plasma diagnostics
[S/T-REPT-VOL-3-NO-5] N86-27051

BUCKLING
Measure of displacement around holes in composite plates subjected to quasi-static compression
[NASA-CR-3989] N86-26377
Buckling behavior of Rene 41 tubular panels for a hypersonic aircraft wing
[NASA-TM-86798] N86-26653
The postbuckling behavior of blade-stiffened carbon epoxy panels loaded in compression — semisubmersible platform
[NLR-MP-85019-U] N86-26661

BUNCHING
Transient analysis of a bunched beam free electron laser
[DE86-003372] N86-26614

BUOYS
A review of methods to track oil in arctic waters
[AD-A164679] N86-26716
infrasonic ambient ocean noise spectra from freely drifting sensors
[AD-A163413] N86-26785

BURGER EQUATION
Convergence to steady state of solutions of Burgers' equation N86-26553

BURNING RATE
Smokeless propellants of improved performance N86-26469
Propergol combustion based on octogenesis N86-26470
Burning stability of double base propellants N86-26472
The chemical interaction of ballistic modifiers in CDB propellant: Its effect upon ballistics and stability N86-26475
Direct erosive burning measurements of a reduced-smoke solid propellant rocket by flash X-rays N86-26476

C

C-135 AIRCRAFT
Electrostatic aggregation of finely-comminuted geological materials N86-27156
Nucleation experiments in a microgravity environment N86-27158

CADMIUM
Evaluation of the effects of a plastic bead paint removal process on properties of aircraft structural materials
[AD-A165289] N86-26384
Optical and electrochemical study of model zinc electrode pores in alkaline electrolyte
[DE86-002967] N86-26521

CADMIUM SULFIDES
Stable, high-efficiency, CuInSe2 based polycrystalline thin-film tandem solar cells
[DE85-016893] N86-26700

CADMIUM TELLURIDES
Stable, high-efficiency, CuInSe2 based polycrystalline thin-film tandem solar cells
[DE85-016893] N86-26700

CALCIUM
Evaluation of TWT (Traveling Wave Tube) cathode impregnant manufacturing procedures
[AD-A163360] N86-26526

CALENDARS
Calendar of selected aeronautical and space meetings December 1985
[AD-A164535] N86-27112

CALIBRATING
International Ultraviolet Explorer Observatory operations
[NASA-CR-177873] N86-26347
Calibration of the ISEE plasma composition experiment
[NASA-TM-86542] N86-26348
Optical absorption characteristics of aerosols
[AD-A165216] N86-26401
Radar target classification studies: Software development and documentation
[AD-A164789] N86-26510
Calibration of droplet sizing and liquid water content instruments: Survey and analysis
[NASA-CR-175099] N86-26596
An evaluation of the capability of the surface condition analyzer (SCAN) sensors to measure runway water depth
[AD-A164719] N86-26603
A study of the optimization problem for calibrating a Lacoste and Romberg G gravity meter to determine circular arrors
[AD-A165218] N86-26607
Blue Ridge gravimeter calibration base line, established 1985
[PB86-167475] N86-26755

CALIFORNIA
Plate motions and deformations from geologic and geodetic data
[NASA-CR-177299] N86-26741

CAMERA TUBES
Improved designs for isocon cameras in HERTR systems
[AD-A164627] N86-26602

CANOPIES (VEGETATION)
Operational soil moisture prediction model
[AD-A165313] N86-26481

CANTILEVER BEAMS
Structure and properties of polymers and organosilanes adsorbed onto oxidized aluminum and titanium
[AD-A165210] N86-26449

CAPACITORS
Application of conductive polymer technology to the production of a novel multilayer capacitor
[AD-A165212] N86-26450

CARBON
Carbon exchange between the mantle and the crust and its effect upon the atmosphere: Today compared to Archean time N86-26882
Earth's early atmosphere as seen from carbon and nitrogen isotopic analysis of Archean sediments N86-26883

CARBON CYCLE
Energy yields in the prebiotic synthesis of hydrogen cyanide and formaldehyde N86-26863

CARBON DIOXIDE
Photoelectrochemical reduction of carbon dioxide
[PB86-157864] N86-26406
Paleosols and the chemical evolution of the atmosphere N86-26870
Climatic consequences of very high CO2 levels in Earth's early atmosphere N86-26904

CARBON DIOXIDE LASERS
Use of a CO2 laser lidar for flight and penetration at very low altitudes N86-26326

CARBON FIBER REINFORCED PLASTICS
The postbuckling behavior of blade-stiffened carbon epoxy panels loaded in compression — semisubmersible platform
[NLR-MP-85019-U] N86-26661

CARBON FIBERS
The damage tolerance of carbon fiber reinforced composites: A workshop summary
[AD-A163757] N86-26381

CARBON ISOTOPES
Organic chemistry of Murchison meteorite: Carbon isotopic fractionation N86-26845

CARBON MONOXIDE
Carbon monoxide induced ordering of adsorbates on the Rh(111) crystal surface
[DE86-004104] N86-26405
Photolysis products of CO, NH3 aND H2O and their significance to reactions on interstellar grains N86-26649

CARBON 13
Isotopic, petrologic and biogeochemical investigations of banded iron-formations N86-26885

CARBONACEOUS CHONDRITES
Characterization of biogenic elements in interplanetary dust particles N86-26846
Origin of life and iron-rich clays N86-26868
CARBONACEOUS METEORITES
Interstellar isomers N86-26848
CARBONYL COMPOUNDS
Ethynyl-containing aromatic monomers
[AD-D012170] N86-26436
The role of the oceans in the atmospheric cycle of carbonyl sulfide N86-26796
CARBOXYLIC ACIDS
Ion transport across synthetic and biological membranes: ionophore-mediated transport
[AD-A163269] N86-27057
CARGO AIRCRAFT
The C-17: An attempt at increased airlift versatility
[AD-A164622] N86-26290
CASSEGRAIN OPTICS
The negligible effect of non-Gaussian surface deviations in large MM-Lambda reflectors' aperture efficiency and the performance of Itapetinga 45-ft antenna at Lambda = 3.3 MM
[INPE-3637-PRE/906] N86-26486
CASTINGS
The effect of air gaps on the propagation of detonation in charges consisting of stacked blocks of cast TNT
[AD-A163399] N86-26459
CASUALTIES
A lightweight impermeable suit for chemical protection in warm conditions: A preliminary look at the concept
[AD-A164687] N86-26839
CATACLYSMIC VARIABLES
Theoretical study of the X-ray emission from astrophysical shock waves
[NASA-CR-177318] N86-27176
CATALYSIS
Acid-catalyzed degradation of Poly(2-Butyl-1,3,6-Trioxocane)
[AD-A165327] N86-26452
Protobiological information, bidirectional recognition and reverse translation N86-26878
CATALYSTS
Acid-catalyzed degradation of Poly(2-Butyl-1,3,6-Trioxocane)
[AD-A165327] N86-26452
Selective catalytic removal of NO from stationary sources — flue gases
[S/T-REPT-VOL-3-NO-6] N86-26719
Biotechnics '85 International Congress for Biotechnology
[AD-A165415] N86-26794
Cooperation of catalysts and templates N86-26871
Stereoselective aminoacylation of RNA N86-26875
Biosynthetic porphyrins and the origin of photosynthesis N86-26894
Experimental determination of the electronic structure of small metal particles
[AD-A163406] N86-27091
CATALYTIC ACTIVITY
Selective catalytic removal of NO from stationary sources — flue gases
[S/T-REPT-VOL-3-NO-6] N86-26719
CATHODES
Monolithic cathodes
[AD-A163282] N86-26523
CATIONS
Acid-catalyzed degradation of Poly(2-Butyl-1,3,6-Trioxocane)
[AD-A165327] N86-26452
Ion transport across synthetic and biological membranes: ionophore-mediated transport
[AD-A163269] N86-27057
CAUCHY INTEGRAL FORMULA
The crack problem in a reinforced cylindrical shell
[NASA-CR-176686] N86-26948
On the solution of integral equations with a generalized cauchy kernel
[NASA-CR-176685] N86-26987
On the solution of integral equations with strong ly singular kernels
[NASA-CR-176687] N86-26988
CAVITATION CORROSION
Effects of cavitation on high-cycle fatigue life
[DE86-001814] N86-26641
CAVITATION FLOW
Impingement of liquid fuel sprays on heated walls
[AD-A165422] N86-26465
CAVITIES
Waves and electric fields associated with the December 27, 1964, artificial comet
[AD-A163409] N86-26744
CAVITY RESONATORS
Wakefield accelerators for SDI
[DE86-003673] N86-27062
CEILINGS (METEOROLOGY)
Factors affecting the vertical motion of a zero-pressure, polyethylene, free balloon
[AD-A164596] N86-26290
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Kunsan AB, South Korea
[AD-A165553] N86-26764
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Indian Mountain AFS, Alaska
[AD-A165554] N86-26765
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Kelly AFB, Texas
[AD-A165555] N86-26766
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Tin City AFS, Alaska
[AD-A165556] N86-26767
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Cape Lisburne, Alaska
[AD-A165557] N86-26768
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Langley AFB, Virginia
[AD-A165558] N86-26769
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Talalina AFS, Alaska
[AD-A165559] N86-26770
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Beale AFB, California
[AD-A165560] N86-26771
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, La Crosse Municipal Airport, Wisconsin
[AD-A165561] N86-26772
Camp Casey, South Korea Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F
[AD-A165562] N86-26773
Westover AFB, Massachusetts Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F
[AD-A165563] N86-26774
CELL DIVISION
The size and scar distributions of the yeast Saccharomyces cerevisiae — mathematical model
[CWI-AM-R8509] N86-27024
CELLS (BIOLOGY)
Macrophage structure and function
[AD-A163314] N86-26793
Biotechnics '85 International Congress for Biotechnology
[AD-A165415] N86-26794
Fluid-Electrolyte-Mineral interrelations as affecting work performance
[AD-A165325] N86-26799
Clay energetics in chemical evolution N86-26867
Intramolecular interactions in aminoacyl nucleotides: Implications regarding the origin of genetic coding and protein synthesis N86-26873
Photochemical reactions of various model protocell systems N86-26879
Microbial contributions to the Precambrian Earth N86-26890
CELLULOSE NITRATE
Stability of nitrocellulose propellants assessed via thermal decomposition and alteration of the stabilizer composition N86-26471
CENSORED DATA (MATHEMATICS)
On density estimation from censored data by penalized likelihood methods
[AD-A163398] N86-27002
CENTRAL PROCESSING UNITS
Implementation of a natural language processor using functional grammar
[AD-A165428] N86-26972
CENTRIFUGAL FORCE
A centrifugal type gasket for bearings
[AD-A164796] N86-26632
Dynamic behaviour of spherical and aspherical contact lenses exposed to +Gz-acceleration forces N86-26816
CERAMIC MATRIX COMPOSITES
Silicon carbide whiskers for composites: Growth and properties
[DE86-000796] N86-26375
CERAMICS
On the sintering of silicon carbide
[NASA-TM-88402] N86-26374
Hardness of ion implanted ceramics
[DE86-004771] N86-26432
Application of conductive polymer technology to the production of a novel multilayer capacitor
[AD-A165212] N86-26450
European science notes. Volume 40, number 4
[AD-A165292] N86-27134
CERENKOV RADIATION
Radiation of long electromagnetic waves by a modulated electron beam in the ionosphere
[AD-A163306] N86-26743
CERIUM COMPOUNDS
Monolithic cathodes
[AD-A163282] N86-26523
CESSNA AIRCRAFT
Study on using a digital ride quality augmentation system to trim an engine-out in a Cessna 402B
[NASA-CR-177272] N86-26342
CHAINS
Initiator duration effect on pulsed chain reaction chemical laser scaling laws
[AD-A163387] N86-26620
CHANNEL FLOW
On the existence of solutions of an equation arising in the theory of laminar flow in a uniformly porous channel with injection
[NASA-CR-176078] N86-26543
CHANNELS (DATA TRANSMISSION)
Data transmission systems
[AD-A163778] N86-26490
CHAOS
On the existence of Li-Yorke points in the theory of chaos
[AD-A164691] N86-27010
Bifurcation, intermittancy and chaos in a driven three wave system — software reuse
[IPF-84-11] N86-27094
CHARGE CARRIERS
The effects of arsine pressure on the compositions, carrier concentrations, mobilities and growth rates of epitaxial layers of Ga(x)In(1-x)As prepared by the VPE (Vapor-Phase Epitaxy)-hydride technique
[AD-A165278] N86-27097
CHARGE TRANSFER
Carbon monoxide induced ordering of adsorbates on the Rh(111) crystal surface
[DE86-004104] N86-26406
Whistler-mode radiation from the Spacelab 2 electron beam
[AD-A163367] N86-27078
CHEBYSHEV APPROXIMATION
A spectral multidomain method for the solution of hyperbolic systems N86-26557
Time domain filtering of two-dimensional fluorescence data
[AD-A164954] N86-27013
CHEMICAL ANALYSIS
Bioanalytical applications of fluorescence quenching
[AD-A164867] N86-26399
Characterization of biogenic elements in interplanetary dust particles N86-26846
The organic aerosols of Titan N86-26852
The D to H ratio on Titan and the planets: Implications for origin and evolution of planetary atmospheres N86-26853
Measurements of physical properties of model Titan atmospheres N86-26854
Experimental basis for a Titan probe organic analysis N86-26855
Molecular and Elemental Dust Analyzer (MEDA) for the comet rendezvous asteroid flyby mission N86-26857
Miniature metastable ionization detectors for exobiology flight experiments N86-26859
multiplex gas chromatography: A novel analytical technique for future planetary studies N86-26860
Ion Mobility Drift Spectrometer (IMDS) as a flight analytical instrument technique N86-26861
Syntheses and analyses in studies of chemical evolution N86-26864
CHEMICAL COMPOSITION
The chemical interaction of ballistic modifiers in CDB propellant: Its effect upon ballistics and stability N86-26475
Experimental techniques for obtaining particle behavior in solid propellant combustion N86-26477
A metallurgical route to solar-grade silicon N86-26693
CHEMICAL ENERGY
Models of glycolysis: Glyceraldehyde as a source of energy and monomers for prebiotic condensation reactions N86-26876
CHEMICAL ENGINEERING
Processes and process development N86-26690
CHEMICAL EVOLUTION
Stereoselective formation of a 2 prime (3 prime)-aminoacyl ester of a nucleotide
[NASA-CR-176830] N86-26873
Second Symposium on Chemical Evolution and the Origin of Life
[NASA-CP-2425] N86-26844

The D to H ratio on Titan and the planets: Implications for origin and evolution of planetary atmospheres N86-26863
Measurements of physical properties of model Titan atmospheres N86-26854
Experimental basis for a Titan probe organic analysis N86-26855
A gas chromatograph experiment for a Titan entry probe N86-26856
Molecular and Elemental Dust Analyzer (MEDA) for the comet rendezvous asteroid flyby mission N86-26857
Investigation of porous polymer gas chromatographic packings for atmospheric analysis of extraterrestrial bodies N86-26858
multiplex gas chromatography: A novel analytical technique for future planetary studies N86-26860
Molecular microenvironments: Solvent interactions with nucleic acid bases and ions N86-26872
Molecular replication N86-26874
Stereoselective aminoacylation of RNA N86-26875

CHEMICAL FRACTIONATION
Organic chemistry of Murchison meteorite: Carbon isotopic fractionation N86-26845

CHEMICAL LASERS
Initiator duration effect on pulsed chain reaction chemical laser scaling laws [AD-A163397] N86-26620

CHEMICAL PROPERTIES
Standard reference data publications, 1964-1984 [PB86-155567] N86-26409

CHEMICAL REACTIONS
Thermal response tests of candidate insulation systems for the chlorine tank car [AD-A165293] N86-26451
The chemical interaction of ballistic modifiers in CDB propellant: Its effect upon ballistics and stability N86-26475
Microscopic control of semiconductor interface reactivity [AD-A164580] N86-27093

CHEMICAL REACTORS
Silicon production in an aerosol reactor N86-26688

CHEMICAL WARFARE
A lightweight impermeable suit for chemical protection in warm conditions: A preliminary look at the concept [AD-A164667] N86-26839

CHEMISORPTION
Experimental determination of the electronic structure of small metal particles [AD-A163406] N86-27091

CHIPS (ELECTRONICS)
Compaction with automatic jog introduction [AD-A163436] N86-26527
Area penalty for sublinear signal propagation delay on chip (preliminary version) -- mathematical model [CWI-CS-R8514] N86-26541
Space-efficient algorithms for computational geometry [AD-A163426] N86-26945

CHLORIDES
The effects of arsine pressure on the compositions, carrier concentrations, mobilities and growth rates of epitaxial layers of Ga(x)In(1-x)As prepared by the VPE (Vapor-Phase Epitaxy)-hydride technique [AD-A165278] N86-27097

CHLORINE
Thermal response tests of candidate insulation systems for the chlorine tank car [AD-A165293] N86-26451
Reaction dynamics of electronically excited alkali atoms with simpler molecules [DE86-014538] N86-27060

CHLOROPHYLLS
Influence of the Yukon River on the Bering Sea [NASA-CR-177310] N86-26783

CHLOROSILANES
Processes and process development in Japan N86-26669

CHOLESTEROL
Ion transport across synthetic and biological membranes: Ionophore-mediated transport [AD-A163269] N86-27057

CHOLINE
Ion transport across synthetic and biological membranes: Ionophore-mediated transport [AD-A163269] N86-27057

CIRCLES (GEOMETRY)
Estimates of circular error probabilities [AD-A163257] N86-27028

CIRCUIT BOARDS
Evaluation of multilayer printed wiring boards by metallographic techniques: An illustrated guide to the preparation and inspection of plated-through hole test coupons based on the requirements of Mil-P-55110D [NASA-RP-1161] N86-26839

CIRCUITS
Use of LAN (Local Area Network) technology in DSCS (Defense Satellite Communication System) Earth terminals [AD-A165486] N86-26615
Analysis of helical waveguide [AD-A163252] N86-26522
Compaction with automatic jog introduction [AD-A163436] N86-26527
Independent research and independent exploratory development FY 85 [AD-A163432] N86-27111

CIRCULAR CYLINDERS
Circular-cylindrical structures: Dynamic response to vortex shedding. Part 3: Computer programs [ESDU-85040] N86-26642

CIRCULAR POLARIZATION
Radar target classification studies: Software development and documentation [AD-A164789] N86-26510

CIVIL AVIATION
A microcomputer pollution model for civilian airports and Air Force bases [AD-A163232] N86-26714

CLADDING
Evaluation of the effects of a plastic bead paint removal process on properties of aircraft structural materials [AD-A165269] N86-26384
Effects of cladding and anodizing on flight simulation fatigue of 2024-T3 and 7475-T761 aluminum alloys — semisubmersible platform [NLR-TR-85006-U] N86-26430

CLASSICAL MECHANICS
Stochastic mechanics and the Kepler problem -- plasma diagnostics [REPT-70] N86-27034

CLASSIFICATIONS
Radar target classification studies: Software development and documentation [AD-A164789] N86-26510

CLAYS
Origin of life and iron-rich clays N86-26866
Clay energetics in chemical evolution N86-26867

CLEARING
Evaluation of charged fog for smoke clearing shipboard fires [AD-A165551] N86-26300

CLIMATE
Three-level energy balance climate model with topography, explicit radiative transfer, and explicit sea ice and snow mass budgets [PB86-181799] N86-26636
Changes in the ocean mixed layer following extraordinary atmospheric forcing [AD-A164703] N86-26766
The lunar nodal tide and the distance to the Moon during the Precambrian era N86-26886
Climatic consequences of very high CO2 levels in Earth's early atmosphere N86-26904

CLIMATOLOGY
Model validation research: Comparison of simulated and observed climate patterns for the past 18,000 years [DE86-004631] N86-26775

CLOCKS
A paradigm for reliable clock synchronization [AD-A164819] N86-27040

CLOUD COVER
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Kunsan AB, South Korea [AD-A165553] N86-26764
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Tin City AFS, Alaska [AD-A165558] N86-26767
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Cape Lisburne, Alaska [AD-A165557] N86-26768
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Langley AFB, Virginia [AD-A165556] N86-26769
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Talalina AFS, Alaska [AD-A165559] N86-26770
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Beale AFB, California [AD-A165560] N86-26771
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, La Crosse Municipal Airport, Wisconsin [AD-A165561] N86-26772
Camp Casey, South Korea Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F [AD-A165562] N86-26773
Westover AFB, Massachusetts Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F [AD-A165563] N86-26774

CLOUD HEIGHT INDICATORS
Cloud base heights from lidar, rotating beam ceilometer and pilot reports compared by experiment and theory [PB86-159694] N86-26778

CLOUDS
Debris-cloud collisions: Accretion studies in the space station N86-27181

CLOUDS (METEOROLOGY)
Techniques for the automated observation of clouds [AD-A165573] N86-26775

CLUMPS
Molecular jet study of vanderWaals complexes of flexible molecules: N-Propyl benzene solvated by small alkanes [AD-A164600] N86-26394
Studies of negative ion reactions: Solvated ions and strong acids [AD-A165484] N86-26404

CLUSTER ANALYSIS
The local redistribution of points along curves for numerical grid generation N86-26571

CLUTTER
Model studies of surface noise interference in ground-probing radar [AD-A163206] N86-26500

COAL
Proceedings of the Second Annual Heat Engines Contractors Meeting [DE85-006595] N86-26705

COASTAL CURRENTS
Influence of the Yukon River on the Bering Sea [NASA-CR-177310] N86-26783

COASTAL WATER
Methods of obtaining offshore wind direction and sea-state data from X-band aircraft SAR (Synthetic Aperture Radar) imagery of coastal waters [AD-A165552] N86-26517
A simulation analysis of the fate of phytoplankton within the mid-Atlantic bight [NASA-CR-177265] N86-26670

COASTAL ZONE COLOR SCANNER
A simulation analysis of the fate of phytoplankton within the mid-Atlantic bight [NASA-CR-177265] N86-26670

COASTS
Methods of obtaining offshore wind direction and sea-state data from X-band aircraft SAR (Synthetic Aperture Radar) imagery of coastal waters [AD-A165552] N86-26517
Ocean frontal areas. Phytoplankton enumeration and biomass estimates -- operation guiding light (April - May 1985) [AD-A164995] N86-26787
Colossus revisited: A review and extension of the Marsh-Schulkin shallow water transmission loss model (1982) [AD-A164588] N86-27046

COATINGS
Evaluation of the effects of a plastic bead paint removal process on properties of aircraft structural materials [AD-A165269] N86-26384
Character of silver lining [DE86-001585] N86-26423
Experimental polyurethane foam (PUF) roofing systems. 3. Naval Station, Roosevelt Roads, Puerto Rico, and Naval Facility, Cape Hatteras, North Carolina [AD-A164833] N86-26444

COCKPITS
Cockpit automation requirements derived from mission functions data N86-26318
Some quantitative methodology for cockpit design N86-26320
Visual and spectroradiometric performance criteria for Night Vision Goggles (NVG) compatible aircraft interior lighting N86-26807
Human factors: The Cinderella discipline in cockpit interface design N86-26825

CODING
A comparative analysis of whispered and normally phonated speech using an LPC-10 vocoder [AD-A163307] N86-26504
A computer code for three-dimensional incompressible flows using nonorthogonal body-fitted coordinate systems [NASA-CR-178818] N86-26544
AZTEC: A front tracking code based on Godunov's method N86-26568
Computers and data transmission equipment. Alphanumeric codes [AD-A164794] N86-26923

Characterization of an Ada software development
[AD-A166320] N86-26960
Software metrics for Ada
[AD-A165321] N86-26961

COEFFICIENTS
Two compliance expressions for arbitrary locations across a crack in a CT (Compact Type) specimen
[AD-A163369] N86-26658

COGNITION
Acquiring procedural skills from lesson sequences
[AD-A164580] N86-26829
Human factors in rule-based systems
[AD-A165309] N86-26830
Independent research and independent exploratory development FY 85
[AD-A163432] N86-27111
A personalized and prescriptive decision aid for choice from a database of options
[AD-A165396] N86-27129

COHERENT SCATTERING
Comparison of the coherent attenuation predicted by single and multiple scattering theories for the case of several types of hydrometeors
[AD-A164835] N86-26507

COLD FRONTS
Weather radar studies
[AD-A165221] N86-26752

COLD PLASMAS
Definition study of a coordinated group of experiments to measure and monitor the in situ plasma and electromagnetic environment of a polar orbiting space shuttle
[AD-A164561] N86-26353

COLD SURFACES
The delayed fracture of aluminum alloys
[AD-A165203] N86-26422

COLD WATER
Development and evaluation of a prototype life preserver
[AD-A163224] N86-26297
Perceptual and physiological responses during exercise in cool and cold water
[AD-A165491] N86-26800

COLD WORKING
Evaluation of the effects of a plastic bead paint removal process on properties of aircraft structural materials
[AD-A165289] N86-26384

COLLISIONAL PLASMAS
Plasma physics modeling and the Cray-2 multiprocessor
[DE86-004239] N86-27072

COLLISIONLESS PLASMAS
Plasma physics modeling and the Cray-2 multiprocessor
[DE86-004239] N86-27072

COLLISIONS
The orbit properties of colliding co-orbiting bodies
N86-27149

COLOR
Use of color in differentiating factor levels in simulation output (preliminary report)
[AD-A164651] N86-26947

COLOR VISION
Visual and spectroradiometric performance criteria for Night Vision Goggles (NVG) compatible aircraft interior lighting N86-26807
Field-sequential color stereoscopy with liquid crystal spectacles — aircraft tracking
[NLR-MP-84061-U] N86-27071

COMBAT
Independent research and independent exploratory development FY 85
[AD-A163432] N86-27111

COMBINATORIAL ANALYSIS
Cayley cages — graph theory
[MEMO-448] N86-27017
A solution method for the set packing problem with polyhedral characteristics — field theory
[MEMO-448] N86-27035

COMBUSTIBLE FLOW
The General Electric F404 - engine of the RAAF's new fighter
[AD-A164562] N86-26338

COMBUSTION
A fundamental mathematical theory for thermal explosions in rigid solids and in gases
[AD-A164892] N86-26396
Investigation into alternative fuel rating techniques
[DE86-004277] N86-26467
European science notes. Volume 40, number 4
[AD-A165292] N86-27134

COMBUSTION CHAMBERS
Proceedings of the Second Annual Heat Engines Contractors Meeting
[DE85-008596] N86-26705

COMBUSTION CONTROL
Calculations of burning surfaces of propellant grain with embedded metal wires and of internal ballistics of such motor
[AD-A163361] N86-26458

COMBUSTION PHYSICS
Direct erosive burning measurements of a reduced-smoke solid propellant rocket by flash X-rays
N86-26476

COMBUSTION PRODUCTS
Gas analysis for the investigation of the combustion of double-base propellants and HMX N86-26478
Measurements of distributed combustion N86-26479
Environmental assessment of NOx control on a compression ignition large bore reciprocating internal combustion engine. Volume 1: Technical results
[PB86-155819] N86-26637

COMBUSTION STABILITY
Burning stability of double base propellants
N86-26472
The chemical interaction of ballistic modifiers in CDB propellant: Its effect upon ballistics and stability
N86-26475
Measurements of distributed combustion N86-26479

COMETARY ATMOSPHERES
Characterization of biogenic elements in interplanetary dust particles N86-26846
Molecular and Elemental Dust Analyzer (MEDA) for the comet rendezvous asteroid flyby mission N86-26857

COMETS
New techniques for the detection and capture of micrometeoroids N86-26862
Ultraviolet spectroscopy of meteoric debris: In situ calibration experiments from Earth orbit N86-27159
How to make a comet N86-27163

COMMAND LANGUAGES
Extending data typing beyond the bounds of programming languages — computer systems programs
[RSRE-MEMO-3878] N86-26931

COMMERCE
Commercial market potentials for the use of the ADA (trademark) programming language
[AD-A163273] N86-26939

COMMERCIAL AIRCRAFT
Simulation of an aircraft flying through a ground station to satellite link
[NASA-CR-176845] N86-26487

COMMUNICATION EQUIPMENT
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 1
[AD-A164430] N86-26491
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 2
[AD-A164431] N86-26492
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 1. High energy pulse-device failure test. 50 ohms impedance 25,000 volts-4000 amps, 100 joules
[AD-A164432] N86-26493
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 2. High impedance/high voltage test 50 ohms-4500 volts
[AD-A164433] N86-26494
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 3. Low impedance/high voltage test, 5 ohms-4500 volts-1000 amps
[AD-A164434] N86-26495
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 4. Low impedance/low voltage test, 5 ohms-600 volts-120 amps
[AD-A164435] N86-26496
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 5. Equipment and devices oscilloscope photographs
[AD-A164436] N86-26497
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 6. Equipment and devices bench check measurement
[AD-A164437] N86-26498
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 7. Equipment and devices test descriptions
[AD-A164438] N86-26499
Defense Communications Agency cost and planning factors manual, change 2
[AD-A163319] N86-26505

COMMUNICATION NETWORKS
A schedule-based approach for flow-control in data communication networks
[AD-A163253] N86-26502
Defense Communications Agency cost and planning factors manual, change 2
[AD-A163319] N86-26505
Process synchronization and data communication between processes in real time local area networks
[AD-A164860] N86-26511
Use of LAN (Local Area Network) technology in DSCS (Defense Satellite Communication System) Earth terminals
[AD-A165496] N86-26515
Commercial SATCOM subarchitecture assessments and initial concepts
[AD-A165549] N86-26516
STARS (Software Technology for Adaptable and Reliable Systems) methodology area summary. Volume 1: Organization and plans
[AD-A163270] N86-26936

COMMUNICATION SATELLITES
Simulation of an aircraft flying through a ground station to satellite link
[NASA-CR-176845] N86-26487
Spectrum orbit utilization program technical manual SOUP5 Version 3.8
[NASA-CR-174944] N86-26489
Use of LAN (Local Area Network) technology in DSCS (Defense Satellite Communication System) Earth terminals
[AD-A165496] N86-26515

COMMUNICATION THEORY
Ready trace semantics for concrete process algebra with priority operator — biological model
[CWI-CS-R8517] N86-27026

COMPACTING
Compaction with automatic jog introduction
[AD-A163436] N86-26527

COMPARISON
Aquila remotely piloted vehicle: Recent developments and alternatives
[AD-A164597] N86-26333
A comparison of voice and keyboard data entry for a helicopter navigation task
[AD-A163245] N86-26501

COMPILERS
CFT compiler optimization and Cray X-MP vector performance
[DE86-004746] N86-26917
User's manual for the prototype ADA (trademark) Compiler Evaluation Capability (ACEC), version 1
[AD-A163272] N86-26938
Ada (trademark) compiler validation summary report. Verdix Ada compiler, VADS, Version V03.06 for VAX-11/785, using ULTRIX 1.0
[AD-A163345] N86-26942
Ada (trade name) compiler validation summary report: Verdix Ada Compiler, VAda-010-0101, Version V03.04 for VAX-11/750, using UNIX 4.2 BSD
[AD-A163363] N86-26943
Top-down parsing syntax error recovery
[AD-A164858] N86-26949
Design methodology for embedded systems
[AD-A165497] N86-26974

COMPOSITE MATERIALS
Measure of displacement around holes in composite plates subjected to quasi-static compression
[NASA-CR-3989] N86-26377
European science notes. Volume 40, number 4
[AD-A165292] N86-27134

COMPOSITE STRUCTURES
Environmental effects on the static and fatigue strength of graphite/epoxy structures
[AR-004-044] N86-26378
The effect of low velocity impact on the strength characteristics of composite materials laminates
[NASA-CR-176846] N86-26379
Evaluation of the effects of a plastic bead paint removal process on properties of aircraft structural materials
[AD-A165289] N86-26384

COMPOSITION (PROPERTY)
Effect of liquid composition on enhanced flow due to surface shear in the contact line region: Constant vapor pressure boundary condition
[AD-A165545] N86-26587

COMPRESSIBLE FLOW
Spectral methods in fluid dynamics
[NASA-CR-178103] N86-26560
Application of flux-corrected transport to TTCP joint launch blast computational effort
[AD-A163332] N86-26941
COMPRESSING
Air compression heating ignition of high explosives in the launch environment
[AD-A164961] N86-26400
High strain rate material behavior
[AD-A165214] N86-26659
COMPRESSION LOADS
Measure of displacement around holes in composite plates subjected to quasi-static compression
[NASA-CR-3969] N86-26377
The postbuckling behavior of blade-stiffened carbon epoxy panels loaded in compression — semisubmersible platform
[NLR-MP-85019-U] N86-26661
COMPRESSION TESTS
Interframe buckling of aluminium alloy stiffened plating — warship materials
[AMTE(S)-R-85104] N86-26654
COMPRESSOR BLADES
Investigation of blade vibration T55-L-11C compressor stages 1 and 2
[AR-004-046] N86-26337
COMPRESSOR EFFICIENCY
Modeling of a heat pump charged with a non-azeotropic refrigerant mixture
[PB86-168267] N86-26712
COMPRESSOR ROTORS
Thermodynamic evaluation of transonic compressor rotors using the finite volume approach
[NASA-CR-176840] N86-26546
COMPRESSORS
Linear resonance cooler
[AD-A165492] N86-26483
A study of the fluid-dynamic pressure fields on compressor reed valves
[AD-A164102] N86-26576
Conceptual development of strain-gage signal interpretation system for jet engine applications
[AD-A165489] N86-26608
COMPUTATION
Numerical simulation of turbulent flames using vortex methods
[AD-A164060] N86-26390
Increasing processor utilization during parallel computation rundown
[NASA-TM-87349] N86-26914
Research in distributed and parallel systems
[AD-A165486] N86-26984
The design and implementation of cost-effective algorithms for direct solution of banded linear systems on the vector processor system 32 supercomputer
[NASA-CR-176861] N86-26992
An abstract delay-differential equation modeling size dependent cell growth and division — local area networks
[CWI-AM-R8508] N86-27023
Electrical measurements on alpha-quartz crystals
[AD-A164793] N86-27096
COMPUTATIONAL FLUID DYNAMICS
Laminar and turbulent boundary-layer calculations on the leeward surface of a slender delta wing at incidence — graph theory
[NLR-MP-84040-U] N86-26293
Application of a computational model for vortex generators in subsonic internal flows
[NASA-TM-87327] N86-26545
Multigrid method for a vortex breakdown simulation
[NASA-CR-178106] N86-26547
Advances in numerical and applied mathematics
[NASA-CR-178076] N86-26552
Stability analysis of intermediate boundary conditions in approximate factorization schemes N86-26554
A spectral multidomain method for the solution of hyperbolic systems N86-26557
Multiple laminar flows through curved pipes N86-26559
Calculations of the stability of some axisymmetric flows proposed as a model of vortex breakdown N86-26560
Numerical study of vortex breakdown N86-26561
Multigrid method for a vortex breakdown simulation N86-26562
Construction of higher order accurate vortex and particle methods N86-26563
Pseudo-time algorithms for the Navier-Stokes equations N86-26564
Conditions for the construction of multi-point total variation diminishing difference schemes N86-26565
Some results on uniformly high order accurate essentially non-oscillatory schemes N86-26566
On numerical dispersion by upwind differencing N86-26567
AZTEC: A front tracking code based on Godunov's method N86-26568
Least squares finite element simulation of transonic flows N86-26569
The weak element method applied to Helmholtz type equations N86-26570
The local redistribution of points along curves for numerical grid generation N86-26571
On similarity solutions of a boundary layer problem with an upstream moving wall N86-26572
On the advantages of the vorticity-velocity formulation of the equations of fluid dynamics N86-26573
Three-dimensional separation and vortical wakes over a prolate spheroid
[AD-A164781] N86-26583
A study of the unsteady aerodynamic forces generated by a deforming Joukowski airfoil N86-26723
Regularity estimates up to the boundary for elliptic systems of difference equations
[NASA-CR-178107] N86-26989
A spectral multidomain method for the solution of hyperbolic systems
[NASA-CR-178105] N86-26990
Transverse vorticity measurements using an array of four hot-wire probes
[NASA-CR-178098] N86-27042
COMPUTATIONAL GRIDS
Interprocessor communication issues in fat-tree architectures
[AD-A163425] N86-26921
A spectral multidomain method for the solution of hyperbolic systems
[NASA-CR-178105] N86-26990
COMPUTER AIDED DESIGN
CADS: A Computer Aided Design System. Volume 2. User's guide
[AD-A163256] N86-26935
Space-efficient algorithms for computational geometry
[AD-A163426] N86-26945
Schema: An architecture for knowledge based CAD
[AD-A163437] N86-26946
COMPUTER AIDED MANUFACTURING
Computer Aided Manufacturing (CAM) data bases: Requirements and survey — plasma diagnostics
[REPT-17/85] N86-26976
COMPUTER ASSISTED INSTRUCTION
User's manual for the prototype ADA (trademark) Compiler Evaluation Capability (ACEC), version 1
[AD-A163272] N86-26936
Commercial market potentials for the use of the ADA (trademark) programming language
[AD-A163273] N86-26939
COMPUTER GRAPHICS
CADS: A Computer Aided Design System. Volume 2. User's guide
[AD-A163256] N86-26935
Surface construction from planar contours
[AD-A164862] N86-26950
The fractal geometry of nature; its mathematical basis and application to computer graphics
[AD-A165185] N86-27014
COMPUTER NETWORKS
Process synchronization and data communication between processes in real time local area networks
[AD-A164860] N86-26511
Network file storage system
[DE86-000779] N86-26916
Schema: An architecture for knowledge based CAD
[AD-A163437] N86-26946
Distributed matchmaking for processes in computer networks — mathematical model
[CWI-CS-R8513] N86-26965
COMPUTER PROGRAMMING
Simple wavemeter for pulsed dye lasers
[DE86-004486] N86-26624
Regular expression analysis of procedures and exceptions — computer systems programs
[RSRE-85008] N86-26927
Extending data typing beyond the bounds of programming languages — computer systems programs
[RSRE-MEMO-3878] N86-26931
STARS (Software Technology for Adaptable and Reliable Systems) methodology area summary. Volume 1: Organization and plans
[AD-A163270] N86-26936
STARS (Software Technology for Adaptable and Reliable Systems) methodology area summary. Volume 2: Preliminary views on the software life cycle and methodology selection
[AD-A163271] N86-26937
User's manual for the prototype ADA (trademark) Compiler Evaluation Capability (ACEC), version 1
[AD-A163272] N86-26938

Commercial market potentials for the use of the ADA (trademark) programming language
[AD-A163273] N86-26939
Top-down parsing syntax error recovery
[AD-A164859] N86-26949
Ada (trademark) training curriculum. Software engineering methodologies m201 teacher's workbook
[AD-A165299] N86-26954
Ada (trademark) training curriculum. Software engineering methodologies m201 teacher's guide, volume 1
[AD-A165300] N86-26955
Ada (trademark) training curriculum. Software engineering methodologies m201 teacher's guide, volume 2
[AD-A165301] N86-26956
Ada (trademark) training curriculum. Software engineering methodologies m201 teacher's guide, volume 3
[AD-A165302] N86-26957
Ada (trademark) training curriculum. Ada (registered trademark) for software managers, 1201: Teacher's guide, volume 1
[AD-A165314] N86-26958
Characterization of an Ada software development
[AD-A165320] N86-26960
Software metrics for Ada
[AD-A165321] N86-26961
Monitoring and Ada software development project
[AD-A165324] N86-26962
Metrics for Ada packages: An initial study
[AD-A165336] N86-26963
Ada (Trademark) primer
[AD-A165345] N86-26964
Ada (trademark) training curriculum. Instructor's course s500 introductory language modules
[AD-A165348] N86-26966
Ada (trademark) training curriculum. Instructor's course s500 methodology modules
[AD-A165349] N86-26967
Ada (trademark) training curriculum. Instructor's course s500 overview
[AD-A165350] N86-26968
Software documentation on the URDB modifications to incorporate information collected in Post-DSCS and UHF studies
[AD-A165451] N86-26973
Design methodology for embedded systems
[AD-A165497] N86-26974
The implementation of a entity-relationship interface for the multi-lingual database system
[AD-A164858] N86-27123
The IRAS revisited (lessons learned from IRAS operations) — satellite tracking
[FOK-TR-85-63] N86-27170
COMPUTER PROGRAMS
Theoretical analysis of the electrical aspects of the basic electro-impulse problem in aircraft de-icing applications
[NASA-CR-176808] N86-26330
Computational simulation of progressive fracture in fiber composites
[NASA-TM-87341] N86-26376
The effect of low velocity impact on the strength characteristics of composite materials laminates
[NASA-CR-176846] N86-26379
A lumped parameter code for regenerative liquid propellant guns
[AD-A164960] N86-26483
Spectrum orbit utilization program technical manual SOUP5 Version 3.8
[NASA-CR-174944] N86-26489
Radar target classification studies: Software development and documentation
[AD-A164789] N86-26510
A computer code for three-dimensional incompressible flows using nonorthogonal body-fitted coordinate systems
[NASA-CR-178818] N86-26544
TOPAZ3D: A three-dimensional finite element heat transfer code
[DE85-017878] N86-26590
Conceptual development of strain-gage signal interpretation system for jet engine applications
[AD-A165489] N86-26608
Circular-cylindrical structures: Dynamic response to vortex shedding. Part 3: Computer programs
[ESDU-85040] N86-26642
High strain rate material behavior
[AD-A165214] N86-26659
User-friendly screening model for point-source impact assessment
[PB86-176369] N86-26722
Proceedings of the International Test and Evaluation Association 1984 Symposium (Step Session) Supplement
[AD-A163236] N86-26919

SPECFUN - a portable special function package
[DE86-004080] N86-26629
Top-down parsing syntax error recovery
[AD-A164889] N86-26649
Software test and evaluation manual. Volume 1: Guidelines for the treatment of software in test and evaluation master plans
[AD-A165208] N86-26953
Ada (trademark) training curriculum. Software engineering methodologies m201 teacher's guide, volume 3
[AD-A165302] N86-26957
Ada (trademark) training curriculum. Ada (registered trademark) for software managers, 1201: Teacher's guide, volume 1
[AD-A165314] N86-26958
Characterization of an Ada software development
[AD-A165320] N86-26960
Software metrics for Ada
[AD-A165321] N86-26961
Monitoring and Ada software development project
[AD-A165324] N86-26962
Software documentation on the URDB modifications to incorporate information collected in Post-DSCS and UHF studies
[AD-A165451] N86-26973
The formal specification of an abstract database: Design and implementation
[AD-A164865] N86-27124

COMPUTER STORAGE DEVICES
Process synchronization and data communication between processes in real time local area networks
[AD-A164880] N86-26511
Network file storage system
[DE86-000779] N86-26916

COMPUTER SYSTEMS DESIGN
Stanford Hardware Development Program
N86-26910
Semi-applicative programming. Examples of contact free recognizers
[AD-A164897] N86-26951
Ada (Trademark) training curriculum: Ada technical overview 1102 teacher's guide
[AD-A165352] N86-26970

COMPUTER SYSTEMS PERFORMANCE
Quality control in research data bases: The US Environmental Protection Agency National Surface Water Survey Experience
[DE86-002249] N86-27117

COMPUTER SYSTEMS PROGRAMS
Comparison of measured and computed boundary layers at the tail-end of two axisymmetric bodies in the ARE quiet wind tunnel — gear box wear
[AMTE(N)-TM-84063] N86-26574
Software test and evaluation manual. Volume 1: Guidelines for the treatment of software in test and evaluation master plans
[AD-A165208] N86-26953
Software metrics for Ada
[AD-A165321] N86-26961
Software documentation on the URDB modifications to incorporate information collected in Post-DSCS and UHF studies
[AD-A165451] N86-26973
A theory of partial systems — software reuse
[KFK-3982] N86-26975
Printer multiplexing among multiple Z-100 microcomputers
[AD-A165179] N86-26983

COMPUTER TECHNIQUES
An analysis of S-3 SDLM (Standard Depot Level Maintenance) corrosion documentation procedures
[AD-A165688] N86-26282
A survey of videodisc technology
[AD-A164392] N86-26606
The study of gravity field estimation procedures
[AD-A164564] N86-26745
Electrical measurements on alpha-quartz crystals
[AD-A164793] N86-27096

COMPUTERIZED SIMULATION
Computational simulation of progressive fracture in fiber composites
[NASA-TM-87341] N86-26376
Optical and electrochemical study of model zinc electrode pores in alkaline electrolyte
[DE86-002967] N86-26521
Three-dimensional simulations of an XUV free-electron laser
[DE86-003654] N86-26610
Numerical modeling of a solid particle solar central receiver
[DE86-005066] N86-26709
Modeling of a heat pump charged with a non-azeotropic refrigerant mixture
[PB86-169267] N86-26712
HEC-5Q: System water quality modeling
[AD-A164832] N86-26717
Remote sensing and oceanographic equipment technology: Some present systems and future needs, revised
[PB86-156602] N86-26791
Computer visual simulation of contrast sensitivity deficits induced by laser and chemical antidote exposure
N86-26913
A nonparametric statistical approach to the validation of computer simulation models
[AD-A169376] N86-26944
Use of color in differentiating factor levels in simulation output (preliminary report)
[AD-A164951] N86-26947
A lumped parameter mathematical model for simulation of subsonic wind tunnels
[NASA-TM-87324] N86-27036
Plasma physics modeling and the Cray-2 multiprocessor
[DE86-004239] N86-27072
Electrical measurements on alpha-quartz crystals
[AD-A164793] N86-27096
Early differentiation of the Moon: Experimental and modeling studies
[NASA-CR-176817] N86-27172

COMPUTERS
IRIG standard data format for interrange transmission of tracking data from computer to computer (2400 BPS synchronous EFG format 0)
[AD-A163251] N86-26982
Printer multiplexing among multiple Z-100 microcomputers
[AD-A165179] N86-26983
Piezometer data base package user's guide
[AD-A163264] N86-27119
Compilation of abstracts of theses submitted by candidates for degrees
[AD-A164868] N86-27126
A summary of the Naval Postgraduate School research program
[AD-A164845] N86-27131

CONCRETE STRUCTURES
The Shock and Vibration Digest, volume 17, no. 9
[AD-A161143] N86-26944
Impactor interaction with concrete structures: Local effects N86-26645

CONCRETES
Comparative study of nondestructive pavement testing, WES (Waterways Experiment Station) NDT (nondestructive tests) methodologies
[AD-A169379] N86-26480

CONCURRENT PROCESSING
Stanford Hardware Development Program
N86-26910
Verifying temporal properties without using temporal logic
[AD-A164820] N86-26948

CONDENSING
Adsorption and condensation of amino acids and nucleotides with soluble mineral salts N86-26969
Particle formation and interaction N86-27139

CONDUCTION ELECTRONS
Electrical measurements on alpha-quartz crystals
[AD-A164793] N86-27096

CONDUCTIVE HEAT TRANSFER
SAROS: Solar Active Region Observations from Spacelab
[NASA-CR-177876] N86-27173

CONFERENCES
Guidance-Control-Navigation Automation for Night All-Weather Tactical Operations
[AGARD-CP-367] N86-26316
IST/IDA (Innovative Science and Technology/Institute for Defense Analyses) Gamma-Ray Laser Workshop, 21-22 May 1985
[AD-A164890] N86-26622
Technology transfer at DARPA: The Defense Advanced Research Projects Agency. Executive summary
[AD-A164503] N86-27110
Calendar of selected aeronautical and space meetings December 1985
[AD-A164535] N86-27112

CONFIDENCE LIMITS
Sequential testing and confidence intervals for the MTBF (meantime between failures) of systems having exponential distribution of the interfailure times
[AD-A165189] N86-26640
Convexity of elliptically contoured distributions with applications
[AD-A163399] N86-27003
Generalized order statistics, Bahadur representations and sequential nonparametric fixed-width confidence intervals
[AD-A163329] N86-27031

CONICAL BODIES
A centrifugal type gasket for bearings
[AD-A164796] N86-26632

CONJUGATE GRADIENT METHOD
History matching by spline approximation and regularization in single-phase areal reservoirs
[NASA-CR-178067] N86-26984

CONNECTORS
Fiber optic cable storage device
[AD-D012166] N86-27066

CONSERVATION
HEC-5Q: System water quality modeling
[AD-A164832] N86-26717

CONSERVATION EQUATIONS
A physical model and conservation equation for dynamic solid-liquid behavior
[AD-A165295] N86-26586
Thermospheric models: A short review on the basic assumptions
[INPE-3823-PRE/899] N86-26738
Metastability and compensated compactness in continuum theories
[AD-A164634] N86-27007

CONSERVATION LAWS
Uniformly high order accurate essentially non-oscillatory schemes 3
[NASA-CR-178101] N86-26287
Regularity for a singular conservation law
[AD-A163620] N86-26576
Metastability and compensated compactness in continuum theories
[AD-A164634] N86-27007

CONSISTENCY
Human factors in rule-based systems
[AD-A165309] N86-26840
On density estimation from censored data by penalized likelihood methods
[AD-A163388] N86-27002

CONSTANTS
High strain rate material behavior
[AD-A165214] N86-26659

CONSTRAINTS
Analysis of helical waveguide
[AD-A163252] N86-26522
A comparative study of prebiotic and present day translational models N86-26877

CONSTRUCTION
Surface construction from planar contours
[AD-A164862] N86-26950
Convexity of elliptically contoured distributions with applications
[AD-A163399] N86-27003

CONTACT LENSES
Contact lenses for pilots and aircrew in the services
N86-26515
Dynamic behaviour of spherical and aspherical contact lenses exposed to +Gz-acceleration forces
N86-26516

CONTAINERLESS MELTS
Surface film effects on drop tube undercooling studies
[NASA-TM-86547] N86-26410

CONTAMINANTS
TNT RDX and HMX explosives in soils and sediments. Analysis techniques and drying losses
[AD-A163278] N86-26457
Unusual contaminant in JP-4 fuel delivered to Fort Campbell, Fort Knox, and Tennessee Army National Guard
[AD-A163399] N86-26460
Aircraft engine emissions estimator
[AD-A164552] N86-26715
Maryland Water Resources Research Center, fiscal year 1984 program report
[PB86-133253] N86-26721

CONTAMINATION
Evaluation of TWT (Traveling Wave Tube) cathode impregnant manufacturing procedures
[AD-A163360] N86-26526
New techniques for the detection and capture of micrometeoroids N86-26862
On the least-informative distribution in a contamination neighborhood
[AD-A163312] N86-27030
Hillock formation on (100) GaAs
[AD-A163308] N86-27090

CONTINUITY (MATHEMATICS)
On the existence of Li-Yorke points in the theory of chaos
[AD-A164891] N86-27010

CONTINUOUS RADIATION
Proposal for FEL experiments driven by the National Bureau of Standards' CW microtron
[AD-A163227] N86-26619
Techniques for the automated observation of clouds
[AD-A165673] N86-26775

CONTINUUM MECHANICS
A minimum entropy principle in the gas dynamics equations N86-26556
Metastability and compensated compactness in continuum theories
[AD-A164634] N86-27007
CONTOURS
Application of a computational model for vortex generators in subsonic internal flows
[NASA-TM-87327] N86-26545
Surface construction from planar contours
[AD-A164862] N86-26950
Convexity of elliptically contoured distributions with applications
[AD-A163389] N86-27003
Experiments on sound propagation over sloped bottoms
[AD-A163431] N86-27044
CONTRACT INCENTIVES
An application of cost risk in incentive contracts
[AD-A165177] N86-27115
CONTRACTORS
An application of cost risk in incentive contracts
[AD-A165177] N86-27115
CONTRACTS
An application of cost risk in incentive contracts
[AD-A165177] N86-27115
CONTRAST
Aeromedical lessons learned with night vision devices N86-26810
Computer visual simulation of contrast sensitivity deficits induced by laser and chemical antidote exposure N86-26813
CONTROL EQUIPMENT
Magnetic spin reduction system for free spinning objects
[NASA-CASE-MFS-25966-1] N86-26352
A system for conducting igneous petrology experiments under controlled redox conditions in reduced gravity N86-27166
CONTROL STABILITY
Digitally controlled programmable active filters
[AD-A164999] N86-26534
CONTROL SYSTEMS DESIGN
Study of Navsat control segment characteristics. Part 1: Elements of a control segment concept — space station power supplies
[NLR-TR-84086-L-PT-1] N86-26361
CONTROL THEORY
Mathematical models of flexible spacecraft dynamics: A survey of order reduction approaches — aircraft tracking
[NLR-MP-85004-U] N86-26367
Computational methods for the control of distributed parameter systems
[NASA-CR-178108] N86-26915
CONTROL VALVES
Modelling of a cold gas jet system for satellite attitude control
[INPE-3853-PRE/917] N86-26356
CONTROLLED FUSION
State-of-the-Art survey of gyrotron research: An ONRL sponsored workshop
[AD-A163580] N86-26800
CONVECTION
On numerical dispersion by upwind differencing N86-26567
Characteristics of western region flash flood events in GOES imagery and conventional data
[NOAA-TM-NESDIS-13] N86-26866
CONVECTIVE FLOW
Observations of low-degree p-mode oscillations in 1984. Comments on techniques for spectral deconvolution
[AD-A164780] N86-27174
CONVERGENCE
Convergence to steady state of solutions of Burgers' equation N86-26553
Annual progress report, 1 June 1984-31 May 1985
[AD-A164863] N86-26584
End-point corrected trapezoidal quadrature rules for singular functions
[AD-A163242] N86-27000
A note on convergence of functions of random elements
[AD-A163406] N86-27004
A paradigm for reliable clock synchronization
[AD-A164819] N86-27040
CONVEXITY
Convexity of elliptically contoured distributions with applications
[AD-A163389] N86-27003
COOLING
Development and evaluation of a prototype life preserver
[AD-A163224] N86-26297
COOLING SYSTEMS
Highlights from the assembly of the helical field coils for the Advanced Toroidal Facility
[DE86-004758] N86-27081
COORDINATES
The solution of nonlinear time-dependent problems using modal coordinates
[AD-A163535] N86-26994
COPOLYMERIZATION
Polyether-polyester graft copolymer
[NASA-CASE-LAR-13447-1] N86-26436
COPOLYMERS
Polyether-polyester graft copolymer
[NASA-CASE-LAR-13447-1] N86-26436
Organofunctional phosphazenes and organofunctional phosphazene polymers
[AD-A165437] N86-26483
COPPER
Nonlinear damage analysis: Postulate and evaluation
[NASA-CR-168171] N86-26652
High strain rate material behavior
[AD-A165214] N86-26659
COPPER ALLOYS
Development of high field superconductors for fusion energy applications
[DE86-004834] N86-27103
CORE FLOW
The General Electric F404 - engine of the RAAF's new fighter
[AD-A164562] N86-26338
CORE SAMPLING
Investigation of subsurface exploration methods for prevailing geologic conditions in South Carolina
[PB86-167087] N86-26752
CORIOLIS EFFECT
Low gravity facilities for space station planetology experiments N86-27160
CORONAL LOOPS
SAROS: Solar Active Region Observations from Spacelab
[NASA-CR-177878] N86-27173
CORRELATION
Comparative study of nondestructive pavement testing, WES (Waterways Experiment Station) NDT (nondestructive tests) methodologies
[AD-A163379] N86-26480
Demonstration of a statistical method for isolating timesharing components
[AD-A165417] N86-26926
Convexity of elliptically contoured distributions with applications
[AD-A163389] N86-27003
Properties of batch means from stationary ARMA (Autoregressive moving average) time series
[AD-A165187] N86-27033
CORROSION
Structure and properties of polymers and organosilanes adsorbed onto oxidized aluminum and titanium
[AD-A165210] N86-26449
Thermal response tests of candidate insulation systems for the chlorine tank car
[AD-A165293] N86-26451
CORROSION PREVENTION
An analysis of S-3 SDLM (Standard Depot Level Maintenance) corrosion documentation procedures
[AD-A165588] N86-26282
The inhibition of vapor-phase corrosion. A review
[AD-A163430] N86-26417
Corrosion control through a better understanding of the metallic substrate/organic coating/interface
[AD-A164734] N86-26419
Oxidation protecting coatings for polymers
[NASA-CASE-LEW-14072-3] N86-26434
High temperature molten salt storage
[DE85-016874] N86-26706
CORROSION RESISTANCE
Effect of chromium addition to the low temperature hot corrosion resistance of platinum modified aluminide coatings
[AD-A164755] N86-26420
High temperature molten salt storage
[DE85-016874] N86-26706
CORROSION TESTS
Accelerated corrosion testing of graphite/epoxy composites and aluminum alloy mechanically-fastened joints
[AD-A164772] N86-26382
COSMIC DUST
Molecular and Elemental Dust Analyzer (MEDA) for the comet rendezvous asteroid flyby mission N86-26867
Report on opportunities and/or techniques for high-caliber experimental research (other) proposals for SSPEX N86-27140
Cosmic dust collection with a sub-satellite tethered to a space station N86-27146
COSMIC RAYS
Survey of atmospheric radiation components for the Gamma and Cosmic Ray Astrophysics Branch of the Space Science Division of the Naval Research Laboratory
[AD-A165538] N86-27177
COSMOLOGY
Field theoretic investigations on particle physics and cosmology
[DE86-004518] N86-27108
COST ANALYSIS
Advanced materials research status and requirements. Volume 1: Technical summary
[AD-A165338] N86-26385
Defense Communications Agency cost and planning factors manual, change 2
[AD-A163319] N86-26505
Conception and optimization of an infrared thermal sensor using the value analysis method
[INPE-3854-PRE/918] N86-26597
Sensitivity analysis for solar plates N86-26684
Processes and process development N86-26690
An application of cost risk in incentive contracts
[AD-A165177] N86-27115
COST EFFECTIVENESS
Analyzing the cost effectiveness of using flight simulators in the Israeli Air Force
[AD-A164604] N86-26346
Annual progress report, 1 June 1984-31 May 1985
[AD-A164863] N86-26584
KrF lasers as inertial fusion drivers
[DE86-003667] N86-26612
COST ESTIMATES
Aquila remotely piloted vehicle: Recent developments and alternatives
[AD-A164597] N86-26330
An application of cost risk in incentive contracts
[AD-A165177] N86-27115
COST INCENTIVES
An application of cost risk in incentive contracts
[AD-A165177] N86-27115
COST REDUCTION
Compaction with automatic jog introduction
[AD-A163436] N86-26527
Requirements for high-efficiency solar cells N86-26681
Economics of polysilicon process: A view from Japan N86-26682
Sensitivity analysis for solar plates N86-26684
Development of the silane process for the production of low-cost polysilicon N86-26685
Fluidized-bed development at JPL N86-26688
Processes and process development in Japan N86-26689
Refining of metallurgical-grade silicon N86-26691
Solar-grade silicon prepared by carbothermic reduction of silica N86-26692
Characterization of solar-grade silicon produced by the SiF4-Na process N86-26695
COSTS
An analysis of S-3 SDLM (Standard Depot Level Maintenance) corrosion documentation procedures
[AD-A165588] N86-26282
Integrated risk/cost planning models for the US Air Traffic system
[NASA-CR-177274] N86-26312
CRACK ARREST
Some tests to assess the effect of crack stoppers on the fatigue life of center-notched specimens — semisubmersible platform
[NLR-TR-84051-U] N86-26862
CRACK CLOSURE
Some tests to assess the effect of crack stoppers on the fatigue life of center-notched specimens — semisubmersible platform
[NLR-TR-84051-U] N86-26862
CRACK INITIATION
Low-cycle thermal fatigue
[NASA-TM-87225] N86-26651
Nonlinear damage analysis: Postulate and evaluation
[NASA-CR-168171] N86-26652
CRACK PROPAGATION
Crack propagation in powder metallurgy hot isostatically pressed nickel-based alloy
[AD-A164587] N86-26416
Structure and properties of polymers and organosilanes adsorbed onto oxidized aluminum and titanium
[AD-A165210] N86-26449
Crack propagation and branching in burning solid propellants and ignition of nitramine-based composite propellants
[AD-A164630] N86-26461
The crack problem in a reinforced cylindrical shell
[NASA-CR-176686] N86-26648
Line spring model and its applications to part-through crack problems in plates and shells
[NASA-CR-176698] N86-26649

Low-cycle thermal fatigue
[NASA-TM-87225] N86-26651
Two compliance expressions for arbitrary locations across a crack in a CT (Compact Type) specimen
[AD-A163369] N86-26656
On the solution of integral equations with strong ly singular kernels
[NASA-CR-176687] N86-26686
CRACK TIPS
The crack problem in a reinforced cylindrical shell
[NASA-CR-176686] N86-26648
CRACKING (FRACTURING)
Boundary force method for analyzing two-dimensional cracked bodies
[NASA-TM-87725] N86-26647
A study of sea ice kinematics and their relationship to arctic ambient noise. Part 3, Section 1: Ambient noise. Section 2: Ambient noise
[AD-A165304] N86-26788
A study of sea ice kinematics and their relationship to arctic ambient noise. Part 3, section 3: Ambient noise
[AD-A165305] N86-26789
CRACKS
Two compliance expressions for arbitrary locations across a crack in a CT (Compact Type) specimen
[AD-A163369] N86-26656
CRASH INJURIES
Crash-resistant crewseat limit-load optimization through dynamic testing with cadavers
[AD-A164826] N86-26296
CRASHES
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 5 of 1984 accidents
[PB86-916901] N86-26305
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 6 of 1984 accidents
[PB86-916902] N86-26306
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 7 of 1984 accidents
[PB86-916903] N86-26307
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 8 of 1984 accidents
[PB86-916904] N86-26308
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 9 of 1984 Accidents
[PB86-916905] N86-26309
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 11 of 1984 accidents
[PB86-916907] N86-26310
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 13 of 1984 accidents
[PB86-916909] N86-26311
CRASHWORTHINESS
Crash-resistant crewseat limit-load optimization through dynamic testing with cadavers
[AD-A164826] N86-26296
Safety report General Aviation Crashworthiness Project. Phase 3: Acceleration loads and velocity changes of survivable general aviation accidents
[PB85-917016] N86-26302
CRATERING
Proposed Earth based cratering experiments at low G in hard vacuum N86-27142
Debris-cloud collisions: Accretion studies in the space station N86-27161
CRATERS
Bomb crater repair techniques for permanent airfields. Report 3. Series 4 tests
[AD-A164682] N86-26345
Space station impact experiments N86-27137
Low-gravity impact experiments: Progress toward a facility definition N86-27145
CRAY COMPUTERS
CFT compiler optimization and Cray X-MP vector performance
[DE86-004746] N86-26917
CREATIVITY
Creativity in Science - a symposium
[DE86-003289] N86-27109
CREEP RUPTURE STRENGTH
Heat treatment for superalloy
[NASA-CASE-LEW-14262-1] N86-26414
CREW WORKSTATIONS
Some quantitative methodology for cockpit design N86-26320
CROCCO METHOD
On similarity solutions of a boundary layer problem with an upstream moving wall
[NASA-CR-178104] N86-26549
On similarity solutions of a boundary layer problem with an upstream moving wall N86-26572
CROP IDENTIFICATION
A multilindex multitemporal approach to map crops in the early growing season: An application to two Italian irrigation districts: East Sesia and Grande Bonifica Ferrarese — five gases
[ICW-1811] N86-26674
CROP INVENTORIES
Wheat area estimation using digital LANDSAT MSS data and aerial photographs
[INPE-3624-PRE/900] N86-26667
CROSS COUPLING
Decoupling control synthesis for an oblique-wing aircraft
[NASA-TM-86801] N86-26339
CROSSLINKING
Polyether-polyester graft copolymer
[NASA-CASE-LAR-13447-1] N86-26435
CRYOGENIC EQUIPMENT
Propulsion apparatus and method using boil-off gas from a cryogenic liquid
[NASA-CASE-MFS-25946-1] N86-26368
CRYOGENIC WIND TUNNELS
Tables for correcting airfoil data obtained in the Langley 0.3-meter transonic cryogenic tunnel for sidewall boundary-layer effects
[NASA-TM-87723] N86-26269
CRYOGENICS
Linear resonance cooler
[AD-A165492] N86-26483
CRYSTAL GROWTH
Planar oscillatory stirring apparatus
[NASA-CASE-MFS-26002-1-CU] N86-26598
Effects of impurities on silicon solar-cell performance N86-26680
Sensitivity analysis for solar plates N86-26684
Characterization of solar-grade silicon produced by the SiF4-Na process N86-26695
Stable, high-efficiency, CuInSe2 based polycrystalline thin-film tandem solar cells
[DE86-016893] N86-26700
CRYSTAL LATTICES
Carbon monoxide induced ordering of adsorbates on the Rh(111) crystal surface
[DE86-004104] N86-26405
CRYSTAL OSCILLATORS
Classical derivation of nonlinear susceptibilities for the 32 crystal classes in the harmonic oscillator approximation
[AD-A164536] N86-27092
CRYSTAL STRUCTURE
Structural chemistry of energetic compounds
[AD-A164813] N86-26397
Synthesis and properties of novel electroactive organometallic polymers
[DE86-004951] N86-26455
The effect of air gape on the propagation of detonation in charges consisting of stacked blocks of cast TNT
[AD-A163398] N86-26459
Spectroscopy of surface adsorbed molecules (scanning tunneling microscopy)
[DE86-004508] N86-27067
Classical derivation of nonlinear susceptibilities for the 32 crystal classes in the harmonic oscillator approximation
[AD-A164536] N86-27092
CRYSTAL SURFACES
Analysis of the physical atomic forces between noble gas atoms, alkali ions and halogen ions
[NASA-TP-2586] N86-26413
Hillock formation on (100) GaAs
[AD-A163308] N86-27090
CRYSTALLINITY
Field-induced crystallization in highly plasticized poly(vinylidene fluoride) films
[AD-A164684] N86-26442
Field induced dipole reorientation and piezoelectricity in heavily plasticized nylon 11 films
[AD-A164683] N86-27095
CRYSTALLIZATION
Field-induced crystallization in highly plasticized poly(vinylidene fluoride) films
[AD-A164684] N86-26442
A metallurgical route to solar-grade silicon N86-26693
Early differentiation of the Moon: Experimental and modeling studies
[NASA-CR-178817] N86-27172
CRYSTALS
Dynamic orientation studies of polymers
[AD-A164611] N86-26440
Crystal plasticity analysis of large-strain shear
[DE86-005061] N86-26660
Investigations of ultrasonic wave interactions at boundaries separating anisotropic materials
[DE86-004953] N86-27060
Electrical measurements on alpha-quartz crystals
[AD-A164793] N86-27098
CULTURE TECHNIQUES
Biotechnica '85 International Congress for Biotechnology
[AD-A165415] N86-26794
CURING
Ethynyl-containing aromatic polyamide resins
[AD-D012169] N86-26437
CURVES (GEOMETRY)
The local redistribution of points along curves for numerical grid generation N86-26571
CYCLES
Synthesis of high-speed digital systems
[AD-A164660] N86-26922
CYCLIC COMPOUNDS
Structural chemistry of energetic compounds
[AD-A164813] N86-26397
Organofunctional phosphazenes and organofunctional phosphazene polymers
[AD-A165437] N86-26453
CYCLIC LOADS
Low-cycle thermal fatigue
[NASA-TM-87225] N86-26651
CYCLONES
Characteristics of western region flash flood events in GOES imagery and conventional data
[NOAA-TM-NESDIS-13] N86-26669
Genesis of major dust storms in West Africa during the summer of 1974
[AD-A165457] N86-26783
CYCLOTRON RADIATION
Particle and wave dynamics during plasma injections
[AD-A163210] N86-26742
Non-thermal electron velocity distribution measured by electron cyclotron emission in Alcator C tokamak
[DE86-004402] N86-27073
Electron Bernstein wave current drive in the start-up phase of a tokamak discharge
[INPE-3886-PRE/926] N86-27074
CYCLOTRON RESONANCE DEVICES
State-of-the-Art survey of gyrotron research: An ONRL sponsored workshop
[AD-A163580] N86-26800
CYCLOTRONS
Proposal for FEL experiments driven by the National Bureau of Standards' CW microtron
[AD-A163227] N86-26819
CYLINDRICAL SHELLS
The crack problem in a reinforced cylindrical shell
[NASA-CR-176686] N86-26648
CZOCHRALSKI METHOD
Hillock formation on (100) GaAs
[AD-A163308] N86-27090

D

D REGION
Measurement techniques for middle atmosphere electric fields N86-26734
DAMAGE
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 5 of 1984 accidents
[PB86-916901] N86-26305
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 6 of 1984 accidents
[PB86-916902] N86-26306
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 7 of 1984 accidents

DECOMPOSITION
Fluidized-bed development at JPL N86-26686
Isotopic characterization of prebiotic synthesis of organic material N86-26865

DECOUPLING
Decoupling control synthesis for an oblique-wing aircraft
[NASA-TM-86801] N86-26339

DEFECTS
Evaluation of multilayer printed wiring boards by metallographic techniques: An illustrated guide to the preparation and inspection of plated-through hole test coupons based on the requirements of MIL-P-55110D
[NASA-RP-1161] N86-26639
Marching difference schemes for ill posed initial value problems
[AD-A164012] N86-26987

DEFENSE COMMUNICATIONS SYSTEM (DCS)
Commercial SATCOM subarchitecture assessments and initial concepts
[AD-A165549] N86-26516

DEFENSE PROGRAM
Proceedings of the International Test and Evaluation Association 1984 Symposium (Step Session). Supplement
[AD-A163236] N86-26919
An application of cost risk in incentive contracts
[AD-A165177] N86-27115
Proceedings of the 1985 Annual DTIC Users Conference
[AD-A166250] N86-27118

DEFLAGRATION
A fundamental mathematical theory for thermal explosions in rigid solids and in gases
[AD-A164692] N86-26396

DEFLECTION
Comparative study of nondestructive pavement testing, WES (Waterways Experiment Station) NDT (nondestructive tests) methodologies
[AD-A163379] N86-26480
Circular-cylindrical structures: Dynamic response to vortex shedding. Part 3: Computer programs
[ESDU-85040] N86-26642

DEFORMATION
Effects of quenched-in hydrogen on deformation of iron single crystals
[DE86-001883] N86-26426
Recent research in nonlinear analysis of beams N86-26546
Damage prediction of projectile penetration process based on energy dissipation rate
[AD-A163268] N86-26656
Crystal plasticity analysis of large-strain shear
[DE86-005061] N86-26860
Plate motions and deformations from geologic and geodetic data
[NASA-CR-177299] N86-26741

DEICING
Theoretical analysis of the electrical aspects of the basic electro-impulse problem in aircraft de-icing applications
[NASA-CR-176808] N86-26330
Calibration of droplet sizing and liquid water content instruments: Survey and analysis
[NASA-CR-175099] N86-26596

DELAY
The effect of air gaps on the propagation of detonation in charges consisting of stacked blocks of cast TNT
[AD-A163398] N86-26455

DELTA WINGS
Laminar and turbulent boundary-layer calculations on the leeward surface of a slender delta wing at incidence — graph theory
[NLR-MP-84040-U] N86-26293
DELTAS
The Atchafalaya River Delta. Report 7. Analytical analysis of the development of the Atchafalaya River Delta
[AD-A164931] N86-26673
DEMAGNETIZATION
Effect of magnetostriction on remanent magnetization
[AD-A165450] N86-27041
DEMAND ASSIGNMENT MULTIPLE ACCESS
UHF DAMA (Demand-Assigned Multiple Access) simulation analysis
[AD-A165446] N86-26514
DEMOGRAPHY
Demographic and anthropometric assessment of US Army anthropometric data base
[AD-A164637] N86-26838
DENSITY (NUMBER/VOLUME)
Spectroscopy of surface adsorbed molecules (scanning tunneling microscopy)
[DE86-004506] N86-27087
DENSITY MEASUREMENT
Cars diagnostics of high pressure combustion. 2. Measurements of NO, H2O and high pressure flames
[AD-A164610] N86-26395
DEOXYRIBONUCLEIC ACID
Intramolecular interactions in aminoacyl nucleotides: Implications regarding the origin of genetic coding and protein synthesis N86-26673
Base pairing and base mis-pairing in nucleic acids N86-26681
Investigations with methanobacteria and with evolution of the genetic code N86-26690
Thioredoxins in evolutionarily primitive organisms N86-26693
DEPLOYMENT
Infrasonic ambient ocean noise spectra from freely drifting sensors
[AD-A163413] N86-26785
DEPOSITION
Character of silver lining
[DE86-001585] N86-26423
Influence of deposition variables on LPCVD tungsten films deposited by the WF6/Si reduction
[DE86-003727] N86-26431
Proceedings of the Second Annual Heat Engines Contractors Meeting
[DE85-006595] N86-26705
Research on high-efficiency, stacked, multijunction, amorphous silicon alloy thin-film solar cells
[DE85-016675] N86-26707
The use of ion implantation for materials processing
[AD-A165432] N86-27059
Impact experimentation and the microgravity environment: An overview N86-27151
Electrostatic aggregation of finely-comminuted geological materials N86-27156
DESCRIPTIVE GEOMETRY
Computer Aided Manufacturing (CAM) data bases: Requirements and survey — plasma diagnostics
[REPT-17/85] N86-26976
DESERTS
Microfossils in the Antarctic cold desert: Possible implications for Mars N86-26697
DESIGN ANALYSIS
Some quantitative methodology for cockpit design N86-26320
KrF lasers as inertial fusion drivers
[DE86-003667] N86-26612
The design and analysis of a network interface for the multi-lingual database system
[AD-A164756] N86-27121
DESIGN TO COST
STARS (Software Technology for Adaptable and Reliable Systems) methodology area summary. Volume 1: Organization and plans
[AD-A163270] N86-26936
STARS (Software Technology for Adaptable and Reliable Systems) methodology area summary. Volume 2: Preliminary views on the software life cycle and methodology selection
[AD-A163271] N86-26937
DETECTION
Power sensing device
[AD-D012171] N86-26529
Vorticity optical probe
[AD-A164619] N86-26581
A study of the methodology of low-altitude wind shear detection with special emphasis on the low level wind shear alert system concept
[AD-A164939] N86-26760
Techniques for the automated observation of clouds
[AD-A165573] N86-26775
New techniques for the detection and capture of micrometeoroids N86-26862
MSS evaluation. Revision 1
[AD-A164589] N86-27047
Continuous ultrasonic waves to detect steam bubbles in water under high pressure — plasma diagnostics
[S/T-REPT-VOL-3-NO-5] N86-27051
DETERMINANTS
A nonparametric statistical approach to the validation of computer simulation models
[AD-A163376] N86-26944
DETONATION
The effect of air gaps on the propagation of detonation in charges consisting of stacked blocks of cast TNT
[AD-A163396] N86-26459
DEUTERIUM
Biodeuterated materials: High-temperature lubricants from algae
[AD-A164913] N86-26445
DF LASERS
DF vibrational relaxation
[AD-A163421] N86-26392
DIAGNOSIS
The healthy motivation to fly: No psychiatric diagnosis
[AD-A164944] N86-26832
DIAMAGNETISM
Waves and electric fields associated with the December 27, 1984, artificial comet
[AD-A163409] N86-26744
DIAMETERS
Analysis of helical waveguide
[AD-A163252] N86-26522
DICHROISM
Dynamic orientation studies of polymers
[AD-A164611] N86-26440
DIELECTRIC PROPERTIES
Investigation and development of advanced surface microanalysis techniques and methods
[AD-A163616] N86-26389
Field-induced crystallization in highly plasticized poly(vinylidene fluoride) films
[AD-A164684] N86-26442
Application of conductive polymer technology to the production of a novel multilayer capacitor
[AD-A165212] N86-26450
Effect of magnetostriction on remanent magnetization
[AD-A165450] N86-27041
Electrical measurements on alpha-quartz crystals
[AD-A164793] N86-27096
DIELECTRICS
Ferromagnetic dielectric substance
[AD-A163214] N86-26415
Moment method analysis of microstrip antennas over a wide frequency range
[NASA-CR-176842] N86-26485
Minimizing EHF waveguide losses
[AD-A164726] N86-26530
DIESEL ENGINES
Preliminary evaluation of a compound cycle engine for shipboard gensets
[NASA-CR-179451] N86-26829
Environmental assessment of NOx control on a compression ignition large bore reciprocating internal combustion engine. Volume 1: Technical results
[PB86-155819] N86-26837
Proceedings of the Second Annual Heat Engines Contractors Meeting
[DE85-006595] N86-26705
DIESEL FUELS
LC-(1)H NMR characterization studies of tricyclic aromatics and olefins in diesel fuels
[AD-A165402] N86-26464
DIFFERENCE EQUATIONS
An efficient decision-making-free filter for processes with abrupt changes — aircraft tracking
[NLR-MP-84060-U] N86-27018
DIFFERENTIAL EQUATIONS
A lumped parameter code for regenerative liquid propellant guns
[AD-A164960] N86-26463
Operational soil moisture prediction model
[AD-A165313] N86-26481
A physical model and conservation equation for dynamic solid-liquid behavior
[AD-A165295] N86-26586
Exact integration algorithm for use with model analysis
[DE85-018533] N86-26993
DIFFRACTION
Joint services electronics program
[AD-A164916] N86-26532
DIFFRACTION PATTERNS
An E-plane analysis of aperture-matched horn antennas using the moment method and the uniform geometrical theory of diffraction
[NASA-CR-176841] N86-26484
Asymptotic high frequency analysis of the electromagnetic backscattering from an inlet model consisting of piecewise linearly tapered sections
[NASA-CR-176844] N86-26486
Joint services electronics program
[AD-A164916] N86-26532
DIFFRACTION PROPAGATION
Asymptotic high frequency analysis of the electromagnetic backscattering from an inlet model consisting of piecewise linearly tapered sections
[NASA-CR-176844] N86-26486
DIFFUSE RADIATION
Optical absorption characteristics of aerosols
[AD-A165216] N86-26401
DIFFUSION
Operational use of the REEDM (Rocket Exhaust Effluent Diffusion Model)
[AD-A164965] N86-26371
Optical absorption characteristics of aerosols
[AD-A165216] N86-26401
Application of a computational model for vortex generators in subsonic internal flows
[NASA-TM-87327] N86-26545
Investigation of the diffuse ultraviolet background using satellite data: Dynamics explorer guest investigator program
[NASA-CR-176809] N86-26739
DIFFUSION FLAMES
Numerical simulation of turbulent flames using vortex methods
[AD-A164080] N86-26390
DIGITAL COMPUTERS
Synthesis of high-speed digital systems
[AD-A164690] N86-26922
Computers and data transmission equipment. Alphanumeric codes
[AD-A164794] N86-26923
The use of form, fit, and function in the acquisition of major weapon systems
[AD-A165000] N86-27114
DIGITAL DATA
Statistical analysis of digital Side-Looking Airborne Radar (SLAR) data — ESA programs
[DFVLR-FB-85-59] N86-26519
DIGITAL FILTERS
Exact integration algorithm for use with modal analysis
[DE85-018533] N86-26993
DIGITAL RADAR SYSTEMS
Statistical analysis of digital Side-Looking Airborne Radar (SLAR) data — ESA programs
[DFVLR-FB-85-59] N86-26519
DIGITAL SIMULATION
Synthetic Aperture Radar (SAR) product simulation — ESA programs
[ESA-CR(P)-2149] N86-26518
A three dimensional plasma simulation code applied to phase velocity prediction in a coupled cavity circuit
[AD-A163331] N86-26525
Application of flux-corrected transport to TTCP joint launch blast computational effort
[AD-A163332] N86-26941
DIGITAL SYSTEMS
A solid-state map display for rapid response operation N86-26323
Applications of digital terrain data in flight operations N86-26324
Study on using a digital ride quality augmentation system to trim an engine-out in a Cessna 402B
[NASA-CR-177272] N86-26342
Data analysis for multidimensional luminescence
[AD-A164666] N86-26398
Digitally controlled programmable active filters
[AD-A164999] N86-26534
Synthesis of high-speed digital systems
[AD-A164690] N86-26922
The geonames processing system synopsis
[AD-A163366] N86-27120
DIGITAL TECHNIQUES
Data analysis for multidimensional luminescence
[AD-A164666] N86-26398
Stanford Hardware Development Program N86-26910
DILUTION
Optical absorption characteristics of aerosols
[AD-A165216] N86-26401
DIMENSIONAL MEASUREMENT
Polarization modulated ellipsometry
[NASA-CR-177264] N86-26599

DIMENSIONS
Approach to error-estimation in the application of dimension algorithms
[DE86-004733] N86-27016
DIMERS
Acid-catalyzed degradation of Poly(2-Butyl-1,3,6-Trioxocane)
[AD-A165327] N86-26452
Calculations of the geometry and binding energy of aromatic dimers: Benzene, toluene, and toluene-benzene
[AD-A164570] N86-27058
DIODES
In-process control of machining. Phase 1: Milling
[AD-A165391] N86-26482
DIRECTIONAL ANTENNAS
Radiation of long electromagnetic waves by a modulated electron beam in the ionosphere
[AD-A163306] N86-26743
DIRECTIONAL SOLIDIFICATION (CRYSTALS)
Solar silicon from directional solidification of MG silicon produced via the silicon carbide route N86-26694
DIRECTORIES
Directory of research publications
[AD-A164875] N86-27125
DISPERSING
Analysis of helical waveguide
[AD-A163252] N86-26522
DISPLACEMENT
Two compliance expressions for arbitrary locations across a crack in a CT (Compact Type) specimen
[AD-A163369] N86-26658
Dynamic behaviour of spherical and aspherical contact lenses exposed to +Gz-acceleration forces N86-26816
On the solution of integral equations with a generalized cauchy kernel
[NASA-CR-176685] N86-26967
A synopsis of research on subbottom effects on underwater acoustic propagation
[AD-A165420] N86-27048
DISPLAY DEVICES
Guidance-Control-Navigation Automation for Night All-Weather Tactical Operations
[AGARD-CP-387] N86-26316
Synthetic real-time relief display all-weather airborne missions N86-26321
A solid-state map display for rapid response operation N86-26323
Applications of digital terrain data in flight operations N86-26324
DISSIPATION
Bifurcation, intermittancy and chaos in a driven three wave system — software reuse
[IPF-84-11] N86-27064
DISTANCE
Attenuation of seismic waves at regional distances
[AD-A164617] N86-26746
DISTORTION
The effect of air gaps on the propagation of detonation in charges consisting of stacked blocks of cast TNT
[AD-A163398] N86-26459
DISTRIBUTED PARAMETER SYSTEMS
History matching by spline approximation and regularization in single-phase areal reservoirs
[NASA-CR-178087] N86-26664
Computational methods for the control of distributed parameter systems
[NASA-CR-178108] N86-26915
Control, state estimation and parameter identification of nonlinear distributed parameter systems using fixed point techniques: A survey
[INPE-3855-PRE/919] N86-26991
DISTRIBUTED PROCESSING
Process synchronization and data communication between processes in real time local area networks
[AD-A164860] N86-26511
Development of a testbed for multisensor distributed decision algorithms
[AD-A164487] N86-26601
Network file storage system
[DE86-000779] N86-26916
Foundations of knowledge for distributed systems. Revision
[AD-A163545] N86-26918
Software testing of multiprocessor systems
[AD-A165387] N86-26971
Research in distributed and parallel systems
[AD-A165486] N86-26984
Distributed matchmaking for processes in computer networks — mathematical model
[CWI-CS-R8513] N86-26985
A paradigm for reliable clock synchronization
[AD-A164819] N85-27040
DISTRIBUTION (PROPERTY)
Convexity of elliptically contoured distributions with applications
[AD-A163389] N86-27003
DISTRIBUTION FUNCTIONS
Sequential testing and confidence intervals for the MTBF (meantime between failures) of systems having exponential distribution of the interfailure times
[AD-A165189] N86-26640
On density estimation from censored data by penalized likelihood methods
[AD-A163388] N86-27002
Convexity of elliptically contoured distributions with applications
[AD-A163389] N86-27003
A note on convergence of functions of random elements
[AD-A163405] N86-27004
DIURNAL VARIATIONS
Operational soil moisture prediction model
[AD-A165313] N86-26481
Equatorial F region vertical plasma drifts: Seasonal and longitudinal asymmetries in the American sector
[INPE-3839-PRE/909] N86-26736
Data tabulations and analysis of diurnal sea surface temperature variability observed at LOTUS (long-term upper ocean study)
[AD-A165406] N86-26790
DOCUMENTATION
Software test and evaluation manual. Volume 1: Guidelines for the treatment of software in test and evaluation master plans
[AD-A165206] N86-26953
Software documentation on the URDB modifications to incorporate information collected in Post-DSCS and UHF studies
[AD-A165451] N86-26973
DOCUMENTS
Recent Naval Postgraduate School publications
[AD-A164846] N86-27122
Directory of research publications
[AD-A164875] N86-27125
DOMAINS
Data analysis for multidimensional luminescence
[AD-A164866] N86-26398
Design methodology for embedded systems
[AD-A165497] N86-26974
DOPPLER EFFECT
DTNSRDC three component laser Doppler velocimetry: Towing tank system measurement errors
[AD-A164743] N86-26604
DOPPLER NAVIGATION
Navigation equipment, Doppler
[AD-A163408] N86-26314
A comparison of voice and keyboard data entry for a helicopter navigation task
[AD-A163245] N86-26501
DOSAGE
Electron induced conductivity of Al2O3 as pertaining to thermionic integrated circuits
[AD-A165589] N86-26539
DOUBLE BASE PROPELLANTS
Smokeless Propellants
[AGARD-CP-391] N86-26468
Smokeless propellants of improved performance N86-26469
Burning stability of double base propellants N86-26472
Elastomer modified cast double base propellants N86-26473
The reduction of exhaust signature in solid propellant rocket motors N86-26474
The chemical interaction of ballistic modifiers in CDB propellant: Its effect upon ballistics and stability N86-26475
Gas analysis for the investigation of the combustion of double-base propellants and HMX N86-26478
DRAG REDUCTION
Active control of boundary layer transition and turbulence
[NASA-CASE-LAR-13532-1] N86-26575
DROP TOWERS
Surface film effects on drop tube undercooling studies
[NASA-TM-86547] N86-26410
DROPS (LIQUIDS)
Evaluation of charged fog for smoke clearing shipboard fires
[AD-A165551] N86-26300
Calibration of droplet sizing and liquid water content instruments: Survey and analysis
[NASA-CR-175099] N86-26596
DROUGHT
Comparison of rainfall characteristics at Fortaleza (CEARA) and other nearby locations in Northeast Brazil
[INPE-3851-PRE/915] N86-26757
DRYING
TNT RDX and HMX explosives in soils and sediments. Analysis techniques and drying losses
[AD-A163278] N86-26457
DUCTED FLOW
Pressure probe and hot-film probe response to acoustic excitation in mean flow
[NASA-TP-2581] N86-27043
DUCTILITY
Hydrogen embrittlement of nickel: Modeling of the effect of diffusive segregation of hydrogen on intergranular fracture
[AD-A163415] N86-26416
DUST
Genesis of major dust storms in West Africa during the summer of 1974
[AD-A165457] N86-26763
DUST STORMS
Genesis of major dust storms in West Africa during the summer of 1974
[AD-A165457] N86-26763
DYE LASERS
High-resolution absorption spectrum of the 6(1)S0 (YIELDS) 6(3)P1 transition in mercury with a Cw dye laser
[DE86-003492] N86-26615
Simple wavemeter for pulsed dye lasers
[DE86-004488] N86-26624
Reaction dynamics of electronically excited alkali atoms with simpler molecules
[DE85-014538] N86-27060
DYNAMIC CHARACTERISTICS
Theoretical N2-, 02- and air-broadened halfwidths of ozone calculated by quantum Fourier transform theory with realistic collision dynamics
[AD-A163276] N86-26391
Bioanalytical applications of fluorescence quenching
[AD-A164867] N86-26399
A study of sea ice kinematics and their relationship to arctic ambient noise. Part 3, Section 1: Ambient noise. Section 2: Ambient noise
[AD-A165304] N86-26788
A study of sea ice kinematics and their relationship to arctic ambient noise. Part 3, section 3: Ambient noise
[AD-A165305] N86-26789
Theory of photo- and electroproduction of mesons: problems and prospects
[DE86-004094] N86-27052
DYNAMIC MODELS
Mathematical models of flexible spacecraft dynamics: A survey of order reduction approaches — aircraft tracking
[NLR-MP-85004-U] N86-26367
Mechanical face seal dynamics
[AD-A164978] N86-26633
High strain rate material behavior
[AD-A165214] N86-26659
Effect of stochastic perturbations on a spectral model of atmospheric circulation — mathematical model
[CWI-AM-R8515] N86-26751
DYNAMIC MODULUS OF ELASTICITY
Comparative study of nondestructive pavement testing, WES (Waterways Experiment Station) NDT (nondestructive tests) methodologies
[AD-A163379] N86-26480
DYNAMIC PROGRAMMING
A new technique for terrain following/terrain avoidance guidance command generation N86-26325
DYNAMIC RESPONSE
Circular-cylindrical structures: Dynamic response to vortex shedding. Part 3: Computer programs
[ESDU-85040] N86-26642
DYNAMIC STRUCTURAL ANALYSIS
Dynamic characteristics of power-tower space stations with 15-foot truss bays
[NASA-TM-87684] N86-26357
Recent research in nonlinear analysis of beams N86-26646
Interframe buckling of aluminium alloy stiffened plating — warship materials
[AMTE(S)-R-85104] N86-26654
DYNAMIC TESTS
Crash-resistant crewseat limit-load optimization through dynamic testing with cadavers
[AD-A164826] N86-26296
DYNAMICAL SYSTEMS
Bifurcation, intermittancy and chaos in a driven three wave system — software reuse
[IPF-84-11] N86-27064

E

EARTH (PLANET)
The fossil record of evolution: Analysis of extinction N86-26901

Mapping experiment with space station N86-27168
EARTH ALBEDO
Vertical modes and energetics of gravitational and rotational modes in a multilevel global spectral model
[PB86-160165] N86-26777
EARTH ATMOSPHERE
Gas exchange between the forest and the atmosphere
[DE86-004624] N86-26718
Vertical modes and energetics of gravitational and rotational modes in a multilevel global spectral model
[PB86-160165] N86-26777
Changes in the ocean mixed layer following extraordinary atmospheric forcing
[AD-A164703] N86-26786
Climatic consequences of very high CO2 levels in Earth's early atmosphere N86-26904
EARTH CRUST
Attenuation of seismic waves at regional distances
[AD-A164617] N86-26746
Carbon exchange between the mantle and the crust and its effect upon the atmosphere: Today compared to Archean time N86-26882
EARTH MANTLE
Carbon exchange between the mantle and the crust and its effect upon the atmosphere: Today compared to Archean time N86-26882
EARTH MOVEMENTS
Plate motions and deformations from geologic and geodetic data
[NASA-CR-177299] N86-26741
EARTH ORBITS
The study of gravity field estimation procedures
[AD-A164564] N86-26745
EARTH PLANETARY STRUCTURE
An isostatic Earth model
[AD-A164608] N86-26672
EARTH SURFACE
An isostatic Earth model
[AD-A164608] N86-26672
Gravity gradiometer survey errors
[AD-A165575] N86-26749
EARTH TERMINALS
Use of LAN (Local Area Network) technology in DSCS (Defense Satellite Communication System) Earth terminals
[AD-A165496] N86-26515
EARTH-MOON SYSTEM
The lunar nodal tide and the distance to the Moon during the Precambrian era N86-26886
ECONOMETRICS
Stochastic realization problems motivated by economic modeling — vibration analysis
[CWI-OS-R8507] N86-27037
ECONOMIC ANALYSIS
The mathematical structure of error correction models
[AD-A163344] N86-27001
ECONOMICS
Proceedings of the Flat-Plate Solar Array Project Workshop on Low-Cost Polysilicon for Terrestrial Photovoltaic Solar-Cell Applications
[NASA-CR-176816] N86-26679
Economics of polysilicon processes N86-26683
ECOSYSTEMS
A simulation analysis of the fate of phytoplankton within the mid-Atlantic bight
[NASA-CR-177265] N86-26670
EDGES
In-process control of machining. Phase 1: Milling
[AD-A165391] N86-26482
EDUCATION
The role of elaborations in instructional texts: Learning to use the appropriate procedure at the appropriate time
[AD-A165211] N86-26833
Ada (trademark) training curriculum. Software engineering methodologies m201 teacher's guide, volume 1
[AD-A165300] N86-26955
Ada (trademark) training curriculum. Software engineering methodologies m201 teacher's guide, volume 2
[AD-A165301] N86-26956

Creativity in Science - a symposium
[DE86-003286] N86-27109
EGYPT
Thematic mapper research in the Earth sciences: Tectonic evaluation of the Nubian Shield of northeastern Sudan/southeastern Egypt using thematic mapper imagery
[NASA-CR-177311] N86-26740
EIGENVALUES
Decoupling control synthesis for an oblique-wing aircraft
[NASA-TM-86801] N86-26339
Finite length discrete matched filters
[AD-A164869] N86-26531
Density functional theory for excited states in a quasi local density approximation
[AD-A164474] N86-26999
EIGENVECTORS
Thematic mapper research in the Earth sciences: Tectonic evaluation of the Nubian Shield of northeastern Sudan/southeastern Egypt using thematic mapper imagery
[NASA-CR-177311] N86-26740
Objective analysis of tidal fields in the Atlantic and Indian Oceans
[NASA-TM-87773] N86-26782
Kinetic stabilization of field-reversed configurations
[DE86-003655] N86-27039
EJECTA
Mass loading of the Earth's magnetosphere by micron size lunar ejecta. 1: Ejecta production and orbital dynamics in cislunar space N86-27143
Mass loading of the Earth's magnetosphere by micron size lunar ejecta. 2: Ejecta dynamics and enhanced lifetimes in the Earth's magnetosphere N86-27144
ELASTIC PROPERTIES
Comparative study of nondestructive pavement testing, WES (Waterways Experiment Station) NDT [nondestructive tests] methodologies
[AD-A163379] N86-26480
On substructuring algorithms and solution techniques for the numerical approximation of partial differential equations N86-26558
A physical model and conservation equation for dynamic solid-liquid behavior
[AD-A165295] N86-26586
Marching difference schemes for ill posed initial value problems
[AD-A164012] N86-26997
ELASTOMERS
Energy absorption of polyurethane-based polymer alloys
[AD-A164537] N86-26439
Experimental polyurethane foam (PUF) roofing systems. 3. Naval Station, Roosevelt Roads, Puerto Rico, and Naval Facility, Cape Hatteras, North Carolina
[AD-A164833] N86-26444
Elastomer modified cast double base propellants N86-26473
ELASTOSTATICS
A recursive boundary element with initial error investigation
[AD-A163563] N86-26995
ELECTRIC ARCS
Solar-grade silicon prepared by carbothermic reduction of silica N86-26692
Solar silicon from directional solidification of MG silicon produced via the silicon carbide route N86-26694
ELECTRIC BATTERIES
Project summaries: Seventh Battery and Electrochemical Contractors' Conference
[DE86-003020] N86-26676
Testing activities at the National Battery Test Laboratory
[DE86-004057] N86-26702
Status of electric vehicle battery development and manufacturing activities outside of the United States
[DE86-004215] N86-26703
ELECTRIC CHARGE
Electrode processes in porous electrodes
[AD-A165410] N86-26402
Study of charge and polarization distribution in polymers
[AD-A164633] N86-26441
Spectroscopy of surface adsorbed molecules (scanning tunneling microscopy)
[DE86-004508] N86-27087
ELECTRIC CURRENT
Theoretical analysis of the electrical aspects of the basic electro-impulse problem in aircraft de-icing applications
[NASA-CR-179808] N86-26330
Magnetic spin reduction system for free spinning objects
[NASA-CASE-MFS-25986-1] N86-26382
An analytical method for the determination of solar cell model parameters
[INPE-3852-PRE/918] N86-26698
ELECTRIC DISCHARGES
Electrode processes in porous electrodes
[AD-A165410] N86-26402
ELECTRIC FIELD STRENGTH
Exact calculations of first order contributions to the incoherent intensity
[AD-A164927] N86-26513
ELECTRIC FIELDS
Non-uniform currents on a wedge illuminated by a TE (Transverse Electric) plane wave
[AD-A163323] N86-26524
Three-dimensional simulations of an XUV free-electron laser
[DE86-003654] N86-26610
Measurement techniques for middle atmosphere electric fields N86-26734
Waves and electric fields associated with the December 27, 1984, artificial comet
[AD-A163409] N86-26744
Wakefield accelerators for SDI
[DE86-003673] N86-27062
ELECTRIC FILTERS
Digitally controlled programmable active filters
[AD-A164999] N86-26534
ELECTRIC MOTOR VEHICLES
Sodium-sulfur battery development, phase VB
[DE86-003484] N86-26701
Testing activities at the National Battery Test Laboratory
[DE86-004057] N86-26702
ELECTRIC NETWORKS
HEC-5Q: System water quality modeling
[AD-A164832] N86-26717
ELECTRIC POTENTIAL
Proposal for FEL experiments driven by the National Bureau of Standards' CW microtron
[AD-A163227] N86-26619
ELECTRIC POWER
Status of electric vehicle battery development and manufacturing activities outside of the United States
[DE86-004215] N86-26703
ELECTRIC POWER SUPPLIES
Power sensing device
[AD-D012171] N86-26529
ELECTRIC SPARKS
Synthesis and analysis in studies of chemical evolution N86-26864
ELECTRICAL ENGINEERING
A summary of the Naval Postgraduate School research program
[AD-A164845] N86-27131
ELECTRICAL MEASUREMENT
Corrosion control through a better understanding of the metallic substrate/organic coating/interface
[AD-A164734] N86-26419
Electrical measurements on alpha-quartz crystals
[AD-A164793] N86-27096
ELECTRICAL PROPERTIES
Power sensing device
[AD-D012171] N86-26529
An analytical method for the determination of solar cell model parameters
[INPE-3852-PRE/918] N86-26698
Space-efficient algorithms for computational geometry
[AD-A163426] N86-26945
ELECTRICAL RESISTANCE
Corrosion control through a better understanding of the metallic substrate/organic coating/interface
[AD-A164734] N86-26419
ELECTRICAL RESISTIVITY
Study of charge and polarization distribution in polymers
[AD-A164633] N86-26441
Transient conductance measurements and heat-flow analysis of pulsed-laser-induced melting of aluminum thin films
[DE86-003926] N86-26613
Electrical conductivity of carbonaceous chondrites and electric heating of meteorite parent bodies N86-27148
ELECTRO-OPTICS
In-process control of machining. Phase 1: Milling
[AD-A165391] N86-26482
FLIR, NVG and HMS/D systems for helicopter operation: Review N86-26804

Topical Meeting on Picosecond Electronics and Optoelectronics: A digest of technical papers
[AD-A194598] N86-27069
European science notes. Volume 40, number 4
[AD-A165282] N86-27134

ELECTROCARDIOGRAPHY
Development and evaluation of a prototype life preserver
[AD-A163224] N86-26297

ELECTROCHEMICAL CORROSION
Accelerated corrosion testing of graphite/epoxy composites and aluminum alloy mechanically-fastened joints
[AD-A164772] N86-26362
Applications of current measurement over corroding metallic surfaces
[DE86-001174] N86-26425

ELECTROCHEMICAL OXIDATION
In situ monitoring of electrochemical reactions by surface enhanced Raman scattering
[PB86-157500] N86-26407
Comparison of high temperature steam oxidation behavior of Zircaloy-4 versus austenitic and ferritic steels under light water reactor safety aspects — software issue
[KFK-3994] N86-26426

ELECTROCHEMISTRY
Electrode processes in porous electrodes
[AD-A165410] N86-26402
Structure/property studies of a heterocyclic conductive polymer
[AD-A164959] N86-26447
Optical and electrochemical study of model zinc electrode pores in alkaline electrolyte
[DE86-002967] N86-26521

ELECTRODES
Electrode processes in porous electrodes
[AD-A165410] N86-26402
In situ monitoring of electrochemical reactions by surface enhanced Raman scattering
[PB86-157500] N86-26407
Application of conductive polymer technology to the production of a novel multilayer capacitor
[AD-A165212] N86-26450
Optical and electrochemical study of model zinc electrode pores in alkaline electrolyte
[DE86-002967] N86-26521

ELECTRODYNAMICS
Measurement techniques for middle atmosphere electric fields N86-26734

ELECTROLYTES
Photoelectrochemical reduction of carbon dioxide
[PB86-157664] N86-26406
Optical and electrochemical study of model zinc electrode pores in alkaline electrolyte
[DE86-002967] N86-26521
Project summaries: Seventh Battery and Electrochemical Contractors' Conference
[DE86-003020] N86-26676
Sodium-sulfur battery development, phase VB
[DE86-003484] N86-26701

ELECTROMAGNETIC ABSORPTION
Optical absorption characteristics of aerosols
[AD-A165216] N86-26401

ELECTROMAGNETIC FIELDS
Mixed-order finite elements for the solution of three-dimensional electromagnetic fields
[AD-A164786] N86-26509
Exact calculations of first order contributions to the incoherent intensity
[AD-A164927] N86-26513

ELECTROMAGNETIC NOISE
Model studies of surface noise interference in ground-probing radar
[AD-A163208] N86-26500

ELECTROMAGNETIC PROPERTIES
Definition study of a coordinated group of experiments to measure and monitor the in situ plasma and electromagnetic environment of a polar orbiting space shuttle
[AD-A164581] N86-26353
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 3. Low impedance/high voltage test, 5 ohms-4500 volts-1000 amps
[AD-A164434] N86-26495
Ionization induced instability in an electron collecting sheath
[AD-A165330] N86-26538

ELECTROMAGNETIC PULSES
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 1
[AD-A164430] N86-26491
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 2
[AD-A164431] N86-26492
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 1. High energy pulse-device failure test. 50 ohms impedance 25,000 volts-4000 amps, 100 joules
[AD-A164432] N86-26493
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 2. High impedance/high voltage test 50 ohms-4500 volts
[AD-A164433] N86-26494
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 3. Low impedance/high voltage test, 5 ohms-4500 volts-1000 amps
[AD-A164434] N86-26495
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 4. Low impedance/low voltage test, 5 ohms-600 volts-120 amps
[AD-A164435] N86-26496
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 5. Equipment and devices oscilloscope photographs
[AD-A164436] N86-26497
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 6. Equipment and device bench check measurement
[AD-A164437] N86-26498
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 7. Equipment and devices test descriptions
[AD-A164438] N86-26499

ELECTROMAGNETIC RADIATION
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 1
[AD-A164430] N86-26491
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 2
[AD-A164431] N86-26492
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 1. High energy pulse-device failure test. 50 ohms impedance 25,000 volts-4000 amps, 100 joules
[AD-A164432] N86-26493
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 2. High impedance/high voltage test 50 ohms-4500 volts
[AD-A164433] N86-26494
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 3. Low impedance/high voltage test, 5 ohms-4500 volts-1000 amps
[AD-A164434] N86-26495
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 4. Low impedance/low voltage test, 5 ohms-600 volts-120 amps
[AD-A164435] N86-26496
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 5. Equipment and devices oscilloscope photographs
[AD-A164436] N86-26497
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 6. Equipment and device bench check measurement
[AD-A164437] N86-26498
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 7. Equipment and devices test descriptions
[AD-A164438] N86-26499
Three-dimensional numerical simulations of FELs by transverse mode spectral method
[AD-A163297] N86-26503
Electromagnetic penetration through a slot into a rectangular waveguide
[AD-A164590] N86-26506
Mixed-order finite elements for the solution of three-dimensional electromagnetic fields
[AD-A164786] N86-26509
Analysis of helical waveguide
[AD-A163252] N86-26522
Joint services electronics program
[AD-A164916] N86-26532
Radiation of long electromagnetic waves by a modulated electron beam in the ionosphere
[AD-A163306] N86-26743
Mechanism of electromagnetic energy effects on the nervous system: Voltage-clamp study
[AD-A164653] N86-26798

ELECTROMAGNETIC SCATTERING
Asymptotic high frequency analysis of the electromagnetic backscattering from an inlet model consisting of piecewise linearly tapered sections
[NASA-CR-176844] N86-26486
Comparison of the coherent attenuation predicted by single and multiple scattering theories for the case of several types of hydrometeors
[AD-A164635] N86-26507
Mixed-order finite elements for the solution of three-dimensional electromagnetic fields
[AD-A164786] N86-26509
Joint services electronics program
[AD-A164916] N86-26532

ELECTROMAGNETIC SPECTRA
The reduction of exhaust signature in solid propellant rocket motors N86-26474
Thematic mapper research in the Earth sciences: Tectonic evaluation of the Nubian Shield of northeastern Sudan/southeastern Egypt using thematic mapper imagery
[NASA-CR-177311] N86-26740

ELECTROMAGNETIC WAVE TRANSMISSION
Exact calculations of first order contributions to the incoherent intensity
[AD-A164927] N86-26513

ELECTROMAGNETS
Magnetic spin reduction system for free spinning objects
[NASA-CASE-MFS-25966-1] N86-26352

ELECTRON ACCELERATORS
Electron micropulse diagnostics and results for the Los Alamos free-electron laser
[DE86-003690] N86-26617

ELECTRON BEAMS
Study of charge and polarization distribution in polymers
[AD-A164633] N86-26441
Three-dimensional numerical simulations of FELs by transverse mode spectral method
[AD-A163297] N86-26503
Energy deposition, heat flow and rapid solidification during laser and electron beam irradiation of materials
[DE86-002240] N86-26588
KrF lasers as inertial fusion drivers
[DE86-003667] N86-26612
Electron micropulse diagnostics and results for the Los Alamos free-electron laser
[DE86-003690] N86-26617
Proposal for FEL experiments driven by the National Bureau of Standards' CW microtron
[AD-A163227] N86-26619
Initiator duration effect on pulsed chain reaction chemical laser scaling laws
[AD-A163387] N86-26620
Radiation of long electromagnetic waves by a modulated electron beam in the ionosphere
[AD-A163306] N86-26743
Whistler-mode radiation from the Spacelab 2 electron beam
[AD-A163367] N86-27078

ELECTRON BUNCHING
Electron micropulse diagnostics and results for the Los Alamos free-electron laser
[DE86-003690] N86-26617

ELECTRON COUNTERS
Detectors for measuring energetic charged particles in rockets N86-26729
ELECTRON DENSITY (CONCENTRATION)
DC-probe measurements in the middle atmosphere N86-26731
Electron density measurements in the middle atmosphere by radio propagation techniques N86-26733
Waves and electric fields associated with the December 27, 1984, artificial comet
[AD-A163409] N86-26744
Non-thermal electron velocity distribution measured by electron cyclotron emission in Alcator C tokamak
[DE86-004402] N86-27073
In situ measurements of the plasma bulk velocity near the Io flux tube
[NASA-CR-176810] N86-27075
ELECTRON DIFFRACTION
Carbon monoxide induced ordering of adsorbates on the Rh(111) crystal surface
[DE86-004104] N86-26405
ELECTRON DISTRIBUTION
Electron micropulse diagnostics and results for the Los Alamos free-electron laser
[DE86-003690] N86-26617
Non-thermal electron velocity distribution measured by electron cyclotron emission in Alcator C tokamak
[DE86-004402] N86-27073
ELECTRON EMISSION
Evaluation of TWT (Traveling Wave Tube) cathode impregnant manufacturing procedures
[AD-A163360] N86-26526
ELECTRON ENERGY
Proposal for FEL experiments driven by the National Bureau of Standards' CW microtron
[AD-A163227] N86-26619
Electron Bernstein wave current drive in the start-up phase of a tokamak discharge
[INPE-3868-PRE/926] N86-27074
ELECTRON GUNS
Whistler-mode radiation from the Spacelab 2 electron beam
[AD-A163367] N86-27078
ELECTRON IMPACT
Acid-catalyzed degradation of Poly(2-Butyl-1,3,6-Trioxocane)
[AD-A165327] N86-26452
Particle and wave dynamics during plasma injections
[AD-A163210] N86-26742
ELECTRON IRRADIATION
Electron induced conductivity of Al2O3 as pertaining to thermionic integrated circuits
[AD-A165589] N86-26539
ELECTRON MICROSCOPY
Spectroscopy of surface adsorbed molecules (scanning tunneling microscopy)
[DE86-004508] N86-27067
ELECTRON OSCILLATIONS
Self aligned notch for InP planar transferred electron oscillator
[AD-D012185] N86-26540
ELECTRON PUMPING
Three-dimensional numerical simulations of FELs by transverse mode spectral method
[AD-A163297] N86-26503
Initiator duration effect on pulsed chain reaction chemical laser scaling laws
[AD-A163387] N86-26620
ELECTRON SPECTROSCOPY
The delayed fracture of aluminum alloys
[AD-A165203] N86-26422
ELECTRON STATES
Density functional theory for excited states in a quasi local density approximation
[AD-A164474] N86-26999
ELECTRON TRANSFER
Self aligned notch for InP planar transferred electron oscillator
[AD-D012185] N86-26540
Electronic transport in boron carbides
[DE86-003721] N86-27086
ELECTRON TUNNELING
Spectroscopy of surface adsorbed molecules (scanning tunneling microscopy)
[DE86-004508] N86-27067
ELECTRONIC COUNTERMEASURES
What USAF aircraft should be the Wild Weasel of the 1990's?: An assessment of the F-4G, the F-15WW, and F-16WW
[AD-A164727] N86-26279
ELECTRONIC EQUIPMENT
Schema: An architecture for knowledge based CAD
[AD-A163437] N86-26946
A paradigm for reliable clock synchronization
[AD-A164819] N86-27040
ELECTRONIC EQUIPMENT TESTS
Navigation equipment, Doppler
[AD-A163408] N86-26314
ELECTRONIC SPECTRA
Acid-catalyzed degradation of Poly(2-Butyl-1,3,6-Trioxocane)
[AD-A165327] N86-26452
Particle and wave dynamics during plasma injections
[AD-A163210] N86-26742
ELECTRONS
Ionization induced instability in an electron collecting sheath
[AD-A165330] N86-26538
Reaction dynamics of electronically excited alkali atoms with simpler molecules
[DE85-014538] N86-27060
ELECTROSTATIC PROBES
DC-probe measurements in the middle atmosphere N86-26731
ELECTROSTATICS
Waves and electric fields associated with the December 27, 1984, artificial comet
[AD-A163409] N86-26744
Electrostatic aggregation of finely-comminuted geological materials N86-27156
ELEMENTARY EXCITATIONS
Quasi-particle spectrum of the Hubbard model
[INPE-3869-PRE/927] N86-27053
ELEMENTARY PARTICLES
Theoretical elementary particle studies
[DE86-001165] N86-27054
ELLIPSOMETERS
Polarization modulated ellipsometry
[NASA-CR-177264] N86-26599
ELLIPTIC FUNCTIONS
Multigrid method for a vortex breakdown simulation
[NASA-CR-178106] N86-26547
EMBEDDED COMPUTER SYSTEMS
Ada (Trademark) primer
[AD-A165345] N86-26964
Design methodology for embedded systems
[AD-A165497] N86-26974
EMBEDDING
Calculations of burning surfaces of propellant grain with embedded metal wires and of internal ballistics of such motor
[AD-A163361] N86-26458
EMBRITTLEMENT
The delayed fracture of aluminum alloys
[AD-A165203] N86-26422
EMISSION
A microcomputer pollution model for civilian airports and Air Force bases
[AD-A163232] N86-26714
Aircraft engine emissions estimator
[AD-A164552] N86-26715
EMISSION SPECTRA
Waves and electric fields associated with the December 27, 1984, artificial comet
[AD-A163409] N86-26744
Non-thermal electron velocity distribution measured by electron cyclotron emission in Alcator C tokamak
[DE86-004402] N86-27073
EMITTANCE
Oxidation and emittance of superalloys in heat shield applications
[NASA-TP-2578] N86-26412
Proposal for FEL experiments driven by the National Bureau of Standards' CW microtron
[AD-A163227] N86-26619
ENCAPSULATING
Hillock formation on (100) GaAs
[AD-A163308] N86-27090
ENDOTHERMIC REACTIONS
Entropy-driven loss of gas-phase Group 5 species from GOLD/3-5 compound semiconductor systems
[AD-A165584] N86-27100
ENERGETIC PARTICLES
Detectors for measuring energetic charged particles in rockets N86-26729
ENERGY ABSORPTION
Crash-resistant crewseat limit-load optimization through dynamic testing with cadavers
[AD-A164828] N86-26298
Energy absorption of polyurethane-based polymer alloys
[AD-A164537] N86-26439
Energy deposition, heat flow and rapid solidification during laser and electron beam irradiation of materials
[DE86-002240] N86-26588
ENERGY CONSERVATION
Proceedings of the Flat-Plate Solar Array Project Workshop on Low-Cost Polysilicon for Terrestrial Photovoltaic Solar-Cell Applications
[NASA-CR-176816] N86-26679
ENERGY CONSUMPTION
Experimental polyurethane foam (PUF) roofing systems, 3. Naval Station, Roosevelt Roads, Puerto Rico, and Naval Facility, Cape Hatteras, North Carolina
[AD-A164833] N86-26444
ENERGY CONVERSION EFFICIENCY
Effects of impurities on silicon solar-cell performance N86-26680
Requirements for high-efficiency solar cells N86-26681
Stable, high-efficiency, CuInSe2 based polycrystalline thin-film tandem solar cells
[DE85-016893] N86-26700
ENERGY DISSIPATION
Carbon monoxide induced ordering of adsorbates on the Rh(111) crystal surface
[DE86-004104] N86-26405
Damage prediction of projectile penetration process based on energy dissipation rate
[AD-A163268] N86-26656
ENERGY GAPS (SOLID STATE)
Pressure-dependent magneto-optic measurements in strained-layer superlattices at low temperatures
[DE86-004604] N86-27088
ENERGY POLICY
Advanced propulsion systems and alternative fuels for non-highway transportation. An assessment of unique and priority research and development opportunities. Volume 3. A compendium of research and development
[DE86-002975] N86-26458
Advanced propulsion systems and alternative fuels for non-highway transportation. Volume 1: An assessment of unique and priority research and development opportunities
[DE86-002973] N86-26466
ENERGY SPECTRA
Measurements of X-ray energy deposition in the middle atmosphere N86-26728
ENERGY STORAGE
Testing activities at the National Battery Test Laboratory
[DE86-004057] N86-26702
ENERGY TRANSFER
Structural chemistry of energetic compounds
[AD-A164813] N86-26397
State-of-the-Art survey of gyrotron research: An ONRL sponsored workshop
[AD-A163580] N86-26600
Damage prediction of projectile penetration process based on energy dissipation rate
[AD-A163268] N86-26656
Wakefield accelerators for SDI
[DE86-003673] N86-27062
ENGINE FAILURE
Crack propagation and branching in burning solid propellants and ignition of nitramine-based composite propellants
[AD-A164630] N86-26461
ENGINE INLETS
The effects on rotor nonuniform inflow harmonic content of uneven circumferential distribution of jet engine inlet guide vanes
[AD-A164629] N86-26291
ENGINE PARTS
Conceptual development of strain-gage signal interpretation system for jet engine applications
[AD-A165489] N86-26608
ENGINE TESTS
Summary of investigations of engine response to distorted inlet conditions
[NASA-TM-87317] N86-26336
Preliminary evaluation of a compound cycle engine for shipboard gensets
[NASA-CR-179451] N86-26629
ENTIRE FUNCTIONS
An abstract delay-differential equation modeling size dependent cell growth and division — local area networks
[CWI-AM-R8508] N86-27023
ENTRAINMENT
Sediment-transport experiments in zero-gravity N86-27153
The initiation of grain movement by wind N86-27157
ENTROPY
The relative entropy of a random vector with respect to another random vector
[AD-A164093] N86-26998
Entropy-driven loss of gas-phase Group 5 species from GOLD/3-5 compound semiconductor systems
[AD-A165584] N86-27100
ENVIRONMENT EFFECTS
Energy yields in the prebiotic synthesis of hydrogen cyanide and formaldehyde N86-26863
Climatic consequences of very high CO2 levels in Earth's early atmosphere N86-26904

ENVIRONMENT MODELS
A microcomputer pollution model for civilian airports and Air Force bases
[AD-A163232] N86-26714
ENVIRONMENT POLLUTION
Alternative methods for disposal of low-level radioactive wastes
[TI81-900254] N86-27067
ENVIRONMENT PROTECTION
Alternative methods for disposal of low-level radioactive wastes
[TI81-900254] N86-27067
ENVIRONMENTAL ENGINEERING
Research on enhancing the utilization of digital multispectral data and geographic information systems in global habitability studies
[NASA-CR-177294] N86-26669
ENVIRONMENTAL MONITORING
Definition study of a coordinated group of experiments to measure and monitor the in situ plasma and electromagnetic environment of a polar orbiting space shuttle
[AD-A164561] N86-26353
Environmental assessment of NOx control on a compression ignition large bore reciprocating internal combustion engine. Volume 1: Technical results
[PB86-155819] N86-26637
Nonpoint source pollution: Information guide
[PB86-130275] N86-26720
ENVIRONMENTAL RESEARCH SATELLITES
ENVIROSAT-2000 report: Federal agency satellite requirements
[NASA-TM-88752] N86-26355
ENVIRONMENTAL TESTS
Safety testing of missile and rocket systems employing manned launch stations
[AD-A165395] N86-26372
Development of a portable test kit for field-screening paints
[AD-A164989] N86-26448
ENZYMES
Cooperation of catalysts and templates N86-26871
Is the ATPase from halobacterium saccharovorum an evolutionary relic? N86-26891
Thioredoxins in evolutionarily primitive organisms N86-26893
Biosynthetic porphyrins and the origin of photosynthesis N86-26894
EPITAXY
Hillock formation on (100) GaAs
[AD-A163308] N86-27090
EPOXY COMPOUNDS
Structural chemistry of energetic compounds
[AD-A164813] N86-26397
Structure and properties of polymers and organosilanes adsorbed onto oxidized aluminum and titanium
[AD-A165210] N86-26449
EPOXY MATRIX COMPOSITES
Advanced materials research status and requirements. Volume 1: Technical summary
[AD-A165338] N86-26385
Advanced materials research status and requirements. Volume 2, appendix: Material properties data review
[AD-A165339] N86-26386
EPOXY RESINS
Ferromagnetic dielectric substance
[AD-A163214] N86-26415
Energy absorption of polyurethane-based polymer alloys
[AD-A164537] N86-26439
EQUATIONS OF MOTION
Theoretical N2-, O2- and air-broadened halfwidths of ozone calculated by quantum Fourier transform theory with realistic collision dynamics
[AD-A163276] N86-26391
A computer code for three-dimensional incompressible flows using nonorthogonal body-fitted coordinate systems
[NASA-CR-178818] N86-26544
Production of turbulence according to the transport equations — graph theory
[NLR-MP-84030-U] N86-26594
Dynamics of non-relativistic equatorial electrons and protons inside the plasmasphere
[INPE-3833-PRE/905] N86-26737
Particle dynamics for motion in a non-planar accelerator
[DE86-005303] N86-27065
The initiation of grain movement by wind N86-27157
Aeolian processes aboard a space station: Saltation and particle trajectory analysis N86-27165
EQUATIONS OF STATE
A lumped parameter mathematical model for simulation of subsonic wind tunnels
[NASA-TM-87324] N86-27036
EQUATORIAL ATMOSPHERE
Equatorial F region vertical plasma drifts: Seasonal and longitudinal asymmetries in the American sector
[INPE-3839-PRE/909] N86-26736
EQUIPMENT SPECIFICATIONS
Electrical conductivity of carbonaceous chondrites and electric heating of meteorite parent bodies N86-27148
EROSIVE BURNING
Direct erosive burning measurements of a reduced-smoke solid propellant rocket by flash X-rays N86-26476
ERROR ANALYSIS
DTNSRDC three component laser Doppler velocimetry: Mean velocity data analysis
[AD-A164744] N86-26605
A study of the optimization problem for calibrating a Lacoste and Romberg G gravity meter to determine circular errors
[AD-A165218] N86-26607
Gravity gradiometer survey errors
[AD-A165575] N86-26749
Top-down parsing syntax error recovery
[AD-A164859] N86-26949
The mathematical structure of error correction models
[AD-A163344] N86-27001
On frequency polygons and average shifted histograms in higher dimensions
[AD-A164880] N86-27009
Time domain filtering of two-dimensional fluorescence data
[AD-A164954] N86-27013
Estimates of circular error probabilities
[AD-A163257] N86-27026
ERROR CORRECTING DEVICES
Top-down parsing syntax error recovery
[AD-A164859] N86-26949
The mathematical structure of error correction models
[AD-A163344] N86-27001
ERROR SIGNALS
Error properties of Hartley transform algorithms
[AD-A163217] N86-26934
ERRORS
Navstar GPS (Global Positioning System) accuracy while surveying arrays of deep ocean transponders
[AD-A163364] N86-26313
The negligible effect of non-Gaussian surface deviations in large MM-Lambda reflectors' aperture efficiency and the performance of Itapetinga 45-ft antenna at Lambda = 3.3 MM
[INPE-3837-PRE/908] N86-26488
Executable assertions and flight software NASA-CR-176759 NAS 1.26:176759 CSL-TR-84-258 CRC-TR-84-16 HC A03/MF A01
[NASA-CR-176759] N86-26928
Characterization of an Ada software development
[AD-A165320] N86-26960
Piezometer data base package user's guide
[AD-A163264] N86-27119
A personalized and prescriptive decision aid for choice from a database of options
[AD-A165396] N86-27129
ESTERS
Ion transport across synthetic and biological membranes: Ionophore-mediated transport
[AD-A163269] N86-27057
ESTIMATES
Estimates of circular error probabilities
[AD-A163257] N86-27026
ESTIMATING
Wheat area estimation using digital LANDSAT MSS data and aerial photographs
[INPE-3824-PRE/900] N86-26667
ESTUARIES
Application of LANDSAT TM images to assess circulation and dispersion in coastal lagoons
[NASA-CR-177315] N86-26665
ETHANE
Molecular jet study of vanderWaals complexes of flexible molecules: N-Propyl benzene solvated by small alkanes
[AD-A164600] N86-26394
ETHERS
Acid-catalyzed degradation of Poly(2-Butyl-1,3,6-Trioxocane)
[AD-A165327] N86-26452
Ion transport across synthetic and biological membranes: Ionophore-mediated transport
[AD-A163269] N86-27057
EULER BUCKLING
Interframe buckling of aluminium alloy stiffened plating — warship materials
[AMTE(S)-R-85104] N86-26654
EULER EQUATIONS OF MOTION
A minimum entropy principle in the gas dynamics equations N86-26556
EUROPEAN SPACE PROGRAMS
Space research and space technology. Contributions by the Federal Republic of Germany — plasma diagnostics
[ESA-86-00942] N86-26349
Synthetic Aperture Radar (SAR) product simulation — ESA programs
[ESA-CR(P)-2149] N86-26518
EVALUATION
Ada (trade name) compiler validation summary report: Verdix Ada Compiler, VAda-010-0101, Version V03.04 for VAX-11/750, using UNIX 4.2 BSD
[AD-A163363] N86-26943
Software test and evaluation manual. Volume 1: Guidelines for the treatment of software in test and evaluation master plans
[AD-A165206] N86-26953
EVAPORATION
Operational soil moisture prediction model
[AD-A165313] N86-26481
Self aligned notch for InP planar transferred electron oscillator
[AD-D012185] N86-26540
EVOLUTION (DEVELOPMENT)
Development, growth and time — biological model
[CWI-CS-R8516] N86-26795
Evolutionary significance of osmoregulatory mechanisms in cyanobacteria N86-26898
Microbial contributions to the Precambrian Earth N86-26899
The fossil record of evolution: Analysis of extinction N86-26901
The fossil record of evolution: Data on diversification and extinction N86-26902
Geochemical anomalies, bolide impacts and biological extinctions on the Earth N86-26903
Space station impact experiments N86-27137
Debris-cloud collisions: Accretion studies in the space station N86-27161
How to make a comet N86-27163
EXCITATION
Density functional theory for excited states in a quasi local density approximation
[AD-A164474] N86-26999
Reaction dynamics of electronically excited alkali atoms with simpler molecules
[DE85-014538] N86-27060
EXHAUST EMISSION
The reduction of exhaust signature in solid propellant rocket motors N86-26474
EXHAUST GASES
Theoretical study on the effect of the design of small (milli-Newton) thruster jets on molecular contamination for the space station
[NASA-CR-177263] N86-26358
Aircraft engine emissions estimator
[AD-A164552] N86-26715
EXISTENCE
On the existence of Li-Yorke points in the theory of chaos
[AD-A164691] N86-27010
EXISTENCE THEOREMS
On the existence of solutions of an equation arising in the theory of laminar flow in a uniformly porous channel with injection
[NASA-CR-178078] N86-26543
EXOBIOLOGY
Aerospace Medicine and Biology: A continuing bibliography with indexes
[NASA-SP-7011(285)] N86-26797
Second Symposium on Chemical Evolution and the Origin of Life
[NASA-CP-2425] N86-26844
Observational exobiology N86-26850
A gas chromatograph experiment for a Titan entry probe N86-26856
Miniature metastable ionization detectors for exobiology flight experiments N86-26859
Multiplex gas chromatography: A novel analytical technique for future planetary studies N86-26860
Exobiology experiment concepts for space station N86-27152
EXPANSION
The C-17: An attempt at increased airlift versatility
[AD-A164822] N86-26280
EXPERIMENT DESIGN
Monoball energy transfer: Test report
[NASA-CR-178812] N86-26551
Report on opportunities and/or techniques for high-caliber experimental research (other) proposals for SSPEX N86-27140
A planetary ultra hypervelocity impact mechanics and shock wave science facility N86-27141
Proposed Earth based cratering experiments at low G in hard vacuum N86-27142

Low-gravity impact experiments: Progress toward a facility definition N86-27145
Space station science lab module N86-27147
The orbit properties of colliding co-orbiting bodies N86-27149
Impact experimentation and the microgravity environment: An overview N86-27151
Exobiology experiment concepts for space station N86-27152
Low gravity facilities for space station planetology experiments N86-27160
Debris-cloud collisions: Accretion studies in the space station N86-27161

EXPERIMENTATION
Investigation of structure-permeability relationships of silicone polymer membranes
[PB86-157179] N86-26408
How to make a comet N86-27163
Grain dynamics in zero gravity N86-27164

EXPERT SYSTEMS
A demonstration expert system for implementing emergency procedures in a high-performance fighter aircraft
[MAE-1749] N86-26295
Conceptual development of strain-gage signal interpretation system for jet engine applications
[AD-A165489] N86-26606
Mental models and problem solving with a knowledge-based expert system
[AD-A165398] N86-26843
Choosing architectures for expert systems
[AD-A163343] N86-26920
A conceptual modeling expert system — biological model
[CWI-CS-R8518] N86-26978
Independent research and independent exploratory development FY 85
[AD-A163432] N86-27111
Relational model of a data dictionary
[AD-A164998] N86-27128

EXPLORATION
Investigation of subsurface exploration methods for prevailing geologic conditions in South Carolina
[PB86-167087] N86-26752

EXPLOSIONS
A fundamental mathematical theory for thermal explosions in rigid solids and in gases
[AD-A164692] N86-26396
Attenuation of seismic waves at regional distances
[AD-A164617] N86-26746

EXPLOSIVES
Safety testing of missile and rocket systems employing manned launch stations
[AD-A165395] N86-26372
Air compression heating ignition of high explosives in the launch environment
[AD-A164961] N86-26400
TNT RDX and HMX explosives in soils and sediments. Analysis techniques and drying losses
[AD-A163278] N86-26457
The effect of air gaps on the propagation of detonation in charges consisting of stacked blocks of cast TNT
[AD-A163398] N86-26458

EXPONENTIAL FUNCTIONS
Sequential testing and confidence intervals for the MTBF (meantime between failures) of systems having exponential distribution of the interfailure times
[AD-A165189] N86-26640
On the likelihood ratio test for a change point in a sequence of independent exponentially distributed random variables — semisubmersible platform
[CWI-MS-R8507] N86-27019

EXPOSURE
The effects of steel profile and cleanliness on coating performance
[AD-A164788] N86-26443
Structure and properties of polymers and organosilanes adsorbed onto oxidized aluminum and titanium
[AD-A165210] N86-26449

EXTINCTION
Relative - humidity parameterization of the Navy Aerosol Model (NAM)
[AD-A163209] N86-26759
The fossil record of evolution: Analysis of extinction N86-26901
The fossil record of evolution: Data on diversification and extinction N86-26902
Geochemical anomalies, bolide impacts and biological extinctions on the Earth N86-26903

EXTRATERRESTRIAL ENVIRONMENTS
Cooperation of catalysts and templates N86-26871

EXTRATERRESTRIAL INTELLIGENCE
A decade of SETI observations N86-26905
An infrared search for extraterrestrial laser signals N86-26907
Using the IRAS data to search in the asteroid belt for any potential evidence of galactic colonization N86-26908
Overview of the NASA SETI Program N86-26909
Goldstone field test activities: Target search N86-26911
Goldstone field test activities: Sky survey N86-26912
JPL's role in the SETI program N86-26913

EXTRATERRESTRIAL MATTER
Synthesis and analysis in studies of chemical evolution N86-26964

EXTREMELY HIGH FREQUENCIES
Minimizing EHF waveguide losses
[AD-A164726] N86-26530
Techniques for the automated observation of clouds
[AD-A165573] N86-26775

EXTRUDING
Material property and fracture testing of 7075-T6 extruded aluminum
[AD-A164933] N86-26421

EYE PROTECTION
Visual Protection and Enhancement
[AGARD-CP-379] N86-26802
Dynamic behaviour of spherical and aspherical contact lenses exposed to +Gz-acceleration forces N86-26815
Effects of broad-banded eye protection on dark adaptation N86-26817
Eye protection against intense light sources N86-26818
Calculations on technical requirements for protection devices against a nuclear light flash N86-26819
German development of a LC-flashblindness device N86-26820
The application of diffraction optics techniques to laser eye protection N86-26821
Foveal flashes and human performance N86-26822
Permanent visual change associated with punctate foveal lesions N86-26823

EYEPIECES
New glasses for presbyopic pilots N86-26814
Contact lenses for pilots and aircrew in the services N86-26815
Field-sequential color stereoscopy with liquid crystal spectacles — aircraft tracking
[NLR-MP-84061-U] N86-27071

F

F REGION
Equatorial F region vertical plasma drifts: Seasonal and longitudinal asymmetries in the American sector
[INPE-3839-PRE/909] N86-26736

F-15 AIRCRAFT
Summary of results of NASA F-15 flight research program
[NASA-TM-86811] N86-26277

FABRICATION
Advanced materials research status and requirements. Volume 2, appendix: Material properties data review
[AD-A165339] N86-26386
Solar silicon from directional solidification of MG silicon produced via the silicon carbide route N86-26694
Characterization of solar-grade silicon produced by the SiF4-Na process N86-26695
Focused ion beam fabrication of graded channel FET's in GaAs and Si
[AD-A163475] N86-27069

FABRY-PEROT INTERFEROMETERS
A brillouin light scattering study of magnetic excitations
[AD-A164716] N86-27070

FACTOR ANALYSIS
Data analysis for multidimensional luminescence
[AD-A164866] N86-26398
Demonstration of a statistical method for isolating timesharing components
[AD-A165417] N86-26926

FACTORIZATION
Stability analysis of intermediate boundary conditions in approximate factorization schemes N86-26554
Theoretical elementary particle studies
[DE86-001165] N86-27054

FAILURE
Structure and properties of polymers and organosilanes adsorbed onto oxidized aluminum and titanium
[AD-A165210] N86-26449
Sequential testing and confidence intervals for the MTBF (meantime between failures) of systems having exponential distribution of the interfailure times
[AD-A165189] N86-26640

FAILURE ANALYSIS
Reliability prediction for spacecraft
[AD-A164747] N86-26359
Improved designs for iscon cameras in HERTR systems
[AD-A164627] N86-26602
Pressure systems energy release protection (gas pressurized systems)
[NASA-CR-176090] N86-26626
Sequential testing and confidence intervals for the MTBF (meantime between failures) of systems having exponential distribution of the interfailure times
[AD-A165189] N86-26640
Probabilistic analysis of nonlinear structures subjected to transient loads. Part 1
[AD-A163235] N86-26655

FAILURE MODES
Computational simulation of progressive fracture in fiber composites
[NASA-TM-87341] N86-26376

FAR FIELDS
Two compliance expressions for arbitrary locations across a crack in a CT (Compact Type) specimen
[AD-A163369] N86-26658

FAST FOURIER TRANSFORMATIONS
An isostatic Earth model
[AD-A164606] N86-26672
The Berkeley Serendip Project N86-26906

FASTENERS
Accelerated corrosion testing of graphite/epoxy composites and aluminum alloy mechanically-fastened joints
[AD-A164772] N86-26382

FATIGUE (MATERIALS)
Low-cycle thermal fatigue
[NASA-TM-87225] N86-26651

FATIGUE LIFE
Environmental effects on the static and fatigue strength of graphite/epoxy structures
[AR-004-044] N86-26378
Effects of cavitation on high-cycle fatigue life
[DE86-001814] N86-26641
Nonlinear damage analysis: Postulate and evaluation
[NASA-CR-168171] N86-26652

FATIGUE TESTS
Engineering property comparisons for 2324-T39 and 2024-T351 aluminum alloy plate — semisubmersible platform
[NLR-TR-84021-U] N86-26429
Effects of cladding and anodizing on flight simulation fatigue of 2024-T3 and 7475-T761 aluminum alloys — semisubmersible platform
[NLR-TR-85006-U] N86-26430
Constant amplitude and flight simulation of fatigue tests on adhesive bonded lap joint specimens of 2024-T3 sheet material — semisubmersible platform
[NLR-TR-84090-U] N86-26663

FAULT TOLERANCE
Research in distributed and parallel systems
[AD-A165486] N86-26984
A paradigm for reliable clock synchronization
[AD-A164819] N86-27040

FEEDBACK
Small linear wind tunnel saltation experiments: Some experiences N86-27150

FEEDBACK CONTROL
In-process control of machining. Phase 1: Milling
[AD-A165391] N86-26482
Computational methods for the control of distributed parameter systems
[NASA-CR-178108] N86-26915
Analysis of a multiaccess control scheme
[AD-A165498] N86-26986
A lumped parameter mathematical model for simulation of subsonic wind tunnels
[NASA-TM-87324] N86-27036

FEEDFORWARD CONTROL
Decoupling control synthesis for an oblique-wing aircraft
[NASA-TM-86801] N86-26339

FEMALES
Development and evaluation of a prototype life preserver
[AD-A163224] N86-26297
A comparative analysis of whispered and normally phonated speech using an LPC-10 vocoder
[AD-A163307] N86-26504

FERRITES
Effect of magnetostriction on remanent magnetization
[AD-A165450] N86-27041

FERRITIC STAINLESS STEELS
Comparison of high temperature steam oxidation behavior of Zircaloy-4 versus austenitic and ferritic steels under light water reactor safety aspects — software reuse
[KFK-3994] N86-26428

FERROELECTRICITY
Study of charge and polarization distribution in polymers
[AD-A164633] N86-26441
FERROMAGNETIC MATERIALS
Ferromagnetic dielectric substance
[AD-A163214] N86-26415
FIBER COMPOSITES
Computational simulation of progressive fracture in fiber composites
[NASA-TM-87341] N86-26376
Measure of displacement around holes in composite plates subjected to quasi-static compression
[NASA-CR-3989] N86-26377
FIBER OPTICS
Fiber optic cable storage device
[AD-D012166] N86-27068
FIBER REINFORCED COMPOSITES
The damage tolerance of carbon fiber reinforced composites: A workshop summary
[AD-A163757] N86-26381
Thermal expansion of elastic-plastic composite materials
[AD-A164910] N86-26383
Nickel-hydrogen separator development
[NASA-TM-87332] N86-26677
FIBERS
Nickel-hydrogen separator development
[NASA-TM-87332] N86-26677
FIELD COILS
Highlights from the assembly of the helical field coils for the Advanced Toroidal Facility
[DE86-004758] N86-27061
FIELD EFFECT TRANSISTORS
Focused ion beam fabrication of graded channel FET's in GaAs and Si
[AD-A163475] N86-27069
FIELD OF VIEW
New glasses for presbyopic pilots N86-26814
FIELD STRENGTH
Measurement techniques for middle atmosphere electric fields N86-26734
FIELD THEORY (PHYSICS)
On the quantization of noncontact field theories in Minkowski space — turing machines
[NIKHEF-H/85-12] N86-27107
FIGHTER AIRCRAFT
Aerospace knowledge magazine (selected articles)
[AD-A164720] N86-26278
What USAF aircraft should be the Wild Weasel of the 1990's? An assessment of the F-4G, the F-15WW, and F-16WW
[AD-A164727] N86-26279
A demonstration expert system for implementing emergency procedures in a high-performance fighter aircraft
[MAE-1749] N86-26295
A cost-effective night attack system for ground attack aircraft N86-26317
The General Electric F404 - engine of the RAAF's new fighter
[AD-A164562] N86-26338
Analyzing the cost effectiveness of using fight simulators in the Israeli Air Force
[AD-A164864] N86-26346
FILE MAINTENANCE (COMPUTERS)
Spectrum orbit utilization program technical manual SOUP5 Version 3.8
[NASA-CR-174944] N86-26489
Ada (Trademark) primer
[AD-A165345] N86-26964
FILM THICKNESS
Polarization modulated ellipsometry
[NASA-CR-177264] N86-26599
FINITE DIFFERENCE THEORY
The effect of low velocity impact on the strength characteristics of composite materials laminates
[NASA-CR-176846] N86-26379
High strain rate material behavior
[AD-A165214] N86-26659
Regularity estimates up to the boundary for elliptic systems of difference equations
[NASA-CR-178107] N86-26989
Marching difference schemes for ill posed initial value problems
[AD-A164012] N86-26997
FINITE ELEMENT METHOD
Computational simulation of progressive fracture in fiber composites
[NASA-TM-87341] N86-26376
The effect of low velocity impact on the strength characteristics of composite materials laminates
[NASA-CR-176846] N86-26379
Mixed-order finite elements for the solution of three-dimensional electromagnetic fields
[AD-A164786] N86-26509
Quasi-TEM analysis of microwave transmission lines by the finite element method
[AD-A164943] N86-26533
On substructuring algorithms and solution techniques for the numerical approximation of partial differential equations N86-26558
Least squares finite element simulation of transonic flows N86-26569
Infinite elements for two-dimensional fluid-structure interaction problems
[AD-A164749] N86-26582
A physical model and conservation equation for dynamic solid-liquid behavior
[AD-A165295] N86-26586
TOPAZ3D: A three-dimensional finite element heat transfer code
[DE85-017978] N86-26590
Line spring model and its applications to part-through crack problems in plates and shells
[NASA-CR-176688] N86-26649
Computational methods for the control of distributed parameter systems
[NASA-CR-178106] N86-26915
The solution of nonlinear time-dependent problems using modal coordinates
[AD-A163535] N86-26994
Monte Carlo particle simulation and finite-element techniques for tandem mirror transport
[DE86-004238] N86-27079
FINITE VOLUME METHOD
Thermodynamic evaluation of transonic compressor rotors using the finite volume approach
[NASA-CR-176840] N86-26546
FINS
The analysis, design and performance of a 1.25 inch diameter pneumatic actuator
[AD-A165297] N86-26635
FIRE FIGHTING
Evaluation of charged fog for smoke clearing shipboard fires
[AD-A165551] N86-26300
FIRES
Flammability of aircraft hydraulic fluids: A bibliography
[AD-A165463] N86-26299
FISHES
HEC-5Q: System water quality modeling
[AD-A164832] N86-26717
FISSION PRODUCTS
Alternative methods for disposal of low-level radioactive wastes
[TI81-900254] N86-27067
FIXED POINTS (MATHEMATICS)
Control, state estimation and parameter identification of nonlinear distributed parameter systems using fixed point techniques: A survey
[INPE-3855-PRE/919] N86-26991
FIXED WINGS
Night vision by NVG with FLIR N86-26811
FLAME PROPAGATION
Numerical simulation of turbulent flames using vortex methods
[AD-A164080] N86-26390
FLAME RETARDANTS
The reduction of exhaust signature in solid propellant rocket motors N86-26474
FLAMES
Numerical simulation of turbulent flames using vortex methods
[AD-A164080] N86-26390
Cars diagnostics of high pressure combustion. 2. Measurements of NO, H2O and high pressure flames
[AD-A164016] N86-26395
A fundamental mathematical theory for thermal explosions in rigid solids and in gases
[AD-A164692] N86-26396
Burning stability of double base propellants N86-26472
FLAMMABILITY
Flammability of aircraft hydraulic fluids: A bibliography
[AD-A165463] N86-26299
FLASH BLINDNESS
Calculations on technical requirements for protection devices against a nuclear light flash N86-26819
German development of a LC-flashblindness device N86-26820
Foveal flashes and human performance N86-26822
FLASH LAMPS
Initiator duration effect on pulsed chain reaction chemical laser scaling laws
[AD-A163387] N86-26620
FLASH POINT
Direct erosive burning measurements of a reduced-smoke solid propellant rocket by flash X-rays N86-26476
FLAT PLATES
On similarity solutions of a boundary layer problem with an upstream moving wall N86-26572
FLEXIBLE SPACECRAFT
Mathematical models of flexible spacecraft dynamics: A survey of order reduction approaches — aircraft tracking
[NLR-MP-85004-U] N86-26367
FLIGHT CHARACTERISTICS
Validation of a new flying quality criterion for the landing task
[NASA-TM-88261] N86-26341
FLIGHT CLOTHING
Methodology for integration testing of aircrew clothing and equipment
[AD-A165328] N86-26842
FLIGHT CONDITIONS
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 5 of 1984 accidents
[PB86-916901] N86-26305
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 6 of 1984 accidents
[PB86-916902] N86-26306
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 7 of 1984 accidents
[PB86-916903] N86-26307
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 8 of 1984 accidents
[PB86-916904] N86-26308
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 9 of 1984 Accidents
[PB86-916905] N86-26309
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 11 of 1984 accidents
[PB86-916907] N86-26310
Aircraft accident reports, brief format, US Civil and Foreign Aviation Issue Number 13 of 1984 accidents
[PB86-916909] N86-26311
FLIGHT CONTROL
A demonstration expert system for implementing emergency procedures in a high-performance fighter aircraft
[MAE-1749] N86-26295
Decoupling control synthesis for an oblique-wing aircraft
[NASA-TM-86601] N86-26339
FLIGHT CREWS
Analyzing the cost effectiveness of using flight simulators in the Israeli Air Force
[AD-A164864] N86-26346
Methodology for integration testing of aircrew clothing and equipment
[AD-A165328] N86-26842
FLIGHT INSTRUMENTS
A demonstration expert system for implementing emergency procedures in a high-performance fighter aircraft
[MAE-1749] N86-26295
Synthetic real-time relief display all-weather airborne missions N86-26321
FLIGHT PATHS
Validation of a new flying quality criterion for the landing task
[NASA-TM-88261] N86-26341
FLIGHT RECORDERS
Method for determining the time delay of the pitot-static tubing system of aircraft — semisubmersible platform
[NLR-TR-83075-U] N86-26335
FLIGHT SAFETY
Integrated risk/cost planning models for the US Air Traffic system
[NASA-CR-177274] N86-26312
FLIGHT SIMULATION
Validation of a new flying quality criterion for the landing task
[NASA-TM-88261] N86-26341
Engineering property comparisons for 2324-T39 and 2024-T351 aluminum alloy plate — semisubmersible platform
[NLR-TR-84021-U] N86-26429
Effects of cladding and anodizing on flight simulation fatigue of 2024-T3 and 7475-T761 aluminum alloys — semisubmersible platform
[NLR-TR-85006-U] N86-26430
Simulation of an aircraft flying through a ground station to satellite link
[NASA-CR-176845] N86-26487
Constant amplitude and flight simulation of fatigue tests on adhesive bonded lap joint specimens of 2024-T3 sheet material — semisubmersible platform
[NLR-TR-84090-U] N86-26663
A model and experimental analysis of pilot decision making behavior for various automatic approach conditions
[NLR-TR-84037-U] N86-26835

FLIGHT SIMULATORS
Flight simulator: Comparison of resolution thresholds for two light valve video projectors
[AD-A164577] N86-26344
Analyzing the cost effectiveness of using flight simulators in the Israeli Air Force
[AD-A164664] N86-26346
A comparison of voice and keyboard data entry for a helicopter navigation task
[AD-A163245] N86-26501
FLIGHT TEST INSTRUMENTS
Method for determining the time delay of the pitot-static tubing system of aircraft — semisubmersible platform
[NLR-TR-83075-U] N86-26335
FLIGHT TESTS
Summary of results of NASA F-15 flight research program
[NASA-TM-86811] N86-26277
X-29A technology demonstrator flight test program overview
[NASA-TM-86809] N86-26328
Flight test guide for certification of transport category airplanes
[FAA-AC-25-7] N86-26329
Aeroelastic control of oblique-wing aircraft
[NASA-TM-86806] N86-26340
Ballistic flight of a projectile with two precessional modes
[DE86-003176] N86-26350
Minuteman 3, stage 3 surveillance
[AD-A164840] N86-26351
Evaluation of helicopter helmet-mounted display mock-up N86-26806
Methodology for integration testing of aircrew clothing and equipment
[AD-A165328] N86-26842
FLIGHT TRAINING
Analyzing the cost effectiveness of using flight simulators in the Israeli Air Force
[AD-A164664] N86-26346
Changes in Naval Aviation Basic Instrument flight training: An analysis
[AD-A164736] N86-26830
FLIR DETECTORS
A cost-effective night attack system for ground attack aircraft N86-26317
FLIR, NVG and HMS/D systems for helicopter operation: Review N86-26804
Evaluation of helicopter helmet-mounted display mock-up N86-26806
Night vision by NVG with FLIR N86-26811
FLOATING POINT ARITHMETIC
SPECFUN - a portable special function package
[DE86-004060] N86-26929
Error properties of Hartley transform algorithms
[AD-A163217] N86-26934
FLOOD CONTROL
HEC-5Q: System water quality modeling
[AD-A164832] N86-26717
FLOOD PREDICTIONS
Characteristics of western region flash flood events in GOES imagery and conventional data
[NOAA-TM-NESDIS-13] N86-26666
FLOW CHARTS
A microcomputer pollution model for civilian airports and Air Force bases
[AD-A163232] N86-26714
FLOW DISTORTION
Summary of investigations of engine response to distorted inlet conditions
[NASA-TM-87317] N86-26336
FLOW DISTRIBUTION
The effects on rotor nonuniform inflow harmonic content of uneven circumferential distribution of jet engine inlet guide vanes
[AD-A164629] N86-26291
Lumped-element and leaky-wave antennas for millimeter waves
[AD-A165280] N86-26536
A study of the fluid-dynamic pressure fields on compressor reed valves
[AD-A164102] N86-26578
Vorticity optical probe
[AD-A164619] N86-26581
DTNSRDC three component laser Doppler velocimetry: Towing tank system measurement errors
[AD-A164743] N86-26604
A study of the unsteady aerodynamic forces generated by a deforming Joukowski airfoil N86-26723
Genesis of major dust storms in West Africa during the summer of 1974
[AD-A165457] N86-26763
FLOW EQUATIONS
Viscid/inviscid interaction analysis of subsonic turbulent trailing-edge flows
[AD-A165207] N86-26292
The Atchafalaya River Delta. Report 7. Analytical analysis of the development of the Atchafalaya River Delta
[AD-A164931] N86-26673
FLOW GEOMETRY
Viscid/inviscid interaction analysis of subsonic turbulent trailing-edge flows
[AD-A165207] N86-26292
FLOW MEASUREMENT
Corrosion control through a better understanding of the metallic substrate/organic coating/interface
[AD-A164734] N86-26419
FLOW STABILITY
Multigrid method for a vortex breakdown simulation
[NASA-CR-178106] N86-26547
Calculations of the stability of some axisymmetric flows proposed as a model of vortex breakdown N86-26560
FLOW VELOCITY
Plume characteristics of single-stream and dual-flow conventional and inverted-profile nozzles at equal thrust
[NASA-TM-87323] N86-26285
On similarity solutions of a boundary layer problem with an upstream moving wall
[NASA-CR-178104] N86-26548
On similarity solutions of a boundary layer problem with an upstream moving wall N86-26572
Comparison of measured and computed boundary layers at the tail-end of two axisymmetric bodies in the ARE quiet wind tunnel — gear box wear
[AMTE(N)-TM-84063] N86-26574
Application of LANDSAT TM images to assess circulation and dispersion in coastal lagoons
[NASA-CR-177315] N86-26665
FLOW VISUALIZATION
A study of the fluid-dynamic pressure fields on compressor reed valves
[AD-A164102] N86-26578
Vorticity optical probe
[AD-A164619] N86-26581
FLUE GASES
Selective catalytic removal of NO from stationary sources — flue gases
[S/T-REPT-VOL-3-NO-6] N86-26719
FLUID AMPLIFIERS
Hydraulic power modulation laminar proportional amplifier development
[AD-A163390] N86-26579
FLUID DYNAMICS
A study of the fluid-dynamic pressure fields on compressor reed valves
[AD-A164102] N86-26578
Summer study program in geophysical fluid dynamics, Woods Hole Oceanographic Institution: Chaos
[AD-A164601] N86-26580
A lumped parameter mathematical model for simulation of subsonic wind tunnels
[NASA-TM-87324] N86-27036
Proposed Earth based cratering experiments at low G in hard vacuum N86-27142
FLUID FLOW
Hydraulic power modulation laminar proportional amplifier development
[AD-A163390] N86-26579
Effect of liquid composition on enhanced flow due to surface shear in the contact line region: Constant vapor pressure boundary condition
[AD-A165545] N86-26587
DTNSRDC three component laser Doppler velocimetry: Mean velocity data analysis
[AD-A164744] N86-26605
A lumped parameter mathematical model for simulation of subsonic wind tunnels
[NASA-TM-87324] N86-27036
Design and calibration of the carousel wind tunnel N86-27154
FLUID MECHANICS
Summer study program in geophysical fluid dynamics, Woods Hole Oceanographic Institution: Chaos
[AD-A164601] N86-26580
A physical model and conservation equation for dynamic solid-liquid behavior
[AD-A165295] N86-26586
European science notes. Volume 40, number 4
[AD-A165292] N86-27134
FLUIDIZED BED PROCESSORS
Development of the silane process for the production of low-cost polysilicon N86-26685
Fluidized-bed development at JPL N86-26686
Fluidized-bed reactor modeling for production of silicon by silane pyrolysis N86-26687
Processes and process development in Japan N86-26689
FLUORESCENCE
Data analysis for multidimensional luminescence
[AD-A164866] N86-26398
Bioanalytical applications of fluorescence quenching
[AD-A164867] N86-26399
Time domain filtering of two-dimensional fluorescence data
[AD-A164954] N86-27013
Resonance fluorescence of a two-level atom near a rough metal surface
[AD-A163219] N86-27056
FLUORIDES
Influence of deposition variables on LPCVD tungsten films deposited by the WF6/Si reduction
[DE86-003727] N86-26431
Field-induced crystallization in highly plasticized poly(vinylidene fluoride) films
[AD-A164684] N86-26442
Characterization of solar-grade silicon produced by the SiF4-Na process N86-26695
FLUOROPOLYMERS
Study of charge and polarization distribution in polymers
[AD-A164633] N86-26441
Field-induced crystallization in highly plasticized poly(vinylidene fluoride) films
[AD-A164684] N86-26442
Research in energetic compounds
[AD-A164901] N86-26462
FLUTTER ANALYSIS
A computational transonic flutter boundary tracking procedure
[NASA-TM-87708] N86-26264
Aeroelastic control of oblique-wing aircraft
[NASA-TM-86806] N86-26340
FLUX DENSITY
Field theoretic investigations on particle physics and cosmology
[DE86-004516] N86-27106
FLY BY WIRE CONTROL
Failures in advanced flight control systems of future transport aircraft — semisubmersible platform
[NLR-TR-84108-U] N86-26343
FOAMS
Energy absorption of polyurethane-based polymer alloys
[AD-A164537] N86-26439
Experimental polyurethane foam (PUF) roofing systems. 3. Naval Station, Roosevelt Roads, Puerto Rico, and Naval Facility, Cape Hatteras, North Carolina
[AD-A164833] N86-26444
Apparent viscosity measurements of surfactant foam in porous media
[DE86-000260] N86-26454
FOCUSING
Three-dimensional numerical simulations of FELs by transverse mode spectral method
[AD-A163297] N86-26503
New glasses for presbyopic pilots N86-26814
FOG
Evaluation of charged fog for smoke clearing shipboard fires
[AD-A165551] N86-2*300
The effects of steel profile and cleanliness on coating performance
[AD-A164788] N86-26443
FOLDING STRUCTURES
Design and production of damage-resistant tray pack containers
[AD-A164595] N86-26837
FORESTS
A proposal for a project entitled Assessment of Forest Resources in Uruguay submitted to the United Nations Industrial Development Organization (UNIDO)
[INPE-3828-NTE/255] N86-26666
Gas exchange between the forest and the atmosphere
[DE86-004624] N86-26718
FORMALDEHYDE
Energy yields in the prebiotic synthesis of hydrogen cyanide and formaldehyde N86-26863
FORMAT
Radar target classification studies: Software development and documentation
[AD-A164789] N86-26510
FORMULAS (MATHEMATICS)
An isostatic Earth model
[AD-A164606] N86-26672
Relative - humidity parameterization of the Navy Aerosol Model (NAM)
[AD-A163209] N86-26759
End-point corrected trapezoidal quadrature rules for singular functions
[AD-A163242] N86-27000
FORTRAN
SPECFUN - a portable special function package
[DE86-004060] N86-26929

FOSSILS
Use of laboratory simulated pyrolysis in tracing the history of sedimentary organic matter N86-26884
Recent progress in Precambrian paleobiology N86-26887
Microfossils in the Antarctic cold desert: Possible implications for Mars N86-26897
The fossil record of evolution: Analysis of extinction N86-26901
The fossil record of evolution: Data on diversification and extinction N86-26902
Geochemical anomalies, bolide impacts and biological extinctions on the Earth N86-26903

FOVEA
Foveal flashes and human performance N86-26622
Permanent visual change associated with punctate foveal lesions N86-26623

FRACTALS
The fractal geometry of nature; its mathematical basis and application to computer graphics
[AD-A165185] N86-27014

FRACTURE MECHANICS
Computational simulation of progressive fracture in fiber composites
[NASA-TM-87341] N86-26376
Criterion for mixed mode fracture in composite bonded joints
[NASA-CR-178112] N86-26350
Hydrogen embrittlement of nickel: Modeling of the effect of diffusive segregation of hydrogen on intergranular fracture
[AD-A163415] N86-26416
The delayed fracture of aluminum alloys
[AD-A165203] N86-26422
The crack problem in a reinforced cylindrical shell
[NASA-CR-176686] N86-26648
Line spring model and its applications to part-through crack problems in plates and shells
[NASA-CR-176686] N86-26649
Damage prediction of projectile penetration process based on energy dissipation rate
[AD-A163286] N86-26656
Two compliance expressions for arbitrary locations across a crack in a CT (Compact Type) specimen
[AD-A163389] N86-26658

FRACTURE STRENGTH
Silicon carbide whiskers for composites: Growth and properties
[DE86-000798] N86-26375
Material property and fracture testing of 7075-T6 extruded aluminum
[AD-A164933] N86-26421
Engineering property comparisons for 2324-T39 and 2024-T351 aluminum alloy plate — semisubmersible platform
[NLR-TR-84021-U] N86-26429

FRACTURES (MATERIALS)
Material property and fracture testing of 7075-T6 extruded aluminum
[AD-A164933] N86-26421

FRACTURING
The delayed fracture of aluminum alloys
[AD-A165203] N86-26422
Role of hydrogen, sulfur and other impurities in intergranular fracture in iron
[DE86-001684] N86-26427

FRAGMENTATION
Optical model calculations of heavy-ion target fragmentation
[NASA-TM-87692] N86-27063

FREE ELECTRON LASERS
Three-dimensional numerical simulations of FELs by transverse mode spectral method
[AD-A163297] N86-26503
Three-dimensional simulations of an XUV free-electron laser
[DE86-003654] N86-26610
Transient analysis of a bunched beam free electron laser
[DE86-003372] N86-26614
Electron micropulse diagnostics and results for the Los Alamos free-electron laser
[DE86-003690] N86-26617
Proposal for FEL experiments driven by the National Bureau of Standards' CW microtron
[AD-A163227] N86-26619

FREE FLOW
Pointed bubbles rising in a two-dimensional tube
[AD-A163624] N86-26577

FREE MOLECULAR FLOW
Kinematics, composition and thermodynamics of the mesopause, turbopause, region of the atmosphere (between 80 and 120 km) related to the Aeroassisted Orbit Transfer Vehicle (AOTV) operations
[NASA-TM-86545] N86-26735

FREQUENCIES
Data analysis for multidimensional luminescence
[AD-A164668] N86-26396
A comparative analysis of whispered and normally phonated speech using an LPC-10 vocoder
[AD-A163307] N86-26504
An isostatic Earth model
[AD-A164608] N86-26672

FREQUENCY RANGES
Moment method analysis of microstrip antennas over a wide frequency range
[NASA-CR-176842] N86-26485

FREQUENCY SYNTHESIZERS
The Berkeley Serendip Project N86-26906

FRICTION DRAG
Active control of boundary layer transition and turbulence
[NASA-CASE-LAR-13532-1] N86-26575

FUEL CELLS
Project summaries: Seventh Battery and Electrochemical Contractors' Conference
[DE86-003020] N86-26676

FUEL CONTAMINATION
Unusual contaminant in JP-4 fuel delivered to Fort Campbell, Fort Knox, and Tennessee Army National Guard
[AD-A163399] N86-26460

FUEL CORROSION
Effect of chromium addition to the low temperature hot corrosion resistance of platinum modified aluminide coatings
[AD-A164755] N86-26420

FUEL INJECTION
A lumped parameter code for regenerative liquid propellant guns
[AD-A164960] N86-26463

FUEL SPRAYS
Impingement of liquid fuel sprays on heated walls
[AD-A165422] N86-26465

FUELS
Proceedings of the Second Annual Heat Engines Contractors Meeting
[DE86-006595] N86-26705

FUNCTIONS (MATHEMATICS)
Verifying temporal properties without using temporal logic
[AD-A164820] N86-26948

FURAN RESINS
Ferromagnetic dielectric substance
[AD-A163214] N86-26415

FURNACES
Solar-grade silicon prepared by carbothermic reduction of silica N86-26692
Solar silicon from directional solidification of MG silicon produced via the silicon carbide route N86-26694
Advanced heating facilities. Development of demonstration models — microgravity experiment sample heating
[ERNO-671-AHF/2] N86-26710

FUSION REACTORS
Fusion reactor physics and technology studies
[DE86-004527] N86-27064
Advanced Toroidal Facility
[DE86-004805] N86-27082
Development of high field superconductors for fusion energy applications
[DE86-004834] N86-27103

G

GALACTIC COSMIC RAYS
Optical model calculations of heavy-ion target fragmentation
[NASA-TM-87692] N86-27063

GALLIUM
The delayed fracture of aluminum alloys
[AD-A165203] N86-26422
Transient transport in binary and ternary semiconductors
[AD-A165464] N86-27098

GALLIUM ARSENIDES
Indium phosphide solar cells: status and prospects for use in space
[NASA-TM-87315] N86-26520
Pressure-dependent magneto-optic measurements in strained-layer superlattices at low temperatures
[DE86-004604] N86-27086
Focused ion beam fabrication of graded channel FET's in GaAs and Si
[AD-A163475] N86-27089
Hillock formation on (100) GaAs
[AD-A163308] N86-27090
The effects of arsine pressure on the compositions, carrier concentrations, mobilities and growth rates of epitaxial layers of Ga(x)In(1-x)As prepared by the VPE (Vapor-Phase Epitaxy)-hydride technique
[AD-A165278] N86-27097
Optical imaging of dislocations in strained-layer superlattices and lattice-mismatched epilayers
[DE86-004620] N86-27102

GALLIUM COMPOUNDS
Entropy-driven loss of gas-phase Group 5 species from GOLD/3-5 compound semiconductor systems
[AD-A165584] N86-27100

GALLIUM PHOSPHIDES
Pressure-dependent magneto-optic measurements in strained-layer superlattices at low temperatures
[DE86-004604] N86-27086
Optical imaging of dislocations in strained-layer superlattices and lattice-mismatched epilayers
[DE86-004620] N86-27102

GAMMA RAY LASERS
Applications of gamma-ray lasers
[AD-A164889] N86-26621
IST/IDA (Innovative Science and Technology/Institute for Defense Analyses) Gamma-Ray Laser Workshop, 21-22 May 1985
[AD-A164890] N86-26622

GAMMA RAYS
Survey of atmospheric radiation components for the Gamma and Cosmic Ray Astrophysics Branch of the Space Science Division of the Naval Research Laboratory
[AD-A165536] N86-27177

GANGLIA
Mechanism of electromagnetic energy effects on the nervous system: Voltage-clamp study
[AD-A164653] N86-26798

GAS ANALYSIS
Gas analysis for the investigation of the combustion of double-base propellants and HMX N86-26478

GAS CHROMATOGRAPHY
A gas chromatograph experiment for a Titan entry probe N86-26856
Investigation of porous polymer gas chromatographic packings for atmospheric analysis of extraterrestrial bodies N86-26858
multiplex gas chromatography: A novel analytical technique for future planetary studies N86-26860

GAS DISCHARGE TUBES
Measurements of HO2 chemical kinetics with a new detection method
[NASA-CR-176826] N86-26386

GAS DYNAMICS
A fundamental mathematical theory for thermal explosions in rigid solids and in gases
[AD-A164692] N86-26396
Multiple steady states for characteristic initial value problems N86-26555
A minimum entropy principle in the gas dynamics equations N86-26556
A spectral multidomain method for the solution of hyperbolic systems N86-26557
AZTEC: A front tracking code based on Godunov's method N86-26558
A spectral multidomain method for the solution of hyperbolic systems
[NASA-CR-178105] N86-26990

GAS EXCHANGE
Gas exchange between the forest and the atmosphere
[DE86-004624] N86-26718

GAS FLOW
TOPAZ - The transient one-dimensional pipe flow analyzer: Equations and numerics
[DE86-005063] N86-26592

GAS INJECTION
Solid sorbent air sampler
[NASA-CASE-MSC-20653-1] N86-26595

GAS JETS
Modelling of a cold gas jet system for satellite attitude control
[INPE-3853-PRE/917] N86-26356

GAS LASERS
Blue laser
[AD-A163201] N86-26618

GAS TURBINE ENGINES
High-temperature lubrication systems for ring/liner applications in advanced heat engines
[AD-A164955] N86-26446

GAS TURBINES
The effects on rotor nonuniform inflow harmonic content of uneven circumferential distribution of jet engine inlet guide vanes
[AD-A164629] N86-26291
Aircraft performance optimization with thrust vector control
[AD-A165388] N86-26334

Effect of chromium addition to the low temperature hot corrosion resistance of platinum modified aluminide coatings
[AD-A164755] N86-26420
Proceedings of the Second Annual Heat Engines Contractors Meeting
[DE85-006505] N86-26705

GAS-METAL INTERACTIONS
Surface film effects on drop tube undercooling studies
[NASA-TM-86547] N86-26410
The inhibition of vapor-phase corrosion. A review
[AD-A163430] N86-26417

GAS-SOLID INTERACTIONS
Analysis of the physical atomic forces between noble gas atoms, alkali ions and halogen ions
[NASA-TP-2568] N86-26413
Theory of the reaction surface with freezing Lewis Number not equal to 1 and its application in the oxidation-sublimation coupling process
[AD-A163213] N86-27104

GASES
Factors affecting the vertical motion of a zero-pressure, polyethylene, free balloon
[AD-A164596] N86-26290
Theoretical N2-, O2- and air-broadened halfwidths of ozone calculated by quantum Fourier transform theory with realistic collision dynamics
[AD-A162276] N86-26391
A fundamental mathematical theory for thermal explosions in rigid solids and in gases
[AD-A164692] N86-26396
The effect of air gaps on the propagation of detonation in charges consisting of stacked blocks of cast TNT
[AD-A163396] N86-26459

GASKETS
A centrifugal type gasket for bearings
[AD-A164796] N86-26632

GAUSS EQUATION
Aeroelastic control of oblique-wing aircraft
[NASA-TM-86808] N86-26340

GEARS
The examination of three scuffing wear disc specimens from University College, Cardiff — gear box wear
[AMTE(M)-TM-85219] N86-26630

GENETIC CODE
Intramolecular interactions in aminoacyl nucleotides: Implications regarding the origin of genetic coding and protein synthesis N86-26873
A comparative study of prebiotic and present day translational models N86-26877

GENETICS
Investigations with methanobacteria and with evolution of the genetic code N86-26890

GEOCHEMISTRY
Carbon exchange between the mantle and the crust and its effect upon the atmosphere: Today compared to Archean time N86-26882
Earth's early atmosphere as seen from carbon and nitrogen isotopic analysis of Archean sediments N86-26883
The fossil record of evolution: Analysis of extinction N86-26901
Geochemical anomalies, bolide impacts and biological extinctions on the Earth N86-26903

GEODESY
Plate motions and deformations from geologic and geodetic data
[NASA-CR-177299] N86-26741
The study of gravity field estimation procedures
[AD-A164564] N86-26745

GEODYNAMICS
Plate motions and deformations from geologic and geodetic data
[NASA-CR-177299] N86-26741

GEOGRAPHIC INFORMATION SYSTEMS
Research on enhancing the utilization of digital multispectral data and geographic information systems in global habitability studies
[NASA-CR-177294] N86-26669
Research, investigations and technical developments: National mapping program, 1983-1984
[PB86-166097] N86-26675
The geonames processing system synopsis
[AD-A163366] N86-27120

GEOIDS
An isostatic Earth model
[AD-A164606] N86-26672

GEOLOGICAL SURVEYS
Investigation of subsurface exploration methods for prevailing geologic conditions in South Carolina
[PB86-167087] N86-26752

GEOLOGY
The fossil record of evolution: Analysis of extinction N86-26901
Impact experimentation and the microgravity environment: An overview N86-27151

GEOMAGNETISM
Dynamics of non-relativistic equatorial electrons and protons inside the plasmasphere
[INPE-3933-PRE/905] N86-26737

GEOMETRICAL OPTICS
Non-uniform currents on a wedge illuminated by a TE (Transverse Electric) plane wave
[AD-A163323] N86-26524

GEOMETRICAL THEORY OF DIFFRACTION
Non-uniform currents on a wedge illuminated by a TE (Transverse Electric) plane wave
[AD-A163323] N86-26524

GEOMETRY
The effect of low velocity impact on the strength characteristics of composite materials laminates
[NASA-CR-178846] N86-26379
Contoured punch tool for removing semi-tubular rivets
[AD-D012172] N86-26631
A comparative study of prebiotic and present day translational models N86-26877
A synopsis of research on subbottom effects on underwater acoustic propagation
[AD-A165420] N86-27046
Calculations of the geometry and binding energy of aromatic dimers: Benzene, toluene, and toluene-benzene
[AD-A164570] N86-27056

GEOPHYSICAL FLUIDS
Summer study program in geophysical fluid dynamics, Woods Hole Oceanographic Institution: Chaos
[AD-A164601] N86-26560

GEOPHYSICS
Summer study program in geophysical fluid dynamics, Woods Hole Oceanographic Institution: Chaos
[AD-A164601] N86-26560
MSS evaluation. Revision 1
[AD-A164589] N86-27047

GEOPOTENTIAL HEIGHT
An isostatic Earth model
[AD-A164606] N86-26672

GEOTECHNICAL ENGINEERING
Piezometer data base package user's guide
[AD-A163264] N86-27119

GEOTEMPERATURE
Carbon exchange between the mantle and the crust and its effect upon the atmosphere: Today compared to Archean time N86-26882

GERMANIUM
Stability and properties of compositionally modulated films
[AD-A164574] N86-27094

GIBBS PHENOMENON
Uniformly high order accurate essentially non-oscillatory schemes 3
[NASA-CR-178101] N86-26267

GLIDE PATHS
Math model study of a proposed glide slope for runway 13R, Dallas-Fort Worth Airport, Texas
[AD-A164907] N86-26315

GLOBAL POSITIONING SYSTEM
Navstar GPS (Global Positioning System) accuracy while surveying arrays of deep ocean transponders
[AD-A163364] N86-26313

GLUTATHIONE
Evolution of thiol protective systems in prokaryotes N86-26896

GLYCOLS
Acid-catalyzed degradation of Poly(2-Butyl-1,3,6-Trioxocane)
[AD-A165327] N86-26452

GLYCOLYSIS
Models of glycolysis: Glyceraldehyde as a source of energy and monomers for prebiotic condensation reactions N86-26876

GOGGLES
Operational experiences with night vision goggles in helicopter low-level flight at night N86-26805
Visual and spectroradiometric performance criteria for Night Vision Goggles (NVG) compatible aircraft interior lighting N86-26807

GOLD
In situ monitoring of electrochemical reactions by surface enhanced Raman scattering
[PB86-157500] N86-26407
Solid-phase equilibria in the Au-Ga-Sb, Au-In-As, and Au-In-Sb ternaries
[AD-A165469] N86-27099
Entropy-driven loss of gas-phase Group 5 species from GOLD/3-5 compound semiconductor systems
[AD-A165584] N86-27100

GOODNESS OF FIT
Measures of imbalance for unbalanced models
[AD-A164636] N86-27006

GOVERNMENT PROCUREMENT
The use of form, fit, and function in the acquisition of major weapon systems
[AD-A165000] N86-27114

GOVERNMENTS
Report of the West Germany federal government on research
[ESA-86-08940] N86-27118

GRADIENTS
Effect of liquid composition on enhanced flow due to surface shear in the contact line region: Constant vapor pressure boundary condition
[AD-A165545] N86-26587
Colossus revisited: A review and extension of the Marsh-Schulkin shallow water transmission loss model (1962)
[AD-A164588] N86-27046

GRAIN BOUNDARIES
Hydrogen embrittlement of nickel: Modeling of the effect of diffusive segregation of hydrogen on intergranular fracture
[AD-A163415] N86-26418
The delayed fracture of aluminum alloys
[AD-A165203] N86-26422
Role of hydrogen, sulfur and other impurities in intergranular fracture in iron
[DE86-001884] N86-26427
Requirements for high-efficiency solar cells N86-26081

GRAIN SIZE
Crack propagation in powder metallurgy hot isostatically pressed nickel-based alloy
[AD-A164587] N86-26416
The initiation of grain movement by wind N86-27157

GRAINS
Grain dynamics in zero gravity N86-27164

GRAMMARS
Implementation of a natural language processor using functional grammar
[AD-A165426] N86-26972

GRANULAR MATERIALS
Experimental polyurethane foam (PUF) roofing systems. 3. Naval Station, Roosevelt Roads, Puerto Rico, and Naval Facility, Cape Hatteras, North Carolina
[AD-A164833] N86-26444

GRAPH THEORY
Cayley cages — graph theory
[MEMO-446] N86-27017

GRAPHIC ARTS
Independent research and independent exploratory development FY 85
[AD-A163432] N86-27111

GRAPHITE
Theory of the reaction surface with freezing Lewis Number not equal to 1 and its application in the oxidation-sublimation coupling process
[AD-A163213] N86-27104

GRAPHITE-EPOXY COMPOSITES
Environmental effects on the static and fatigue strength of graphite/epoxy structures
[AR-004-044] N86-26378
Criterion for mixed mode fracture in composite bonded joints
[NASA-CR-178112] N86-26380
Accelerated corrosion testing of graphite/epoxy composites and aluminum alloy mechanically-fastened joints
[AD-A164772] N86-26382

GRATINGS (SPECTRA)
Grating interferometric sensors
[AD-A165593] N86-26609

GRAVIMETERS
Blue Ridge gravimeter calibration base line, established 1985
[PB86-167475] N86-26755

GRAVIMETRY
Blue Ridge gravimeter calibration base line, established 1985
[PB86-167475] N86-26755

GRAVITATION
A study of the optimization problem for calibrating a Lacoste and Romberg G gravity meter to determine circular errors
[AD-A165218] N86-26607

GRAVITATIONAL EFFECTS
Particle formation and interaction N86-27139
Report on opportunities and/or techniques for high-caliber experimental research (other) proposals for SSPEX N86-27140
Mass loading of the Earth's magnetosphere by micron size lunar ejecta. 2: Ejecta dynamics and enhanced lifetimes in the Earth's magnetosphere N86-27144
Low-gravity impact experiments: Progress toward a facility definition N86-27145
Impact experimentation and the microgravity environment: An overview N86-27151

Exobiology experiment concepts for space station
N86-27152
Sediment-transport experiments in zero-gravity
N86-27153
Design and calibration of the carousel wind tunnel
N86-27154
Electrostatic aggregation of finely-comminuted geological materials N86-27156
Nucleation experiments in a microgravity environment
N86-27158
Low gravity facilities for space station planetology experiments N86-27160
Debris-cloud collisions: Accretion studies in the space station N86-27161
Grain dynamics in zero gravity N86-27164
Aeolian processes aboard a space station: Saltation and particle trajectory analysis N86-27165
A system for conducting igneous petrology experiments under controlled redox conditions in reduced gravity
N86-27166

GRAVITATIONAL FIELDS
Pointed bubbles rising in a two-dimensional tube
[AD-A163624] N86-26577
An isostatic Earth model
[AD-A164606] N86-26672
The study of gravity field estimation procedures
[AD-A164564] N86-26745
Gravity gradiometer survey errors
[AD-A165575] N86-26749

GRAVITY GRADIENT SATELLITES
Further work on POPSAT. Volume 1: Executive summary — space station power supplies
[ESA-CR(P)-2148-VOL-1] N86-26364
Further work on POPSAT. Volume 2: Technical results — space station power supplies
[ESA-CR(P)-2148-VOL-2] N86-26365

GRAVITY GRADIOMETERS
Gravity gradiometer survey errors
[AD-A165575] N86-26749

GREASES
Linear resonance cooler
[AD-A165492] N86-26463

GREEN'S FUNCTIONS
Marching difference schemes for ill posed initial value problems
[AD-A164012] N86-26997
Quasi-particle spectrum of the Hubbard model
[INPE-3969-PRE/927] N86-27053

GREENHOUSE EFFECT
Climatic consequences of very high CO2 levels in Earth's early atmosphere N86-26904

GROUND EFFECT (COMMUNICATIONS)
Model studies of surface noise interference in ground-probing radar
[AD-A163206] N86-26500

GROUND STATE
Density functional theory for excited states in a quasi local density approximation
[AD-A164474] N86-26999

GROUND STATIONS
Simulation of an aircraft flying through a ground station to satellite link
[NASA-CR-176845] N86-26487
Use of LAN (Local Area Network) technology in DSCS (Defense Satellite Communication System) Earth terminals
[AD-A165496] N86-26515

GROUND TESTS
Navigation equipment, Doppler
[AD-A163408] N86-26314

GROUND TRUTH
Application of LANDSAT TM images to assess circulation and dispersion in coastal lagoons
[NASA-CR-177315] N86-26665
Remote sensing and oceanographic equipment technology: Some present systems and future needs, revised
[PB86-156502] N86-26791

GROUND WATER
Model studies of surface noise interference in ground-probing radar
[AD-A163206] N86-26500
Maryland Water Resources Research Center, fiscal year 1984 program report
[PB86-133253] N86-26721

GROUND WIND
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Kunsan AB, South Korea
[AD-A165553] N86-26764
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Indian Mountain AFS, Alaska
[AD-A165554] N86-26765
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Kelly AFB, Texas
[AD-A165555] N86-26766
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Langley AFB, Virginia
[AD-A165558] N86-26769
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Beale AFB, California
[AD-A165560] N86-26771
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, La Crosse Municipal Airport, Wisconsin
[AD-A165561] N86-26772

GROUP THEORY
Cayley cages — graph theory
[MEMO-448] N86-27017

GROUT
Bomb crater repair techniques for permanent airfields. Report 3. Series 4 tests
[AD-A164662] N86-26345

GROWTH
Development, growth and time — biological model
[CWI-CS-R8516] N86-26795
The size and scar distributions of the yeast Saccharomyces cerevisiae — mathematical model
[CWI-AM-R8509] N86-27024

GUIDE VANES
The effects on rotor nonuniform inflow harmonic content of uneven circumferential distribution of jet engine inlet guide vanes
[AD-A164629] N86-26291
The analysis, design and performance of a 1.25 inch diameter pneumatic actuator
[AD-A165297] N86-26635

GULF STREAM
Remote sensing and oceanographic equipment technology: Some present systems and future needs, revised
[PB86-156502] N86-26791

GUN PROPELLANTS
A lumped parameter code for regenerative liquid propellant guns
[AD-A164960] N86-26463

GUN TURRETS
Residual stress measurements on M1 tank weldments
[AD-A163330] N86-26657

GUNS (ORDNANCE)
The muzzle flash of guns and rockets: A translation
[AD-A164593] N86-26370
Application of flux-corrected transport to TTCP joint launch blast computational effort
[AD-A163332] N86-26941
Marching difference schemes for ill posed initial value problems
[AD-A164012] N86-26997

GUSTS
A study of the methodology of low-altitude wind shear detection with special emphasis on the low level wind shear alert system concept
[AD-A164939] N86-26760

GYROSCOPES
Free gyroscope experiments of two immiscible liquids in a partially filled cylinder
[AD-A164937] N86-26585

H

HALIDES
Ethynyl-containing aromatic monomers
[AD-D012170] N86-26436

HALITES
Analysis of the physical atomic forces between noble gas atoms, alkali ions and halogen ions
[NASA-TP-2566] N86-26413

HALOS
Small scale H I structure and the soft X-ray background
[NASA-CR-176674] N86-27169

HAMILTONIAN FUNCTIONS
Spontaneous symmetry breaking and neutral stability in the noncanonical Hamiltonian formalism
[DE86-004562] N86-27015

HANDBOOKS
Transportation safety recommendations adopted during the month of December 1985
[PB85-916612] N86-26301

HARDNESS
Hardness of ion implanted ceramics
[DE86-004771] N86-26432

HARDWARE
Goldstone field test activities: Target search
N86-26911

HARMONIC ANALYSIS
A study of the optimization problem for calibrating a Lacoste and Romberg G gravity meter to determine circular errors
[AD-A165218] N86-26607
An isostatic Earth model
[AD-A164606] N86-26672

HARMONIC GENERATORS
Radiation of long electromagnetic waves by a modulated electron beam in the ionosphere
[AD-A163306] N86-26743
Classical derivation of nonlinear susceptibilities for the 32 crystal classes in the harmonic oscillator approximation
[AD-A164536] N86-27092

HARMONIC OSCILLATORS
Classical derivation of nonlinear susceptibilities for the 32 crystal classes in the harmonic oscillator approximation
[AD-A164536] N86-27092

HARMONICS
Numerical simulation of turbulent flames using vortex methods
[AD-A164080] N86-26390
Particle and wave dynamics during plasma injections
[AD-A163210] N86-26742
The study of gravity field estimation procedures
[AD-A164564] N86-26745

HAZARDS
Investigation of blade vibration T55-L-11C compressor stages 1 and 2
[AR-004-046] N86-26337
Safety testing of missile and rocket systems employing manned launch stations
[AD-A165395] N86-26372
Pressure systems energy release protection (gas pressurized systems)
[NASA-CR-178090] N86-26626
On density estimation from censored data by penalized likelihood methods
[AD-A163388] N86-27002

HEAD-UP DISPLAYS
A cost-effective night attack system for ground attack aircraft N86-26317
Micro-heads-up display for enhancement of night vision goggle operations N86-26709
Visual difficulties associated with future windscreen and HUD integration N86-26824

HEART RATE
Development and evaluation of a prototype life preserver
[AD-A163224] N86-26297
Perceptual and physiological responses during exercise in cool and cold water
[AD-A165491] N86-26800

HEAT
Proceedings of the Second Annual Heat Engines Contractors Meeting
[DE85-006596] N86-26705

HEAT FLUX
A physical model and conservation equation for dynamic solid-liquid behavior
[AD-A165295] N86-26586
Numerical modeling of a solid particle solar central receiver
[DE86-005066] N86-26709
An investigation of the marine boundary layer during cold air outbreak
[NASA-CR-177267] N86-26758

HEAT MEASUREMENT
Cars diagnostics of high pressure combustion. 2. Measurements of NO, H2O and high pressure flames
[AD-A164610] N86-26395
Corrosion control through a better understanding of the metallic substrate/organic coating/interface
[AD-A164734] N86-26419

HEAT OF COMBUSTION
Cars diagnostics of high pressure combustion. 2. Measurements of NO, H2O and high pressure flames
[AD-A164610] N86-26395

HEAT PIPES
Ceramic heat pipe waste heat recovery, Phase 1
[DE86-005350] N86-26593

HEAT PUMPS
Heat pump strategy at the Nevada Test Site
[DE85-013669] N86-26589
Modeling of a heat pump charged with a non-azeotropic refrigerant mixture
[PB86-168267] N86-26712

HEAT RESISTANT ALLOYS
Oxidation and emittance of superalloys in heat shield applications
[NASA-TP-2578] N86-26412
Heat treatment for superalloy
[NASA-CASE-LEW-14262-1] N86-26414

Effect of chromium addition to the low temperature hot corrosion resistance of platinum modified aluminide coatings
[AD-A164755] N86-26420

HEAT SHIELDING
Oxidation and emittance of superalloys in heat shield applications
[NASA-TP-2578] N86-26412

HEAT SOURCES
Generation of available potential energy and the energy cycle during the global weather experiment
[NASA-CR-177872] N86-26758

HEAT STORAGE
High temperature molten salt storage
[DE85-016874] N86-26706

HEAT TRANSFER
Factors affecting the vertical motion of a zero-pressure, polyethylene, free balloon
[AD-A164596] N86-26290
Operational soil moisture prediction model
[AD-A165313] N86-26481
A physical model and conservation equation for dynamic solid-liquid behavior
[AD-A165295] N86-26586
TOPAZ3D: A three-dimensional finite element heat transfer code
[DE85-017878] N86-26590
Modeling of a heat pump charged with a non-azeotropic refrigerant mixture
[PB86-168267] N86-26712
Theory of the reaction surface with freezing Lewis Number not equal to 1 and its application in the oxidation-sublimation coupling process
[AD-A163213] N86-27104

HEAT TRANSMISSION
Monubell energy transfer: Test report
[NASA-CR-176812] N86-26551
Energy deposition, heat flow and rapid solidification during laser and electron beam irradiation of materials
[DE86-002240] N86-26586
Transient conductance measurements and heat-flow analysis of pulsed-laser-induced melting of aluminum thin films
[DE86-003928] N86-26613

HEAT TREATMENT
Heat treatment for superalloy
[NASA-CASE-LEW-14262-1] N86-26414
Field induced dipole reorientation and piezoelectricity in heavily plasticized nylon 11 films
[AD-A164683] N86-27095

HEATING
Air compression heating ignition of high explosives in the launch environment
[AD-A164961] N86-26400
Data tabulations and analysis of diurnal sea surface temperature variability observed at LOTUS (long-term upper ocean study)
[AD-A165406] N86-26790

HEATING EQUIPMENT
Active control of boundary layer transition and turbulence
[NASA-CASE-LAR-13532-1] N86-26575

HEAVY IONS
Optical model calculations of heavy-ion target fragmentation
[NASA-TM-87692] N86-27063
Survey of atmospheric radiation components for the Gamma and Cosmic Ray Astrophysics Branch of the Space Science Division of the Naval Research Laboratory
[AD-A165538] N86-27177

HEAVY WATER
Biodeuterated materials: High-temperature lubricants from algae
[AD-A164913] N86-26445

HELICOPTER CONTROL
Six degree-of-freedom LIVE isolation systems, part 1
[NASA-CR-177928] N86-26331
Operational experiences with night vision goggles in helicopter low-level flight at night N86-26605
Evaluation of helicopter helmet-mounted display mock-up N86-26606

HELICOPTER DESIGN
Six degree-of-freedom LIVE isolation systems, part 1
[NASA-CR-177928] N86-26331

HELICOPTER ENGINES
Preliminary evaluation of a compound cycle engine for shipboard gensets
[NASA-CR-179451] N86-26629

HELICOPTERS
Crash-resistant crewseat limit-load optimization through dynamic testing with cadavers
[AD-A164828] N86-26298
Analyzing the cost effectiveness of using flight simulators in the Israeli Air Force
[AD-A164864] N86-26346
A comparison of voice and keyboard data entry for a helicopter navigation task
[AD-A163245] N86-26501

HELMET MOUNTED DISPLAYS
The wide field helmet mounted display N86-26322
Evaluation of helicopter helmet-mounted display mock-up N86-26606

HELMHOLTZ VORTICITY EQUATION
The weak element method applied to Helmholtz type equations N86-26570

HEMATOPOIETIC SYSTEM
Macrophage structure and function
[AD-A163314] N86-26793

HERZBERG BANDS
Determination of band oscillator strengths of atmospheric molecules from high resolution vacuum ultraviolet cross section measurements
[NASA-CR-177293] N86-26724

HETEROCYCLIC COMPOUNDS
Structure/property studies of a heterocyclic conductive polymer
[AD-A164959] N86-26447

HETERODYNING
An infrared search for extraterrestrial laser signals N86-26907

HEURISTIC METHODS
Surface construction from planar contours
[AD-A164862] N86-26950

HIGH ENERGY ELECTRONS
Electron induced conductivity of Al2O3 as pertaining to thermionic integrated circuits
[AD-A165589] N86-26539

HIGH GAIN
Analysis of helical waveguide
[AD-A163252] N86-26522

HIGH LEVEL LANGUAGES
Extending data typing beyond the bounds of programming languages — computer systems programs
[RSRE-MEMO-3878] N86-26931
STARS (Software Technology for Adaptable and Reliable Systems) methodology area summary. Volume 1: Organization and plans
[AD-A163270] N86-26936
STARS (Software Technology for Adaptable and Reliable Systems) methodology area summary. Volume 2: Preliminary views on the software life cycle and methodology selection
[AD-A163271] N86-26937
User's manual for the prototype ADA (trademark) Compiler Evaluation Capability (ACEC), version 1
[AD-A163272] N86-26938
Commercial market potentials for the use of the ADA (trademark) programming language
[AD-A163273] N86-26939
CIRCE: A natural language rule translation system for intersensor
[AD-A163279] N86-26940
Ada (trade name) compiler validation summary report: Verdix Ada Compiler, VAda-010-0101, Version V03.04 for VAX-11/750, using UNIX 4.2 BSD
[AD-A163363] N86-26943
Ada (trademark) training curriculum. Software engineering methodologies m201 teacher's guide, volume 1
[AD-A165300] N86-26955
Ada (trademark) training curriculum. Software engineering methodologies m201 teacher's guide, volume 2
[AD-A165301] N86-26956
Software metrics for Ada
[AD-A165321] N86-26961
Monitoring and Ada software development project
[AD-A165324] N86-26962
Ada (trademark) training curriculum. Instructor's course s500 introductory language modules
[AD-A165348] N86-26966
Design methodology for embedded systems
[AD-A165497] N86-26974

HIGH PRESSURE
Cars diagnostics of high pressure combustion. 2. Measurements of NO, H2O and high pressure flames
[AD-A164610] N86-26395
Continuous ultrasonic waves to detect steam bubbles in water under high pressure — plasma diagnostics
[S/T-REPT-VOL-3-NO-5] N86-27051

HIGH RESOLUTION
High resolution imaging of boron carbide microstructures
[DE86-001751] N86-26387
Amorphous silicon spatial light modulator
[AD-D012168] N86-26528
High-resolution absorption spectrum of the 6(1)S0 (YIELDS) 6(3)P1 transition in mercury with a Cw dye laser
[DE86-003492] N86-26615
A brillouin light scattering study of magnetic excitations
[AD-A164716] N86-27070

HIGH REYNOLDS NUMBER
Analysis of high Reynolds number wind tunnel tests of the semisper — semisubmersible platform
[NLR-MP-85014-U] N86-26294
Numerical simulation of turbulent flames using vortex methods
[AD-A164080] N86-26390

HIGH SPEED
Flight test guide for certification of transport category airplanes
[FAA-AC-25-7] N86-26329
A fundamental mathematical theory for thermal explosions in rigid solids and in gases
[AD-A164692] N86-26396
High strain rate material behavior
[AD-A165214] N86-26659
Synthesis of high-speed digital systems
[AD-A164590] N86-26922

HIGH TEMPERATURE
High temperature molten salt storage
[DE85-016874] N86-26706
Electrical measurements on alpha-quartz crystals
[AD-A164793] N86-27096

HIGH TEMPERATURE LUBRICANTS
Biodeuterated materials: High-temperature lubricants from algae
[AD-A164913] N86-26445
High-temperature lubrication systems for ring/liner applications in advanced heat engines
[AD-A164955] N86-26446

HIGH TEMPERATURE TESTS
Comparison of high temperature steam oxidation behavior of Zircaloy-4 versus austenitic and ferritic steels under light water reactor safety aspects — software reuse
[KFK-3994] N86-26426

HIGHWAYS
On roads with no overtaking — stochastic traffic models
[CWI-MS-R8508] N86-27135

HISTOGRAMS
On frequency polygons and average shifted histograms in higher dimensions
[AD-A164680] N86-27009

HMX
TNT RDX and HMX explosives in soils and sediments. Analysis techniques and drying losses
[AD-A163278] N86-26457
Propergol combustion based on octogenesis N86-26470
Gas analysis for the investigation of the combustion of double-base propellants and HMX N86-26478

HOLDERS
Fiber optic cable storage device
[AD-D012166] N86-27068

HOLE GEOMETRY (MECHANICS)
Evaluation of multilayer printed wiring boards by metallographic techniques: An illustrated guide to the preparation and inspection of plated-through hole test coupons based on the requirements of Mil-P-55110D
[NASA-RP-1161] N86-26639

HOLLOW CATHODES
Blue laser
[AD-A163201] N86-26618

HOLOGRAPHIC INTERFEROMETRY
Measure of displacement around holes in composite plates subjected to quasi-static compression
[NASA-CR-3989] N86-26377
Video guidebook. Proceedings of the First Symposium on the Applications of Laboratory X-ray lasers
[DE86-002982] N86-26625

HOLOGRAPHY
The application of diffraction optics techniques to laser eye protection N86-26821

HORIZONTAL ORIENTATION
Radar target classification studies: Software development and documentation
[AD-A164789] N86-26510

HORN ANTENNAS
An E-plane analysis of aperture-matched horn antennas using the moment method and the uniform geometrical theory of diffraction
[NASA-CR-176841] N86-26484

HOT CORROSION
Effect of chromium addition to the low temperature hot corrosion resistance of platinum modified aluminide coatings
[AD-A164755] N86-26420
High temperature molten salt storage
[DE85-016874] N86-26706

HOT PRESSING
High resolution imaging of boron carbide microstructures
[DE86-001751] N86-26387
HOT-FILM ANEMOMETERS
Pressure probe and hot-film probe raponses to acoustic excitation in mean flow
[NASA-TP-2561] N86-27043
HOUSINGS
The analysis, design and performance of a 1.25 inch diameter pneumatic actuator
[AD-A165297] N86-26635
HOVERING
Navigation equipment, Doppler
[AD-A163406] N86-26314
HULLS (STRUCTURES)
Residual stress measurements on M1 tank weldments
[AD-A163330] N86-26657
HUMAN BEHAVIOR
Components of verbal intelligence
[AD-A163359] N86-26628
HUMAN BEINGS
Development and evaluation of a prototype life preserver
[AD-A163224] N86-26297
Crash-resistant crewseat limit-load optimization through dynamic testing with cadavers
[AD-A164826] N86-26296
A comparative analysis of whispered and normally phonated speech using an LPC-10 vocoder
[AD-A163307] N86-26504
Macrophage structure and function
[AD-A163314] N86-26793
Fluid-Electrolyte-Mineral interrelations as affecting work performance
[AD-A165325] N86-26799
HUMAN BODY
Individual parameters in thermoregulatory control; a review — plasma diagnostics
[IZF-1985-26] N86-26801
HUMAN FACTORS ENGINEERING
Some quantitative methodology for cockpit design
N86-26320
Flight simulator: Comparison of resolution thresholds for two light valve video projectors
[AD-A164577] N86-26344
A comparison of voice and keyboard data entry for a helicopter navigation task
[AD-A163245] N86-26501
Night vision support devices: Human engineering integration N86-26808
Micro-heads-up display for enhancement of night vision goggle operations N86-26809
Human factors: The Cinderella discipline in cockpit interface design N86-26825
Baseline experiments in teleoperator control
[NASA-TP-2547] N86-26836
Human factors in rule-based systems
[AD-A165309] N86-26840
Soldier-computer interface
[AD-A165326] N86-26841
Mental models and problem solving with a knowledge-based expert system
[AD-A165398] N86-26843
Demonstration of a statistical method for isolating timesharing components
[AD-A165417] N86-26926
Creativity in Science - a symposium
[DE86-003289] N86-27109
A personalized and prescriptive decision aid for choice from a database of options
[AD-A165396] N86-27129
HUMAN PERFORMANCE
Fluid-Electrolyte-Mineral interrelations as affecting work performance
[AD-A165325] N86-26799
Permanent visual change associated with punctate foveal lesions N86-26823
Independent research and independent exploratory development FY 85
[AD-A163432] N86-27111
HUMAN REACTIONS
Individual parameters in thermoregulatory control; a review — plasma diagnostics
[IZF-1985-26] N86-26801
HUMIDITY
Relative - humidity parameterization of the Navy Aerosol Model (NAM)
[AD-A163209] N86-26759
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Kunsan AB, South Korea
[AD-A165553] N86-26764
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Indian Mountain AFS, Alaska
[AD-A165554] N86-26765
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Kelly AFB, Texas
[AD-A165555] N86-26766
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Tin City AFS, Alaska
[AD-A165556] N86-26767
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Cape Lisburne, Alaska
[AD-A165557] N86-26768
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Langley AFB, Virginia
[AD-A165558] N86-26769
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Tatalina AFS, Alaska
[AD-A165559] N86-26770
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Beale AFB, California
[AD-A165560] N86-26771
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, La Crosse Municipal Airport, Wisconsin
[AD-A165561] N86-26772
Camp Casey, South Korea Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F
[AD-A165562] N86-26773
Westover AFB, Massachusetts Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F
[AD-A165563] N86-26774
HYBRID PROPULSION
Solar energy and the aeronautics industry
[NASA-TM-77957] N86-26678
HYDRAULIC FLUIDS
Flammability of aircraft hydraulic fluids: A bibliography
[AD-A165463] N86-26299
HYDRAULIC JETS
Hydraulic power modulation laminar proportional amplifier development
[AD-A163390] N86-26579
HYDRAULIC TEST TUNNELS
DTNSRDC three component laser Doppler velocimetry: Mean velocity data analysis
[AD-A164744] N86-26605
HYDRIDES
The effects of arsine pressure on the compositions, carrier concentrations, mobilities and growth rates of epitaxial layers of Ga(x)In(1-x)As prepared by the VPE (Vapor-Phase Epitaxy)-hydride technique
[AD-A165278] N86-27097
HYDROCARBONS
Molecular jet study of vanderWaals complexes of flexible molecules: N-Propyl benzene solvated by small alkanes
[AD-A164600] N86-26394
HYDROCYANIC ACID
Energy yields in the prebiotic synthesis of hydrogen cyanide and formaldehyde N86-26863
HYDRODYNAMICS
The Atchafalaya River Delta. Report 7. Analytical analysis of the development of the Atchafalaya River Delta
[AD-A164931] N86-26673
HYDROELECTRICITY
HEC-5Q: System water quality modeling
[AD-A164832] N86-26717
HYDROGEN
Effects of quenched-in hydrogen on deformation of iron single crystals
[DE86-001883] N86-26426
Role of hydrogen, sulfur and other impurities in intergranular fracture in iron
[DE86-001884] N86-26427
Biosynthetic porphyrins and the origin of photosynthesis N86-26894
HYDROGEN BONDS
Base pairing and base mis-pairing in nucleic acids
N86-26881
HYDROGEN EMBRITTLEMENT
Slow strain rate testing of high strength low-alloy steels: A technique for assessing the degree of hydrogen embrittlement produced by plating processes, paint strippers and other aircraft maintenance chemicals
[AR-004-060] N86-26411
Hydrogen embrittlement of nickel: Modeling of the effect of diffusive segregation of hydrogen on intergranular fracture
[AD-A163415] N86-26416
The delayed fracture of aluminum alloys
[AD-A165203] N86-26422
HYDROGEN PEROXIDE
Measurements of HO2 chemical kinetics with a new detection method
[NASA-CR-176826] N86-26396
HYDROLOGY
Operational soil moisture prediction model
[AD-A165313] N86-26481
HYDROLOGY MODELS
HEC-5Q: System water quality modeling
[AD-A164832] N86-26717
HYDROLYSIS
Structure and properties of polymers and organosilanes adsorbed onto oxidized aluminum and titanium
[AD-A165210] N86-26449
HYDROMETEOROLOGY
Comparison of the coherent attenuation predicted by single and multiple scattering theories for the case of several types of hydrometeors
[AD-A164635] N86-26507
HYDROPHONES
Navstar GPS (Global Positioning System) accuracy while surveying arrays of deep ocean transponders
[AD-A163364] N86-26313
MSS evaluation. Revision 1
[AD-A164589] N86-27047
HYGROSCOPICITY
Relative - humidity parameterization of the Navy Aerosol Model (NAM)
[AD-A163209] N86-26759
HYPERBOLIC DIFFERENTIAL EQUATIONS
A spectral multidomain method for the solution of hyperbolic systems N86-26647
Regularity estimates up to the boundary for elliptic systems of difference equations
[NASA-CR-178107] N86-26989
A spectral multidomain method for the solution of hyperbolic systems
[NASA-CR-178105] N86-26990
HYPERSONIC BOUNDARY LAYER
Self-adaptive difference method for the effective solution of computationally complex problems of boundary layer theory
[NASA-TM-88440] N86-26649
HYPERSONIC REENTRY
Self-adaptive difference method for the effective solution of computationally complex problems of boundary layer theory
[NASA-TM-88440] N86-26649
HYPERVELOCITY IMPACT
A planetary ultra hypervelocity impact mechanics and shock wave science facility N86-27141
HYPERVELOCITY PROJECTILES
A planetary ultra hypervelocity impact mechanics and shock wave science facility N86-27141
HYPOTHERMIA
Perceptual and physiological responses during exercise in cool and cold water
[AD-A165491] N86-26800
HYPOTHESES
An exact test for the nesting effect in variance components in an unbalanced random two-fold nested model
[AD-A164607] N86-27006
HYSTERESIS
Effect of magnetostriction on remanent magnetization
[AD-A165450] N86-27041

I

ICE
Model studies of surface noise interference in ground-probing radar
[AD-A163206] N86-26500
ICE ENVIRONMENTS
A review of methods to track oil in arctic waters
[AD-A164679] N86-26718
ICE FORMATION
Calibration of droplet sizing and liquid water content instruments: Survey and analysis
[NASA-CR-175099] N86-26596
IDENTIFYING
Macrophage structure and function
[AD-A163314] N86-26793
Directory of research publications
[AD-A164875] N86-27125
IGNITION
Air compression heating ignition of high explosives in the launch environment
[AD-A164961] N86-26400
Crack propagation and branching in burning solid propellants and ignition of nitramine-based composite propellants
[AD-A164630] N86-26461
ILLUMINANCE
Night vision support devices: Human engineering integration N86-26808

ILLUMINATING
Visual and spectroradiometric performance criteria for Night Vision Goggles (NVG) compatible aircraft interior lighting N86-26307
IMAGE ANALYSIS
Wheat area estimation using digital LANDSAT MSS data and aerial photographs
[INPE-3824-PRE/900] N86-26667
IMAGE CONTRAST
Flight simulator: Comparison of resolution thresholds for two light valve video projectors
[AD-A164577] N86-26344
IMAGE CORRELATORS
Mapping experiment with space station N86-27168
IMAGE ENHANCEMENT
Visual Protection and Enhancement
[AGARD-CP-379] N86-26802
IMAGE INTENSIFIERS
Image intensifiers: Past and present N86-26803
IMAGE PROCESSING
International Ultraviolet Explorer Observatory operations
[NASA-CR-177873] N86-26347
Application of LANDSAT TM images to assess circulation and dispersion in coastal lagoons
[NASA-CR-177315] N86-26665
Thematic mapper research in the Earth sciences: Tectonic evaluation of the Nubian Shield of northeastern Sudan/southeastern Egypt using thematic mapper imagery
[NASA-CR-177311] N86-26740
IMAGE RESOLUTION
Interaction of image characteristics of stereoscopic forms during depth perception
[AD-A164895] N86-26831
IMAGING TECHNIQUES
High resolution imaging of boron carbide microstructures
[DE86-001751] N86-26367
Influence of the Yukon River on the Bering Sea
[NASA-CR-177310] N86-26783
Aeromedical lessons learned with night vision devices N86-26810
Optical imaging of dislocations in strained-layer superlattices and lattice-mismatched epilayers
[DE86-004620] N86-27102
IMMUNITY
Macrophage structure and function
[AD-A163314] N86-26793
IMPACT
Proposed Earth based cratering experiments at low G in hard vacuum N86-27142
IMPACT DAMAGE
The Shock and Vibration Digest, volume 17, no. 9
[AD-A161143] N86-26644
Impactor interaction with concrete structures: Local effects N86-26645
The fossil record of evolution: Analysis of extinction N86-26901
Space station impact experiments N86-27137
Low-gravity impact experiments: Progress toward a facility definition N86-27145
IMPACT LOADS
Damage prediction of projectile penetration process based on energy dissipation rate
[AD-A163268] N86-26656
IMPACT RESISTANCE
Safety report General Aviation Crashworthiness Project. Phase 3: Acceleration loads and velocity changes of survivable general aviation accidents
[PB85-917016] N86-26302
IMPACT TESTS
High strain rate material behavior
[AD-A165214] N86-26659
IMPACTORS
The Shock and Vibration Digest, volume 17, no. 9
[AD-A161143] N86-26644
Impactor interaction with concrete structures: Local effects N86-26645
IMPEDANCE
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 3. Low impedance/high voltage test, 5 ohms-4500 volts-1000 amps
[AD-A164434] N86-26495
Analysis of an aperture coupled microstrip antenna
[AD-A165283] N86-26537
A synopsis of research on subbottom effects on underwater acoustic propagation
[AD-A165420] N86-27048
IMPEDANCE MATCHING
Moment method analysis of microstrip antennas over a wide frequency range
[NASA-CR-178842] N86-26485
IMPEDANCE MEASUREMENT
A loop antenna for a VLF (Very Low Frequency) satellite transmitter
[AD-A164652] N86-26508
IMPINGEMENT
Impingement of liquid fuel sprays on heated walls
[AD-A165422] N86-26465
IMPREGNATING
Evaluation of TWT (Traveling Wave Tube) cathode impregnant manufacturing procedures
[AD-A163360] N86-26526
IMPURITIES
Role of hydrogen, sulfur and other impurities in intergranular fracture in iron
[DE86-001884] N86-26427
Effects of impurities on silicon solar-cell performance N86-26580
Solar silicon from directional solidification of MG silicon produced via the silicon carbide route N86-26694
INCIDENCE
Laminar and turbulent boundary-layer calculations on the leeward surface of a slender delta wing at incidence — graph theory
[NLR-MP-84040-U] N86-26293
INCOHERENCE
Exact calculations of first order contributions to the incoherent intensity
[AD-A164927] N86-26513
INCOHERENT SCATTERING
Investigations of the micro-turbulence in the bottom of the boundary layer
[AD-A165306] N86-26748
INCOMPRESSIBLE FLOW
A computer code for three-dimensional incompressible flows using nonorthogonal body-fitted coordinate systems
[NASA-CR-178818] N86-26544
Spectral methods in fluid dynamics
[NASA-CR-178103] N86-26550
Annual progress report, 1 June 1984-31 May 1985
[AD-A164853] N86-26584
INDEPENDENT VARIABLES
Radar target classification studies: Software development and documentation
[AD-A164789] N86-26510
On the likelihood ratio test for a change point in a sequence of independent exponentially distributed random variables — semisubmersible platform
[CWI-MS-R8507] N86-27019
INDEXES (DOCUMENTATION)
Standard reference data publications, 1964-1984
[PB86-155587] N86-26409
INDIUM ARSENIDES
Entropy-driven loss of gas-phase Group 5 species from GOLD/3-5 compound semiconductor systems
[AD-A165584] N86-27100
INDIUM COMPOUNDS
The effects of arsine pressure on the compositions, carrier concentrations, mobilities and growth rates of epitaxial layers of Ga(x)In(1-x)As prepared by the VPE (Vapor-Phase Epitaxy)-hydride technique
[AD-A165278] N86-27097
Transient transport in binary and ternary semiconductors
[AD-A165464] N86-27098
INDIUM PHOSPHIDES
Indium phosphide solar cells: status and prospects for use in space
[NASA-TM-87315] N86-26520
INELASTIC SCATTERING
In situ monitoring of electrochemical reactions by surface enhanced Raman scattering
[PB86-157500] N86-26407
INELASTIC STRESS
Nonlinear damage analysis: Postulate and evaluation
[NASA-CR-168171] N86-26652
INEQUALITIES
Convexity of elliptically contoured distributions with applications
[AD-A163389] N86-27003
On the existence of Li-Yorke points in the theory of chaos
[AD-A164891] N86-27010
A Bahadur representation for quantiles of empirical DFs generalized U-statistic structure
[AD-A163311] N86-27029
INERTIA
A physical model and conservation equation for dynamic solid-liquid behavior
[AD-A165295] N86-26586
INERTIAL FUSION (REACTOR)
KrF lasers as inertial fusion drivers
[DE86-003667] N86-26612
INFINITE SPAN WINGS
Analysis of transitional separation bubbles on infinite swept wings
[NASA-CR-3956] N86-26298
INFORMATION ADAPTIVE SYSTEM
A personalized and prescriptive decision aid for choice from a database of options
[AD-A165396] N86-27129
INFORMATION DISSEMINATION
Technology transfer at DARPA: The Defense Advanced Research Projects Agency. Executive summary
[AD-A164503] N86-27110
Public laws of the 98th Congress relating to information policy
[CRS-TK-7885-F] N86-27130
INFORMATION MANAGEMENT
The design and analysis of a network interface for the multi-lingual database system
[AD-A164756] N86-27121
Public laws of the 98th Congress relating to information policy
[CRS-TK-7885-F] N86-27130
INFORMATION RETRIEVAL
Piezometer data base package user's guide
[AD-A163264] N86-27119
INFORMATION SYSTEMS
An analysis of S-3 SDLM (Standard Depot Level Maintenance) corrosion documentation procedures
[AD-A165588] N86-26282
LAWEB (Lake Weather Broadcast): Data processing for the Great Lakes
[PB86-176658] N86-26780
Proceedings of the 1985 Annual DTIC Users Conference
[AD-A166250] N86-27118
Compilation of abstracts of theses submitted by candidates for degrees
[AD-A164988] N86-27126
Relational model of a data dictionary
[AD-A164998] N86-27128
Public laws of the 98th Congress relating to information policy
[CRS-TK-7885-F] N86-27130
INFORMATION THEORY
Tape versus queue and stacks: The lower bounds — turing machines
[CWI-CS-R8519] N86-26979
The relative entropy of a random vector with respect to another random vector
[AD-A164093] N86-26998
INFORMATION TRANSFER
Adsorption and condensation of amino acids and nucleotides with soluble mineral salts N86-26869
Public laws of the 98th Congress relating to information policy
[CRS-TK-7885-F] N86-27130
United States technology transfer to Peru and Venezuela
[AD-A164995] N86-27133
INFRARED ASTRONOMY SATELLITE
Using the IRAS data to search in the asteroid belt for any potential evidence of galactic colonization N86-26906
The IRAS revisited (lessons learned from IRAS operations) — satellite tracking
[FOK-TR-85-63] N86-27170
INFRARED DETECTORS
Conception and optimization of an infrared thermal sensor using the value analysis method
[INPE-3854-PRE/918] N86-26597
Grating interferometric sensors
[AD-A165593] N86-26609
INFRARED RADIATION
Dynamic orientation studies of polymers
[AD-A164611] N86-26440
An infrared search for extraterrestrial laser signals N86-26907
INJECTION
Particle and wave dynamics during plasma injections
[AD-A163210] N86-26742
INLET FLOW
Summary of investigations of engine response to distorted inlet conditions
[NASA-TM-87317] N86-26336
INLET NOZZLES
Asymptotic high frequency analysis of the electromagnetic backscattering from an inlet model consisting of piecewise linearly tapered sections
[NASA-CR-178844] N86-26486
INLET TEMPERATURE
Summary of investigations of engine response to distorted inlet conditions
[NASA-TM-87317] N86-26336

INORGANIC COATINGS
The effects of steel profile and cleanliness on coating performance
[AD-A164788] N86-26443
INPUT
Piezometer data base package user's guide
[AD-A163264] N86-27119
INSOLATION
Directory of Mesoscale Solar Radiation Information Sources
[DE85-016868] N86-27175
INSTRUMENT COMPENSATION
Blue Ridge gravimeter calibration base line, established 1985
[PB86-167475] N86-26755
INSTRUMENT ERRORS
Blue Ridge gravimeter calibration base line, established 1985
[PB86-167475] N86-26755
INSTRUMENT LANDING SYSTEMS
Math model study of a proposed glide slope for runway 13R, Dallas-Fort Worth Airport, Texas
[AD-A164907] N86-26315
INSULATION
Thermal response tests of candidate insulation systems for the chlorine tank car
[AD-A165293] N86-26451
INTAKE SYSTEMS
The effects on rotor nonuniform inflow harmonic content of uneven circumferential distribution of jet engine inlet guide vanes
[AD-A164629] N86-26291
The General Electric F404 - engine of the RAAF's new fighter
[AD-A164562] N86-26338
Solid sorbent air sampler
[NASA-CASE-MSC-20653-1] N86-26595
INTEGRAL EQUATIONS
Joint services electronics program
[AD-A164916] N86-26532
A physical model and conservation equation for dynamic solid-liquid behavior
[AD-A165295] N86-26586
Megatrend solutions in physical geodesy
[PB86-173317] N86-26754
On the solution of integral equations with a generalized cauchy kernel
[NASA-CR-176685] N86-26967
INTEGRATED CIRCUITS
Monolithic cathodes
[AD-A163282] N86-26523
Electron induced conductivity of Al2O3 as pertaining to thermionic integrated circuits
[AD-A165589] N86-26539
INTELLIGENCE
Components of verbal intelligence
[AD-A163359] N86-26828
INTERATOMIC FORCES
Analysis of the physical atomic forces between noble gas atoms, alkali ions and halogen ions
[NASA-TP-2568] N86-26413
INTERFACES
Photoelectrochemical reduction of carbon dioxide
[PB86-157864] N86-26406
Corrosion control through a better understanding of the metallic substrate/organic coating/interface
[AD-A164734] N86-26419
Structure and properties of polymers and organosilanes adsorbed onto oxidized aluminum and titanium
[AD-A165210] N86-26449
Model studies of surface noise interference in ground-probing radar
[AD-A163208] N86-26500
Infinite elements for two-dimensional fluid-structure interaction problems
[AD-A164749] N86-26582
Soldier-computer interface
[AD-A165326] N86-26841
Experimental determination of the electronic structure of small metal particles
[AD-A163406] N86-27091
The implementation of a entity-relationship interface for the multi-lingual database system
[AD-A164858] N86-27123
The formal specification of an abstract database: Design and implementation
[AD-A164865] N86-27124
The implementation of a network CODASYL-DML interface for the multi-lingual database system
[AD-A164996] N86-27127
INTERFACIAL TENSION
Effect of liquid composition on enhanced flow due to surface shear in the contact line region: Constant vapor pressure boundary condition
[AD-A165545] N86-26587
INTERFEROMETERS
Grating interferometric sensors
[AD-A165593] N86-26600
INTERIOR BALLISTICS
Calculations of burning surfaces of propellant grain with embedded metal wires and of internal ballistics of such motor
[AD-A163361] N86-26458
INTERMETALLICS
Solid-phase equilibria in the Au-Ga-Sb, Au-In-As, and Au-In-Sb ternaries
[AD-A165469] N86-27099
INTERMITTENCY
Bifurcation, intermittancy and chaos in a driven three wave system — software reuse
[IPF-84-11] N86-27084
INTERMOLECULAR FORCES
Analysis of the physical atomic forces between noble gas atoms, alkali ions and halogen ions
[NASA-TP-2568] N86-26413
INTERNAL COMBUSTION ENGINES
Advanced propulsion systems and alternative fuels for non-highway transportation. Volume 1: An assessment of unique and priority research and development opportunities
[DE86-002973] N86-26466
Preliminary evaluation of a compound cycle engine for shipboard gensets
[NASA-CR-179451] N86-26629
Environmental assessment of NOx control on a compression ignition large bore reciprocating internal combustion engine. Volume 1: Technical results
[PB86-155819] N86-26637
INTERNATIONAL RELATIONS
United States technology transfer to Peru and Venezuela
[AD-A164995] N86-27133
INTERPLANETARY DUST
Characterization of biogenic elements in interplanetary dust particles N86-26846
Boundary conditions for the paleoenvironment: Chemical and Physical Processes in dense interstellar clouds N86-26847
INTERPOLATION
Model comparison in vertical crustal motion estimation using leveling data
[PB86-175551] N86-26753
INTERPROCESSOR COMMUNICATION
Interprocessor communication issues in fat-tree architectures
[AD-A163425] N86-26921
IRIG standard data format for interrange transmission of tracking data from computer to computer (2400 BPS synchronous EFG format 0)
[AD-A163251] N86-26982
Research in distributed and parallel systems
[AD-A165486] N86-26984
Distributed matchmaking for processes in computer networks — mathematical model
[CWI-CS-R8513] N86-26985
INTERSTELLAR GAS
Investigation of the diffuse ultraviolet background using satellite data: Dynamics explorer guest investigator program
[NASA-CR-176809] N86-26739
Photolysis products of CO, NH3 aND H2O and their significance to reactions on interstellar grains N86-26849
INTERSTELLAR MATTER
Boundary conditions for the paleoenvironment: Chemical and Physical Processes in dense interstellar clouds N86-26847
Interstellar isomers N86-26848
Photolysis products of CO, NH3 aND H2O and their significance to reactions on interstellar grains N86-26849
Observational exobiology N86-26850
New techniques for the detection and capture of micrometeoroids N86-26862
Small scale H I structure and the soft X-ray background
[NASA-CR-176674] N86-27169
Photoabsorption and photodissociation of molecules important in the interstellar medium
[NASA-CR-176828] N86-27171
INTERSTELLAR RADIATION
Small scale H I structure and the soft X-ray background
[NASA-CR-176674] N86-27169
INTERVALS
Sequential testing and confidence intervals for the MTBF (meantime between failures) of systems having exponential distribution of the interfailure times
[AD-A165169] N86-26840
On density estimation from censored data by penalized likelihood methods
[AD-A163386] N86-27002
Generalized order statistics, Bahadur representations and sequential nonparametric fixed-width confidence intervals
[AD-A163329] N86-27031
INTRAMOLECULAR STRUCTURES
Intramolecular interactions in aminoacyl nucleotides: Implications regarding the origin of genetic coding and protein synthesis N86-26873
Stereoselective aminoacylation of RNA N86-26875
INVARIANCE
Verifying temporal properties without using temporal logic
[AD-A164820] N86-26946
Exact integration algorithm for use with modal analysis
[DE85-018533] N86-26993
INVENTIONS
Ethynyl-containing aromatic polyamide resins
[AD-D012169] N86-26437
Ethynyl-containing aromatic monomers
[AD-D012170] N86-26438
Power sensing device
[AD-D012171] N86-26529
INVENTORIES
A microcomputer pollution model for civilian airports and Air Force bases
[AD-A163232] N86-26714
INVISCID FLOW
Analysis of transitional separation bubbles on infinite swept wings
[NASA-CR-3956] N86-26268
Viscid/inviscid interaction analysis of subsonic turbulent trailing-edge flows
[AD-A165207] N86-26292
On similarity solutions of a boundary layer problem with an upstream moving wall
[NASA-CR-178104] N86-26548
Spectral methods in fluid dynamics
[NASA-CR-178103] N86-26550
IO
In situ measurements of the plasma bulk velocity near the Io flux tube
[NASA-CR-176810] N86-27075
IODINE LASERS
A model for the kinetics of a solar-pumped long path laser experiment
[NASA-TM-87668] N86-26616
ION BEAMS
Effects of rapidly pulsed ion bombardment on microstructure and phase stability in a Ti-modified stainless steel
[DE86-004790] N86-26424
The use of ion implantation for materials processing
[AD-A165432] N86-27059
Focused ion beam fabrication of graded channel FET's in GaAs and Si
[AD-A163475] N86-27089
ION CURRENTS
Rocket probe techniques for measuring bulk ion properties N86-26732
ION DENSITY (CONCENTRATION)
DC-probe measurements in the middle atmosphere N86-26731
Rocket probe techniques for measuring bulk ion properties N86-26732
ION DISTRIBUTION
Calibration of the ISEE plasma composition experiment
[NASA-TM-86542] N86-26348
ION EMISSION
Calibration of the ISEE plasma composition experiment
[NASA-TM-86542] N86-26348
ION EXCHANGING
Ion transport across synthetic and biological membranes: Ionophore-mediated transport
[AD-A163269] N86-27057
ION IMPLANTATION
Hardness of ion implanted ceramics
[DE86-004771] N86-26432
Self aligned notch for InP planar transferred electron oscillator
[AD-D012185] N86-26540
The use of ion implantation for materials processing
[AD-A165432] N86-27059
Amorphization and recrystallization processes in monocrystalline beta silicon carbide thin films
[DE86-004797] N86-27101
ION PROBES
Ionization induced instability in an electron collecting sheath
[AD-A165330] N86-26538

ION TEMPERATURE
Studies of negative ion reactions: Solvated ions and strong acids
[AD-A165484] N86-26404
IONIC MOBILITY
Rocket probe techniques for measuring bulk ion properties N86-26732
IONIZATION
Acid-catalyzed degradation of Poly(2-Butyl-1,3,6-Trioxocane)
[AD-A165327] N86-26452
Ionization induced instability in an electron collecting sheath
[AD-A165330] N86-26538
Miniature metastable ionization detectors for exobiology flight experiments N86-26859
IONOSONDES
Detectors for measuring energetic charged particles in rockets N86-26729
IONOSPHERE
DC-probe measurements in the middle atmosphere N86-26731
Radiation of long electromagnetic waves by a modulated electron beam in the ionosphere
[AD-A163306] N86-26743
Study of ionospheric and tropospheric models — satellite tracking
[ESA-CR(P)-2157] N86-26750
IONOSPHERIC DISTURBANCES
Radiation of long electromagnetic waves by a modulated electron beam in the ionosphere
[AD-A163306] N86-26743
IONOSPHERIC DRIFT
Equatorial F region vertical plasma drifts: Seasonal and longitudinal asymmetries in the American sector
[INPE-3839-PRE/909] N86-26736
Ion Mobility Drift Spectrometer (IMDS) as a flight analytical instrument technique N86-26861
IONOSPHERIC PROPAGATION
A loop antenna for a VLF (Very Low Frequency) satellite transmitter
[AD-A164652] N86-26508
IONOSPHERIC TEMPERATURE
Ionization induced instability in an electron collecting sheath
[AD-A165330] N86-26538
IRON
Ferromagnetic dielectric substance
[AD-A163214] N86-26415
Effects of quenched-in hydrogen on deformation of iron single crystals
[DE86-001883] N86-26426
Role of hydrogen, sulfur and other impurities in intergranular fracture in iron
[DE86-001884] N86-26427
Structure and properties of polymers and organosilanes adsorbed onto oxidized aluminum and titanium
[AD-A165210] N86-26449
Isotopic, petrologic and biogeochemical investigations of banded iron-formations N86-26865
IRON COMPOUNDS
Origin of life and iron-rich clays N86-26866
Effect of magnetostriction on remanent magnetization
[AD-A165450] N86-27041
IRRIGATION
HEC-5Q: System water quality modeling
[AD-A164832] N86-26717
ISLANDS
Methods of obtaining offshore wind direction and sea-state data from X-band aircraft SAR (Synthetic Aperture Radar) imagery of coastal waters
[AD-A165552] N86-26517
ISOLATION
Six degree-of-freedom LIVE isolation systems, part 1
[NASA-CR-177926] N86-26331
ISOMERS
Acid-catalyzed degradation of Poly(2-Butyl-1,3,6-Trioxocane)
[AD-A165327] N86-26452
Interstellar isomers N86-26848
ISOSTATIC PRESSURE
Crack propagation in powder metallurgy hot isostatically pressed nickel-based alloy
[AD-A164587] N86-26416
An isostatic Earth model
[AD-A164606] N86-26672
ISOTHERMS
Numerical modeling of a solid particle solar central receiver
[DE86-005086] N86-26709
ISOTOPES
Isotopic characterization of prebiotic synthesis of organic material N86-26865
ISOTROPIC MEDIA
Measure of displacement around holes in composite plates subjected to quasi-static compression
[NASA-CR-3999] N86-26377
ISOTROPISM
Effect of magnetostriction on remanent magnetization
[AD-A165450] N86-27041
ITERATIVE SOLUTION
Multigrid method for a vortex breakdown simulation N86-26562
IUE
International Ultraviolet Explorer Observatory operations
[NASA-CR-177873] N86-26347

J

JAPAN
Processes and process development in Japan N86-26869
JET AIRCRAFT
What USAF aircraft should be the Wild Weasel of the 1990's?: An assessment of the F-4G, the F-15WW, and F-16WW
[AD-A164727] N86-26279
The General Electric F404 - engine of the RAAF's new fighter
[AD-A164562] N86-26336
Analyzing the cost effectiveness of using flight simulators in the Israeli Air Force
[AD-A164864] N86-26346
JET CONTROL
Modelling of a cold gas jet system for satellite attitude control
[INPE-3853-PRE/917] N86-26356
JET ENGINE FUELS
Unusual contaminant in JP-4 fuel delivered to Fort Campbell, Fort Knox, and Tennessee Army National Guard
[AD-A163399] N86-26460
JET ENGINES
The effects on rotor nonuniform inflow harmonic content of uneven circumferential distribution of jet engine inlet guide vanes
[AD-A164629] N86-26291
Conceptual development of strain-gage signal interpretation system for jet engine applications
[AD-A165489] N86-26608
JET EXHAUST
Plume characteristics of single-stream and dual-flow conventional and inverted-profile nozzles at equal thrust
[NASA-TM-87323] N86-26285
JET FLOW
Plume characteristics of single-stream and dual-flow conventional and inverted-profile nozzles at equal thrust
[NASA-TM-87323] N86-26285
JOINTS (JUNCTIONS)
Criterion for mixed mode fracture in composite bonded joints
[NASA-CR-178112] N86-26380
Accelerated corrosion testing of graphite/epoxy composites and aluminum alloy mechanically-fastened joints
[AD-A164772] N86-26382
Evaluation of the effects of a plastic bead paint removal process on properties of aircraft structural materials
[AD-A165289] N86-26384
JUDGMENTS
A theoretically based review of theory and research in judgment and decision making
[AD-A164914] N86-27113
JUPITER (PLANET)
In situ measurements of the plasma bulk velocity near the Io flux tube
[NASA-CR-178810] N86-27075

K

KERNEL FUNCTIONS
On the solution of integral equations with a generalized cauchy kernel
[NASA-CR-178885] N86-26987
On the solution of integral equations with strong ly singular kernels
[NASA-CR-178887] N86-26988
On frequency polygons and average shifted histograms in higher dimensions
[AD-A164830] N86-27009
KEROGEN
Isotopic characterization of prebiotic synthesis of organic material N86-26865
Use of laboratory simulated pyrolysis in tracing the history of sedimentary organic matter N86-26864
KINEMATICS
Kinematics, composition and thermodynamics of the mesopause, turbopause, region of the atmosphere (between 80 and 120 km) related to the Aerosolated Orbit Transfer Vehicle (AOTV) operations
[NASA-TM-86515] N86-26736
A study of sea ice kinematics and their relationship to arctic ambient noise. Part 3, Section 1: Ambient noise. Section 2: Ambient noise
[AD-A165304] N86-26789
A study of sea ice kinematics and their relationship to arctic ambient noise. Part 3, section 3: Ambient noise
[AD-A165305] N86-26790
KINETIC ENERGY
A physical model and conservation equation for dynamic solid-liquid behavior
[AD-A165295] N86-26588
Impacts of free-floating objects: Unique space station experiments N86-27182
KITS
Development of a portable test kit for field-screening paints
[AD-A164989] N86-26448
KNOWLEDGE
A demonstration expert system for implementing emergency procedures in a high-performance fighter aircraft
[MAE-1749] N86-26295
Foundations of knowledge for distributed systems. Revision
[AD-A163545] N86-26918
KRYPTON FLUORIDE LASERS
KrF lasers as inertial fusion drivers
[DE86-003667] N86-26912

L

LABORATORIES
Video guidebook. Proceedings of the First Symposium on the Applications of Laboratory X-ray lasers
[DE86-002962] N86-26625
How to make a comet N86-27163
LABORATORY EQUIPMENT
Advanced heating facilities. Development of demonstration models — microgravity experiment sample heating
[ERNO-671-AHF/2] N86-26710
Biotechnica '85 International Congress for Biotechnology
[AD-A165415] N86-26794
Field-sequential color stereoscopy with liquid crystal spectacles — aircraft tracking
[NLR-MP-84081-U] N86-27071
LAGOONS
Application of LANDSAT TM images to assess circulation and dispersion in coastal lagoons
[NASA-CR-177315] N86-26665
LAGRANGE MULTIPLIERS
Numerical simulation of turbulent flames using vortex methods
[AD-A164060] N86-26390
LAMINAR BOUNDARY LAYER
Laminar and turbulent boundary-layer calculations on the leeward surface of a slender delta wing at incidence — graph theory
[NLR-MP-84040-U] N86-26293
Theory of the reaction surface with freezing Lewis Number not equal to 1 and its application in the oxidation-sublimation coupling process
[AD-A163213] N86-27104
LAMINAR FLOW
On the existence of solutions of an equation arising in the theory of laminar flow in a uniformly porous channel with injection
[NASA-CR-178078] N86-26543
Multiple laminar flows through curved pipes N86-26559
Hydraulic power modulation laminar proportional amplifier development
[AD-A163390] N86-26579
LAMINAR FLOW AIRFOILS
Experimental results for a flapped natural-laminar-flow airfoil with high lift/drag ratio
[NASA-TM-85788] N86-26286
LAMINATES
Computational simulation of progressive fracture in fiber composites
[NASA-TM-87341] N86-26376
Evaluation of multilayer printed wiring boards by metallographic techniques: An illustrated guide to the preparation and inspection of plated-through hole test coupons based on the requirements of MIL-P-55110D
[NASA-RP-1161] N86-26930

The postbuckling behavior of blade stiffened carbon epoxy panels loaded in compression — semisubmersible platform
[NLR-MP-85019-U] N86-26661

LAND USE
Research, investigations and technical developments: National mapping program, 1983-1984
[PB86-166097] N86-26675

LANDING
Upgrade of weather forecast support to shuttle operations
[AD-A164967] N86-26761

LANDING SITES
Bomb crater repair techniques for permanent airfields. Report 3. Series 4 tests
[AD-A164872] N86-26345

LANDSAT SATELLITES
A multiindex multitemporal approach to map crops in the early growing season: An application to two Italian irrigation districts: East Sesia and Grande Bonifica Ferrarese — flue gases
[ICW-1611] N86-26674

LANGUAGE PROGRAMMING
CIRCE: A natural language rule translation system for intersensor
[AD-A163279] N86-26940
A conceptual modeling expert system — biological model
[CWI-CS-R8518] N86-26978

LANTHANUM COMPOUNDS
Monolithic cathodes
[AD-A163252] N86-26523

LAP JOINTS
Effects of cladding and anodizing on flight simulation fatigue of 2024-T3 and 7475-T761 aluminum alloys — semisubmersible platform
[NLR-TR-85006-U] N86-26430
Constant amplitude and flight simulation of fatigue tests on adhesive bonded lap joint specimens of 2024-T3 sheet material — semisubmersible platform
[NLR-TR-84090-U] N86-26663

LARGE SPACE STRUCTURES
Dynamic characteristics of power-tower space stations with 15-foot truss bays
[NASA-TM-87684] N86-26357
Mathematical models of flexible spacecraft dynamics: A survey of order reduction approaches — aircraft tracking
[NLR-MP-85004-U] N86-26367

LASER APPLICATIONS
Calibration of droplet sizing and liquid water content instruments: Survey and analysis
[NASA-CR-175099] N86-26596
Alexandrite lasers: State of technology and applications
[DE86-003666] N86-26611
Electron micropulse diagnostics and results for the Los Alamos free-electron laser
[DE86-003690] N86-26617
Blue laser
[AD-A163201] N86-26618
Applications of gamma-ray lasers
[AD-A164889] N86-26621
IST/IDA (Innovative Science and Technology/Institute for Defense Analyses) Gamma-Ray Laser Workshop, 21-22 May 1985
[AD-A164890] N86-26622
Video guidebook. Proceedings of the First Symposium on the Applications of Laboratory X-ray lasers
[DE86-002962] N86-26625

LASER DAMAGE
Eye protection against intense light sources
N86-26818
The application of diffraction optics techniques to laser eye protection
N86-26821

LASER DOPPLER VELOCIMETERS
DTNSRDC three component laser Doppler velocimetry: Towing tank system measurement errors
[AD-A164743] N86-26604
DTNSRDC three component laser Doppler velocimetry: Mean velocity data analysis
[AD-A164744] N86-26605

LASER MATERIALS
Proposal for FEL experiments driven by the National Bureau of Standards' CW microtron
[AD-A163227] N86-26619

LASER OUTPUTS
Cars diagnostics of high pressure combustion. 2. Measurements of NO, H2O and high pressure flames
[AD-A164610] N86-26396
Energy deposition, heat flow and rapid solidification during laser and electron beam irradiation of materials
[DE86-002240] N86-26588
A model for the kinetics of a solar-pumped long path laser experiment
[NASA-TM-87669] N86-26613
Initiator duration effect on pulsed chain reaction chemical laser scaling laws
[AD-A163367] N86-26620
Applications of gamma-ray lasers
[AD-A164889] N86-26621
Laser-heated CVD process for depositing thin films for low-cost solar cell applications
[DE85-016887] N86-26699

LASER PLASMAS
Laser Program
[DE86-005297] N86-26626

LASER WINDOWS
Assessment of the possible use of the KE 1 Thomson scattering collection optics for an additional lidar system — plasma diagnostics
[IPF-85-1] N86-27085

LASERS
Alexandrite lasers: State of technology and applications
[DE86-003666] N86-26611
Laser Program
[DE86-005297] N86-26626
European science notes. Volume 40, number 4
[AD-A165292] N86-27134

LASING
Alexandrite lasers: State of technology and applications
[DE86-003666] N86-26611

LATERAL CONTROL
Decoupling control synthesis for an oblique-wing aircraft
[NASA-TM-86801] N86-26339

LATERAL STABILITY
A lateral guidance algorithm to reduce the post-aerobraking burn requirements for a lift-modulated orbital transfer vehicle
[NASA-CR-177295] N86-26932

LATEX
The effects of steel profile and cleanliness on coating performance
[AD-A164798] N86-26443
Development of a portable test kit for field-screening paints
[AD-A164369] N86-26448

LATTICE PARAMETERS
High resolution imaging of boron carbide microstructures
[DE86-001751] N86-26387

LAUNCHING
Upgrade of weather forecast support to shuttle operations
[AD-A164967] N86-26761

LAYOUTS
Area penalty for sublinear signal propagation delay on chip (preliminary version) — mathematical model
[CWI-CS-R8514] N86-26541

LEAKAGE
Hydraulic power modulation laminar proportional amplifier development
[AD-A163390] N86-26579

LEARNING
The role of elaborations in instructional texts: Learning to use the appropriate procedure at the appropriate time
[AD-A165211] N86-26833
Independent research and independent exploratory development FY 85
[AD-A163432] N86-27111

LEARNING THEORY
Components of verbal intelligence
[AD-A163359] N86-26828
Acquiring procedural skills from lesson sequences
[AD-A164580] N86-26829

LEAST SQUARES METHOD
Least squares finite element simulation of transonic flows
N86-26569
Megatrend solutions in physical geodesy
[PB86-173317] N86-26754
The ordinary least squares estimation for the General-Link Linear Models, with applications
[AD-A163589] N86-26996

LENGTH
Two compliance expressions for arbitrary locations across a crack in a CT (Compact Type) specimen
[AD-A163369] N86-26658

LENS ANTENNAS
Concept study of a multiple beam lens antenna with an internal phase shift mask
[AD-A165277] N86-26535

LESIONS
Permanent visual change associated with punctate foveal lesions
N86-26823

LEUKOCYTES
Macrophage structure and function
[AD-A163314] N86-26793

LEVEL (QUANTITY)
Analysis of helical waveguide
[AD-A163252] N86-26522

LEWIS NUMBERS
Theory of the reaction surface with freezing Lewis Number not equal to 1 and its application in the oxidation-sublimation coupling process
[AD-A163213] N86-27104

LIFE (DURABILITY)
Nonlinear damage analysis: Postulate and evaluation
[NASA-CR-168171] N86-26652

LIFE CYCLE COSTS
STARS (Software Technology for Adaptable and Reliable Systems) methodology area summary. Volume 1: Organization and plans
[AD-A163270] N86-26936
STARS (Software Technology for Adaptable and Reliable Systems) methodology area summary. Volume 2: Preliminary views on the software life cycle and methodology selection
[AD-A163271] N86-26937

LIFE SCIENCES
European science notes. Volume 40, number 4
[AD-A165292] N86-27134
Exobiology experiment concepts for space station
N86-27152

LIFT
A study of the unsteady aerodynamic forces generated by a deforming Joukowski airfoil N86-26723

LIFT DRAG RATIO
Experimental results for a flapped natural-laminar-flow airfoil with high lift/drag ratio
[NASA-TM-85788] N86-26286

LIGHT (VISIBLE RADIATION)
In-process control of machining. Phase 1: Milling
[AD-A165391] N86-26482

LIGHT ADAPTATION
Calculations on technical requirements for protection devices against a nuclear light flash N86-26819

LIGHT MODULATION
Amorphous silicon spatial light modulator
[AD-D012168] N86-26528

LIGHT SCATTERING
Dynamic orientation studies of polymers
[AD-A164611] N86-26440
A brillouin light scattering study of magnetic excitations
[AD-A164716] N86-27070

LIGHT SOURCES
Investigations of the micro-turbulence in the bottom of the boundary layer
[AD-A165306] N86-26748
Eye protection against intense light sources
N86-26818

LIGHT TRANSMISSION
Optical absorption characteristics of aerosols
[AD-A165216] N86-26401

LIGHTNING
Lightning discharge protection rod
[NASA-CASE-LAR-13470-1] N86-26296
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 1
[AD-A164430] N86-26491
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 2
[AD-A164431] N86-26492
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 1. High energy pulse-device failure test. 50 ohms impedance 25,000 volts-4000 amps, 100 joules
[AD-A164432] N86-26493
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 2. High impedance/high voltage test 50 ohms-4500 volts
[AD-A164433] N86-26494
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 3. Low impedance/high voltage test, 5 ohms-4500 volts-1000 amps
[AD-A164434] N86-26495
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 4. Low impedance/low voltage test, 5 ohms-600 volts-120 amps
[AD-A164435] N86-26496

Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 5. Equipment and devices oscilloscope photographs
[AD-A164436] N86-26497
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 6. Equipment and devices bench check measurement
[AD-A164437] N86-26498
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 7. Equipment and devices test descriptions
[AD-A164438] N86-26499
The production of trace gases by photochemistry and lightning in the early atmosphere N86-26851
A gas chromatograph experiment for a Titan entry probe N86-26856

LIKELIHOOD RATIO
On the likelihood ratio test for a change point in a sequence of independent exponentially distributed random variables — semisubmersible platform
[CWI-MS-R8507] N86-27019

LINE OF SIGHT
Self aligned notch for InP planar transferred electron oscillator
[AD-D012165] N86-26540

LINE SPECTRA
Theoretical N2-, O2- and air-broadened halfwidths of ozone calculated by quantum Fourier transform theory with realistic collision dynamics
[AD-A163276] N86-26391
Determination of band oscillator strengths of atmospheric molecules from high resolution vacuum ultraviolet cross section measurements
[NASA-CR-177293] N86-26724

LINEAR ARRAYS
In-process control of machining. Phase 1: Milling
[AD-A165391] N86-26482
Finite length discrete matched filters
[AD-A164869] N86-26531
A unifying approach to linear and nonlinear array processing: A tutorial
[AD-A164777] N86-27012

LINEAR ENERGY TRANSFER (LET)
Survey of atmospheric radiation components for the Gamma and Cosmic Ray Astrophysics Branch of the Space Science Division of the Naval Research Laboratory
[AD-A165538] N86-27177

LINEAR EQUATIONS
Aeroelastic control of oblique-wing aircraft
[NASA-TM-86808] N86-26340
The design and implementation of cost-effective algorithms for direct solution of banded linear systems on the vector processor system 32 supercomputer
[NASA-CR-17681] N86-26992
End-point corrected trapezoidal quadrature rules for singular functions
[AD-A163242] N86-27000

LINEAR FILTERS
A unifying approach to linear and nonlinear array processing: A tutorial
[AD-A164777] N86-27012

LINEAR PREDICTION
Error properties of Hartley transform algorithms
[AD-A163217] N86-26934

LINEAR SYSTEMS
Data analysis for multidimensional luminescence
[AD-A164866] N86-26396
Linear resonance cooler
[AD-A165492] N86-26483
An isostatic Earth model
[AD-A164608] N86-26672
Gravity gradiometer survey errors
[AD-A165575] N86-26749
Convexity of elliptically contoured distributions with applications
[AD-A163369] N86-27003

LINEARITY
The ordinary least squares estimation for the General-Link Linear Models, with applications
[AD-A163599] N86-26996

LINEARIZATION
Model comparison in vertical crustal motion estimation using leveling data
[PB86-175551] N86-26753

LINGUISTICS
Components of verbal intelligence
[AD-A163359] N86-26828

LININGS
Character of silver lining
[DE86-001585] N86-26423
High temperature molten salt storage
[DE85-016874] N86-26706

LINKS (MATHEMATICS)
The ordinary least squares estimation for the General-Link Linear Models, with applications
[AD-A163599] N86-26996

LIQUEFIED GASES
Thermal response tests of candidate insulation systems for the chlorine tank car
[AD-A165293] N86-26451

LIQUID AIR
Optical absorption characteristics of aerosols
[AD-A165216] N86-26401

LIQUID CRYSTALS
Amorphous silicon spatial light modulator
[AD-D012168] N86-26528
German development of a LC-flashblindness device N86-26820
Field-sequential color stereoscopy with liquid crystal spectacles — aircraft tracking
[NLR-MP-84061-U] N86-27071
Hillock formation on (100) GaAs
[AD-A163308] N86-27090

LIQUID FLOW
Effect of liquid composition on enhanced flow due to surface shear in the contact line region: Constant vapor pressure boundary condition
[AD-A165545] N86-26587

LIQUID FUELS
A lumped parameter code for regenerative liquid propellant guns
[AD-A164960] N86-26463
Impingement of liquid fuel sprays on heated walls
[AD-A165422] N86-26465

LIQUID METALS
The delayed fracture of aluminum alloys
[AD-A165203] N86-26422

LISP (PROGRAMMING LANGUAGE)
The feasibility of automatic storage reclamation with concurrent program execution in a LISP environment
[AD-A165184] N86-26925

LOAD TESTS
The postbuckling behavior of blade-stiffened carbon epoxy panels loaded in compression — semisubmersible platform
[NLR-MP-85019-U] N86-26661

LOADING OPERATIONS
Design and production of damage-resistant tray pack containers
[AD-A164595] N86-26837

LOADS (FORCES)
The effect of low velocity impact on the strength characteristics of composite materials laminates
[NASA-CR-176846] N86-26379
Entropy-driven loss of gas-phase Group 5 species from GOLD/3-5 compound semiconductor systems
[AD-A165584] N86-27100

LOGIC DESIGN
Foundations of knowledge for distributed systems. Revision
[AD-A163545] N86-26918
Verifying temporal properties without using temporal logic
[AD-A164820] N86-26948

LONGERONS
Magnetic spin reduction system for free spinning objects
[NASA-CASE-MFS-25966-1] N86-26352

LONGITUDINAL CONTROL
Decoupling control synthesis for an oblique-wing aircraft
[NASA-TM-86801] N86-26339

LOOP ANTENNAS
A loop antenna for a VLF (Very Low Frequency) satellite transmitter
[AD-A164652] N86-26506

LORENTZ FORCE
Mass loading of the Earth's magnetosphere by micron size lunar ejecta. 2: Ejecta dynamics and enhanced lifetimes in the Earth's magnetosphere N86-27144

LOSSES
The effects of steel profile and cleanliness on coating performance
[AD-A164768] N86-26443
Electrical measurements on alpha-quartz crystals
[AD-A164793] N86-27096

LOUISIANA
Application of LANDSAT TM images to assess circulation and dispersion in coastal lagoons
[NASA-CR-177315] N86-26665

LOW ALTITUDE
Techniques for the automated observation of clouds
[AD-A165573] N86-26775

LOW COST
Application of conductive polymer technology to the production of a novel multilayer capacitor
[AD-A165212] N86-26450
Compaction with automatic jog introduction
[AD-A163436] N86-26527
Laser-heated CVD process for depositing thin films for low-cost solar cell applications
[DE85-016887] N86-26699

LOW FREQUENCIES
A synopsis of research on subbottom effects on underwater acoustic propagation
[AD-A165420] N86-27048

LOW GRAVITY MANUFACTURING
Surface film effects on drop tube undercooling studies
[NASA-TM-86547] N86-26410

LOW NOISE
Blue laser
[AD-A163201] N86-26618

LOW PRESSURE
Early differentiation of the Moon: Experimental and modeling studies
[NASA-CR-176817] N86-27172

LOW REYNOLDS NUMBER
Proceedings of the Conference on Low Reynolds Number Airfoil Aerodynamics
[NASA-CR-177308] N86-25283

LOW TEMPERATURE
Effect of chromium addition to the low temperature hot corrosion resistance of platinum modified aluminide coatings
[AD-A164755] N86-26420
Pressure-dependent magneto-optic measurements in strained-layer superlattices at low temperatures
[DE86-004604] N86-27068
Electrical measurements on alpha-quartz crystals
[AD-A164793] N86-27096

LOW TEMPERATURE ENVIRONMENTS
Model studies of surface noise interference in ground-probing radar
[AD-A163206] N86-26500

LOW THRUST PROPULSION
Theoretical study on the effect of the design of small (milli-Newton) thruster jets on molecular contamination for the space station
[NASA-CR-177263] N86-26358

LOWER ATMOSPHERE
Weather radar studies
[AD-A165221] N86-26762

LUBRICANTS
Index of aerospace mechanisms symposia proceedings 1-19
[NASA-TM-88205] N86-26650

LUBRICATION SYSTEMS
High-temperature lubrication systems for ring/liner applications in advanced heat engines
[AD-A164955] N86-26446

LUMINESCENCE
Data analysis for multidimensional luminescence
[AD-A164866] N86-26396

LUMINOUS INTENSITY
Eye protection against intense light sources N86-26818

LUNAR GRAVITATIONAL EFFECTS
The lunar nodal tide and the distance to the Moon during the Precambrian era N86-26886

LUNAR MAPS
Early differentiation of the Moon: Experimental and modeling studies
[NASA-CR-176817] N86-27172

LUNAR PHASES
Tidal and lunar data for Point Mugu, San Nicholas Island, and the Barking Sands Area during 1986
[AD-A163249] N86-26784

LUNAR SURFACE
Mass loading of the Earth's magnetosphere by micron size lunar ejecta. 1: Ejecta production and orbital dynamics in cislunar space N86-27143
Mass loading of the Earth's magnetosphere by micron size lunar ejecta. 2: Ejecta dynamics and enhanced lifetimes in the Earth's magnetosphere N86-27144

LUNAR TIDES
The lunar nodal tide and the distance to the Moon during the Precambrian era N86-26886

LYMPHOCYTES
Macrophage structure and function
[AD-A163314] N86-26793

M

MACHINING
In-process control of machining. Phase 1: Milling
[AD-A165391] N86-26482

MACROPHAGES
Macrophage structure and function
[AD-A163314] N86-26793
MAGMA
Early differentiation of the Moon: Experimental and modeling studies
[NASA-CR-176817] N86-27172
MAGNESIUM
Advanced materials research status and requirements. Volume 1: Technical summary
[AD-A165338] N86-26385
Advanced materials research status and requirements. Volume 2, appendix: Material properties data review
[AD-A165339] N86-26386
MAGNESIUM ALLOYS
The delayed fracture of aluminum alloys
[AD-A165203] N86-26422
MAGNET COILS
Highlights from the assembly of the helical field coils for the Advanced Toroidal Facility
[DE86-004758] N86-27081
Advanced Toroidal Facility
[DE86-004805] N86-27082
MAGNETIC FIELD CONFIGURATIONS
Kinetic stabilization of field-reversed configurations
[DE86-003655] N86-27039
MAGNETIC FIELDS
Linear resonance cooler
[AD-A165492] N86-26483
Infinite elements for two-dimensional fluid-structure interaction problems
[AD-A164749] N86-26582
Radiation of long electromagnetic waves by a modulated electron beam in the ionosphere
[AD-A163306] N86-26743
Waves and electric fields associated with the December 27, 1984, artificial comet
[AD-A163409] N86-26744
MAGNETIC FLUX
Kinetic stabilization of field-reversed configurations
[DE86-003655] N86-27039
MAGNETIC INDUCTION
Theoretical analysis of the electrical aspects of the basic electro-impulse problem in aircraft de-icing applications
[NASA-CR-176808] N86-26330
MAGNETIC MOMENTS
Monte Carlo particle simulation and finite-element techniques for tandem mirror transport
[DE86-004236] N86-27079
MAGNETIC PERMEABILITY
Classical derivation of nonlinear susceptibilities for the 32 crystal classes in the harmonic oscillator approximation
[AD-A164536] N86-27082
MAGNETIC PROPERTIES
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 1
[AD-A164430] N86-26491
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 2
[AD-A164431] N86-26492
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 1. High energy pulse-device failure test. 50 ohms impedance 25,000 volts-4000 amps, 100 joules
[AD-A164432] N86-26493
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 2. High impedance/high voltage test 50 ohms-4500 volts
[AD-A164433] N86-26494
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 4. Low impedance/low voltage test, 5 ohms-600 volts-120 amps
[AD-A164435] N86-26496
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 5. Equipment and devices oscilloscope photographs
[AD-A164436] N86-26497
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 6. Equipment and devices bench check measurement
[AD-A164437] N86-26498
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 7. Equipment and device test descriptions
[AD-A164438] N86-26499
MAGNETIC RESONANCE
Spectroscopic investigations of organic molecules on graphite surfaces
[AD-A165431] N86-26403
MAGNETIC STORMS
Particle and wave dynamics during plasma injections
[AD-A163210] N86-26742
MAGNETIZATION
Effect of magnetostriction on remanent magnetization
[AD-A165450] N86-27041
MAGNETO-OPTICS
Pressure-dependent magneto-optic measurements in strained-layer superlattices at low temperatures
[DE86-004604] N86-27088
MAGNETOHYDRODYNAMIC STABILITY
Electron Bernstein wave current drive in the start-up phase of a tokamak discharge
[INPE-3866-PRE/926] N86-27074
MAGNETOHYDRODYNAMICS
Plasma physics modeling and the Cray-2 multiprocessor
[DE86-004239] N86-27072
MAGNETOIONICS
Electron density measurements in the middle atmosphere by radio propagation techniques
N86-26733
MAGNETOSPHERE
Particle and wave dynamics during plasma injections
[AD-A163210] N86-26742
In situ measurements of the plasma bulk velocity near the Io flux tube
[NASA-CR-176810] N86-27075
Mass loading of the Earth's magnetosphere by micron size lunar ejecta. 2: Ejecta dynamics and enhanced lifetimes in the Earth's magnetosphere N86-27144
A magnetospheric simulation at the space station
N86-27155
MAGNETOSTRICTION
Effect of magnetostriction on remanent magnetization
[AD-A165450] N86-27041
MAINTENANCE
An analysis of S-3 SDLM (Standard Depot Level Maintenance) corrosion documentation procedures
[AD-A165588] N86-26282
Bomb crater repair techniques for permanent airfields. Report 3. Series 4 tests
[AD-A164682] N86-26345
MALES
Development and evaluation of a prototype life preserver
[AD-A163224] N86-26297
A comparative analysis of whispered and normally phonated speech using an LPC-10 vocoder
[AD-A163307] N86-26504
Perceptual and physiological responses during exercise in cool and cold water
[AD-A165491] N86-26800
MAN MACHINE SYSTEMS
Guidance-Control-Navigation Automation for Night All-Weather Tactical Operations
[AGARD-CP-387] N86-26316
Cockpit automation requirements derived from mission functions data N86-26318
Automation and pilot interactions in night or all-weather tactical operations N86-26319
Some quantitative methodology for cockpit design
N86-26320
Human factors: The Cinderella discipline in cockpit interface design N86-26825
A model and experimental analysis of pilot decision making behavior for various automatic approach conditions
[NLR-TR-84037-U] N86-26835
Baseline experiments in teleoperator control
[NASA-TP-2547] N86-26836
Human factors in rule-based systems
[AD-A165309] N86-26840
Soldier-computer interface
[AD-A165326] N86-26841
Mental models and problem solving with a knowledge-based expert system
[AD-A165398] N86-26843
A personalized and prescriptive decision aid for choice from a database of options
[AD-A165396] N86-27129
MANAGEMENT
Proceedings of the International Test and Evaluation Association 1984 Symposium (Step Session). Supplement
[AD-A163236] N86-26919
Management: A bibliography for NASA Managers
[NASA-SP-7500(20)] N86-27108
A summary of the Naval Postgraduate School research program
[AD-A164845] N86-27131
MANAGEMENT METHODS
Management: A bibliography for NASA Managers
[NASA-SP-7500(20)] N86-27108
MANAGEMENT PLANNING
STARS (Software Technology for Adaptable and Reliable Systems) methodology area summary. Volume 1: Organization and plans
[AD-A163270] N86-26936
STARS (Software Technology for Adaptable and Reliable Systems) methodology area summary. Volume 2: Preliminary views on the software life cycle and methodology selection
[AD-A163271] N86-26937
MANEUVERS
Aircraft performance optimization with thrust vector control
[AD-A165388] N86-26334
MANGANESE ALLOYS
Formation of surface layers of icosahedral Al(Mn)
[DE86-004606] N86-26433
MANGANESE COMPOUNDS
Effect of magnetostriction on remanent magnetization
[AD-A165450] N86-27041
MANIPULATORS
Magnetic spin reduction system for free spinning objects
[NASA-CASE-MFS-25966-1] N86-26352
Index of aerospace mechanisms symposia proceedings 1-19
[NASA-TM-88205] N86-26850
Baseline experiments in teleoperator control
[NASA-TP-2547] N86-26836
MANNED SPACE FLIGHT
Optical model calculations of heavy-ion target fragmentation
[NASA-TM-87692] N86-27083
MANUAL CONTROL
A comparison of voice and keyboard data entry for a helicopter navigation task
[AD-A163245] N86-26501
MANUALS
The role of elaborations in instructional texts: Learning to use the appropriate procedure at the appropriate time
[AD-A165211] N86-26833
MANUFACTURING
Nickel-hydrogen separator development
[NASA-TM-87332] N86-26677
Economics of polysilicon process: A view from Japan
N86-26382
Economics of polysilicon processes N86-26683
Sensitivity analysis for solar plates N86-26684
Development of the silane process for the production of low-cost polysilicon N86-26685
Fluidized-bed development at JPL N86-26686
Silicon production in an aerosol reactor N86-26688
Processes and process development in Japan
N86-26689
Processes and process development N86-26690
Refining of metallurgical-grade silicon N86-26691
A silane-based polysilicon process N86-26696
MANY BODY PROBLEM
Stochastic mechanics and the Kepler problem — plasma diagnostics
[REPT-70] N86-27034
MAPPING
ENVIROSAT-2000 report: Federal agency satellite requirements
[NASA-TM-88752] N86-26355
The local redistribution of points along curves for numerical grid generation N86-26571
Surface construction from planar contours
[AD-A164862] N86-26950
Mapping experiment with space station N86-27168
MAPS
A solid-state map display for rapid response operation
N86-26323
Exploiting capability constraints to solve global, two dimensional path planning problems
[AD-A164973] N86-27132
MARINE BIOLOGY
A simulation analysis of the fate of phytoplankton within the mid-Atlantic bight
[NASA-CR-177265] N86-26670
Ocean frontal areas. Phytoplankton enumeration and biomass estimates – operation guiding light (April - May 1985)
[AD-A164965] N86-26787
Identification manual for phytoplankton of the United States Atlantic coast
[PB86-151222] N86-26792

MARINE ENVIRONMENTS
Accelerated corrosion testing of graphite/epoxy composites and aluminum alloy mechanically-fastened joints
[AD-A164772] N86-26382
The effects of steel profile and cleanliness on coating performance
[AD-A164788] N86-26443
An investigation of the marine boundary layer during cold air outbreak
[NASA-CR-177267] N86-26758
Relative - humidity parameterization of the Navy Aerosol Model (NAM)
[AD-A163209] N86-26759
The fossil record of evolution: Data on diversification and extinction N86-26902
Geochemical anomalies, bolide impacts and biological extinctions on the Earth N86-26903
MARINE PROPULSION
Advanced propulsor design studies
[AD-A164963] N86-26634
MARINE TECHNOLOGY
Independent research and independent exploratory development FY 85
[AD-A163432] N86-27111
Recent Naval Postgraduate School publications
[AD-A164846] N86-27122
Directory of research publications
[AD-A164875] N86-27125
A summary of the Naval Postgraduate School research program
[AD-A164845] N86-27131
MARKETING
Proceedings of the Flat-Plate Solar Array Project Workshop on Low-Cost Polysilicon for Terrestrial Photovoltaic Solar-Cell Applications
[NASA-CR-178616] N86-26679
Biotechnica '85 International Congress for Biotechnology
[AD-A165415] N86-26794
MARKOV PROCESSES
Effect of stochastic perturbations on a spectral model of atmospheric circulation — mathematical model
[CWI-AM-R8515] N86-26751
An efficient decision-making-free filter for processes with abrupt changes — aircraft tracking
[NLR-MP-84080-U] N86-27018
MARS (PLANET)
Microfossils in the Antarctic cold desert: Possible implications for Mars N86-26897
Early differentiation of the Moon: Experimental and modeling studies
[NASA-CR-178617] N86-27172
MASKING
Self aligned notch for InP planar transferred electron oscillator
[AD-D012185] N86-26540
MASKS
Concept study of a multiple beam lens antenna with an internal phase shift mask
[AD-A165277] N86-26535
MASS
Factors affecting the vertical motion of a zero-pressure, polyethylene, free balloon
[AD-A164596] N86-26290
MASS DISTRIBUTION
Mass loading of the Earth's magnetosphere by micron size lunar ejecta. 1: Ejecta production and orbital dynamics in cislunar space N86-27143
MASS RATIOS
Fluid-Electrolyte-Mineral interrelations as affecting work performance
[AD-A165325] N86-26799
MASS SPECTROSCOPY
Molecular jet study of solvation of pyrazine by small hydrocarbons
[AD-A164583] N86-26393
Review of rocket-borne ion mass spectrometry in the middle atmosphere N86-26730
Fluid-Electrolyte-Mineral interrelations as affecting work performance
[AD-A165325] N86-26799
MASS TRANSFER
Studies of negative ion reactions: Solvated ions and strong acids
[AD-A165484] N86-26404
Gas exchange between the forest and the atmosphere
[DE86-004624] N86-26718
Theory of the reaction surface with freezing Lewis Number not equal to 1 and its application in the oxidation-sublimation coupling process
[AD-A163213] N86-27104
MATCHED FILTERS
Finite length discrete matched filters
[AD-A164869] N86-26531
MATCHING
Electromagnetic penetration through a slot into a rectangular waveguide
[AD-A164590] N86-26506
Distributed matchmaking for processes in computer networks — mathematical model
[CWI-CS-R8513] N86-26985
MATERIALS HANDLING
Design and production of damage-resistant tray pack containers
[AD-A164595] N86-26837
MATHEMATICAL MODELS
Proceedings of the Conference on Low Reynolds Number Airfoil Aerodynamics
[NASA-CR-177306] N86-26293
Viscid/inviscid interaction analysis of subsonic turbulent trailing-edge flows
[AD-A165207] N86-26292
Integrated risk/cost planning models for the US Air Traffic system
[NASA-CR-177274] N86-26312
Math model study of a proposed glide slope for runway 13R, Dallas-Fort Worth Airport, Texas
[AD-A164907] N86-26315
Theoretical analysis of the electrical aspects of the basic electro-impulse problem in aircraft de-icing applications
[NASA-CR-178608] N86-26330
Modelling of a cold gas jet system for satellite attitude control
[INPE-3853-PRE/917] N86-26356
Reliability prediction for spacecraft
[AD-A164747] N86-26359
Mathematical models of flexible spacecraft dynamics: A survey of order reduction approaches — aircraft tracking
[NLR-MP-85004-U] N86-26367
Operational use of the REEDM (Rocket Exhaust Effluent Diffusion Model)
[AD-A164965] N86-26371
The effect of low velocity impact on the strength characteristics of composite materials laminates
[NASA-CR-178648] N86-26379
Numerical simulation of turbulent flames using vortex methods
[AD-A164080] N86-26390
A fundamental mathematical theory for thermal explosions in rigid solids and in gases
[AD-A164692] N86-26396
Spectrum orbit utilization program technical manual SOUP5 Version 3.8
[NASA-CR-174944] N86-26489
Synthetic Aperture Radar (SAR) product simulation — ESA programs
[ESA-CR(P)-2149] N86-26518
TOPAZ - The transient one-dimensional pipe flow analyzer: Equations and numerics
[DE86-005063] N86-26592
Rectangular plate is proposed as an IES model test structure
[DE85-018274] N86-26643
History matching by spline approximation and regularization in single-phase areal reservoirs
[NASA-CR-178087] N86-26664
An isostatic Earth model
[AD-A164608] N86-26672
Fluidized-bed reactor modeling for production of silicon by silane pyrolysis N86-26687
An analytical method for the determination of solar cell model parameters
[INPE-3652-PRE/916] N86-26698
Modeling of a heat pump charged with a non-azeotropic refrigerant mixture
[PB86-166267] N86-26712
User-friendly screening model for point-source impact assessment
[PB86-176369] N86-26722
Thermospheric models: A short review on the basic assumptions
[INPE-3823-PRE/899] N86-26738
Megatrend solutions in physical geodesy
[PB86-173017] N86-26754
Relative - humidity parameterization of the Navy Aerosol Model (NAM)
[AD-A163209] N86-26759
Model validation research: Comparison of simulated and observed climate patterns for the past 18,000 years
[DE86-004831] N86-26776
Data tabulations and analysis of diurnal sea surface temperature variability observed at LOTUS (long-term upper ocean study)
[AD-A165406] N86-26790
Error properties of Hartley transform algorithms
[AD-A163217] N86-26934
Exact integration algorithm for use with modal analysis
[DE85-018533] N86-26993
The ordinary least squares estimation for the General-Link Linear Models, with applications
[AD-A163599] N86-26996
The mathematical structure of error correction models
[AD-A163344] N86-27001
Convexity of elliptically contoured distributions with applications
[AD-A163389] N86-27003
An exact test for the nesting effect's variance component in an unbalanced random two-fold nested model
[AD-A164607] N86-27006
A lumped parameter mathematical model for simulation of subsonic wind tunnels
[NASA-TM-87324] N86-27036
Stochastic realization problems motivated by economic modeling — vibration analysis
[CWI-OS-R8507] N86-27037
Colossus revisited: A review and extension of the Marsh-Schulkin shallow water transmission loss model (1962)
[AD-A164588] N86-27046
On roads with no overtaking — stochastic traffic models
[CWI-MS-R8508] N86-27135
Grain dynamics in zero gravity N86-27164
Theoretical study of the X-ray emission from astrophysical shock waves
[NASA-CR-177318] N86-27176
MATRICES (MATHEMATICS)
The mathematical structure of error correction models
[AD-A163344] N86-27001
MATRIX MATERIALS
European science notes. Volume 40, number 4
[AD-A165292] N86-27134
MATRIX METHODS
Residue formulas for meromorphic matrices — vibration analysis
[CWI-OS-R8506] N86-27020
MATRIX THEORY
Acoustic normal modes using the propagator matrix technique for a stratified ocean overlaying an inhomogeneous anisotropic porous bed
[AD-A165436] N86-27049
MAXIMUM ENTROPY METHOD
A review of maximum entropy spectral analysis and applications to Fourier Spectroscopy
[AD-A164698] N86-27011
MAXIMUM LIKELIHOOD ESTIMATES
On density estimation from censored data by penalized likelihood methods
[AD-A163388] N86-27002
Gamma processes
[AD-A165390] N86-27038
MEAN
Asymptotic normality of U-statistics based on trimmed samples
[AD-A163346] N86-27032
MEAN FREE PATH
Ionization induced instability in an electron collecting sheath
[AD-A165330] N86-26538
MEASUREMENT
On the quantization of noncontact field theories in Minkowski space — turing machines
[NIKHEF-H/85-12] N86-27107
MEASURING INSTRUMENTS
Calibration of the ISEE plasma composition experiment
[NASA-TM-86542] N86-26348
Calibration of droplet sizing and liquid water content instruments: Survey and analysis
[NASA-CR-175099] N86-26596
An evaluation of the capability of the surface condition analyzer (SCAN) sensors to measure runway water depth
[AD-A164719] N86-26603
A study of the optimization problem for calibrating a Lacoste and Romberg G gravity meter to determine circular errors
[AD-A165218] N86-26607
Conceptual development of strain-gage signal interpretation system for jet engine applications
[AD-A165489] N86-26608
Simple wavemeter for pulsed dye lasers
[DE86-004488] N86-26624
Miniature metastable ionization detectors for exobiology flight experiments N86-26859
MECHANICAL DRIVES
Linear resonance cooler
[AD-A165492] N86-26485
Mechanical face seal dynamics
[AD-A164978] N86-26633
MECHANICAL ENGINEERING
A summary of the Naval Postgraduate School research program
[AD-A164845] N86-27131

MECHANICAL OSCILLATORS
Comparative study of nondestructive pavement testing, WES (Waterways Experiment Station) NDT (nondestructive tests) methodologies
[AD-A163379] N86-26480
MECHANICAL PROPERTIES
Standard reference data publications, 1964-1984
[PB86-155587] N86-26409
Amorphous silicon spatial light modulator
[AD-D012168] N86-26529
MELTING
Transient conductance measurements and heat-flow analysis of pulsed-laser-induced melting of aluminum thin films
[DE86-003928] N86-26613
Melting nuclear fuel — flue gases
[S/T-REPT-VOL-3-NO-7] N86-27066
MEMBRANES
Experimental polyurethane foam (PUF) roofing systems. 3. Naval Station, Roosevelt Roads, Puerto Rico, and Naval Facility, Cape Hatteras, North Carolina
[AD-A164833] N86-26444
Mechanism of electromagnetic energy effects on the nervous system: Voltage-clamp study
[AD-A164653] N86-26798
Ion transport across synthetic and biological membranes: Ionophore-mediated transport
[AD-A163269] N86-27057
MEMORY
The role of elaborations in instructional texts: Learning to use the appropriate procedure at the appropriate time
[AD-A165211] N86-26833
MENTAL HEALTH
The healthy motivation to fly: No psychiatric diagnosis
[AD-A164944] N86-26832
MENTAL PERFORMANCE
Human factors in rule-based systems
[AD-A165309] N86-26840
Mental models and problem solving with a knowledge-based expert system
[AD-A165398] N86-26843
MERCURY (METAL)
High-resolution absorption spectrum of the 6(1)S0 (YIELDS) 6(3)P1 transition in mercury with a Cw dye laser
[DE86-003492] N86-26615
MEROMORPHIC FUNCTIONS
Residue formulas for meromorphic matrices — vibration analysis
[CWI-OS-R8506] N86-27020
MESONS
Theory of photo- and electroproduction of mesons: problems and prospects
[DE86-004094] N86-27052
MESOPAUSE
Kinematics, composition and thermodynamics of the mesopause, turbopause, region of the atmosphere (between 80 and 120 km) related to the Aeroassisted Orbit Transfer Vehicle (AOTV) operations
[NASA-TM-86545] N86-26735
MESOSCALE PHENOMENA
Characteristics of western region flash flood events in GOES imagery and conventional data
[NOAA-TM-NESDIS-13] N86-26668
Directory of Mesoscale Solar Radiation Information Sources
[DE85-016866] N86-27175
MESOSPHERE
Rocket techniques for measurement of ozone and related neutral minor constituents N86-26727
The neutral/ion chemistry of sodium in the stratosphere and mesosphere
[AD-A164636] N86-26747
MESSAGE PROCESSING
Distributed matchmaking for processes in computer networks — mathematical model
[CWI-CS-R8513] N86-26985
Piezometer data base package user's guide
[AD-A163264] N86-27119
METABOLISM
Oxygen and the evolution of metabolic pathways
N86-26895
METAL FATIGUE
Crack propagation in powder metallurgy hot isostatically pressed nickel-based alloy
[AD-A164587] N86-26418
Low-cycle thermal fatigue
[NASA-TM-87225] N86-26651
METAL MATRIX COMPOSITES
Advanced materials research status and requirements. Volume 1: Technical summary
[AD-A165338] N86-26385
Advanced materials research status and requirements. Volume 2, appendix: Material properties data review
[AD-A165339] N86-26386
METAL OXIDES
Oxidation protecting coatings for polymers
[NASA-CASE-LEW-14072-3] N86-26434
METAL POWDER
Ferromagnetic dielectric substance
[AD-A163214] N86-26415
Solid-phase equilibria in the Au-Ga-Sb, Au-In-As, and Au-In-Sb ternaries
[AD-A165469] N86-27099
METAL SURFACES
The inhibition of vapor-phase corrosion. A review
[AD-A163430] N86-26417
Applications of current measurement over corroding metallic surfaces
[DE86-001174] N86-26425
Calculations of burning surfaces of propellant grain with embedded metal wires and of internal ballistics of such motor
[AD-A163361] N86-26458
Resonance fluorescence of a two-level atom near a rough metal surface
[AD-A163219] N86-27056
Experimental determination of the electronic structure of small metal particles
[AD-A163406] N86-27091
METAL VAPOR LASERS
Blue laser
[AD-A163201] N86-26618
METALLIC PLASMAS
Resonance fluorescence of a two-level atom near a rough metal surface
[AD-A163219] N86-27056
METALS
Advanced materials research status and requirements. Volume 1: Technical summary
[AD-A165338] N86-26385
Advanced materials research status and requirements. Volume 2, appendix: Material properties data review
[AD-A165339] N86-26386
Surface film effects on drop tube undercooling studies
[NASA-TM-86547] N86-26410
Calculations of burning surfaces of propellant grain with embedded metal wires and of internal ballistics of such motor
[AD-A163361] N86-26458
Crystal plasticity analysis of large-strain shear
[DE86-005061] N86-26660
Maryland Water Resources Research Center, fiscal year 1984 program report
[PB86-133253] N86-26721
METASTABLE STATE
Metastability and compensated compactness in continuum theories
[AD-A164634] N86-27007
METEORITES
Synthesis and analysis in studies of chemical evolution N86-26864
Isotopic characterization of prebiotic synthesis of organic material N86-26865
Origin of life and iron-rich clays N86-26866
Ultraviolet spectroscopy of meteoric debris: In situ calibration experiments from Earth orbit N86-27159
METEOROIDS
Space Station Planetology Experiments (SSPEX)
[NASA-CP-2424] N86-27136
Space station impact experiments N86-27137
Mass loading of the Earth's magnetosphere by micron size lunar ejecta. 1: Ejecta production and orbital dynamics in cislunar space N86-27143
Mass loading of the Earth's magnetosphere by micron size lunar ejecta. 2: Ejecta dynamics and enhanced lifetimes in the Earth's magnetosphere N86-27144
METEOROLOGICAL INSTRUMENTS
Review of rocket-borne ion mass spectrometry in the middle atmosphere N86-26730
METEOROLOGICAL PARAMETERS
Operational use of the REEDM (Rocket Exhaust Effluent Diffusion Model)
[AD-A164965] N86-26371
Rocket techniques used to measure the neutral atmosphere N86-26726
Comparison of rainfall characteristics at Fortaleza (CEARA) and other nearby locations in Northeast Brazil
[INPE-3851-PRE/915] N86-26757
Tidal and lunar data for Point Mugu, San Nicholas Island, and the Barking Sands Area during 1986
[AD-A163249] N86-26784
METEOROLOGICAL RADAR
Weather radar studies
[AD-A165221] N86-26762
Techniques for the automated observation of clouds
[AD-A165573] N86-26775
METEOROLOGICAL SERVICES
LAWEB (Lake Weather Broadcast): Data processing for the Great Lakes
[PB86-176658] N86-26780
METEOROLOGY
Operational soil moisture prediction model
[AD-A165313] N86-26481
Severe thunderstorm cases of 1985
[PB86-174125] N86-26781
A summary of the Naval Postgraduate School research program
[AD-A164845] N86-27131
METHOD OF MOMENTS
Analysis of an aperture coupled microstrip antenna
[AD-A165283] N86-26537
METHYL COMPOUNDS
Ion transport across synthetic and biological membranes: Ionophore-mediated transport
[AD-A163269] N86-27057
MEXICO
Application of LANDSAT TM images to assess circulation and dispersion in coastal lagoons
[NASA-CR-177315] N86-26665
Organic S13C values vary slightly with salinity in microbial mats at Guerrero Negro, Baja California Sur, Mexico: Implications for stromatolite S13C values N86-26900
MICROANALYSIS
Investigation and development of advanced surface microanalysis techniques and methods
[AD-A163616] N86-26389
MICROCHANNEL PLATES
Image intensifiers: Past and present N86-26803
MICROCOMPUTERS
A microcomputer pollution model for civilian airports and Air Force bases
[AD-A163232] N86-26714
Printer multiplexing among multiple Z-100 microcomputers
[AD-A165179] N86-26983
The formal specification of an abstract database: Design and implementation
[AD-A164865] N86-27124
MICROMETEORITES
A planetary ultra hypervelocity impact mechanics and shock wave science facility N86-27141
MICROMETEOROIDS
New techniques for the detection and capture of micrometeoroids N86-26862
New techniques for the detection and capture of micrometeoroids N86-27167
MICROORGANISMS
The principle of cooperation and life's origin and evolution N86-26880
Recent progress in Precambrian paleobiology N86-26887
Microfossils in the Antarctic cold desert: Possible implications for Mars N86-26897
Microbial contributions to the Precambrian Earth N86-26899
Organic S13C values vary slightly with salinity in microbial mats at Guerrero Negro, Baja California Sur, Mexico: Implications for stromatolite S13C values N86-26900
MICROSCOPY
Video guidebook. Proceedings of the First Symposium on the Applications of Laboratory X-ray lasers
[DE86-002932] N86-26625
MICROSTRIP TRANSMISSION LINES
Moment method analysis of microstrip antennas over a wide frequency range
[NASA-CR-176842] N86-26485
MICROSTRUCTURE
High resolution imaging of boron carbide microstructure
[DE86-001751] N86-26387
Surface film effects on drop tube undercooling studies
[NASA-TM-86547] N86-26410
Effects of rapidly pulsed ion bombardment on microstructure and phase stability in a Ti-modified stainless steel
[DE86-004790] N86-26424
X-ray generated ultrasound N86-27045
[AD-A164581]
Optical imaging of dislocations in strained-layer superlattices and lattice-mismatched epilayers
[DE86-004620] N86-27102
MICROTRONS
Proposal for FEL experiments driven by the National Bureau of Standards' CW microtron
[AD-A163227] N86-26819
MICROWAVE EQUIPMENT
High power microwave plasma pulse compression
[AD-A163298] N86-27077
MICROWAVE FREQUENCIES
Lumped-element and leaky-wave antennas for millimeter waves
[AD-A165280] N86-26536
An infrared search for extraterrestrial laser signals N86-26907

Overview of the NASA SETI Program N86-26909
JPL's role in the SETI program N86-26913

MICROWAVE SENSORS
Techniques for the automated observation of clouds
[AD-A165573] N86-26775

MICROWAVE TRANSMISSION
Quasi-TEM analysis of microwave transmission lines by the finite element method
[AD-A164943] N86-26533

MICROWAVES
Concept study of a multiple beam lens antenna with an internal phase shift mask
[AD-A165277] N86-26535

MIDDLE ATMOSPHERE
Middle Atmosphere Program. Handbook for MAP, volume 19
[NASA-CR-176800] N86-26725
Rocket technique used to measure the neutral atmosphere N86-26726
Measurements of X-ray energy deposition in the middle atmosphere N86-26728
Review of rocket-borne ion mass spectrometry in the middle atmosphere N86-26730
DC-probe measurements in the middle atmosphere N86-26731
Rocket probe techniques for measuring bulk ion properties N86-26732
Electron density measurements in the middle atmosphere by radio propagation techniques N86-26733
Measurement techniques for middle atmosphere electric fields N86-26734

MIE SCATTERING
Comparison of the coherent attenuation predicted by single and multiple scattering theories for the case of several types of hydrometeors
[AD-A164635] N86-26507

MILITARY AIR FACILITIES
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Kunsan AB, South Korea
[AD-A165553] N86-26764
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Indian Mountain AFS, Alaska
[AD-A165554] N86-26765
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Kelly AFB, Texas
[AD-A165555] N86-26766
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Tin City AFS, Alaska
[AD-A165556] N86-26767
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Cape Lisburne, Alaska
[AD-A165557] N86-26768
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Langley AFB, Virginia
[AD-A165558] N86-26769
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Tatalina AFS, Alaska
[AD-A165559] N86-26770
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Beale AFB, California
[AD-A165560] N86-26771
Westover AFB, Massachusetts Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F
[AD-A165563] N86-26774

MILITARY HELICOPTERS
A mission navigation and control system for modern military helicopters N86-26327

MILITARY OPERATIONS
The C-17: An attempt at increased airlift versatility
[AD-A164822] N86-26280
STARS (Software Technology for Adaptable and Reliable Systems) methodology area summary. Volume 1: Organization and plans
[AD-A163270] N86-26936
STARS (Software Technology for Adaptable and Reliable Systems) methodology area summary. Volume 2: Preliminary views on the software life cycle and methodology selection
[AD-A163271] N86-26937
A personalized and prescriptive decision aid for choice from a database of options
[AD-A165396] N86-27129

MILITARY SPACECRAFT
Use of LAN (Local Area Network) technology in DSCS (Defense Satellite Communication System) Earth terminals
[AD-A165496] N86-26515
Software documentation on the URDB modifications to incorporate information collected in Post-DSCS and UHF studies
[AD-A165451] N86-26973

MILITARY TECHNOLOGY
Flammability of aircraft hydraulic fluids: A bibliography
[AD-A165463] N86-26299
Technology transfer at DARPA: The Defense Advanced Research Projects Agency. Executive summary
[AD-A164503] N86-27110
Recent Naval Postgraduate School publications
[AD-A164846] N86-27122

MILLIMETER WAVES
Quasi-TEM analysis of microwave transmission lines by the finite element method
[AD-A164943] N86-26533
Lumped-element and leaky-wave antennas for millimeter waves
[AD-A165280] N86-26536

MILLING MACHINES
In-process control of machining. Phase 1: Milling
[AD-A165391] N86-26482

MINERALOGY
Paleosols and the chemical evolution of the atmosphere N86-26870
Geochemical anomalies, bolide impacts and biological extinctions on the Earth N86-26903

MINERALS
Proceedings of the Second Annual Heat Engines Contractors Meeting
[DE85-006595] N86-26705
Adsorption and condensation of amino acids and nucleotides with soluble mineral salts N86-26869

MINIATURE ELECTRONIC EQUIPMENT
Miniature metastable ionization detectors for exobiology flight experiments N86-26859

MINICOMPUTERS
CADS: A Computer Aided Design System. Volume 2. User's guide
[AD-A163258] N86-26935

MINIMUM ENTROPY METHOD
A minimum entropy principle in the gas dynamics equations N86-26556

MINIMUM VARIANCE ORBIT DETERMINATION
Study of Navsat control segment characteristics. Part 2: Orbit computation aspects — space station power supplies
[NLR-TR-84086-L-PT-2] N86-26362

MINKOWSKI SPACE
On the quantization of noncontact field theories in Minkowski space — turing machines
[NIKHEF-H/85-12] N86-27107

MISSILE COMPONENTS
Safety testing of missile and rocket systems employing manned launch stations
[AD-A165395] N86-26372

MISSILE SYSTEMS
Safety testing of missile and rocket systems employing manned launch stations
[AD-A165395] N86-26372

MISSILE TESTS
Safety testing of missile and rocket systems employing manned launch stations
[AD-A165395] N86-26372

MISSILES
Pressure systems energy release protection (gas pressurized systems)
[NASA-CR-176090] N86-26628

MISSION PLANNING
Automation and pilot interactions in night or all-weather tactical operations N86-26319
ENVIROSAT-2000 report: Federal agency satellite requirements
[NASA-TM-86752] N86-26355

MIXERS
Planar oscillatory stirring apparatus
[NASA-CASE-MFS-26002-1-CU] N86-26596

MIXING
Cars diagnostics of high pressure combustion. 2. Measurements of NO, H2O and high pressure flames
[AD-A164610] N86-26395
Evaluation of TWT (Traveling Wave Tube) cathode impregnant manufacturing procedures
[AD-A163360] N86-26526

MODELS
UHF DAMA (Demand-Assigned Multiple Access) simulation analysis
[AD-A165446] N86-26514
Optical and electrochemical study of model zinc electrode pores in alkaline electrolyte
[DE86-002967] N86-26521
Application of a computational model for vortex generators in subsonic internal flows
[NASA-TM-87327] N86-26545
Initiator duration effect on pulsed chain reaction chemical laser scaling laws
[AD-A163367] N86-26620
A microcomputer pollution model for civilian airports and Air Force bases
[AD-A163232] N86-26714
Genesis of major dust storms in West Africa during the summer of 1974
[AD-A165457] N86-26763
Biotechnica '85 International Congress for Biotechnology
[AD-A165415] N86-26794
Mental models and problem solving with a knowledge-based expert system
[AD-A165396] N86-26843
Effect of magnetostriction on remanent magnetization
[AD-A165450] N86-27041
Stability and properties of compositionally modulated films
[AD-A164574] N86-27094
The implementation of a entity-relationship interface for the multi-lingual database system
[AD-A164856] N86-27123
A personalized and prescriptive decision aid for choice from a database of options
[AD-A165396] N86-27129
Impacts of free-floating objects: Unique space station experiments N86-27162

MODULARITY
Orbit Transfer Rocket Engine Technology Program: Advanced engine study, task D.1/D.3
[NASA-CR-175064] N86-26369
Rectangular plate is proposed as an IES modal test structure
[DE85-018274] N86-26843

MODULATION
Numerical simulation of turbulent flames using vortex methods
[AD-A164060] N86-26390
Hydraulic power modulation laminar proportional amplifier development
[AD-A163390] N86-26579
Stability and properties of compositionally modulated films
[AD-A164574] N86-27094

MODULES
Space station science lab module N86-27147

MOISTURE
Environmental effects on the static and fatigue strength of graphite/epoxy structures
[AR-004-044] N86-26378
Evaluation of TWT (Traveling Wave Tube) cathode impregnant manufacturing procedures
[AD-A163360] N86-26526

MOISTURE CONTENT
Moisture model for the local AFOS MOS (Automation of Field Operations and Services Model Output Statistics) program
[PB86-151305] N86-26779

MOISTURE METERS
Moisture model for the local AFOS MOS (Automation of Field Operations and Services Model Output Statistics) program
[PB86-151305] N86-26779

MOLECULAR BIOLOGY
A comparative study of prebiotic and present day translational models N86-26877
European science notes. Volume 40, number 4
[AD-A165292] N86-27134

MOLECULAR CLOUDS
Boundary conditions for the paleoenvironment: Chemical and Physical Processes in dense interstellar clouds N86-26847
Interstellar isomers N86-26848

MOLECULAR FLOW
Studies of negative ion reactions: Solvated ions and strong acids
[AD-A165484] N86-26404

MOLECULAR INTERACTIONS
Theoretical N2-, 02- and air-broadened halfwidths of ozone calculated by quantum Fourier transform theory with realistic collision dynamics
[AD-A163276] N86-26391
Molecular microenvironments: Solvent interactions with nucleic acid bases and ions N86-26872
Intramolecular interactions in aminoacyl nucleotides: Implications regarding the origin of genetic coding and protein synthesis N86-26873
Stereoselective aminoacylation of RNA N86-26875
Protobiological informatoin, bidirectional recognition and reverse translation N86-26878
Calculations of the geometry and binding energy of aromatic dimers: Benzene, toluene, and toluene-benzene
[AD-A164570] N86-27058

Field theoretic investigations on particle physics and cosmology
[DE86-004516] N86-27106

MOLECULAR OSCILLATIONS
DF vibrational relaxation
[AD-A163421] N86-26392

MOLECULAR RELAXATION
DF vibrational relaxation
[AD-A163421] N86-26392

MOLECULAR SPECTRA
Determination of band oscillator strengths of atmospheric molecules from high resolution vacuum ultraviolet cross section measurements
[NASA-CR-177293] N86-26724

MOLECULAR STRUCTURE
Molecular jet study of vanderWaals complexes of flexible molecules: N-Propyl benzene solvated by small alkanes
[AD-A164600] N86-26394
Structural chemistry of energetic compounds
[AD-A164813] N86-26397
Carbon monoxide induced ordering of adsorbates on the Rh(111) crystal surface
[DE86-004104] N86-26405
Base pairing and base mis-pairing in nucleic acids N86-26881
Higher-order structure of rRNA N86-26888
The rRNA evolution and procaryotic phylogeny N86-26889
Calculations of the geometry and binding energy of aromatic dimers: Benzene, toluene, and toluene-benzene
[AD-A164570] N86-27058
FASTRUN: A high performance computing device for molecular mechanics using a pipeline architecture
[DE86-004355] N86-27061

MOLECULES
Stereoselective formation of a 2 prime (3 prime)-aminoacyl ester of a nucleotide
[NASA-CR-176830] N86-26373
Cooperation of catalysts and templates N86-26871
Molecular microenvironments: Solvent interactions with nucleic acid bases and ions N86-26872
Molecular replication N86-26874
Reaction dynamics of electronically excited alkali atoms with simpler molecules
[DE85-014538] N86-27060
Photoabsorption and photodissociation of molecules important in the interstellar medium
[NASA-CR-176828] N86-27171

MOLTEN SALTS
High temperature molten salt storage
[DE85-016874] N86-26706

MOMENTS
End-point corrected trapezoidal quadrature rules for singular functions
[AD-A163242] N86-27000
Gamma processes
[AD-A165390] N86-27038

MOMENTUM TRANSFER
Impacts of free-floating objects: Unique space station experiments N86-27162

MONITORS
Conceptual development of strain-gage signal interpretation system for jet engine applications
[AD-A165489] N86-26608
CADS: A Computer Aided Design System. Volume 2. User's guide
[AD-A163258] N86-26935

MONOMERS
Ethynyl-containing aromatic monomers
[AD-D012170] N86-26438
Acid-catalyzed degradation of Poly(2-Butyl-1,3,6-Trioxocane)
[AD-A165327] N86-26452
Further work on sodium montmorillonite as catalyst for the polymerization of activated amino acids N86-26868

MONOTONE FUNCTIONS
End-point corrected trapezoidal quadrature rules for singular functions
[AD-A163242] N86-27000

MONTE CARLO METHOD
A nonparametric statistical approach to the validation of computer simulation models
[AD-A163376] N86-26944
Properties of batch means from stationary ARMA (Autoregressive moving average) time series
[AD-A165187] N86-27033
Monte Carlo particle simulation and finite-element techniques for tandem mirror transport
[DE86-004238] N86-27079

MONTMORILLONITE
Further work on sodium montmorillonite as catalyst for the polymerization of activated amino acids N86-26868

MORPHOLOGY
Silicon purification using a Cu-Si alloy source N86-26697
Macrophage structure and function
[AD-A163314] N86-26793

MOSSBAUER EFFECT
The demonstration of the feasibility of the tuning and stimulation of nuclear radiation
[AD-A164530] N86-27105

MOTIVATION
The healthy motivation to fly: No psychiatric diagnosis
[AD-A164944] N86-26832

MOTORS
Calculations of burning surfaces of propellant grain with embedded metal wires and of internal ballistics of such motor
[AD-A163361] N86-26458
Linear resonance cooler
[AD-A165492] N86-26483

MOUNTAINS
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Indian Mountain AFS, Alaska
[AD-A165554] N86-26765

MOVING TARGET INDICATORS
Grating interferometric sensors
[AD-A165593] N86-26609

MTBF
Sequential testing and confidence intervals for the MTBF (meantime between failures) of systems having exponential distribution of the interfailure times
[AD-A165189] N86-26640

MULTIPLE ACCESS
UHF DAMA (Demand-Assigned Multiple Access) simulation analysis
[AD-A165446] N86-26514

MULTIPLEXING
Printer multiplexing among multiple Z-100 microcomputers
[AD-A165179] N86-26963

MULTIPROCESSING (COMPUTERS)
Software testing of multiprocessor systems
[AD-A165367] N86-26971

MULTISENSOR APPLICATIONS
Development of a testbed for multisensor distributed decision algorithms
[AD-A164487] N86-26601

MULTIVARIATE STATISTICAL ANALYSIS
Convexity of elliptically contoured distributions with applications
[AD-A163389] N86-27003
Computation of the stationary values of the product of two Raleigh quotients
[AD-A164586] N86-27005

MURCHISON METEORITE
Organic chemistry of Murchison meteorite: Carbon isotopic fractionation N86-26845
Electrical conductivity of carbonaceous chondrites and electric heating of meteorite parent bodies N86-27148

MUTAGENS
Maryland Water Resources Research Center, fiscal year 1984 program report
[PB86-133253] N86-26721

N

NAMING
Global renaming operators in concrete process algebra — turing machines
[CWI-CS-R8521] N86-27027

NAP-OF-THE-EARTH NAVIGATION
Automation and pilot interactions in night or all-weather tactical operations N86-26319
Applications of digital terrain data in flight operations N86-26324
A new technique for terrain following/terrain avoidance guidance command generation N86-26325
Use of a CO2 laser lidar for flight and penetration at very low altitudes N86-26326

NARROWBAND
Robust and nonparametric detection of fading narrowband signals
[AD-A164924] N86-26512

NASA PROGRAMS
Overview of the NASA SETI Program N86-26909
JPL's role in the SETI program N86-26913

NATURAL LANGUAGE (COMPUTERS)
CIRCE: A natural language rule translation system for intersensor
[AD-A163279] N86-26940
Implementation of a natural language processor using functional grammar
[AD-A165428] N86-26972

NAVIER-STOKES EQUATION
Numerical simulation of turbulent flames using vortex methods
[AD-A164060] N86-26390
Multiple laminar flows through curved pipes N86-26559
Pseudo-time algorithms for the Navier-Stokes equations N86-26564

NAVIGATION AIDS
Navigation equipment, Doppler
[AD-A163408] N86-26314
A comparison of voice and keyboard data entry for a helicopter navigation task
[AD-A163245] N86-26501

NAVIGATION SATELLITES
Study of Navsat control segment characteristics. Part 1: Elements of a control segment concept — space station power supplies
[NLR-TR-84086-L-PT-1] N86-26361
Study of Navsat control segment characteristics. Part 2: Orbit computation aspects — space station power supplies
[NLR-TR-84086-L-PT-2] N86-26362
Study of Navsat control segment characteristics. Part 3: Executive summary — space station power supplies
[NLR-TR-84086-L-PT-3] N86-26363

NEAR FIELDS
Colossus revisited: A review and extension of the Marsh-Schulkin shallow water transmission loss model (1962)
[AD-A164588] N86-27046

NEBULAE
Sediment-transport (wind) experiments in zero-gravity N86-27136

NEGATIVE IONS
Studies of negative ion reactions: Solvated ions and strong acids
[AD-A165484] N86-26404

NETWORK ANALYSIS
Integrated risk/cost planning models for the US Air Traffic system
[NASA-CR-177274] N86-26312

NETWORK CONTROL
Waiting-time approximations for cyclic-service systems with switchover times — local area networks
[CWI-OS-R8510] N86-27021
A double integral containing the modified Bessel function: Asymptotics and a device for computation — local area networks
[CWI-AM-R8507] N86-27022

NEURONS
Mechanism of electromagnetic energy effects on the nervous system: Voltage-clamp study
[AD-A164653] N86-26798

NEUTRAL ATMOSPHERES
Rocket techniques used to measure the neutral atmosphere N86-26726
Rocket techniques for measurement of ozone and related neutral minor constituents N86-26727
Detectors for measuring energetic charged particles in rockets N86-26729

NEUTRON DISTRIBUTION
Survey of atmospheric radiation components for the Gamma and Cosmic Ray Astrophysics Branch of the Space Science Division of the Naval Research Laboratory
[AD-A165538] N86-27177

NEUTRON SCATTERING
Dynamic orientation studies of polymers
[AD-A164611] N86-26440

NICKEL
Hydrogen embrittlement of nickel: Modeling of the effect of diffusive segregation of hydrogen on intergranular fracture
[AD-A163415] N86-26416
Investigations of ultrasonic wave interactions at boundaries separating anisotropic materials
[DE86-004953] N86-27050

NICKEL ALLOYS
Heat treatment for superalloy
[NASA-CASE-LEW-14262-1] N86-26414
Crack propagation in powder metallurgy hot isostatically pressed nickel-based alloy
[AD-A164587] N86-26418

NICKEL HYDROGEN BATTERIES
Nickel-hydrogen separator development
[NASA-TM-87332] N86-26677

NIGHT FLIGHTS (AIRCRAFT)
Guidance-Control-Navigation Automation for Night All-Weather Tactical Operations
[AGARD-CP-387] N86-26316
A cost-effective night attack system for ground attack aircraft N86-26317
Automation and pilot interactions in night or all-weather tactical operations N86-26319
The wide field helmet mounted display N86-26322
Operational experiences with night vision goggles in helicopter low-level flight at night N86-26806
Night vision support devices: Human engineering integration N86-26808
Night vision by NVG with FLIR N86-26811

NIGHT VISION
FLIR, NVG and HMS/D systems for helicopter operation: Review N86-26904
Operational experiences with night vision goggles in helicopter low-level flight at night N86-26905
Visual and spectroradiometric performance criteria for Night Vision Goggles (NVG) compatible aircraft interior lighting N86-26907
Night vision support devices: Human engineering integration N86-26908
Micro-heads-up display for enhancement of night vision goggle operations N86-26909
Aeromedical lessons learned with night vision devices N86-26910
Night vision by NVG with FLIR N86-26911
Effects of broad-banded eye protection on dark adaptation N86-26917
NIOBIUM ALLOYS
Development of high field superconductors for fusion energy applications
[DE86-004834] N86-27103
NITRAMINE PROPELLANTS
Crack propagation and branching in burning solid propellants and ignition of nitramine-based composite propellants
[AD-A164630] N86-26461
NITRATES
Maryland Water Resources Research Center, fiscal year 1984 program report
[PB86-133253] N86-26721
NITRIC OXIDE
Selective catalytic removal of NO from stationary sources — flue gases
[S/T-REPT-VOL-3-NO-6] N86-26719
NITROAMINES
Smokeless propellants of improved performance N86-26459
NITROGEN
Theoretical N2-, O2- and air-broadened halfwidths of ozone calculated by quantum Fourier transform theory with realistic collision dynamics
[AD-A163276] N86-26391
Earth's early atmosphere as seen from carbon and nitrogen isotopic analysis of Archean sediments N86-26683
NITROGEN COMPOUNDS
Structural chemistry of energetic compounds
[AD-A164813] N86-26397
NITROGEN OXIDES
Cars diagnostics of high pressure combustion. 2. Measurements of NO, H2O and high pressure flames
[AD-A164610] N86-26395
NITROGEN POLYMERS
Structure/property studies of a heterocyclic conductive polymer
[AD-A164959] N86-26447
Research in energetic compounds
[AD-A164901] N86-26462
NITROUS OXIDES
Environmental assessment of NOx control on a compression ignition large bore reciprocating internal combustion engine. Volume 1: Technical results
[PB86-155819] N86-26637
NOBLE METALS
Application of conductive polymer technology to the production of a novel multilayer capacitor
[AD-A165212] N86-26450
NOISE (SOUND)
A study of sea ice kinematics and their relationship to arctic ambient noise. Part 3, Section 1: Ambient noise. Section 2: Ambient noise
[AD-A165304] N86-26788
A study of sea ice kinematics and their relationship to arctic ambient noise. Part 3, section 3: Ambient noise
[AD-A165305] N86-26789
Error properties of Hartley transform algorithms
[AD-A163217] N86-26934
NOISE GENERATORS
Active control of boundary layer transition and turbulence
[NASA-CASE-LAR-13532-1] N86-26575
NOISE INTENSITY
Model studies of surface noise interference in ground-probing radar
[AD-A163208] N86-26500
NOISE MEASUREMENT
Gravity gradiometer survey errors
[AD-A165575] N86-26749
Infrasonic ambient ocean noise spectra from freely drifting sensors
[AD-A163413] N86-26785
NOISE PREDICTION
Error properties of Hartley transform algorithms
[AD-A163217] N86-26934
NOISE REDUCTION
A unifying approach to linear and nonlinear array processing: A tutorial
[AD-A164777] N86-27012
NOISE SPECTRA
Infrasonic ambient ocean noise spectra from freely drifting sensors
[AD-A163413] N86-26785
NONDESTRUCTIVE TESTS
Comparative study of nondestructive pavement testing, WES (Waterways Experiment Station) NDT (nondestructive tests) methodologies
[AD-A163379] N86-26480
Marching difference schemes for ill posed initial value problems
[AD-A164012] N86-26897
NONFLAMMABLE MATERIALS
Organofunctional phosphazenes and organofunctional phosphazene polymers
[AD-A165437] N86-26453
NONLINEAR EQUATIONS
Regularity for a singular conservation law
[AD-A163620] N86-26576
Recent research in nonlinear analysis of beams N86-26646
NONLINEAR FILTERS
A unifying approach to linear and nonlinear array processing: A tutorial
[AD-A164777] N86-27012
NONLINEAR SYSTEMS
Probabilistic analysis of nonlinear structures subjected to transient loads. Part 1
[AD-A163235] N86-26655
Control, state estimation and parameter identification of nonlinear distributed parameter systems using fixed point techniques: A survey
[INPE-3856-PRE/919] N86-26991
Gamma processes
[AD-A165390] N86-27038
Classical derivation of nonlinear susceptibilities for the 32 crystal classes in the harmonic oscillator approximation
[AD-A164536] N86-27092
NONLINEARITY
The effect of low velocity impact on the strength characteristics of composite materials laminates
[NASA-CR-178846] N86-26379
The solution of nonlinear time-dependent problems using modal coordinates
[AD-A163535] N86-26994
NONPARAMETRIC STATISTICS
Aircraft nuclear survivability methods
[AD-A163218] N86-26332
A nonparametric statistical approach to the validation of computer simulation models
[AD-A163378] N86-26944
A Bahadur representation for quantiles of empirical DFs generalized U-statistic structure
[AD-A163311] N86-27029
Generalized order statistics, Bahadur representations and sequential nonparametric fixed-width confidence intervals
[AD-A163329] N86-27031
NONRELATIVISTIC MECHANICS
Dynamics of non-relativistic equatorial electrons and protons inside the plasmasphere
[INPE-3833-PRE/905] N86-26737
NONUNIFORM FLOW
The effects on rotor nonuniform inflow harmonic content of uneven circumferential distribution of jet engine inlet guide vanes
[AD-A164829] N86-26291
NONUNIFORMITY
Non-uniform currents on a wedge illuminated by a TE (Transverse Electric) plane wave
[AD-A163323] N86-26524
NORMALITY
Asymptotic normality of U-statistics based on trimmed samples
[AD-A163346] N86-27032
NOTCHES
Self aligned notch for InP planar transferred electron oscillator
[AD-D012186] N86-26540
NOZZLE DESIGN
Theoretical study on the effect of the design of small (milli-Newton) thruster jets on molecular contamination for the space station
[NASA-CR-177263] N86-26358
NOZZLE FLOW
Theoretical study on the effect of the design of small (milli-Newton) thruster jets on molecular contamination for the space station
[NASA-CR-177263] N86-26358
Hydraulic power modulation laminar proportional amplifier development
[AD-A163390] N86-26579
NOZZLE GEOMETRY
Multiple steady states for characteristic initial value problems N86-26555
A spectral multidomain method for the solution of hyperbolic systems N86-26557
NUCLEAR BINDING ENERGY
Molecular jet study of solvation of pyrazine by small hydrocarbons
[AD-A164583] N86-26528
Molecular jet study of vanderWaals complexes of flexible molecules: N-Propyl benzene solvated by small alkanes
[AD-A164600] N86-26594
NUCLEAR EXPLOSION EFFECT
Aircraft nuclear survivability methods
[AD-A163218] N86-26332
NUCLEAR EXPLOSIONS
Attenuation of seismic waves at regional distances
[AD-A164617] N86-26746
Changes in the ocean mixed layer following extraordinary atmospheric forcing
[AD-A164703] N86-26786
NUCLEAR FUELS
Design concepts and advanced manipulator development for nuclear fuel cycle facilities
[DE85-01771] N86-26636
Melting nuclear fuel — flue gases
[S/T-REPT-VOL-3-NO-7] N86-27066
NUCLEAR MAGNETIC RESONANCE
IST/IDA (Innovative Science and Technology/Institute for Defense Analyses) Gamma-Ray Laser Workshop, 21-22 May 1985
[AD-A164890] N86-26622
NUCLEAR PHYSICS
The demonstration of the feasibility of the tuning and stimulation of nuclear radiation
[AD-A164530] N86-27105
NUCLEAR RADIATION
The demonstration of the feasibility of the tuning and stimulation of nuclear radiation
[AD-A164530] N86-27105
NUCLEAR REACTIONS
Studies of negative ion reactions: Solvated ions and strong acids
[AD-A165484] N86-26404
NUCLEATION
Molecular jet study of solvation of pyrazine by small hydrocarbons
[AD-A164583] N86-26393
Surface film effects on drop tube undercooling studies
[NASA-TM-86647] N86-26410
Silicon production in an aerosol reactor N86-26688
Particle formation and interaction N86-27139
Nucleation experiments in a microgravity environment N86-27156
NUCLEIC ACIDS
Synthesis and analysis in studies of chemical evolution N86-26864
Molecular microenvironments: Solvent interactions with nucleic acid bases and ions N86-26872
A comparative study of prebiotic and present day translational models N86-26877
NUCLEONS
Theory of photo- and electroproduction of mesons: problems and prospects
[DE86-004094] N86-27052
NUCLEOTIDES
Stereoselective formation of a 2 prime (3 prime)-aminoacyl ester of a nucleotide
[NASA-CR-176830] N86-26373
Synthesis and analysis in studies of chemical evolution N86-26864
Further work on sodium montmorillonite as catalyst for the polymerization of activated amino acids N86-26868
Adsorption and condensation of amino acids and nucleotides with soluble mineral salts N86-26869
Cooperation of catalysts and templates N86-26871
Intramolecular interactions in aminoacyl nucleotides: Implications regarding the origin of genetic coding and protein synthesis N86-26873
Molecular replication N86-26874
Protobiological information, bidirectional recognition and reverse translation N86-26878
NUMERICAL ANALYSIS
A lumped parameter code for regenerative liquid propellant guns
[AD-A164960] N86-26463
A computer code for three-dimensional incompressible flows using nonorthogonal body-fitted coordinate systems
[NASA-CR-178818] N86-26544
Advances in numerical and applied mathematics
[NASA-CR-178076] N86-26552

Calculations of the stability of some axisymmetric flows proposed as a model of vortex breakdown N86-26560
Conditions for the construction of multi-point total variation diminishing difference schemes N86-26565
The weak element method applied to Helmholtz type equations N86-26570
On the advantages of the vorticity-velocity formulation of the equations of fluid dynamics N86-26573
A study of the optimization problem for calibrating a Lacoste and Romberg G gravity meter to determine circular errors
[AD-A166218] N86-26607
Application of LANDSAT TM images to assess circulation and dispersion in coastal lagoons
[NASA-CR-177316] N86-26665
Generation of available potential energy and the energy cycle during the global weather experiment
[NASA-CR-177872] N86-26756
Marching difference schemes for ill posed initial value problems
[AD-A164012] N86-26997
End-point corrected trapezoidal quadrature rules for singular functions
[AD-A163242] N86-27000
An exact test for the nesting effect's variance component in an unbalanced random two-fold nested model
[AD-A164807] N86-27006
Colossus revisited: A review and extension of the Marsh-Schulkin shallow water transmission loss model (1962)
[AD-A164586] N86-27046

NUMERICAL CONTROL
Piezometer data base package user's guide
[AD-A163264] N86-27119

NUMERICAL INTEGRATION
A recursive boundary element with initial error investigation
[AD-A163563] N86-26995
End-point corrected trapezoidal quadrature rules for singular functions
[AD-A163242] N86-27000

NUMERICAL WEATHER FORECASTING
Generation of available potential energy and the energy cycle during the global weather experiment
[NASA-CR-177872] N86-26756

NUTRITION
Biochemical transformations in two plant/soil systems exposed to simulated acidic precipitation
[DE86-004040] N86-26713

NYLON (TRADEMARK)
Field induced dipole reorientation and piezoelectricity in heavily plasticized nylon 11 films
[AD-A164683] N86-27095

O

O RING SEALS
Mechanical face seal dynamics
[AD-A164978] N86-26833

OBLIQUE WINGS
Decoupling control synthesis for an oblique-wing aircraft
[NASA-TM-86801] N86-26339
Aeroelastic control of oblique-wing aircraft
[NASA-TM-86808] N86-26340

OCEAN BOTTOM
Objective analysis of tidal fields in the Atlantic and Indian Oceans
[NASA-TM-87773] N86-26782
Experiments on sound propagation over sloped bottoms
[AD-A163431] N86-27044
A synopsis of research on subbottom effects on underwater acoustic propagation
[AD-A165420] N86-27048
Acoustic normal modes using the propagator matrix technique for a stratified ocean overlaying an inhomogeneous anisotropic porous bed
[AD-A165436] N86-27049

OCEAN CURRENTS
Directory of research publications
[AD-A164875] N86-27125

OCEAN DYNAMICS
Remote sensing and oceanographic equipment technology: Some present systems and future needs, revised
[PB86-156502] N86-26791

OCEAN MODELS
Changes in the ocean mixed layer following extraordinary atmospheric forcing
[AD-A164703] N86-26786
Data tabulations and analysis of diurnal sea surface temperature variability observed at LOTUS (long-term upper ocean study)
[AD-A165406] N86-26790

OCEAN SURFACE
Data tabulations and analysis of diurnal sea surface temperature variability observed at LOTUS (long-term upper ocean study)
[AD-A165406] N86-26790
The role of the oceans in the atmospheric cycle of carbonyl sulfide N86-26796
Colossus revisited: A review and extension of the Marsh-Schulkin shallow water transmission loss model (1962)
[AD-A164586] N86-27046

OCEAN THERMAL ENERGY CONVERSION
Solar energy computer models directory
[DE85-006791] N86-26706

OCEANOGRAPHIC PARAMETERS
Infrasonic ambient ocean noise spectra from freely drifting sensors
[AD-A163413] N86-26785

OCEANOGRAPHY
Summer study program in geophysical fluid dynamics, Woods Hole Oceanographic Institution: Chaos
[AD-A164601] N86-26580
A summary of the Naval Postgraduate School research program
[AD-A164845] N86-27131

OCEANS
Navstar GPS (Global Positioning System) accuracy while surveying arrays of deep ocean transponders
[AD-A163364] N86-26313
Objective analysis of tidal fields in the Atlantic and Indian Oceans
[NASA-TM-87773] N86-26782
Tidal and lunar data for Point Mugu, San Nicholas Island, and the Barking Sands Area during 1986
[AD-A163249] N86-26784
The role of the oceans in the atmospheric cycle of carbonyl sulfide N86-26796
Energy yields in the prebiotic synthesis of hydrogen cyanide and formaldehyde N86-26863
A synopsis of research on subbottom effects on underwater acoustic propagation
[AD-A165420] N86-27048
Directory of research publications
[AD-A164875] N86-27125

OFFSHORE PLATFORMS
Analysis of high Reynolds number wind tunnel tests of the semiper — semisubmersible platform
[NLR-MP-85014-U] N86-26294

OHMIC DISSIPATION
Application of conductive polymer technology to the production of a novel multilayer capacitor
[AD-A165212] N86-26450

OIL SLICKS
A review of methods to track oil in arctic waters
[AD-A164879] N86-26716

OILS
Flammability of aircraft hydraulic fluids: A bibliography
[AD-A165463] N86-26299
Investigation into alternative fuel rating techniques
[DE86-004277] N86-26467
A study of the fluid-dynamic pressure fields on compressor reed valves
[AD-A164102] N86-26578
Free gyroscope experiments of two immiscible liquids in a partially filled cylinder
[AD-A164937] N86-26585

ON-LINE SYSTEMS
Modern hardware technologies and software techniques for on-line database storage and access
[AD-A164993] N86-26924

ONBOARD DATA PROCESSING
Attitude estimation and control of maneuvering spacecraft — graph theory
[NLR-MP-84036-U] N86-26366
The IRAS revisited (lessons learned from IRAS operations) — satellite tracking
[FOK-TR-85-63] N86-27170

OPERATING COSTS
Defense Communications Agency cost and planning factors manual, change 2
[AD-A163319] N86-26505
Ada (Trademark) primer
[AD-A165345] N86-26964

OPERATING SYSTEMS (COMPUTERS)
Extending data typing beyond the bounds of programming languages — computer systems programs
[RSRE-MEMO-3676] N86-26931

OPERATIONS RESEARCH
A summary of the Naval Postgraduate School research program
[AD-A164845] N86-27131
Exploiting capability constraints to solve global, two dimensional path planning problems
[AD-A164973] N86-27132

OPERATOR PERFORMANCE
Foveal flashes and human performance N86-26822
Driving performance the day after use of loprazolam, flunitrazepam and placebo
[VK-83-04] N86-26825
The effects of the antidepressants oxaprotiline, mianserin, amitriptyline and doxepin upon actual driving performance
[VK-83-05] N86-26827
Flunitrazepam HCL's residual (hangover) effects upon actual driving performance
[VK-83-02] N86-26834

OPERATORS (MATHEMATICS)
Regularity estimates up to the boundary for elliptic systems of difference equations
[NASA-CR-178107] N86-26989
Ready trace semantics for concrete process algebra with priority operator — biological model
[CWI-CS-R8517] N86-27026
Global renaming operators in concrete process algebra — turing machines
[CWI-CS-R8521] N86-27027

OPERATORS (PERSONNEL)
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 1
[AD-A164430] N86-26491
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 1. High energy pulse-device failure test. 50 ohms impedance 25,000 volts-4000 amps, 100 joules
[AD-A164432] N86-26493

OPHTHALMOLOGY
Particular problems of airworthiness from an ophthalmological view N86-26912

OPTICAL COMMUNICATION
A review of maximum entropy spectral analysis and applications to Fourier Spectroscopy
[AD-A164699] N86-27011

OPTICAL COUNTERMEASURES
Aerospace knowledge magazine (selected articles)
[AD-A164720] N86-26278

OPTICAL DATA STORAGE MATERIALS
Modern hardware technologies and software techniques for on-line database storage and access
[AD-A164993] N86-26924

OPTICAL EQUIPMENT
In-process control of machining. Phase 1: Milling
[AD-A165391] N86-26482
Vorticity optical probe
[AD-A164819] N86-26561

OPTICAL MEASUREMENT
Measure of displacement around holes in composite plates subjected to quasi-static compression
[NASA-CR-3999] N86-26377

OPTICAL MEASURING INSTRUMENTS
FLIR, NVG and HMS/D systems for helicopter operation: Review N86-26804

OPTICAL PROPERTIES
Relative - humidity parameterization of the Navy Aerosol Model (NAM)
[AD-A163209] N86-26759
Classical derivation of nonlinear susceptibilities for the 32 crystal classes in the harmonic oscillator approximation
[AD-A164536] N86-27092

OPTICAL PUMPING
Reaction dynamics of electronically excited alkali atoms with simpler molecules
[DE85-014536] N86-27060

OPTICAL RADAR
Use of a CO2 laser lidar for flight and penetration at very low altitudes N86-26326
Alexandrite lasers: State of technology and applications
[DE86-003966] N86-26611
Techniques for the automated observation of clouds
[AD-A165573] N86-26775
Cloud base heights from lidar, rotating beam ceilometer and pilot reports compared by experiment and theory
[PB86-159894] N86-26778
Assessment of the possible use of the KE 1 Thomson scattering collection optics for an additional lidar system — plasma diagnostics
[IPF-85-1] N86-27065

OPTIMAL CONTROL
Calculations of burning surfaces of propellant grain with embedded metal wires and of internal ballistics of such motor
[AD-A163361] N86-26458
Computational methods for the control of distributed parameter systems
[NASA-CR-178108] N86-26915

OPTIMIZATION
Investigation and development of advanced surface microanalysis techniques and methods
[AD-A163616] N86-26389
Data analysis for multidimensional luminescence
[AD-A164666] N86-26396
CFT compiler optimization and Cray X-MP vector performance
[DE86-004746] N86-26917
Exploiting capability constraints to solve global, two dimensional path planning problems
[AD-A164973] N86-27132
ORBIT DECAY
Analysis of orbital satellite storage
[AD-A164971] N86-26360
ORBIT TRANSFER VEHICLES
Orbit Transfer Rocket Engine Technology Program: Advanced engine study, task D.1/D.3
[NASA-CR-175084] N86-26369
Kinematics, composition and thermodynamics of the mesopause, turbopause, region of the atmosphere (between 80 and 120 km) related to the Aeroassisted Orbit Transfer Vehicle (AOTV) operations
[NASA-TM-86545] N86-26735
A lateral guidance algorithm to reduce the post-aerobraking burn requirements for a lift-modulated orbital transfer vehicle
[NASA-CR-177295] N86-26932
ORBITAL MANEUVERS
An adaptive guidance algorithm for an aerodynamically assisted orbital plane change maneuver
[NASA-CR-177296] N86-26933
ORBITAL MECHANICS
An adaptive guidance algorithm for an aerodynamically assisted orbital plane change maneuver
[NASA-CR-177296] N86-26933
The orbit properties of colliding co-orbiting bodies
N86-27149
ORBITAL POSITION ESTIMATION
Attitude estimation and control of maneuvering spacecraft — graph theory
[NLR-MP-84039-U] N86-26366
ORBITAL SPACE STATIONS
Theoretical study on the effect of the design of small (milli-Newton) thruster jets on molecular contamination for the space station
[NASA-CR-177263] N86-26358
Growth capabilities of European retractable solar arrays — space station power supplies
[ESA-CR(P)-2141] N86-26711
Space Station Planetology Experiments (SSPEX)
[NASA-CP-2424] N86-27136
Space station impact experiments N86-27137
Sediment-transport (wind) experiments in zero-gravity
N86-27138
Particle formation and interaction N86-27139
Report on opportunities and/or techniques for high-caliber experimental research (other) proposals for SSPEX N86-27140
A planetary ultra hypervelocity impact mechanics and shock wave science facility N86-27141
Proposed Earth based cratering experiments at low G in hard vacuum N86-27142
Low-gravity impact experiments: Progress toward a facility definition N86-27145
Cosmic dust collection with a sub-satellite tethered to a space station N86-27146
Space station science lab module N86-27147
Electrical conductivity of carbonaceous chondrites and electric heating of meteorite parent bodies N86-27148
The orbit properties of colliding co-orbiting bodies
N86-27149
Small linear wind tunnel saltation experiments: Some experiences N86-27150
Impact experimentation and the microgravity environment: An overview N86-27151
Exobiology experiment concepts for space station
N86-27152
Sediment-transport experiments in zero-gravity
N86-27153
Design and calibration of the carousel wind tunnel
N86-27154
A magnetospheric simulation at the space station
N86-27155
Electrostatic aggregation of finely-comminuted geological materials N86-27156
Low gravity facilities for space station planetology experiments N86-27160
Debris-cloud collisions: Accretion studies in the space station N86-27161
Impacts of free-floating objects: Unique space station experiments N86-27162
Grain dynamics in zero gravity N86-27164
Aeolian processes aboard a space station: Saltation and particle trajectory analysis N86-27165
A system for conducting igneous petrology experiments under controlled redox conditions in reduced gravity
N86-27166
New techniques for the detection and capture of micrometeoroids N86-27167
Mapping experiment with space station N86-27168
ORGANIC CHEMISTRY
Organic chemistry of Murchison meteorite: Carbon isotopic fractionation N86-26845
The organic aerosols of Titan N86-26852
Experimental basis for a Titan probe organic analysis
N86-26855
ORGANIC COMPOUNDS
Structural chemistry of energetic compounds
[AD-A164813] N86-26397
Structure and properties of polymers and organosilanes adsorbed onto oxidized aluminum and titanium
[AD-A165210] N86-26449
LC-(1)H NMR characterization studies of bicyclic aromatics and olefins in diesel fuels
[AD-A165402] N86-26464
ORGANIC MATERIALS
Corrosion control through a better understanding of the metallic substrate/organic coating/interface
[AD-A164734] N86-26419
Design and production of damage-resistant tray pack containers
[AD-A164595] N86-26837
Isotopic characterization of prebiotic synthesis of organic material N86-26865
Origin of life and iron-rich clays N86-26866
Ion transport across synthetic and biological membranes: Ionophore-mediated transport
[AD-A163269] N86-27057
ORGANIZATIONS
Calendar of selected aeronautical and space meetings December 1985
[AD-A164535] N86-27112
ORGANOMETALLIC COMPOUNDS
Hillock formation on (100) GaAs
[AD-A163308] N86-27090
ORGANOMETALLIC POLYMERS
Synthesis and properties of novel electroactive organometallic polymers
[DE86-004951] N86-26455
ORIFICES
In-process control of machining. Phase 1: Milling
[AD-A165391] N86-26482
OSCILLATIONS
Analysis of helical waveguide
[AD-A163252] N86-26522
Some results on uniformly high order accurate essentially non-oscillatory schemes N86-26566
OSCILLATOR STRENGTHS
Determination of band oscillator strengths of atmospheric molecules from high resolution vacuum ultraviolet cross section measurements
[NASA-CR-177293] N86-26724
OSCILLATORS
Three-dimensional numerical simulations of FELs by transverse mode spectral method
[AD-A163297] N86-26503
Self aligned notch for InP planar transferred electron oscillator
[AD-D012185] N86-26540
OSMOSIS
Evolutionary significance of osmoregulatory mechanisms in cyanobacteria N86-26896
OUTLIERS (STATISTICS)
Asymptotic normality of U-statistics based on trimmed samples
[AD-A163348] N86-27032
OUTPUT
Error properties of Hartley transform algorithms
[AD-A163217] N86-26934
CADS: A Computer Aided Design System. Volume 2. User's guide
[AD-A163258] N86-26935
Top-down parsing syntax error recovery
[AD-A164859] N86-26949
OXALIC ACID
Origin of life and iron-rich clays N86-26866
OXIDATION
Oxidation and emittance of superalloys in heat shield applications
[NASA-TP-2578] N86-26412
Oxidation protecting coatings for polymers
[NASA-CASE-LEW-14072-3] N86-26434
Structure and properties of polymers and organosilanes adsorbed onto oxidized aluminum and titanium
[AD-A165210] N86-26449
Low-cycle thermal fatigue
[NASA-TM-87225] N86-26851
Evolution of thiol protective systems in prokaryotes
N86-26896
Experimental determination of the electronic structure of small metal particles
[AD-A163406] N86-27091
Microscopic control of semiconductor interface reactivity
[AD-A164560] N86-27093
Theory of the reaction surface with freezing Lewis Number not equal to 1 and its application in the oxidation-sublimation coupling process
[AD-A163213] N86-27104
OXIDATION-REDUCTION REACTIONS
In situ monitoring of electrochemical reactions by surface enhanced Raman scattering
[PB86-157500] N86-26407
Selective catalytic removal of NO from stationary sources — flue gases
[S/T-REPT-VOL-3-NO-6] N86-26719
Paleosols and the chemical evolution of the atmosphere N86-26870
Thioredoxins in evolutionarily primitive organisms
N86-26893
A system for conducting igneous petrology experiments under controlled redox conditions in reduced gravity
N86-27166
OXIDE FILMS
Oxidation and emittance of superalloys in heat shield applications
[NASA-TP-2578] N86-26412
Oxidation protecting coatings for polymers
[NASA-CASE-LEW-14072-3] N86-26434
OXIDES
Hillock formation on (100) GaAs
[AD-A163308] N86-27090
OXYGEN
Theoretical N2-, O2- and air-broadened halfwidths of ozone calculated by quantum Fourier transform theory with realistic collision dynamics
[AD-A163276] N86-26391
Determination of band oscillator strengths of atmospheric molecules from high resolution vacuum ultraviolet cross section measurements
[NASA-CR-177293] N86-26724
Oxygen and the evolution of metabolic pathways
N86-26895
Reaction dynamics of electronically excited alkali atoms with simpler molecules
[DE86-014538] N86-27060
OXYGEN ATOMS
Variable energy, high flux, ground-state atomic oxygen source
[NASA-CASE-NPO-16640-1-CU] N86-27055
OXYGEN CONSUMPTION
Perceptual and physiological responses during exercise in cool and cold water
[AD-A165491] N86-26800
OXYGEN SPECTRA
Determination of band oscillator strengths of atmospheric molecules from high resolution vacuum ultraviolet cross section measurements
[NASA-CR-177293] N86-26724
OZONE
Measurements of HO2 chemical kinetics with a new detection method
[NASA-CR-176826] N86-26388
Theoretical N2-, O2- and air-broadened halfwidths of ozone calculated by quantum Fourier transform theory with realistic collision dynamics
[AD-A163276] N86-26391
Rocket techniques for measurement of ozone and related neutral minor constituents N86-26727

P

PACKAGING
Design and production of damage-resistant tray pack containers
[AD-A164595] N86-26837
Fiber optic cable storage device
[AD-D012166] N86-27068
PACKET TRANSMISSION
Analysis of a multiaccess control scheme
[AD-A165498] N86-26986
PACKETS (COMMUNICATION)
A schedule-based approach for flow-control in data communication networks
[AD-A163253] N86-26502
PAINTS
Slow strain rate testing of high strength low-alloy steels: A technique for assessing the degree of hydrogen embrittlement produced by plating processes, paint strippers and other aircraft maintenance chemicals
[AR-004-060] N86-26411
Paint removal process
[AD-D012167] N86-26436

The effects of steel profile and cleanliness on coating performance
[AD-A164788] N86-26443
Development of a portable test kit for field-screening paints
[AD-A164999] N86-26448

PALEOBIOLOGY
Boundary conditions for the paleoenvironment: Chemical and Physical Processes in dense interstellar clouds N86-26847
Isotopic, petrologic and biogeochemical investigations of banded iron-formations N86-26885
Recent progress in Precambrian paleobiology N86-26887

PALEONTOLOGY
Use of laboratory simulated pyrolysis in tracing the history of sedimentary organic matter N86-26884
The lunar nodal tide and the distance to the Moon during the Precambrian era N86-26886
The fossil record of evolution: Analysis of extinction N86-26901

PANELS
The postbuckling behavior of blade-stiffened carbon epoxy panels loaded in compression — semisubmersible platform
[NLR-MP-85019-U] N86-26861

PARALLEL PROCESSING (COMPUTERS)
Increasing processor utilization during parallel computation rundown
[NASA-TM-87349] N86-26914
The feasibility of automatic storage reclamation with concurrent program execution in a LISP environment
[AD-A165184] N86-26925
Operational semantics of a parallel object-oriented language — mathematical model
[CWI-CS-R8515] N86-26977
Research in distributed and parallel systems
[AD-A165486] N86-26984

PARALLEL PROGRAMMING
Semi-applicative programming. Examples of context free recognizers
[AD-A164897] N86-26951

PARAMAGNETISM
Features of spherical torus plasmas
[DE86-004642] N86-27060

PARAMETER IDENTIFICATION
Control, state estimation and parameter identification of nonlinear distributed parameter systems using fixed point techniques: A survey
[INPE-3855-PRE/919] N86-26991

PARAMETERIZATION
The local redistribution of points along curves for numerical grid generation N86-26571
Relative - humidity parameterization of the Navy Aerosol Model (NAM)
[AD-A163209] N86-26759

PARSING ALGORITHMS
CIRCE: A natural language rule translation system for intersensor
[AD-A163279] N86-26940
Top-down parsing syntax error recovery
[AD-A164859] N86-26949
Semi-applicative programming. Examples of context free recognizers
[AD-A164897] N86-26951

PARTIAL DIFFERENTIAL EQUATIONS
On substructuring algorithms and solution techniques for the numerical approximation of partial differential equations N86-26558
Some results on uniformly high order accurate essentially non-oscillatory schemes N86-26566
Regularity for a singular conservation law
[AD-A163620] N86-26576
Transient analysis of a bunched beam free electron laser
[DE86-003372] N86-26614
Computational methods for the control of distributed parameter systems
[NASA-CR-178108] N86-26915
Regularity estimates up to the boundary for elliptic systems of difference equations
[NASA-CR-178107] N86-26989
A spectral multidomain method for the solution of hyperbolic systems
[NASA-CR-178105] N86-26990

PARTIAL PRESSURE
The effects of arsine pressure on the compositions, carrier concentrations, mobilities and growth rates of epitaxial layers of Ga(x)In(1-x)As prepared by the VPE (Vapor-Phase Epitaxy)-hydride technique
[AD-A165278] N86-27097

PARTICLE ACCELERATORS
Wakefield accelerators for SDI
[DE86-003673] N86-27062
Particle dynamics for motion in a non-planar accelerator
[DE86-005303] N86-27065

PARTICLE COLLISIONS
Particle formation and interaction N86-27139

PARTICLE EMISSION
Particle and wave dynamics during plasma injections
[AD-A163210] N86-26742

PARTICLE INTERACTIONS
Studies of negative ion reactions: Solvated ions and strong acids
[AD-A165484] N86-26404
Theoretical elementary particle studies
[DE86-001165] N86-27054

PARTICLE MOTION
Particle dynamics for motion in a non-planar accelerator
[DE86-005303] N86-27065

PARTICLE PRODUCTION
Theoretical elementary particle studies
[DE86-001165] N86-27054

PARTICLE SIZE DISTRIBUTION
Experimental techniques for obtaining particle behavior in solid propellant combustion N86-26477
Relative - humidity parameterization of the Navy Aerosol Model (NAM)
[AD-A163209] N86-26759
Experimental determination of the electronic structure of small metal particles
[AD-A163406] N86-27091

PARTICLE TRAJECTORIES
Dynamics of non-relativistic equatorial electrons and protons inside the plasmasphere
[INPE-3833-PRE/905] N86-26737
The response function of modulated grid Faraday cup plasma instruments
[NASA-CR-177312] N86-27076

PARTICLES
Numerical modeling of a solid particle solar central receiver
[DE86-005066] N86-26709
Quasi-particle spectrum of the Hubbard model
[INPE-3869-PRE/927] N86-27053
Space Station Planetology Experiments (SSPEX)
[NASA-CP-2424] N86-27136
The orbit properties of colliding co-orbiting bodies N86-27149
Electrostatic aggregation of finely-comminuted geological materials N86-27156
Aeolian processes aboard a space station: Saltation and particle trajectory analysis N86-27165

PARTICULATE SAMPLING
Experimental techniques for obtaining particle behavior in solid propellant combustion N86-26477

PATENT APPLICATIONS
Self aligned notch for InP planar transferred electron oscillator
[AD-D012185] N86-26540

PATTERN RECOGNITION
Overview of the NASA SETI Program N86-26909
Goldstone field test activities: Target search N86-26911

PAVEMENTS
Comparative study of nondestructive pavement testing. WES (Waterways Experiment Station) NDT (nondestructive tests) methodologies
[AD-A163379] N86-26480

PAYLOAD INTEGRATION
Monoball energy transfer: Test report
[NASA-CR-176812] N86-26551

PEELING
Slow strain rate testing of high strength low-alloy steels: A technique for assessing the degree of hydrogen embrittlement produced by plating processes, paint strippers and other aircraft maintenance chemicals
[AR-004-060] N86-26411

PENETRATION
Electromagnetic penetration through a slot into a rectangular waveguide
[AD-A164590] N86-26506
The Shock and Vibration Digest, volume 17, no. 9
[AD-A161143] N86-26644
Impactor interaction with concrete structures: Local effects N86-26645

PEPTIDES
Cooperation of catalysts and templates N86-26871
A comparative study of prebiotic and present day translational models N86-26877
Protobiological informatoin, bidirectional recognition and reverse translation N86-26878

PERCEPTION
Cloud base heights from lidar, rotating beam ceilometer and pilot reports compared by experiment and theory
[PB86-159894] N86-26778
A personalized and prescriptive decision aid for choice from a database of options
[AD-A165398] N86-27129

PERCOLATION
Maryland Water Resources Research Center, fiscal year 1984 program report
[PB86-133253] N86-26721

PERFORATED PLATES
Evaluation of multilayer printed wiring boards by metallographic techniques: An illustrated guide to the preparation and inspection of plated-through hole test coupons based on the requirements of MIL-P-55110D
[NASA-RP-1161] N86-26839

PERFORATING
The Shock and Vibration Digest, volume 17, no. 9
[AD-A161143] N86-26644
Impactor interaction with concrete structures: Local effects N86-26645

PERFORMANCE TESTS
Thermal response tests of candidate insulation systems for the chlorine tank car
[AD-A165293] N86-26451
Advanced heating facilities. Development of demonstration models — microgravity experiment sample heating
[ERNO-671-AHF/2] N86-26710
Image intensifiers: Past and present N86-26803
Goldstone field test activities: Target search N86-26911
Executable assertions and flight software NASA-CR-176759 NAS 1.26:176759 CSL-TR-84-258 CRC-TR-84-16 HC A03/MF A01
[NASA-CR-176759] N86-26926

PERIODIC VARIATIONS
The fossil record of evolution: Data on diversification and extinction N86-26902

PERMEABILITY
Investigation of structure-permeability relationships of silicone polymer membranes
[PB86-157179] N86-26408
Apparent viscosity measurements of surfactant foam in porous media
[DE86-000260] N86-26454
A lightweight impermeable suit for chemical protection in warm conditions: A preliminary look at the concept
[AD-A164687] N86-26839

PERSONALITY
The healthy motivation to fly: No psychiatric diagnosis
[AD-A164944] N86-26832

PERSONNEL
A comparison of voice and keyboard data entry for a helicopter navigation task
[AD-A163245] N86-26501
A lightweight impermeable suit for chemical protection in warm conditions: A preliminary look at the concept
[AD-A164687] N86-26839
Soldier-computer interface
[AD-A165326] N86-26841
Software documentation on the URDB modifications to incorporate information collected in Post-DSCS and UHF studies
[AD-A165451] N86-26973
Recent Naval Postgraduate School publications
[AD-A164846] N86-27122

PERSONNEL MANAGEMENT
Independent research and independent exploratory development FY 85
[AD-A163432] N86-27111

PERTURBATION
Theoretical N2-, O2- and air-broadened halfwidths of ozone calculated by quantum Fourier transform theory with realistic collision dynamics
[AD-A163276] N86-26391
The air-injection method of fixing boundary-layer transition and investigating scale effects — Spacelab human physiology payload
[RAE-TR-85025] N86-26542
Mechanical face seal dynamics
[AD-A164978] N86-26833

PERTURBATION THEORY
Convergence to steady state of solutions of Burgers' equation N86-26553
Effect of stochastic perturbations on a spectral model of atmospheric circulation — mathematical model
[CWI-AM-R8515] N86-26751
Theoretical elementary particle studies
[DE86-001165] N86-27054

PERU
United States technology transfer to Peru and Venezuela
[AD-A164995] N86-27133

PETRI NETS
An operational semantics for process algebra — turing machines
[CWI-CS-R8522] N86-26981

PETROLOGY
Isotopic, petrologic and biogeochemical investigations of banded iron-formations N86-26885
Space Station Planetology Experiments (SSPEX)
[NASA-CP-2424] N86-27136
Report on opportunities and/or techniques for high-caliber experimental research (other) proposals for SSPEX N86-27140
A system for conducting igneous petrology experiments under controlled redox conditions in reduced gravity N86-27166

PHASE DIAGRAMS
Solid-phase equilibria in the Au-Ga-Sb, Au-In-As, and Au-In-Sb ternaries
[AD-A165469] N86-27099

PHASE SHIFT CIRCUITS
Concept study of a multiple beam lens antenna with an internal phase shift mask
[AD-A165277] N86-26535

PHASE TRANSFORMATIONS
Thermal expansion of elastic-plastic composite materials
[AD-A164910] N86-26383
Damage prediction of projectile penetration process based on energy dissipation rate
[AD-A163268] N86-26656

PHASE VELOCITY
A three dimensional plasma simulation code applied to phase velocity prediction in a coupled cavity circuit
[AD-A163331] N86-26525

PHASED ARRAYS
Concept study of a multiple beam lens antenna with an internal phase shift mask
[AD-A165277] N86-26535

PHENOLS
Advanced materials research status and requirements. Volume 1: Technical summary
[AD-A165338] N86-26385
Advanced materials research status and requirements. Volume 2, appendix: Material properties data review
[AD-A165339] N86-26386

PHONEMES
A comparative analysis of whispered and normally phonated speech using an LPC-10 vocoder
[AD-A163307] N86-26504

PHONETICS
A comparative analysis of whispered and normally phonated speech using an LPC-10 vocoder
[AD-A163307] N86-26504

PHOSPHATES
Maryland Water Resources Research Center, fiscal year 1984 program report
[PB86-133253] N86-26721

PHOSPHAZENE
Organofunctional phosphazenes and organofunctional phosphazene polymers
[AD-A165437] N86-26453

PHOSPHIDES
Entropy-driven loss of gas-phase Group 5 species from GOLD/3-5 compound semiconductor systems
[AD-A165584] N86-27100

PHOSPHORUS
Investigation and development of advanced surface microanalysis techniques and methods
[AD-A163616] N86-26389

PHOTOABSORPTION
Photoabsorption and photodissociation of molecules important in the interstellar medium
[NASA-CR-176828] N86-27171

PHOTOCATHODES
Image intensifiers: Past and present N86-26803

PHOTOCHEMICAL REACTIONS
Alexandrite lasers: State of technology and applications
[DE86-003666] N86-26611
The production of trace gases by photochemistry and lightning in the early atmosphere N86-26851
The D to H ratio on Titan and the planets: Implications for origin and evolution of planetary atmospheres N86-26853
A gas chromatograph experiment for a Titan entry probe N86-26856
Photochemical reactions of various model protocell systems N86-26879
Functional and evolutionary relationships between bacteriorhodopsin and halorhodopsin in the archaebacterium, halobacterium halobium N86-26892

PHOTOCONDUCTORS
Amorphous silicon spatial light modulator
[AD-D012168] N86-26528

PHOTODISSOCIATION
A model for the kinetics of a solar-pumped long path laser experiment
[NASA-TM-87666] N86-26616
Photoabsorption and photodissociation of molecules important in the interstellar medium
[NASA-CR-176828] N86-27171

PHOTOELECTRIC EMISSION
An analytical method for the determination of solar cell model parameters
[INPE-3852-PRE/916] N86-26698

PHOTOELECTROCHEMISTRY
Photoelectrochemical reduction of carbon dioxide
[PB86-157884] N86-26406

PHOTOGRAMMETRY
Research, investigations and technical developments: National mapping program, 1983-1984
[PB86-166097] N86-26675
Mapping experiment with space station N86-27168

PHOTOGRAPHY
High strain rate material behavior
[AD-A165214] N86-26859

PHOTOINTERPRETATION
Thematic mapper research in the Earth sciences: Tectonic evaluation of the Nubian Shield of northeastern Sudan/southeastern Egypt using thematic mapper imagery
[NASA-CR-177311] N86-26740

PHOTOIONIZATION
Theoretical study of the X-ray emission from astrophysical shock waves
[NASA-CR-177318] N86-27176

PHOTOLYSIS
Photolysis products of CO, NH3 aND H2O and their significance to reactions on interstellar grains N86-26849

PHOTOOXIDATION
Biosynthetic porphyrins and the origin of photosynthesis N86-26894

PHOTOSENSITIVITY
Foveal flashes and human performance N86-26822

PHOTOSPHERE
Observations of low-degree p-mode oscillations in 1984. Comments on techniques for spectral deconvolution
[AD-A164780] N86-27174

PHOTOSYNTHESIS
Photochemical reactions of various model protocell systems N86-26879
The principle of cooperation and life's origin and evolution N86-26880
Thioredoxins in evolutionarily primitive organisms N86-26893
Biosynthetic porphyrins and the origin of photosynthesis N86-26894
Evolutionary significance of osmoregulatory mechanisms in cyanobacteria N86-26898

PHOTOVOLTAGES
An analytical method for the determination of solar cell model parameters
[INPE-3852-PRE/916] N86-26698

PHOTOVOLTAIC CELLS
Dynamic characteristics of power-tower space stations with 15-foot truss bays
[NASA-TM-87684] N86-26357
Sensitivity analysis for solar plates N86-26684
A metallurgical route to solar-grade silicon N86-26693
An analytical method for the determination of solar cell model parameters
[INPE-3852-PRE/916] N86-26698
Solar energy computer models directory
[DE85-006791] N86-26706

PHYSICAL EXERCISE
Perceptual and physiological responses during exercise in cool and cold water
[AD-A165491] N86-26800

PHYSICAL FACTORS
Individual parameters in thermoregulatory control; a review — plasma diagnostics
[IZF-1985-26] N86-26801

PHYSICAL FITNESS
Fluid-Electrolyte-Mineral interrelations as affecting work performance
[AD-A165325] N86-26799

PHYSIOLOGICAL FACTORS
Evolutionary significance of osmoregulatory mechanisms in cyanobacteria N86-26898

PHYSIOLOGICAL RESPONSES
Perceptual and physiological responses during exercise in cool and cold water
[AD-A165491] N86-26800
Individual parameters in thermoregulatory control; a review — plasma diagnostics
[IZF-1985-26] N86-26801
A lightweight impermeable suit for chemical protection in warm conditions: A preliminary look at the concept
[AD-A164687] N86-26839

PICOSECOND PULSES
Topical Meeting on Picosecond Electronics and Optoelectronics: A digest of technical papers
[AD-A164598] N86-27069

PIEZOELECTRIC GAGES
Field-induced crystallization in highly plasticized poly(vinylidene fluoride) films
[AD-A164684] N86-26442

PIEZOELECTRICITY
Field induced dipole reorientation and piezoelectricity in heavily plasticized nylon 11 films
[AD-A164683] N86-27095

PIEZOMETERS
Piezometer data base package user's guide
[AD-A163264] N86-27119

PIGMENTS
Functional and evolutionary relationships between bacteriorhodopsin and halorhodopsin in the archaebacterium, halobacterium halobium N86-26892
Biosynthetic porphyrins and the origin of photosynthesis N86-26894

PILE FOUNDATIONS
Investigation of subsurface exploration methods for prevailing geologic conditions in South Carolina
[PB86-167087] N86-26752

PILOT PERFORMANCE
Some quantitative methodology for cockpit design N86-26320
Validation of a new flying quality criterion for the landing task
[NASA-TM-88261] N86-26341
Evaluation of helicopter helmet-mounted display mock-up N86-26806
Particular problems of airworthiness from an ophthalmological view N86-26812
Contact lenses for pilots and aircrew in the services N86-26815
Human factors: The Cinderella discipline in cockpit interface design N86-26825
Changes in Naval Aviation Basic Instrument flight training: An analysis
[AD-A164738] N86-26830
A model and experimental analysis of pilot decision making behavior for various automatic approach conditions
[NLR-TR-84037-U] N86-26835

PILOT TRAINING
Changes in Naval Aviation Basic Instrument flight training: An analysis
[AD-A164738] N86-26830

PILOTS (PERSONNEL)
Cloud base heights from lidar, rotating beam ceilometer and pilot reports compared by experiment and theory
[PB86-159894] N86-26778

PINCH EFFECT
Features of spherical torus plasmas
[DE86-004642] N86-27080

PIONS
Theory of photo- and electroproduction of mesons: problems and prospects
[DE86-004094] N86-27052

PIPE FLOW
Pointed bubbles rising in a two-dimensional tube
[AD-A163624] N86-26577
TOPAZ - The transient one-dimensional pipe flow analyzer: Equations and numerics
[DE86-005063] N86-26592

PIPELINING (COMPUTERS)
Synthesis of high-speed digital systems
[AD-A164690] N86-26922

PIPES (TUBES)
Multiple laminar flows through curved pipes N86-26559
TOPAZ - The transient one-dimensional pipe flow analyzer: Equations and numerics
[DE86-005063] N86-26592

PISTONS
High-temperature lubrication systems for ring/liner applications in advanced heat engines
[AD-A164955] N86-26446
Linear resonance cooler
[AD-A165492] N86-26483
The analysis, design and performance of a 1.25 inch diameter pneumatic actuator
[AD-A165297] N86-26635

PITCH (INCLINATION)
The analysis, design and performance of a 1.25 inch diameter pneumatic actuator
[AD-A165297] N86-26635

PITOT TUBES
Method for determining the time delay of the pitot-static tubing system of aircraft — semisubmersible platform
[NLR-TR-83075-U] N86-26335

PITTING
Applications of current measurement over corroding metallic surfaces
[DE86-001174] N86-26425

PLANAR STRUCTURES
Self aligned notch for InP planar transferred electron oscillator
[AD-D012185] N86-26540
Surface construction from planar contours
[AD-A164862] N86-26950

PLANE WAVES
Electromagnetic penetration through a slot into a rectangular waveguide
[AD-A164580] N86-26506
Non-uniform currents on a wedge illuminated by a TE (Transverse Electric) plane wave
[AD-A163323] N86-26524
A synopsis of research on subbottom effects on underwater acoustic propagation
[AD-A165420] N86-27048

PLANETARY ATMOSPHERES
The organic aerosols of Titan N86-26852
The D to H ratio on Titan and the planets: Implications for origin and evolution of planetary atmospheres N86-26853
Measurements of physical properties of model Titan atmospheres N86-26854

PLANETARY EVOLUTION
Second Symposium on Chemical Evolution and the Origin of Life
[NASA-CP-2425] N86-26844
The production of trace gases by photochemistry and lightning in the early atmosphere N86-26851
Climatic consequences of very high CO2 levels in Earth's early atmosphere N86-26904
Impact experimentation and the microgravity environment: An overview N86-27151

PLANETOLOGY
Space Station Planetology Experiments (SSPEX)
[NASA-CP-2424] N86-27136
Sediment-transport (wind) experiments in zero-gravity N86-27138
Particle formation and interaction N86-27139
Low-gravity impact experiments: Progress toward a facility definition N86-27145
Low gravity facilities for space station planetology experiments N86-27160
Impacts of free-floating objects: Unique space station experiments N86-27162

PLANETS
Space station impact experiments N86-27137

PLANKTON
A simulation analysis of the fate of phytoplankton within the mid-Atlantic bight
[NASA-CR-177265] N86-26670
Ocean frontal areas. Phytoplankton enumeration and biomass estimates -- operation guiding light (April - May 1985)
[AD-A164985] N86-26787
Identification manual for phytoplankton of the United States Atlantic coast
[PB86-151222] N86-26792

PLANNING
Exploiting capability constraints to solve global, two dimensional path planning problems
[AD-A164973] N86-27132

PLANTS (BOTANY)
Paleosols and the chemical evolution of the atmosphere N86-26870

PLASMA CLOUDS
Waves and electric fields associated with the December 27, 1984, artificial comet
[AD-A163409] N86-26744

PLASMA COMPRESSION
High power microwave plasma pulse compression
[AD-A163298] N86-27077

PLASMA CONTROL
Electron Bernstein wave current drive in the start-up phase of a tokamak discharge
[INPE-3868-PRE/926] N86-27074

PLASMA DENSITY
A plasma ultraviolet source for short wavelength lasers
[AD-A165430] N86-26623

PLASMA DIAGNOSTICS
Calibration of the ISEE plasma composition experiment
[NASA-TM-86542] N86-26348
In situ measurements of the plasma bulk velocity near the Io flux tube
[NASA-CR-176810] N86-27075
The response function of modulated grid Faraday cup plasma instruments
[NASA-CR-177312] N86-27076
Whistler-mode radiation from the Spacelab 2 electron beam
[AD-A163367] N86-27078
Activities report of the Institute of Plasma Research — software reuse
[ESA-86-96920] N86-27083
Assessment of the possible use of the KE 1 Thomson scattering collection optics for an additional lidar system — plasma diagnostics
[IPF-85-1] N86-27085
A magnetospheric simulation at the space station N86-27155

PLASMA DRIFT
Equatorial F region vertical plasma drifts: Seasonal and longitudinal asymmetries in the American sector
[INPE-3839-PRE/909] N86-26736
Waves and electric fields associated with the December 27, 1984, artificial comet
[AD-A163409] N86-26744

PLASMA DYNAMICS
Middle Atmosphere Program. Handbook for MAP, volume 19
[NASA-CR-176800] N86-26725
Particle and wave dynamics during plasma injections
[AD-A163210] N86-26742
Fluid-Electrolyte-Mineral interrelations as affecting work performance
[AD-A165325] N86-26799

PLASMA FOCUS
A plasma ultraviolet source for short wavelength lasers
[AD-A165430] N86-26623
Activities report of the Institute of Plasma Research — software reuse
[ESA-86-96920] N86-27083

PLASMA FREQUENCIES
A three dimensional plasma simulation code applied to phase velocity prediction in a coupled cavity circuit
[AD-A163331] N86-26525
High power microwave plasma pulse compression
[AD-A163298] N86-27077

PLASMA HEATING
State-of-the-Art survey of gyrotron research: An ONRL sponsored workshop
[AD-A163580] N86-26600
Activities report of the Institute of Plasma Research — software reuse
[ESA-86-96920] N86-27083

PLASMA INTERACTIONS
Interactions measurement payload for shuttle (IMPS) definition phase study
[NASA-CR-177291] N86-26354
Middle Atmosphere Program. Handbook for MAP, volume 19
[NASA-CR-176800] N86-26725

PLASMA LAYERS
Ionization induced instability in an electron collecting sheath
[AD-A165330] N86-26538

PLASMA PHYSICS
Plasma physics modeling and the Cray-2 multiprocessor
[DE86-004239] N86-27072
Activities report of the Institute of Plasma Research — software reuse
[ESA-86-96920] N86-27083
A magnetospheric simulation at the space station N86-27155

PLASMA PROBES
Ionization induced instability in an electron collecting sheath
[AD-A165330] N86-26538
The response function of modulated grid Faraday cup plasma instruments
[NASA-CR-177312] N86-27076

PLASMA RESONANCE
Resonance fluorescence of a two-level atom near a rough metal surface
[AD-A163219] N86-27056

PLASMA SHEATHS
Ionization induced instability in an electron collecting sheath
[AD-A165330] N86-26538

PLASMA SPECTRA
A plasma ultraviolet source for short wavelength lasers
[AD-A165430] N86-26623

PLASMA WAVES
Particle and wave dynamics during plasma injections
[AD-A163210] N86-26742
Wakefield accelerators for SDI
[DE86-003673] N86-27062

PLASMAS (PHYSICS)
Definition study of a coordinated group of experiments to measure and monitor the in situ plasma and electromagnetic environment of a polar orbiting space shuttle
[AD-A164561] N86-26353
Ionization induced instability in an electron collecting sheath
[AD-A165330] N86-26538
In situ measurements of the plasma bulk velocity near the Io flux tube
[NASA-CR-176810] N86-27075

PLASMASPHERE
Dynamics of non-relativistic equatorial electrons and protons inside the plasmasphere
[INPE-3833-PRE/905] N86-26737
Particle and wave dynamics during plasma injections
[AD-A163210] N86-26742

PLASTIC AIRCRAFT STRUCTURES
Evaluation of the effects of a plastic bead paint removal process on properties of aircraft structural materials
[AD-A165269] N86-26384

PLASTIC COATINGS
Corrosion control through a better understanding of the metallic substrate/organic coating/interface
[AD-A164734] N86-26419

PLASTIC FLOW
Apparent viscosity measurements of surfactant foam in porous media
[DE86-000260] N86-26454

PLASTIC PROPERTIES
Thermal expansion of elastic-plastic composite materials
[AD-A164910] N86-26383
Low-cycle thermal fatigue
[NASA-TM-87225] N86-26651

PLASTICIZERS
Field-induced crystallization in highly plasticized poly(vinylidene fluoride) films
[AD-A164684] N86-26442

PLASTICS
Study of charge and polarization distribution in polymers
[AD-A164633] N86-26441

PLATES (STRUCTURAL MEMBERS)
On similarity solutions of a boundary layer problem with an upstream moving wall
[NASA-CR-178104] N86-26548
Line spring model and its applications to part-through crack problems in plates and shells
[NASA-CR-176688] N86-26649
Interframe buckling of aluminium alloy stiffened plating — warship materials
[AMTE(S)-R-85104] N86-26654

PLATES (TECTONICS)
Plate motions and deformations from geologic and geodetic data
[NASA-CR-177299] N86-26741

PLATING
Slow strain rate testing of high strength low-alloy steels: A technique for assessing the degree of hydrogen embrittlement produced by plating processes, paint strippers and other aircraft maintenance chemicals
[AR-004-060] N86-26411

PLATINUM
Biosynthetic porphyrins and the origin of photosynthesis N86-26694

PLUMES
Plume characteristics of single-stream and dual-flow conventional and inverted-profile nozzles at equal thrust
[NASA-TM-87323] N86-26285
Smokeless Propellants
[AGARD-CP-391] N86-26468
Elastomer modified cast double base propellants N86-26473

PNEUMATIC EQUIPMENT
The analysis, design and performance of a 1.25 inch diameter pneumatic actuator
[AD-A165297] N86-26635

POINT SOURCES
User-friendly screening model for point-source impact assessment
[PB86-176369] N86-26722

POINTS (MATHEMATICS)
The local redistribution of points along curves for numerical grid generation N86-26571
End-point corrected trapezoidal quadrature rules for singular functions
[AD-A163242] N86-27000

POLAR CAPS
Interactions measurement payload for shuttle (IMPS) definition phase study
[NASA-CR-177291] N86-26354

POLAR ORBITS
Definition study of a coordinated group of experiments to measure and monitor the in situ plasma and electromagnetic environment of a polar orbiting space shuttle
[AD-A164561] N86-26353
POLARIZATION (WAVES)
Polarization modulated ellipsometry
[NASA-CR-177264] N86-26599
POLARIZED RADIATION
Model studies of surface noise interference in ground-probing radar
[AD-A163208] N86-23600
POLARIZERS
German development of a LC-flashblindness device N86-26620
POLICIES
Proceedings of the international Test and Evaluation Association 1984 Symposium (Step Session). Supplement
[AD-A163236] N86-26919
Report of the West Germany federal government on research
[ESA-86-96940] N86-27116
Public laws of the 98th Congress relating to information policy
[CRS-TK-7865-F] N86-27130
POLLUTION
A microcomputer pollution model for civilian airports and Air Force bases
[AD-A163232] N86-26714
POLLUTION CONTROL
Environmental assessment of NOx control on a compression ignition large bore reciprocating internal combustion engine. Volume 1: Technical results
[PB86-155619] N86-26637
Selective catalytic removal of NO from stationary sources — flue gases
[S/T-REPT-VOL-3-NO-6] N86-26719
Nonpoint source pollution: Information guide
[PB86-130275] N86-26720
POLLUTION MONITORING
Nonpoint source pollution: Information guide
[PB86-130275] N86-26720
POLLUTION TRANSPORT
User-friendly screening model for point-source impact assessment
[PB86-178369] N86-26722
The role of the oceans in the atmospheric cycle of carbonyl sulfide N86-26796
Melting nuclear fuel — flue gases
[S/T-REPT-VOL-3-NO-7] N86-27066
POLYAMIDE RESINS
Ethynyl-containing aromatic polyamide resins
[AD-D012169] N86-26437
Ethynyl-containing aromatic monomers
[AD-D012170] N86-26438
Study of charge and polarization distribution in polymers
[AD-A164633] N86-26441
POLYCRYSTALS
Requirements for high-efficiency solar cells N86-26681
Economics of polysilicon processes N36-26683
Development of the silane process for the production of low-cost polysilicon N86-26685
Stable, high-efficiency, CuInSe2 based polycrystalline thin-film tandem solar cells
[DE85-016893] N86-26700
POLYESTERS
Polyether-polyester graft copolymer
[NASA-CASE-LAR-13447-1] N86-26435
POLYETHER RESINS
Polyether-polyester graft copolymer
[NASA-CASE-LAR-13447-1] N86-26435
POLYETHYLENES
Factors affecting the vertical motion of a zero-pressure, polyethylene, free balloon
[AD-A164596] N86-26290
Dynamic orientation studies of polymers
[AD-A164611] N86-26440
Study of charge and polarization distribution in polymers
[AD-A164633] N86-26441
POLYGONS
On frequency polygons and average shifted histograms in higher dimensions
[AD-A164680] N86-27009
POLYHEDRONS
A solution method for the set packing problem with polyhedral characteristics — field theory
[MEMO-446] N86-27035
POLYIMIDE RESINS
Advanced materials research status and requirements. Volume 1: Technical summary
[AD-A165338] N86-26385
Advanced materials research status and requirements. Volume 2, appendix: Material properties data review
[AD-A165339] N86-26386
POLYIMIDES
Oxidation protecting coatings for polymers
[NASA-CASE-LEW-14072-3] N86-26434
POLYMERIC FILMS
Factors affecting the vertical motion of a zero-pressure, polyethylene, free balloon
[AD-A164596] N86-26290
Investigation of structure-permeability relationships of silicone polymer membranes
[PB86-157179] N86-26408
Field-induced crystallization in highly plasticized poly(vinylidene fluoride) films
[AD-A164684] N86-26442
Structure/property studies of a heterocyclic conductive polymer
[AD-A164959] N86-26447
Application of conductive polymer technology to the production of a novel multilayer capacitor
[AD-A165212] N86-26450
Field induced dipole reorientation and piezoelectricity in heavily plasticized nylon 11 films
[AD-A164883] N86-27095
POLYMERIZATION
Ethynyl-containing aromatic polyamide resins
[AD-D012169] N86-26437
POLYMERS
Oxidation protecting coatings for polymers
[NASA-CASE-LEW-14072-3] N86-26434
Further work on sodium montmorillonite as catalyst for the polymerization of activated amino acids N86-26868
POLYMETHYL METHACRYLATE
Rectangular plate is proposed as an IES model test structure
[DE85-018274] N86-26643
POLYPEPTIDES
Further work on sodium montmorillonite as catalyst for the polymerization of activated amino acids N86-26868
POLYSTATION DOPPLER TRACKING SYSTEM
Weather radar studies
[AD-A165221] N86-26782
POLYURETHANE FOAM
Experimental polyurethane foam (PUF) roofing systems. 3. Naval Station, Roosevelt Roads, Puerto Rico, and Naval Facility, Cape Hatteras, North Carolina
[AD-A164833] N86-26444
POLYURETHANE RESINS
Energy absorption of polyurethane-based polymer alloys
[AD-A164537] N86-26439
Experimental polyurethane foam (PUF) roofing systems. 3. Naval Station, Roosevelt Roads, Puerto Rico, and Naval Facility, Cape Hatteras, North Carolina
[AD-A164833] N86-26444
POLYVINYL CHLORIDE
Study of charge and polarization distribution in polymers
[AD-A164633] N86-26441
POPULATION INVERSION
A model for the kinetics of a solar-pumped long path laser experiment
[NASA-TM-87668] N86-26616
POPULATION THEORY
The size and scar distributions of the yeast Saccharomyces cerevisiae — mathematical model
[CWI-AM-R8509] N86-27024
A differential-integral equation modeling the dynamics of populations with a rank structure — mathematical model
[CWI-AM-R8511] N86-27025
POROSITY
Optical and electrochemical study of model zinc electrode pores in alkaline electrolyte
[DE86-002967] N86-26521
POROUS MATERIALS
Electrode processes in porous electrodes
[AD-A165410] N86-26402
Apparent viscosity measurements of surfactant foam in porous media
[DE86-000260] N86-26454
POROUS WALLS
On the existence of solutions of an equation arising in the theory of laminar flow in a uniformly porous channel with injection
[NASA-CR-178078] N86-26543
PORPHYRINS
Biosynthetic porphyrins and the origin of photosynthesis N86-26894
PORTABLE EQUIPMENT
Development of a portable test kit for field-screening paints
[AD-A164989] N86-26448
POSITION (LOCATION)
An analysis of S-3 SDLM (Standard Depot Level Maintenance) corrosion documentation procedures
[AD-A165586] N86-26262
Two compliance expressions for arbitrary locations across a crack in a CT (Compact Type) specimen
[AD-A163369] N86-26658
POSITIONING
Navstar GPS (Global Positioning System) accuracy while surveying arrays of deep ocean transponders
[AD-A163364] N86-26313
POTASSIUM
Ion transport across synthetic and biological membranes: ionophore-mediated transport
[AD-A163299] N86-27057
POTASSIUM ISOTOPES
Fluid-Electrolyte-Mineral interrelations as affecting work performance
[AD-A165325] N86-26799
POTENTIAL ENERGY
Generation of available potential energy and the energy cycle during the global weather experiment
[NASA-CR-177872] N86-26756
POTENTIAL FLOW
Viscid/inviscid interaction analysis of subsonic turbulent trailing-edge flows
[AD-A165207] N86-26292
Laminar and turbulent boundary-layer calculations on the leeward surface of a slender delta wing at incidence — graph theory
[NLR-MP-84040-U] N86-26293
Three-dimensional separation and vortical wakes over a prolate spheroid
[AD-A164781] N86-26583
POWDER METALLURGY
Crack propagation in powder metallurgy hot isostatically pressed nickel-based alloy
[AD-A164587] N86-26418
POWER AMPLIFIERS
Hydraulic power modulation laminar proportional amplifier development
[AD-A163390] N86-26579
POWER CONDITIONING
Proposal for FEL experiments driven by the National Bureau of Standards' CW microtron
[AD-A163227] N86-26619
POWER SPECTRA
Methods of obtaining offshore wind direction and sea-state data from X-band aircraft SAR (Synthetic Aperture Radar) imagery of coastal waters
[AD-A165552] N86-26517
An isostatic Earth model
[AD-A164806] N86-26672
The Berkeley Serendip Project N86-26906
PRANDTL NUMBER
Viscid/inviscid interaction analysis of subsonic turbulent trailing-edge flows
[AD-A165207] N86-26292
PRECAMBRIAN PERIOD
The lunar nodal tide and the distance to the Moon during the Precambrian era N86-26886
Recent progress in Precambrian paleobiology N86-26887
PRECESSION
Ballistic flight of a projectile with two precessional modes
[DE86-003176] N86-26350
PRECIPITATION (METEOROLOGY)
Operational soil moisture prediction model
[AD-A165313] N86-26481
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Kunsan AB, South Korea
[AD-A165553] N86-26764
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Indian Mountain AFS, Alaska
[AD-A165554] N86-26765
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Kelly AFB, Texas
[AD-A165555] N86-26766
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Tin City AFS, Alaska
[AD-A165556] N86-26767
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Langley AFB, Virginia
[AD-A165558] N86-26769
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Beale AFB, California
[AD-A165560] N86-26771

Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, La Crosse Municipal Airport, Wisconsin
[AD-A165681] N86-26772
Camp Casey, South Korea Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F
[AD-A165682] N86-26773
Moisture model for the local AFOS MOS (Automation of Field Operations and Services Model Output Statistics) program
[PB86-151305] N86-26779

PRECISION
Exact integration algorithm for use with modal analysis
[DE86-016533] N86-26993

PREDICTION ANALYSIS TECHNIQUES
Reliability prediction for spacecraft
[AD-A164747] N86-26359
Computational simulation of progressive fracture in fiber composites
[NASA-TM-87341] N86-26376
The Atchafalaya River Delta. Report 7. Analytical analysis of the development of the Atchafalaya River Delta
[AD-A164931] N86-26673
Data tabulations and analysis of diurnal sea surface temperature variability observed at LOTUS (long-term upper ocean study)
[AD-A165406] N86-26790

PREDICTIONS
The negligible effect of non-Gaussian surface deviations in large MM-Lambda reflectors' aperture efficiency and the performance of Itapetinga 45-ft antenna at Lambda = 3.3 MM
[INPE-3837-PRE/908] N86-26468
Grain dynamics in zero gravity N86-27164

PRESBYOPIA
New glasses for presbyopic pilots N86-26814

PRESSING (FORMING)
On the sintering of silicon carbide
[NASA-TM-88402] N86-25374

PRESSURE
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Tin City AFS, Alaska
[AD-A165556] N86-26767
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Cape Lisburne, Alaska
[AD-A165557] N86-26768
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Tatalina AFS, Alaska
[AD-A165559] N86-26770
Entropy-driven loss of gas-phase Group 5 species from GOLD/3-5 compound semiconductor systems
[AD-A165584] N86-27100

PRESSURE DISTRIBUTION
The effects on rotor nonuniform inflow harmonic content of uneven circumferential distribution of jet engine inlet guide vanes
[AD-A164829] N86-26291
A study of the fluid-dynamic pressure fields on compressor reed valves
[AD-A164102] N86-26578

PRESSURE GRADIENTS
Vertical modes and energetics of gravitational and rotational modes in a multilevel global spectral model
[PB86-160165] N86-26777

PRESSURE MEASUREMENT
A study of the fluid-dynamic pressure fields on compressor reed valves
[AD-A164102] N86-26578

PRESSURE OSCILLATIONS
A study of the fluid-dynamic pressure fields on compressor reed valves
[AD-A164102] N86-26578
Pressure probe and hot-film probe responses to acoustic excitation in mean flow
[NASA-TP-2581] N86-27043

PRESSURE REGULATORS
Modelling of a cold gas jet system for satellite attitude control
[INPE-3853-PRE/917] N86-26356

PRESSURE SENSORS
Pressure probe and hot-film probe responses to acoustic excitation in mean flow
[NASA-TP-2581] N86-27043

PRESSURE VESSELS
Advanced Toroidal Facility
[DE86-004805] N86-27082

PRESSURIZING
Air compression heating ignition of high explosives in the launch environment
[AD-A164961] N86-26400
Pressure systems energy release protection (gas pressurized systems)
[NASA-CR-178090] N86-26628

PRIMITIVE EARTH ATMOSPHERE
Energy yields in the prebiotic synthesis of hydrogen cyanide and formaldehyde N86-26863
Synthesis and analysis in studies of chemical evolution N86-26864
Cooperation of catalysts and templates N86-26871
Molecular replication N86-26874
Photochemical reactions of various model protocell systems N86-26879
Carbon exchange between the mantle and the crust and its effect upon the atmosphere: Today compared to Archean time N86-26882
Earth's early atmosphere as seen from carbon and nitrogen isotopic analysis of Archean sediments N86-26883
Isotopic, petrologic and biogeochemical investigations of banded iron-formations N86-26885
Biosynthetic porphyrins and the origin of photosynthesis N86-26894
Oxygen and the evolution of metabolic pathways N86-26895

PRINTED CIRCUITS
Evaluation of multilayer printed wiring boards by metallographic techniques: An illustrated guide to the preparation and inspection of plated-through hole test coupons based on the requirements of Mil-P-55110D
[NASA-RP-1161] N86-26639

PROBABILITY DENSITY FUNCTIONS
Density functional theory for excited states in a quasi local density approximation
[AD-A164474] N86-26999
On density estimation from censored data by penalized likelihood methods
[AD-A163368] N86-27002

PROBABILITY DISTRIBUTION FUNCTIONS
Statistical analysis of digital Side-Looking Airborne Radar (SLAR) data — ESA programs
[DFVLR-FB-85-59] N86-26519
On the least-informative distribution in a contamination neighborhood
[AD-A163312] N86-27030

PROBABILITY THEORY
Marching difference schemes for ill posed initial value problems
[AD-A164012] N86-26997
Convexity of elliptically contoured distributions with applications
[AD-A163389] N86-27003
A note on convergence of functions of random elements
[AD-A163405] N86-27004
A review of maximum entropy spectral analysis and applications to Fourier Spectroscopy
[AD-A164898] N86-27011
Estimates of circular error probabilities
[AD-A163257] N86-27028
A Bahadur representation for quantiles of empirical DFs generalized U-statistic structure
[AD-A163311] N86-27029

PROBLEM SOLVING
On the existence of solutions of an equation arising in the theory of laminar flow in a uniformly porous channel with injection
[NASA-CR-178078] N86-26543
On substructuring algorithms and solution techniques for the numerical approximation of partial differential equations N86-26558
Multiple laminar flows through curved pipes N86-26559
Multigrid method for a vortex breakdown simulation N86-26562
Construction of higher order accurate vortex and particle methods N86-26563
Conditions for the construction of multi-point total variation diminishing difference schemes N86-26565
Some results on uniformly high order accurate essentially non-oscillatory schemes N86-26566
On numerical dispersion by upwind differencing N86-26567
On similarity solutions of a boundary layer problem with an upstream moving wall N86-26572
Development of a testbed for multisensor distributed decision algorithms
[AD-A164487] N86-26601
Megatrend solutions in physical geodesy
[PB86-173317] N86-26754
Human factors in rule-based systems
[AD-A165309] N86-26840
Mental models and problem solving with a knowledge-based expert system
[AD-A165398] N86-26843
Choosing architectures for expert systems
[AD-A163343] N86-26920
The solution of nonlinear time-dependent problems using modal coordinates
[AD-A163535] N86-26994
A solution method for the set packing problem with polyhedral characteristics — field theory
[MEMO-446] N86-27035
The formal specification of an abstract database: Design and implementation
[AD-A164865] N86-27124
A personalized and prescriptive decision aid for choice from a database of options
[AD-A165396] N86-27129
Exploiting capability constraints to solve global, two dimensional path planning problems
[AD-A164973] N86-27132

PROCEDURES
Acquiring procedural skills from lesson sequences
[AD-A164580] N86-26829

PRODUCT DEVELOPMENT
Proceedings of the Flat-Plate Solar Array Project Workshop on Low-Cost Polysilicon for Terrestrial Photovoltaic Solar-Cell Applications
[NASA-CR-176816] N86-26679
Sodium-sulfur battery development, phase VB
[DE86-003484] N86-26701

PRODUCTION COSTS
Compaction with automatic jog introduction
[AD-A163436] N86-26527

PROFILOMETERS
Hillock formation on (100) GaAs
[AD-A163308] N86-27090

PROGRAM VERIFICATION (COMPUTERS)
Regular expression analysis of procedures and exceptions — computer systems programs
[RSRE-85002] N86-26927
User's manual for the prototype ADA (trademark) Compiler Evaluation Capability (ACEC), version 1
[AD-A163272] N86-26938
Ada (trademark) compiler validation summary report. Verdix Ada compiler, VADS, Version V03.06 for VAX-11/785, using ULTRIX 1.0
[AD-A163345] N86-26942
Verifying temporal properties without using temporal logic
[AD-A164820] N86-26948
Methodology investigation: Multilingual Static Analysis Tool (MSAT)
[AD-A164956] N86-26952
Software test and evaluation manual. Volume 1: Guidelines for the treatment of software in test and evaluation master plans
[AD-A165208] N86-26953

PROGRAMMERS
Metrics for Ada packages: An initial study
[AD-A165336] N86-26963
Software documentation on the URDB modifications to incorporate information collected in Post-DSCS and UHF studies
[AD-A165451] N86-26973

PROGRAMMING LANGUAGES
User's manual for the prototype ADA (trademark) Compiler Evaluation Capability (ACEC), version 1
[AD-A163272] N86-26938
Commercial market potentials for the use of the ADA (trademark) programming language
[AD-A163273] N86-26939
Semi-applicative programming. Examples of context free recognizers
[AD-A164897] N86-26951
Methodology investigation: Multilingual Static Analysis Tool (MSAT)
[AD-A164956] N86-26952
Ada (trademark) training curriculum. Instructor's course s500 introductory language modules
[AD-A165348] N86-26966
Ada (trademark) training curriculum. Instructor's course s500 methodology modules
[AD-A165349] N86-26967
Ada (trademark) training curriculum. Instructor's course s500 overview
[AD-A165350] N86-26968
Operational semantics of a parallel object-oriented language — mathematical model
[CWI-CS-R8515] N86-26977
The design and analysis of a network interface for the multi-lingual database system
[AD-A164756] N86-27121
The implementation of a entity-relationship interface for the multi-lingual database system
[AD-A164858] N86-27123
The implementation of a network CODASYL-DML interface for the multi-lingual database system
[AD-A164996] N86-27127

PROJECT MANAGEMENT
Ada (trademark) training curriculum. Ada (registered trademark) for software managers, 1201: Teacher's guide, volume 1
[AD-A165314] N86-26958
PROJECT SETI
Second Symposium on Chemical Evolution and the Origin of Life
[NASA-CP-2425] N86-26844
A decade of SETI observations N86-26905
An infrared search for extraterrestrial laser signals N86-26907
Using the IRAS data to search in the asteroid belt for any potential evidence of galactic colonization N86-26908
Overview of the NASA SETI Program N86-26909
Stanford Hardware Development Program N86-26910
Goldstone field test activities: Target search N86-26911
Goldstone field test activities: Sky survey N86-26912
JPL's role in the SETI program N86-26913
PROJECTILES
Ballistic flight of a projectile with two precessional modes
[DE86-003176] N86-26350
PROLATE SPHEROIDS
Three-dimensional separation and vortical wakes over a prolate spheroid
[AD-A164781] N86-26583
PROPAGATION VELOCITY
The effect of air gaps on the propagation of detonation in charges consisting of stacked blocks of cast TNT
[AD-A163398] N86-26459
PROPANE
Molecular jet study of vanderWaals complexes of flexible molecules: N-Propyl benzene solvated by small alkanes
[AD-A164600] N86-26394
PROPELLANT ADDITIVES
Measurements of distributed combustion N86-26479
PROPELLANT BINDERS
Propargol combustion based on octogenesis N86-26470
Elastomer modified cast double base propellants N86-26473
PROPELLANT CASTING
Elastomer modified cast double base propellants N86-26473
PROPELLANT COMBUSTION
Crack propagation and branching in burning solid propellants and ignition of nitramine-based composite propellants
[AD-A164630] N86-26461
Direct erosive burning measurements of a reduced-smoke solid propellant rocket by flash X-rays N86-26476
Experimental techniques for obtaining particle behavior in solid propellant combustion N86-26477
Measurements of distributed combustion N86-26479
PROPELLANT GRAINS
Calculations of burning surfaces of propellant grain with embedded metal wires and of internal ballistics of such motor
[AD-A163361] N86-26458
Experimental techniques for obtaining particle behavior in solid propellant combustion N86-26477
PROPULSION SYSTEM CONFIGURATIONS
Propulsion apparatus and method using boil-off gas from a cryogenic liquid
[NASA-CASE-MFS-25946-1] N86-26366
Advanced propulsion systems and alternative fuels for non-highway transportation. An assessment of unique and priority research and development opportunities. Volume 3. A compendium of research and development
[DE86-002975] N86-26456
Advanced propulsion systems and alternative fuels for non-highway transportation. Volume 1: An assessment of unique and priority research and development opportunities
[DE86-002973] N86-26466
Advanced propulsion design studies
[AD-A164983] N86-26634
PROPULSION SYSTEM PERFORMANCE
Summary of results of NASA F-15 flight research program
[NASA-TM-86811] N86-26277
Air Force Academy Aeronautics Digest
[AD-A164940] N86-26281
Advanced propulsion systems and alternative fuels for non-highway transportation. An assessment of unique and priority research and development opportunities. Volume 3. A compendium of research and development
[DE86-002975] N86-26456
Advanced propulsion systems and alternative fuels for non-highway transportation. Volume 1: An assessment of unique and priority research and development opportunities
[DE86-002973] N86-26466
PROPYL COMPOUNDS
Molecular jet study of vanderWaals complexes of flexible molecules: N-Propyl benzene solvated by small alkanes
[AD-A164600] N86-26394
PROTECTION
Lightning discharge protection rod
[NASA-CASE-LAR-13470-1] N86-26296
Development and evaluation of a prototype life preserver
[AD-A163224] N86-26297
Pressure systems energy release protection (gas pressurized systems)
[NASA-CR-178090] N86-26628
PROTECTIVE CLOTHING
A lightweight impermeable suit for chemical protection in warm conditions: A preliminary look at the concept
[AD-A164667] N86-26839
Methodology for integration testing of aircrew clothing and equipment
[AD-A165326] N86-26842
PROTECTIVE COATINGS
The inhibition of vapor-phase corrosion. A review
[AD-A163430] N86-26417
Effect of chromium addition to the low temperature hot corrosion resistance of platinum modified aluminide coatings
[AD-A164755] N86-26420
Applications of current measurement over corroding metallic surfaces
[DE86-001174] N86-26425
Oxidation protecting coatings for polymers
[NASA-CASE-LEW-14072-3] N86-26434
Experimental polyurethane foam (PUF) roofing systems. 3. Naval Station, Roosevelt Roads, Puerto Rico, and Naval Facility, Cape Hatteras, North Carolina
[AD-A164833] N86-26444
High temperature molten salt storage
[DE85-016874] N86-26706
PROTEIN SYNTHESIS
Intramolecular interactions in aminoacyl nucleotides: Implications regarding the origin of genetic coding and protein synthesis N86-26673
PROTEINS
Bioanalytical applications of fluorescence quenching
[AD-A164867] N86-26399
Macrophage structure and function
[AD-A163314] N86-26793
A comparative study of prebiotic and present day translational models N86-26677
Protobiological informatoin, bidirectional recognition and reverse translation N86-26678
Investigations with methanobacteria and with evolution of the genetic code N86-26690
Functional and evolutionary relationships between bacteriorhodopsin and halorhodopsin in the archaebacterium, halobacterium halobium N86-26692
Thioredoxins in evolutionarily primitive organisms N86-26693
PROTOCOL (COMPUTERS)
Foundations of knowledge for distributed systems. Revision
[AD-A163545] N86-26918
PROTONS
Studies of negative ion reactions: Solvated ions and strong acids
[AD-A165484] N86-26404
PROTOPLANETS
Debris-cloud collisions: Accretion studies in the space station N86-27161
PROTOTYPES
Development and evaluation of a prototype life preserver
[AD-A163224] N86-26297
Theoretical analysis of the electrical aspects of the basic electro-impulse problem in aircraft de-icing applications
[NASA-CR-178608] N86-26330
Application of conductive polymer technology to the production of a novel multilayer capacitor
[AD-A165212] N86-26450
The analysis, design and performance of a 1.25 inch diameter pneumatic actuator
[AD-A165297] N86-26635
Clay energetics in chemical evolution N86-26667
User's manual for the prototype ADA (trademark) Compiler Evaluation Capability (ACEC), version 1
[AD-A163272] N86-26936
PROVING
UHF DAMA (Demand-Assigned Multiple Access) simulation analysis
[AD-A165446] N86-26514
Baseline experiments in teleoperator control
[NASA-TP-2547] N86-26836
Ada (trade name) compiler validation summary report: Verdix Ada Compiler, VAda-010-0101, Version V03.04 for VAX-11/750, using UNIX 4.2 BSD
[AD-A163363] N86-26943
A nonparametric statistical approach to the validation of computer simulation models
[AD-A163378] N86-26944
PSYCHOLOGICAL FACTORS
The healthy motivation to fly: No psychiatric diagnosis
[AD-A164944] N86-26832
A theoretically based review of theory and research in judgment and decision making
[AD-A164914] N86-27113
PSYCHOLOGICAL TESTS
Components of verbal intelligence
[AD-A163359] N86-26828
PSYCHOLOGY
A personalized and prescriptive decision aid for choice from a database of options
[AD-A165396] N86-27129
PSYCHOMOTOR PERFORMANCE
Driving performance the day after use of loprazolam, flunitrazepam and placebo
[VK-83-04] N86-26826
Flurazepam HCL's residual (hangover) effects upon actual driving performance
[VK-83-02] N86-26834
PSYCHOPHYSIOLOGY
Evaluation of helicopter helmet-mounted display mock-up N86-26806
PSYCHOTROPIC DRUGS
The effects of the antidepressants oxaprotline, mianserin, amitryptline and doxepin upon actual driving performance
[VK-83-05] N86-26827
PSYCHROMETERS
Camp Casey, South Korea Limited Surface Observations Climatic Summary (LISOCS). Parts A, C-F
[AD-A165562] N86-26773
PUBLIC HEALTH
Maryland Water Resources Research Center, fiscal year 1984 program report
[PB86-133253] N86-26721
PUBLIC LAW
Public laws of the 98th Congress relating to information policy
[CRS-TK-7885-F] N86-27130
PULSE COMPRESSION
High power microwave plasma pulse compression
[AD-A163298] N86-27077
PULSE DURATION
Initiator duration effect on pulsed chain reaction chemical laser scaling laws
[AD-A163367] N86-26620
PULSE MODULATION
Radiation of long electromagnetic waves by a modulated electron beam in the ionosphere
[AD-A163306] N86-26743
PULSE RADAR
Techniques for the automated observation of clouds
[AD-A165573] N86-26775
PULSED LASERS
KrF lasers as inertial fusion drivers
[DE86-003667] N86-26612
Transient conductance measurements and heat-flow analysis of pulsed-laser-induced melting of aluminum thin films
[DE86-003926] N86-26613
Initiator duration effect on pulsed chain reaction chemical laser scaling laws
[AD-A163367] N86-26620
Simple wavemeter for pulsed dye lasers
[DE86-004488] N86-26624
PULSED RADIATION
Effects of rapidly pulsed ion bombardment on microstructure and phase stability in a Ti-modified stainless steel
[DE86-004790] N86-26424
Transient conductance measurements and heat-flow analysis of pulsed-laser-induced melting of aluminum thin films
[DE86-003926] N86-26613
PULSES
Proposal for FEL experiments driven by the National Bureau of Standards' CW microtron
[AD-A163227] N86-26619
PURIFICATION
A silane-based polysilicon process N86-26696
Silicon purification using a Cu-Si alloy source N86-26697
PYRAZINES
Molecular jet study of solvation of pyrazine by small hydrocarbons
[AD-A164583] N86-26393

PYROELECTRICITY
Study of charge and polarization distribution in polymers
[AD-A164833] N86-26441
PYROLYSIS
Fluidized-bed development at JPL N86-26686
Fluidized-bed reactor modeling for production of silicon by silane pyrolysis N86-26687
Silicon production in an aerosol reactor N86-26688
Processes and process development N86-26690
A silane-based polysilicon process N86-26696
Use of laboratory simulated pyrolysis in tracing the history of sedimentary organic matter N86-26684
Electrical conductivity of carbonaceous chondrites and electric heating of meteorite parent bodies N86-27148
PYROLYTIC GRAPHITE
Spectroscopic investigations of organic molecules on graphite surfaces
[AD-A165431] N86-26403
PYROMETALLURGY
Refining of metallurgical-grade silicon N86-26691
PYROTECHNICS
Research in energetic compounds
[AD-A164901] N86-26462
PYRROLES
Structure/property studies of a heterocyclic conductive polymer
[AD-A164959] N86-26447

Q

Q FACTORS
Attenuation of seismic waves at regional distances
[AD-A164617] N86-26746
QUADRATIC EQUATIONS
Aeroelastic control of oblique-wing aircraft
[NASA-TM-86808] N86-26340
Annual progress report, 1 June 1984-31 May 1985
[AD-A164853] N86-26584
QUADRATURES
End-point corrected trapezoidal quadrature rules for singular functions
[AD-A163242] N86-27000
QUALITY CONTROL
Interactions measurement payload for shuttle (IMPS) definition phase study
[NASA-CR-177291] N86-26354
Evaluation of multilayer printed wiring boards by metallographic techniques: An illustrated guide to the preparation and inspection of plated-through hole test coupons based on the requirements of Mil-P-55110D
[NASA-RP-1161] N86-26639
Proceedings of the International Test and Evaluation Association 1984 Symposium (Step Session). Supplement
[AD-A163236] N86-26919
Quality control in research data bases: The US Environmental Protection Agency National Surface Water Survey Experience
[DE86-002249] N86-27117
QUANTILES
A Bahadur representation for quantiles of empirical DFs generalized U-statistic structure
[AD-A163311] N86-27029
QUANTITATIVE ANALYSIS
Experimental techniques for obtaining particle behavior in solid propellant combustion N86-26477
QUANTUM CHROMODYNAMICS
Theoretical elementary particle studies
[DE86-001165] N86-27054
QUANTUM ELECTRONICS
The demonstration of the feasibility of the tuning and stimulation of nuclear radiation
[AD-A164530] N86-27105
QUANTUM MECHANICS
Algorithms for supercomputers
[DE86-004480] N86-26930
Stochastic mechanics and the Kepler problem — plasma diagnostics
[REPT-70] N86-27034
Electronic transport in boron carbides
[DE86-003721] N86-27066
Field theoretic investigations on particle physics and cosmology
[DE86-004516] N86-27106
QUARKS
Theoretical elementary particle studies
[DE86-001165] N86-27054
QUENCHING (ATOMIC PHYSICS)
Bioanalytical applications of fluorescence quenching
[AD-A164867] N86-26399
QUENCHING (COOLING)
Effects of quenched-in hydrogen on deformation of iron single crystals
[DE86-001883] N86-26426
QUEUEING THEORY
Use of color in differentiating factor levels in simulation output (preliminary report)
[AD-A164851] N86-26947
Tape versus queue and stacks: The lower bounds — turing machines
[CWI-CS-R8519] N86-26979
Waiting-time approximations for cyclic-service systems with switchover times — local area networks
[CWI-OS-R8510] N86-27021
A double integral containing the modified Bessel function: Asymptotics and a device for computation — local area networks
[CWI-AM-R8507] N86-27022

R

RADAR ANTENNAS
Impulse radar sounding of level first-year sea ice from an icebreaker
[AD-A163229] N86-26671
RADAR DATA
Statistical analysis of digital Side-Looking Airborne Radar (SLAR) data — ESA programs
[DFVLR-FB-85-59] N86-26519
RADAR EQUIPMENT
Radar target classification studies: Software development and documentation
[AD-A164789] N86-26510
Weather radar studies
[AD-A165221] N86-26762
RADAR IMAGERY
Methods of obtaining offshore wind direction and sea-state data from X-band aircraft SAR (Synthetic Aperture Radar) imagery of coastal waters
[AD-A165552] N86-26517
Synthetic Aperture Radar (SAR) product simulation — ESA programs
[ESA-CR(F)-2149] N86-26518
RADAR MAPS
Use of a CO2 laser lidar for flight and penetration at very low altitudes N86-26326
RADAR TARGETS
Radar target classification studies: Software development and documentation
[AD-A164789] N86-26510
RADAR TRACKING
Robust and nonparametric detection of fading narrowband signals
[AD-A164924] N86-26512
Techniques for the automated observation of clouds
[AD-A165573] N86-26775
An efficient decision-making-free filter for processes with abrupt changes — aircraft tracking
[NLR-MP-84060-U] N86-27018
RADIATION COUNTERS
The response function of modulated grid Faraday cup plasma instruments
[NASA-CR-177312] N86-27076
RADIATION DAMAGE
Indium phosphide solar cells: status and prospects for use in space
[NASA-TM-87315] N86-26520
RADIATION DETECTORS
FLIR, NVG and HMS/D systems for helicopter operation: Review N86-26804
RADIATION DOSAGE
Optical model calculations of heavy-ion target fragmentation
[NASA-TM-87692] N86-27063
RADIATION EFFECTS
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 1
[AD-A164430] N86-26491
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 2
[AD-A164431] N86-26492
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 1. High energy pulse-device failure test. 50 ohms impedance 25,000 volts-4000 amps, 100 joules
[AD-A164432] N86-26493
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 2. High impedance/high voltage test 50 ohms-4500 volts
[AD-A164433] N86-26494
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 3. Low impedance/high voltage test, 5 ohms-4500 volts-1000 amps
[AD-A164434] N86-26495
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 4. Low impedance/low voltage test, 5 ohms-600 volts-120 amps
[AD-A164435] N86-26496
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 5. Equipment and devices oscilloscope photographs
[AD-A164436] N86-26497
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 6. Equipment and devices bench check measurement
[AD-A164437] N86-26498
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 7. Equipment and devices test descriptions
[AD-A164438] N86-26499
Applications of gamma-ray lasers
[AD-A164889] N86-26621
Mechanism of electromagnetic energy effects on the nervous system: Voltage-clamp study
[AD-A164653] N86-26798
RADIATION HAZARDS
Calculations on technical requirements for protection devices against a nuclear light flash N86-26819
Alternative methods for disposal of low-level radioactive wastes
[Tia1-900254] N86-27067
RADIATION PROTECTION
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 2
[AD-A164431] N86-26492
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 2. High impedance/high voltage test 50 ohms-4500 volts
[AD-A164433] N86-26494
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 3. Low impedance/high voltage test, 5 ohms-4500 volts-1000 amps
[AD-A164434] N86-26495
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 4. Low impedance/low voltage test, 5 ohms-600 volts-120 amps
[AD-A164435] N86-26496
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 5. Equipment and devices oscilloscope photographs
[AD-A164436] N86-26497
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 6. Equipment and devices bench check measurement
[AD-A164437] N86-26498
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 7. Equipment and devices test descriptions
[AD-A164438] N86-26499
RADIATION SHIELDING
Optical model calculations of heavy-ion target fragmentation
[NASA-TM-87692] N86-27063
RADIATION SOURCES
Directory of Mesoscale Solar Radiation Information Sources
[DE85-016869] N86-27175

RADIATION SPECTRA
Three-dimensional numerical simulations of FELs by transverse mode spectral method
[AD-A163297] N86-26503
RADIATIVE TRANSFER
Three-level energy balance climate model with topography, explicit radiative transfer, and explicit sea ice and snow mass budgets
[PB86-181799] N86-26638
RADICALS
Measurements of HO2 chemical kinetics with a new detection method
[NASA-CR-176825] N86-26388
Photoabsorption and photodissociation of molecules important in the interstellar medium
[NASA-CR-176828] N86-27171
RADIO COMMUNICATION
A decade of SETI observations N86-26905
Using the IRAS data to search in the asteroid belt for any potential evidence of galactic colonization N86-26906
JPL's role in the SETI program N86-26913
RADIO EQUIPMENT
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 1
[AD-A164430] N86-26491
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 2
[AD-A164431] N86-26492
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 1. High energy pulse-device failure test. 50 ohms impedance 25,000 volts-4000 amps, 100 joules
[AD-A164432] N86-26493
Electromagnetic pulse/transient threat testing of protection devices for amateur/military affiliate radio system equipment. Volume 3. Test data, electromagnetic pulse testing of protection devices. Section 2. High impedance/high voltage test 50 ohms-4500 volts
[AD-A164433] N86-26494
RADIO FREQUENCY INTERFERENCE
Goldstone field test activities: Sky survey N86-26912
RADIO SIGNALS
A decade of SETI observations N86-26905
The Berkeley Serendip Project N86-26906
RADIO TELESCOPES
A decade of SETI observations N86-26905
The Berkeley Serendip Project N86-26906
Overview of the NASA SETI Program N86-26909
RADIO TRANSMISSION
Electron density measurements in the middle atmosphere by radio propagation techniques N86-26733
RADIOACTIVE WASTES
Alternative methods for disposal of low-level radioactive wastes
[TI81-900254] N86-27067
RAIL TRANSPORTATION
Thermal response tests of candidate insulation systems for the chlorine tank car
[AD-A165293] N86-26451
RAIN
An evaluation of the capability of the surface condition analyzer (SCAN) sensors to measure runway water depth
[AD-A164719] N86-26603
Comparison of rainfall characteristics at Fortaleza (CEARA) and other nearby locations in Northeast Brazil
[INPE-3851-PRE/915] N86-26757
RAINSTORMS
Characteristics of western region flash flood events in GOES imagery and conventional data
[NOAA-TM-NESDIS-13] N86-26668
RAMAN LASERS
Cars diagnostics of high pressure combustion. 2. Measurements of NO, H2O and high pressure flames
[AD-A164610] N86-26395
KrF lasers as inertial fusion drivers
[DE86-003667] N86-26612
RAMAN SPECTRA
Spectroscopic investigations of organic molecules on graphite surfaces
[AD-A165431] N86-26403
In situ monitoring of electrochemical reactions by surface enhanced Raman scattering
[PB86-157500] N86-26407
RAMAN SPECTROSCOPY
Cars diagnostics of high pressure combustion. 2. Measurements of NO, H2O and high pressure flames
[AD-A164610] N86-26395
Spectroscopic investigations of organic molecules on graphite surfaces
[AD-A165431] N86-26403
RAMP FUNCTIONS
Exact integration algorithm for use with modal analysis
[DE85-018533] N86-26993
RANDOM PROCESSES
A note on convergence of functions of random elements
[AD-A163405] N86-27004
RANDOM VARIABLES
Research in distributed and parallel systems
[AD-A165486] N86-26984
On the likelihood ratio test for a change point in a sequence of independent exponentially distributed random variables — semisubmersible platform
[CWI-MS-R8507] N86-27019
RANGE (EXTREMES)
Proposal for FEL experiments driven by the National Bureau of Standards' CW microtron
[AD-A163227] N86-26619
Data tabulations and analysis of diurnal sea surface temperature variability observed at LOTUS (long-term upper ocean study)
[AD-A165406] N86-26790
RANGES (FACILITIES)
IRIG standard data format for interrange transmission of tracking data from computer to computer (2400 BPS synchronous EFG format 0)
[AD-A163251] N86-26982
RANK TESTS
Generalized order statistics, Bahadur representations and sequential nonparametric fixed-width confidence intervals
[AD-A163329] N86-27031
RANKING
A differential-integral equation modeling the dynamics of populations with a rank structure — mathematical model
[CWI-AM-R8511] N86-27025
RARE GASES
Analysis of the physical atomic forces between noble gas atoms, alkali ions and halogen ions
[NASA-TP-2568] N86-26413
RATES (PER TIME)
Development and evaluation of a prototype life preserver
[AD-A163224] N86-26297
Model studies of surface noise interference in ground-probing radar
[AD-A163208] N86-26500
The effects of arsine pressure on the compositions, carrier concentrations, mobilities and growth rates of epitaxial layers of Ga(x)In(1-x)As prepared by the VPE (Vapor-Phase Epitaxy)-hydride technique
[AD-A165278] N86-27097
RATIOS
Error properties of Hartley transform algorithms
[AD-A163217] N86-26934
RAY TRACING
Electron Bernstein wave current drive in the start-up phase of a tokamak discharge
[INPE-3868-PRE/926] N86-27074
RAYLEIGH DISTRIBUTION
Computation of the stationary values of the product of two Raleigh quotients
[AD-A164586] N86-27005
RDX
TNT RDX and HMX explosives in soils and sediments. Analysis techniques and drying losses
[AD-A163278] N86-26457
Smokeless propellants of improved performance N86-26489
REACTION KINETICS
Measurements of HO2 chemical kinetics with a new detection method
[NASA-CR-176825] N86-26388
DF vibrational relaxation
[AD-A163421] N86-26392
A model for the kinetics of a solar-pumped long path laser experiment
[NASA-TM-87668] N86-26616
Silicon production in an aerosol reactor N86-26688
The neutral/ion chemistry of sodium in the stratosphere and mesosphere
[AD-A164636] N86-26747
Microscopic control of semiconductor interface reactivity
[AD-A164560] N86-27033
Stability and properties of compositionally modulated films
[AD-A164574] N86-27094
REACTOR PHYSICS
Fusion reactor physics and technology studies
[DE86-004527] N86-27064
REACTOR SAFETY
Comparison of high temperature steam oxidation behavior of Zircaloy-4 versus austenitic and ferritic steels under light water reactor safety aspects — software reuse
[KFK-3994] N86-26428
REACTOR TECHNOLOGY
Silicon production in an aerosol reactor N86-26688
READING
A paradigm for reliable clock synchronization
[AD-A164819] N86-27040
REAL TIME OPERATION
Synthetic real-time relief display all-weather airborne missions N86-26321
Process synchronization and data communication between processes in real time local area networks
[AD-A164860] N86-26511
Megatrend solutions in physical geodesy
[PB86-173317] N86-26754
JPL's role in the SETI program N86-26913
RECEIVERS
Hydraulic power modulation laminar proportional amplifier development
[AD-A163390] N86-26579
Radiation of long electromagnetic waves by a modulated electron beam in the ionosphere
[AD-A163306] N86-26743
An infrared search for extraterrestrial laser signals N86-26907
RECOGNITION
The role of elaborations in instructional texts: Learning to use the appropriate procedure at the appropriate time
[AD-A165211] N86-26833
RECOMBINATION REACTIONS
Effects of impurities on silicon solar-cell performance N86-26680
Requirements for high-efficiency solar cells N86-26681
RECOMMENDATIONS
Transportation safety recommendations adopted during the month of December 1985
[PB85-916612] N86-26301
RECRYSTALLIZATION
Amorphization and recrystallization processes in monocrystalline beta silicon carbide thin films
[DE86-004797] N86-27101
RECTANGULAR PLATES
Rectangular plate is proposed as an IES modal test structure
[DE85-018274] N86-26643
RECTANGULAR WAVEGUIDES
Electromagnetic penetration through a slot into a rectangular waveguide
[AD-A164590] N86-26506
RECURSIVE FUNCTIONS
Exact integration algorithm for use with modal analysis
[DE85-018533] N86-26993
A recursive boundary element with initial error investigation
[AD-A163563] N86-26095
RECYCLING
Design concepts and advanced manipulator development for nuclear fuel cycle facilities
[DE85-01771] N86-26636
Economics of polysilicon process: A view from Japan N86-26682
REDUCED GRAVITY
Particle formation and interaction N86-27139
Impact experimentation and the microgravity environment: An overview N86-27151
Exobiology experiment concepts for space station N86-27152
Nucleation experiments in a microgravity environment N86-27158
Grain dynamics in zero gravity N86-27164
A system for conducting igneous petrology experiments under controlled redox conditions in reduced gravity N86-27166
REDUCED ORDER FILTERS
Aeroelastic control of oblique-wing aircraft
[NASA-TM-86808] N86-26340
REDUCTION (CHEMISTRY)
Photoelectrochemical reduction of carbon dioxide
[PB86-157861] N86-26406
REENTRY PHYSICS
Self-adaptive difference method for the effective solution of computationally complex problems of boundary layer theory
[NASA-TM-88440] N86-26549
REENTRY SHIELDING
Oxidation and emittance of superalloys in heat shield applications
[NASA-TP-2578] N86-26412

REENTRY VEHICLES
An adaptive guidance algorithm for an aerodynamically assisted orbital plane change maneuver
[NASA-CR-177296] N86-26933
REFERENCE ATMOSPHERES
Rocket techniques used to measure the neutral atmosphere N86-26726
REFLECTANCE
Transient conductance measurements and heat-flow analysis of pulsed-laser-induced melting of aluminum thin films
[DE86-003928] N86-26613
Colossus revisited: A review and extension of the Marsh-Schulkin shallow water transmission loss model (1962)
[AD-A164566] N86-27046
REFLECTION
Optical absorption characteristics of aerosols
[AD-A165216] N86-26401
Investigations of ultrasonic wave interactions at boundaries separating anisotropic materials
[DE86-004953] N86-27050
REFLECTORS
The negligible effect of non-Gaussian surface deviations in large MM-Lambda reflectors' aperture efficiency and the performance of Itapetinga 45-ft antenna at Lambda = 3.3 MM
[INPE-3837-PRE/906] N86-26488
REFRACTIVITY
Optical absorption characteristics of aerosols
[AD-A165216] N86-26401
Investigations of the micro-turbulence in the bottom of the boundary layer
[AD-A165306] N86-26748
REFRIGERANTS
Modeling of a heat pump charged with a non-azeotropic refrigerant mixture
[PB86-168267] N86-26712
REGIONS
Directory of research publications
[AD-A164875] N86-27125
REGRESSION ANALYSIS
Wheat area estimation using digital LANDSAT MSS data and aerial photographs
[INPE-3824-PRE/900] N86-26667
Model comparison in vertical crustal motion estimation using leveling data
[PB86-175551] N86-26753
Gamma processes
[AD-A165390] N86-27038
REGULARITY
Regularity for a singular conservation law
[AD-A163620] N86-26576
REINFORCED SHELLS
The crack problem in a reinforced cylindrical shell
[NASA-CR-176686] N86-26648
REINFORCING MATERIALS
Advanced materials research status and requirements. Volume 2, appendix: Material properties data review
[AD-A165339] N86-26386
REISSNER THEORY
The crack problem in a reinforced cylindrical shell
[NASA-CR-176686] N86-26648
Line spring model and its applications to part-through crack problems in plates and shells
[NASA-CR-176685] N86-26649
RELATIVISTIC PARTICLES
Dynamics of non-relativistic equatorial electrons and protons inside the plasmasphere
[INPE-3833-PRE/905] N86-26737
RELAXATION TIME
DF vibrational relaxation
[AD-A163421] N86-26392
RELIABILITY
SPECFUN - a portable special function package
[DE86-004060] N86-26929
STARS (Software Technology for Adaptable and Reliable Systems) methodology area summary. Volume 1: Organization and plans
[AD-A163270] N86-26936
A paradigm for reliable clock synchronization
[AD-A164819] N86-27040
RELIABILITY ENGINEERING
Orbit Transfer Rocket Engine Technology Program: Advanced engine study, task D.1/D.3
[NASA-CR-175084] N86-26369
Software testing of multiprocessor systems
[AD-A165367] N86-26971
RELIEF MAPS
Synthetic real-time relief display all-weather airborne missions N86-26321
Applications of digital terrain data in flight operations N86-26324
Use of a CO2 laser lidar for flight and penetration at very low altitudes N86-26326
REMOTE CONTROL
Design concepts and advanced manipulator development for nuclear fuel cycle facilities
[DE85-017711] N86-26636
REMOTE MANIPULATOR SYSTEM
Design concepts and advanced manipulator development for nuclear fuel cycle facilities
[DE85-01771] N86-26636
REMOTE SENSING
A proposal for a project entitled Assessment of Forest Resources in Uruguay submitted to the United Nations Industrial Development Organization (UNIDO)
[INPE-3828-NTE/255] N86-26666
Research on enhancing the utilization of digital multispectral data and geographic information systems in global habitability studies
[NASA-CR-177294] N86-26669
Research, investigations and technical developments: National mapping program, 1983-1984
[PB86-166097] N86-26675
An investigation of the marine boundary layer during cold air outbreak
[NASA-CR-177287] N86-26758
Objective analysis of tidal fields in the Atlantic and Indian Oceans
[NASA-TM-87773] N86-26782
Remote sensing and oceanographic equipment technology: Some present systems and future needs, revised
[PB86-156502] N86-26791
How to make a comet N86-27163
REMOTE SENSORS
Techniques for the automated observation of clouds
[AD-A165573] N86-26775
REMOTELY PILOTED VEHICLES
Aquila remotely piloted vehicle: Recent developments and alternatives
[AD-A164597] N86-26333
REMOVAL
Evaluation of charged fog for smoke clearing shipboard fires
[AD-A165551] N86-26300
Paint removal process
[AD-D012167] N86-26436
Contoured punch tool for removing semi-tubular rivets
[AD-D012172] N86-26631
RENE 41
Buckling behavior of Rene 41 tubular panels for a hypersonic aircraft wing
[NASA-TM-86798] N86-26653
REPLACING
Application of conductive polymer technology to the production of a novel multilayer capacitor
[AD-A165212] N86-26450
REPRODUCTION (BIOLOGY)
Origin of life and iron-rich clays N86-26866
RESEARCH
Directory of research publications
[AD-A164875] N86-27125
A summary of the Naval Postgraduate School research program
[AD-A164845] N86-27131
RESEARCH AIRCRAFT
Summary of results of NASA F-15 flight research program
[NASA-TM-86811] N86-26277
X-29A technology demonstrator flight test program overview
[NASA-TM-86809] N86-26328
RESEARCH AND DEVELOPMENT
Advanced propulsion systems and alternative fuels for non-highway transportation. An assessment of unique and priority research and development opportunities. Volume 3. A compendium of research and development
[DE86-002975] N86-26456
Sodium-sulfur battery development, phase VB
[DE86-003484] N86-26701
Technology transfer at DARPA: The Defense Advanced Research Projects Agency. Executive summary
[AD-A164503] N86-27110
Report of the West Germany federal government on research
[ESA-88-96940] N86-27116
RESEARCH MANAGEMENT
Maryland Water Resources Research Center, fiscal year 1984 program report
[PB86-133253] N86-26721
Biotechnica '85 International Congress for Biotechnology
[AD-A165415] N86-26794
Monitoring and Ada software development project
[AD-A165324] N86-26962
Creativity in Science - a symposium
[DE86-003289] N86-27109
Recent Naval Postgraduate School publications
[AD-A164846] N86-27122
RESEARCH VEHICLES
Impulse radar sounding of level first-year sea ice from an icebreaker
[AD-A163229] N86-26871
RESERVOIRS
History matching by spline approximation and regularization in single-phase areal reservoirs
[NASA-CR-178067] N86-26664
HEC-5Q: System water quality modeling
[AD-A164832] N86-26717
RESIDUAL STRESS
Nonlinear damage analysis: Postulate and evaluation
[NASA-CR-168171] N86-26652
Residual stress measurements on M1 tank weldments
[AD-A163330] N86-26657
RESINS
Acid-catalyzed degradation of Poly(2-Butyl-1,3,6-Trioxocane)
[AD-A165327] N86-26452
RESISTOJET ENGINES
Theoretical study on the effect of the design of small (mili-Newton) thruster jets on molecular contamination for the space station
[NASA-CR-177263] N86-26358
RESONANCE
Linear resonance cooler
[AD-A165492] N86-26483
RESONANCE FLUORESCENCE
Resonance fluorescence of a two-level atom near a rough metal surface
[AD-A163219] N86-27056
RESONANT VIBRATION
Residue formulas for meromorphic matrices — vibration analysis
[CWI-OS-R8506] N86-27020
RESOURCES MANAGEMENT
Research on enhancing the utilization of digital multispectral data and geographic information systems in global habitability studies
[NASA-CR-177294] N86-26669
RETINA
Calculations on technical requirements for protection devices against a nuclear light flash N86-26819
REVERSE FIELD PINCH
Kinetic stabilization of field-reversed configurations
[DE86-003655] N86-27039
REYNOLDS NUMBER
Factors affecting the vertical motion of a zero-pressure, polyethylene, free balloon
[AD-A164596] N86-26290
Viscid/inviscid interaction analysis of subsonic turbulent trailing-edge flows
[AD-A165207] N86-26292
RIBBONS
A metallurgical route to solar-grade silicon N86-26693
RIBONUCLEIC ACIDS
Stereoselective aminoacylation of RNA N86-26875
A comparative study of prebiotic and present day translational models N86-26877
Higher-order structure of rRNA N86-26888
The rRNA evolution and procaryotic phylogeny N86-26889
RIDING QUALITY
Study on using a digital ride quality augmentation system to trim an engine-out in a Cessna 402B
[NASA-CR-177272] N86-26342
RING CURRENTS
Proposal for FEL experiments driven by the National Bureau of Standards' CW microtron
[AD-A163227] N86-26619
RING STRUCTURES
A centrifugal type gasket for bearings
[AD-A164796] N86-26632
RISK
Integrated risk/cost planning models for the US Air Traffic system
[NASA-CR-177274] N86-26312
RIVERS
HEC-5Q: System water quality modeling
[AD-A164832] N86-26717
Influence of the Yukon River on the Bering Sea
[NASA-CR-177310] N86-26783
RIVETED JOINTS
Some tests to assess the effect of crack stoppers on the fatigue life of center-notched specimens — semisubmersible platform
[NLR-TR-84051-U] N86-26662
RIVETS
Contoured punch tool for removing semi-tubular rivets
[AD-D012172] N86-26631
ROBOTICS
Seam tracking performance of a Coaxial Weld Vision System and pulsed welding
[NASA-CR-178816] N86-26627

ROBUSTNESS (MATHEMATICS)
SPECFUN - a portable special function package
[DE86-004090] N86-26929
On the least-informative distribution in a contamination neighborhood
[AD-A163312] N86-27030
ROCKET ENGINE DESIGN
Orbit Transfer Rocket Engine Technology Program: Advanced engine study, task D.1/D.3
[NASA-CR-175084] N86-26369
ROCKET ENGINES
Safety testing of missile and rocket systems employing manned launch stations
[AD-A165395] N86-26372
ROCKET EXHAUST
Operational use of the REEDM (Rocket Exhaust Effluent Diffusion Model)
[AD-A164965] N86-26371
ROCKET LAUNCHING
Safety testing of missile and rocket systems employing manned launch stations
[AD-A165395] N86-26372
ROCKET SOUNDING
Middle Atmosphere Program. Handbook for MAP, volume 19
[NASA-CR-176800] N86-26725
Rocket techniques used to measure the neutral atmosphere N86-26726
Rocket techniques for measurement of ozone and related neutral minor constituents N86-26727
Measurements of X-ray energy deposition in the middle atmosphere N86-26728
DC-probe measurements in the middle atmosphere N86-26731
Rocket probe techniques for measuring bulk ion properties N86-26732
Electron density measurements in the middle atmosphere by radio propagation techniques N86-26733
ROCKET-BORNE INSTRUMENTS
Review of rocket-borne ion mass spectrometry in the middle atmosphere N86-26730
RODS
Lightning discharge protection rod
[NASA-CASE-LAR-13470-1] N86-26296
ROOFS
Experimental polyurethane foam (PUF) roofing systems. 3. Naval Station, Roosevelt Roads, Puerto Rico, and Naval Facility, Cape Hatteras, North Carolina
[AD-A164833] N86-26444
ROTARY GYROSCOPES
Ballistic flight of a projectile with two precessional modes
[DE86-003176] N86-26350
ROTARY WINGS
Six degree-of-freedom LIVE isolation systems, part 1
[NASA-CR-177928] N86-26331
ROTATING DISKS
The examination of three scuffing wear disc specimens from University College, Cardiff — gear box wear
[AMTE(M)-TM-85219] N86-26630
ROTATION
Kinetic stabilization of field-reversed configurations
[DE86-003655] N86-27039
ROTORS
The effects on rotor nonuniform inflow harmonic content of uneven circumferential distribution of jet engine inlet guide vanes
[AD-A164629] N86-26291
Advanced propulsor design studies
[AD-A164983] N86-26634
ROUGHNESS
The fractal geometry of nature; its mathematical basis and application to computer graphics
[AD-A165185] N86-27014
ROUTES
Exploiting capability constraints to solve global, two dimensional path planning problems
[AD-A164973] N86-27132
RUBY LASERS
Cloud base heights from lidar, rotating beam ceilometer and pilot reports compared by experiment and theory
[PB86-159694] N86-26778
RUN TIME (COMPUTERS)
Increasing processor utilization during parallel computation rundown
[NASA-TM-87349] N86-26914
RUNGE-KUTTA METHOD
Pseudo-time algorithms for the Navier-Stokes equations N86-26564
RUNWAYS
Math model study of a proposed glide slope for runway 13R, Dallas-Fort Worth Airport, Texas
[AD-A164907] N86-26315
Bomb crater repair techniques for permanent airfields. Report 3. Series 4 tests
[AD-A164682] N86-26345
Comparative study of nondestructive pavement testing, WES (Waterways Experiment Station) NDT (nondestructive tests) methodologies
[AD-A163379] N86-26480
An evaluation of the capability of the surface condition analyzer (SCAN) sensors to measure runway water depth
[AD-A164719] N86-26603
RUPTURING
Pressure systems energy release protection (gas pressurized systems)
[NASA-CR-178090] N86-26628
RUTHENIUM COMPOUNDS
Synthesis and properties of novel electroactive organometallic polymers
[DE86-004951] N86-26455

S

SABOT PROJECTILES
Material property and fracture testing of 7075-T6 extruded aluminum
[AD-A164933] N86-26421
SAFETY
Safety testing of missile and rocket systems employing manned launch stations
[AD-A165395] N86-26372
Conceptual development of strain-gage signal interpretation system for jet engine applications
[AD-A165489] N86-26608
SAFETY DEVICES
German development of a LC-flashblindness device N86-26820
SAFETY FACTORS
Upgrade of weather forecast support to shuttle operations
[AD-A164967] N86-26761
SAFETY MANAGEMENT
Transportation safety recommendations adopted during the month of December 1985
[PB85-916612] N86-26301
Pressure systems energy release protection (gas pressurized systems)
[NASA-CR-178090] N86-26628
Upgrade of weather forecast support to shuttle operations
[AD-A164967] N86-26761
SAHARA DESERT (AFRICA)
Genesis of major dust storms in West Africa during the summer of 1974
[AD-A165457] N86-26763
SALINITY
Application of LANDSAT TM images to assess circulation and dispersion in coastal lagoons
[NASA-CR-177315] N86-26665
Organic S13C values vary slightly with salinity in microbial mats at Guerrero Negro, Baja California Sur, Mexico: implications for stromatolite S13C values N86-26900
SAMARIUM
Experimental determination of the electronic structure of small metal particles
[AD-A163406] N86-27091
SAMPLING
Solid sorbent air sampler
[NASA-CASE-MSC-20653-1] N86-26595
Gravity gradiometer survey errors
[AD-A165575] N86-26749
Use of color in differentiating factor levels in simulation output (preliminary report)
[AD-A164651] N86-26947
Asymptotic normality of U-statistics based on trimmed samples
[AD-A163346] N86-27032
Cosmic dust collection with a sub-satellite tethered to a space station N86-27146
New techniques for the detection and capture of micrometeoroids N86-27167
SAPPHIRE
Electron induced conductivity of Al2O3 as pertaining to thermionic integrated circuits
[AD-A165589] N86-26539
SATELLITE ANTENNAS
A loop antenna for a VLF (Very Low Frequency) satellite transmitter
[AD-A164652] N86-26506
SATELLITE ATTITUDE CONTROL
Modelling of a cold gas jet system for satellite attitude control
[INPE-3853-PRE/917] N86-26356
Further work on POPSAT. Volume 1: Executive summary — space station power supplies
[ESA-CR(P)-2148-VOL-1] N86-26364
Further work on POPSAT. Volume 2: Technical results — space station power supplies
[ESA-CR(P)-2148-VOL-2] N86-26365
Attitude estimation and control of maneuvering spacecraft — graph theory
[NLR-MP-84036-U] N86-26366
SATELLITE CONTROL
Study of Navsat control segment characteristics. Part 1: Elements of a control segment concept — space station power supplies
[NLR-TR-84066-L-PT-1] N86-26361
Study of Navsat control segment characteristics. Part 2: Orbit computation aspects — space station power supplies
[NLR-TR-84066-L-PT-2] N86-26362
Study of Navsat control segment characteristics. Part 3: Executive summary -- space station power supplies
[NLR-TR-84066-L-PT-3] N86-26363
SATELLITE DOPPLER POSITIONING
Plate motions and deformations from geologic and geodetic data
[NASA-CR-177299] N86-26741
SATELLITE IMAGERY
A proposal for a project entitled Assessment of Forest Resources in Uruguay submitted to the United Nations Industrial Development Organization (UNIDO)
[INPE-3828-NTE/255] N86-26666
Wheat area estimation using digital LANDSAT MSS data and aerial photographs
[INPE-3824-PRE/900] N86-26667
Characteristics of western region flash flood events in GOES imagery and conventional data
[NOAA-TM-NESDIS-13] N86-26668
A multiindex multitemporal approach to map crops in the early growing season: An application to two Italian irrigation districts: East Sesia and Grande Bonifica Ferrarese — flue gases
[ICW-1611] N86-26674
Generation of available potential energy and the energy cycle during the global weather experiment
[NASA-CR-177872] N86-26756
SATELLITE INSTRUMENTS
Conception and optimization of an infrared thermal sensor using the value analysis method
[INPE-3854-PRE/918] N86-26597
SATELLITE LIFETIME
Analysis of orbital satellite storage
[AD-A164971] N86-26360
SATELLITE NETWORKS
Study of Navsat control segment characteristics. Part 1: Elements of a control segment concept — space station power supplies
[NLR-TR-84066-L-PT-1] N86-26361
Study of Navsat control segment characteristics. Part 2: Orbit computation aspects — space station power supplies
[NLR-TR-84066-L-PT-2] N86-26362
Study of Navsat control segment characteristics. Part 3: Executive summary — space station power supplies
[NLR-TR-84066-L-PT-3] N86-26363
Commercial SATCOM subarchitecture assessments and initial concepts
[AD-A165549] N86-26516
SATELLITE OBSERVATION
Characteristics of western region flash flood events in GOES imagery and conventional data
[NOAA-TM-NESDIS-13] N86-26668
A simulation analysis of the fate of phytoplankton within the mid-Atlantic bight
[NASA-CR-177265] N86-26670
A review of methods to track oil in arctic waters
[AD-A164679] N86-26716
SAROS: Solar Active Region Observations from Spacelab
[NASA-CR-177878] N86-27173
SATELLITE ORBITS
ENVIROSAT-2000 report: Federal agency satellite requirements
[NASA-TM-88752] N86-26355
Analysis of orbital satellite storage
[AD-A164971] N86-26360
Study of Navsat control segment characteristics. Part 2: Orbit computation aspects — space station power supplies
[NLR-TR-84066-L-PT-2] N86-26362
Study of Navsat control segment characteristics. Part 3: Executive summary — space station power supplies
[NLR-TR-84066-L-PT-3] N86-26363
SATELLITE PERTURBATION
Further work on POPSAT. Volume 1: Executive summary — space station power supplies
[ESA-CR(P)-2148-VOL-1] N86-26364

Further work on POPSAT. Volume 2: Technical results — space station power supplies
[ESA-CR(P)-2148-VOL-2] N86-26365
The study of gravity field estimation procedures
[AD-A164564] N86-26745

SATELLITE ROTATION
Magnetic spin reduction system for free spinning objects
[NASA-CASE-MFS-25966-1] N86-26352

SATELLITE TRACKING
Further work on POPSAT. Volume 1: Executive summary — space station power supplies
[ESA-CR(P)-2148-VOL-1] N86-26364
Further work on POPSAT. Volume 2: Technical results — space station power supplies
[ESA-CR(P)-2148-VOL-2] N86-26365
Study of ionospheric and tropospheric models — satellite tracking
[ESA-CR(P)-2157] N86-26750

SATELLITE TRANSMISSION
Study of Navsat control segment characteristics. Part 1: Elements of a control segment concept — space station power supplies
[NLR-TR-84066-L-PT-1] N86-26361

SCALE EFFECT
The air-injection method of fixing boundary-layer transition and investigating scale effects — Spacelab human physiology payload
[RAE-TR-85025] N86-26542

SCALING LAWS
Initiator duration effect on pulsed chain reaction chemical laser scaling laws
[AD-A163387] N86-26620

SCANNERS
Concept study of a multiple beam lens antenna with an internal phase shift mask
[AD-A165277] N86-26535

SCANNING
Spectroscopy of surface adsorbed molecules (scanning tunneling microscopy)
[DE86-004508] N86-27067

SCATTERING CROSS SECTIONS
Weather radar studies
[AD-A165221] N86-26782
Photoabsorption and photodissociation of molecules important in the interstellar medium
[NASA-CR-176828] N86-27171

SCHEDULING
A schedule-based approach for flow-control in data communication networks
[AD-A163253] N86-26502

SCHUMANN-RUNGE BANDS
Determination of band oscillator strengths of atmospheric molecules from high resolution vacuum ultraviolet cross section measurements
[NASA-CR-177293] N86-26724

SCIENTISTS
Creativity in Science - a symposium
[DE86-003289] N86-27109

SEA ICE
Three-level energy balance climate model with topography, explicit radiative transfer, and explicit sea ice and snow mass budgets
[PB86-181799] N86-26638
Impulse radar sounding of level first-year sea ice from an icebreaker
[AD-A163229] N86-26671
A study of sea ice kinematics and their relationship to arctic ambient noise. Part 3, Section 1: Ambient noise. Section 2: Ambient noise
[AD-A165304] N86-26788
A study of sea ice kinematics and their relationship to arctic ambient noise. Part 3, section 3: Ambient noise
[AD-A165305] N86-26789

SEA STATES
Methods of obtaining offshore wind direction and sea-state data from X-band aircraft SAR (Synthetic Aperture Radar) imagery of coastal waters
[AD-A165552] N86-26517

SEA SURFACE TEMPERATURE
Data tabulations and analysis of diurnal sea surface temperature variability observed at LOTUS (long-term upper ocean study)
[AD-A165406] N86-26790

SEA WATER
A review of methods to track oil in arctic waters
[AD-A164679] N86-26716

SEAMS (JOINTS)
Seam tracking performance of a Coaxial Weld Vision System and pulsed welding
[NASA-CR-178816] N86-26627

SEATS
Crash-resistant crewseat limit-load optimization through dynamic testing with cadavers
[AD-A164828] N86-26298

SECURITY
A summary of the Naval Postgraduate School research program
[AD-A164845] N86-27131

SEDATIVES
Driving performance the day after use of loprazolam, flunitrazepam and placebo
[VK-83-04] N86-26826
Flurazepam HCL's residual (hangover) effects upon actual driving performance
[VK-83-02] N86-26834

SEDIMENT TRANSPORT
The Atchafalaya River Delta. Report 7. Analytical analysis of the development of the Atchafalaya River Delta
[AD-A164931] N86-26673

SEDIMENTS
TNT RDX and HMX explosives in soils and sediments. Analysis techniques and drying losses
[AD-A163278] N86-26457
Application of LANDSAT TM images to assess circulation and dispersion in coastal lagoons
[NASA-CR-177315] N86-26665
Influence of the Yukon River on the Bering Sea
[NASA-CR-177310] N86-26783
Earth's early atmosphere as seen from carbon and nitrogen isotopic analysis of Archean sediments N86-26883
Isotopic, petrologic and biogeochemical investigations of banded iron-formations N86-26885
Recent progress in Precambrian paleobiology N86-26887
Acoustic normal modes using the propagator matrix technique for a stratified ocean overlaying an inhomogeneous anisotropic porous bed
[AD-A165436] N86-27049
Sediment-transport (wind) experiments in zero-gravity N86-27138
Sediment-transport experiments in zero-gravity N86-27153
The initiation of grain movement by wind N86-27157

SEISMIC WAVES
Attenuation of seismic waves at regional distances
[AD-A164817] N86-26748
MSS evaluation. Revision 1
[AD-A164589] N86-27047

SEISMOLOGY
MSS evaluation. Revision 1
[AD-A164589] N86-27047

SEMANTICS
Operational semantics of a parallel object-oriented language — mathematical model
[CWI-CS-R8515] N86-26977
An operational semantics for process algebra — turing machines
[CWI-CS-R8522] N86-26981
Ready trace semantics for concrete process algebra with priority operator — biological model
[CWI-CS-R8517] N86-27026

SEMICONDUCTOR LASERS
Topical Meeting on Picosecond Electronics and Optoelectronics: A digest of technical papers
[AD-A164598] N86-27069

SEMICONDUCTORS (MATERIALS)
Photoelectrochemical reduction of carbon dioxide
[PB86-157864] N86-26406
Proceedings of the Flat-Plate Solar Array Project Workshop on Low-Cost Polysilicon for Terrestrial Photovoltaic Solar-Cell Applications
[NASA-CR-176816] N86-26679
Economics of polysilicon process: A view from Japan N86-26682
Development of the silane process for the production of low-cost polysilicon N86-26685
Processes and process development in Japan N86-26689
Processes and process development N86-26690
Refining of metallurgical-grade silicon N86-26691
Topical Meeting on Picosecond Electronics and Optoelectronics: A digest of technical papers
[AD-A164598] N86-27069
Experimental determination of the electronic structure of small metal particles
[AD-A163406] N86-27091
Microscopic control of semiconductor interface reactivity
[AD-A164560] N86-27093
The effects of arsine pressure on the compositions, carrier concentrations, mobilities and growth rates of epitaxial layers of Ga(x)In(1-x)As prepared by the VPE (Vapor-Phase Epitaxy)-hydride technique
[AD-A165278] N86-27097
Transient transport in binary and ternary semiconductors
[AD-A165464] N86-27098
Solid-phase equilibria in the Au-Ga-Sb, Au-In-As, and Au-In-Sb ternaries
[AD-A165469] N86-27099
Entropy-driven loss of gas-phase Group 5 species from GOLD/3-5 compound semiconductor systems
[AD-A165584] N86-27100

SENSITIVITY
Methods of obtaining offshore wind direction and sea-state data from X-band aircraft SAR (Synthetic Aperture Radar) imagery of coastal waters
[AD-A165552] N86-26517
Computer visual simulation of contrast sensitivity deficits induced by laser and chemical antidote exposure N86-26613

SENSORY PERCEPTION
Perceptual and physiological responses during exercise in cool and cold water
[AD-A165491] N86-26800

SEPARATED FLOW
Analysis of transitional separation bubbles on infinite swept wings
[NASA-CR-3956] N86-26288
Application of a computational model for vortex generators in subsonic internal flows
[NASA-TM-87327] N86-26545

SEPARATORS
Nickel-hydrogen separator development
[NASA-TM-87332] N86-26677

SEQUENCING
Summer study program in geophysical fluid dynamics, Woods Hole Oceanographic Institution: Chaos
[AD-A164601] N86-26580
Acquiring procedural skills from lesson sequences
[AD-A164580] N86-26829

SERIES (MATHEMATICS)
Summer study program in geophysical fluid dynamics, Woods Hole Oceanographic Institution: Chaos
[AD-A164601] N86-26580

SERVICE LIFE
Bomb crater repair techniques for permanent airfields. Report 3. Series 4 tests
[AD-A164682] N86-26345
Image intensifiers: Past and present N86-26803

SERVOMECHANISMS
Design concepts and advanced manipulator development for nuclear fuel cycle facilities
[DE85-01771] N86-26636

SHAFTS (MACHINE ELEMENTS)
Advanced propulsor design studies
[AD-A164983] N86-26634

SHAKERS
Planar oscillatory stirring apparatus
[NASA-CASE-MFS-26002-1-CU] N86-26598

SHALLOW WATER
Experiments on sound propagation over sloped bottoms
[AD-A163431] N86-27044
Colossus revisited: A review and extension of the Marsh-Schulkin shallow water transmission loss model (1962)
[AD-A164588] N86-27048

SHEAR LAYERS
Numerical simulation of turbulent flames using vortex methods
[AD-A164080] N86-26390
Transverse vorticity measurements using an array of four hot-wire probes
[NASA-CR-178098] N86-27042

SHEAR PROPERTIES
Effect of liquid composition on enhanced flow due to surface shear in the contact line region: Constant vapor pressure boundary condition
[AD-A165545] N86-26587

SHELLS (STRUCTURAL FORMS)
Thermal response tests of candidate insulation systems for the chlorine tank car
[AD-A165293] N86-26451
Line spring model and its applications to part-through crack problems in plates and shells
[NASA-CR-176668] N86-26649

SHIP HULLS
Evaluation of charged fog for smoke clearing shipboard fires
[AD-A165551] N86-26300
Interframe buckling of aluminium alloy stiffened plating — warship materials
[AMTE(S)-R-85104] N86-26654

SHIPS
Effect of chromium addition to the low temperature hot corrosion resistance of platinum modified aluminide coatings
[AD-A164755] N86-26420
Preliminary evaluation of a compound cycle engine for shipboard gensets
[NASA-CR-179451] N86-26629

Impulse radar sounding of level first-year sea ice from an icebreaker
[AD-A163229] N86-26671

SHOCK DISCONTINUITY
Uniformly high order accurate essentially non-oscillatory schemes 3
[NASA-CR-178101] N86-26287
AZTEC: A front tracking code based on Godunov's method N86-26566

SHOCK LOADS
Probabilistic analysis of nonlinear structures subjected to transient loads. Part 1
[AD-A163235] N86-26655

SHOCK WAVES
A fundamental mathematical theory for thermal explosions in rigid solids and in gases
[AD-A164692] N86-26396
Multiple steady states for characteristic initial value problems N86-26555
Conditions for the construction of multi-point total variation diminishing difference schemes N86-26565
On numerical dispersion by upwind differencing N86-26567
AZTEC: A front tracking code based on Godunov's method N86-26568
A study of the fluid-dynamic pressure fields on compressor reed valves
[AD-A164102] N86-26578
High strain rate material behavior
[AD-A165214] N86-26659
Application of flux-corrected transport to TTCP joint launch blast computational effort
[AD-A163332] N86-26941
A planetary ultra hypervelocity impact mechanics and shock wave science facility N86-27141
Theoretical study of the X-ray emission from astrophysical shock waves
[NASA-CR-177318] N86-27176

SHORT WAVE RADIATION
Model studies of surface noise interference in ground-probing radar
[AD-A163208] N86-26500
A plasma ultraviolet source for short wavelength lasers
[AD-A165430] N86-26623

SHORT WAVE RADIO TRANSMISSION
Data transmission systems
[AD-A163778] N86-26490

SIDE-LOOKING RADAR
Statistical analysis of digital Side-Looking Airborne Radar (SLAR) data — ESA programs
[DFVLR-FB-85-59] N86-26519

SIDEBANDS
Three-dimensional numerical simulations of FELs by transverse mode spectral method
[AD-A163297] N86-26503

SIDELOBES
A unifying approach to linear and nonlinear array processing: A tutorial
[AD-A164777] N86-27012

SIGNAL ANALYZERS
Error properties of Hartley transform algorithms
[AD-A163217] N86-26934

SIGNAL DETECTION
Mixed-order finite elements for the solution of three-dimensional electromagnetic fields
[AD-A164786] N86-26509
Robust and nonparametric detection of fading narrowband signals
[AD-A164924] N86-26512
Finite length discrete matched filters
[AD-A164869] N86-26531
Attenuation of seismic waves at regional distances
[AD-A164617] N86-26746
Goldstone field test activities: Sky survey N86-26912
JPL's role in the SETI program N86-26913
MSS evaluation. Revision 1
[AD-A164589] N86-27047

SIGNAL DETECTORS
Finite length discrete matched filters
[AD-A164869] N86-26531

SIGNAL FADING
Robust and nonparametric detection of fading narrowband signals
[AD-A164924] N86-26512

SIGNAL PROCESSING
Conceptual development of strain-gage signal interpretation system for jet engine applications
[AD-A165489] N86-26606
Stanford Hardware Development Program N86-26910
Goldstone field test activities: Target search N86-26911
Error properties of Hartley transform algorithms
[AD-A163217] N86-26934
A review of maximum entropy spectral analysis and applications to Fourier Spectroscopy
[AD-A164698] N86-27011

SIGNAL REFLECTION
Model studies of surface noise interference in ground-probing radar
[AD-A163208] N86-26500
A review of maximum entropy spectral analysis and applications to Fourier Spectroscopy
[AD-A164698] N86-27011

SIGNAL TO NOISE RATIOS
Model studies of surface noise interference in ground-probing radar
[AD-A163208] N86-26500
Finite length discrete matched filters
[AD-A164869] N86-26531

SIGNAL TRANSMISSION
Area penalty for sublinear signal propagation delay on chip (preliminary version) — mathematical model
[CWI-CS-R8514] N86-26541

SILANES
Fluidized-bed development at JPL N86-26686
Fluidized-bed reactor modeling for production of silicon by silane pyrolysis N86-26687
A silane-based polysilicon process N86-26696

SILICON
Photoelectrochemical reduction of carbon dioxide
[PB86-157864] N86-26406
Indium phosphide solar cells: status and prospects for use in space
[NASA-TM-87315] N86-26520
Sensitivity analysis for solar plates N86-26684
Development of the silane process for the production of low-cost polysilicon N86-26685
Fluidized-bed development at JPL N86-26686
Silicon production in an aerosol reactor N86-26688
Processes and process development in Japan N86-26689
Processes and process development N86-26690
Refining of metallurgical-grade silicon N86-26691
A metallurgical route to solar-grade silicon N86-26693
Solar silicon from directional solidification of MG silicon produced via the silicon carbide route N86-26694
Silicon purification using a Cu-Si alloy source N86-26697
Laser-heated CVD process for depositing thin films for low-cost solar cell applications
[DE85-016887] N86-26699
Research on high-efficiency, stacked, multijunction, amorphous silicon alloy thin-film solar cells
[DE85-016875] N86-26707
Focused ion beam fabrication of graded channel FET's in GaAs and Si
[AD-A163475] N86-27089
Experimental determination of the electronic structure of small metal particles
[AD-A163406] N86-27091

SILICON ALLOYS
Research on high-efficiency, stacked, multijunction, amorphous silicon alloy thin-film solar cells
[DE85-016875] N86-26707

SILICON CARBIDES
On the sintering of silicon carbide
[NASA-TM-88402] N86-26374
Silicon carbide whiskers for composites: Growth and properties
[DE86-000798] N86-26375
Amorphization and recrystallization processes in monocrystalline beta silicon carbide thin films
[DE86-004797] N86-27101

SILICON COMPOUNDS
Investigation of structure-permeability relationships of silicone polymer membranes
[PB86-157179] N86-26408
Proceedings of the Flat-Plate Solar Array Project Workshop on Low-Cost Polysilicon for Terrestrial Photovoltaic Solar-Cell Applications
[NASA-CR-178816] N86-26679
Effects of impurities on silicon solar-cell performance N86-26680
Economics of polysilicon process: A view from Japan N86-26682
Economics of polysilicon processes N86-26683
Characterization of solar-grade silicon produced by the SiF4-Na process N86-26695

SILICON FILMS
Influence of deposition variables on LPCVD tungsten films deposited by the WF6/Si reduction
[DE86-003727] N86-26431
Stability and properties of compositionally modulated films
[AD-A164574] N86-27094

SILICON OXIDES
Solar-grade silicon prepared by carbothermic reduction of silica N86-26692

SILICONE RUBBER
Investigation of structure-permeability relationships of silicone polymer membranes
[PB86-157179] N86-26408

SILICONES
Experimental polyurethane foam (PUF) roofing systems. 3. Naval Station, Roosevelt Roads, Puerto Rico, and Naval Facility, Cape Hatteras, North Carolina
[AD-A164833] N86-26444

SILVER
Electrode processes in porous electrodes
[AD-A165410] N86-26402
Character of silver lining
[DE86-001585] N86-26423
Application of conductive polymer technology to the production of a novel multilayer capacitor
[AD-A165212] N86-26450

SILVER OXIDES
In situ monitoring of electrochemical reactions by surface enhanced Raman scattering
[PB86-157500] N86-26407

SIMULATION
UHF DAMA (Demand-Assigned Multiple Access) simulation analysis
[AD-A165446] N86-26514
Least squares finite element simulation of transonic flows N86-26569
Conception and optimization of an infrared thermal sensor using the value analysis method
[INPE-3854-PRE/918] N86-26597
Biochemical transformations in two plant/soil systems exposed to simulated acidic precipitation
[DE86-004040] N86-26713
Low-gravity impact experiments: Progress toward a facility definition N86-27145

SIMULATORS
Synthetic Aperture Radar (SAR) product simulation — ESA programs
[ESA-CR(P)-2149] N86-26518

SINGLE CRYSTALS
Effects of quenched-in hydrogen on deformation of iron single crystals
[DE86-001883] N86-26426
Monolithic cathodes
[AD-A163282] N86-26523
Electron induced conductivity of Al2O3 as pertaining to thermionic integrated circuits
[AD-A165589] N86-26539
Characterization of solar-grade silicon produced by the SiF4-Na process N86-26695

SINGULAR INTEGRAL EQUATIONS
On the solution of integral equations with strongly singular kernels
[NASA-CR-176887] N86-26968

SINGULARITY (MATHEMATICS)
A minimum entropy principle in the gas dynamics equations N86-26556
On the solution of integral equations with a generalized cauchy kernel
[NASA-CR-176885] N86-26987
End-point corrected trapezoidal quadrature rules for singular functions
[AD-A163242] N86-27000

SINKS
The role of the oceans in the atmospheric cycle of carbonyl sulfide N86-26796

SINTERING
On the sintering of silicon carbide
[NASA-TM-88402] N86-26374

SITES
MSS evaluation. Revision 1
[AD-A164589] N86-27047

SIZE (DIMENSIONS)
On frequency polygons and average shifted histograms in higher dimensions
[AD-A164660] N86-27009
Properties of batch means from stationary ARMA (Autoregressive moving average) time series
[AD-A165187] N86-27033

SKY
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Kunsan AB, South Korea
[AD-A165553] N86-26784
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F, Tin City AFS, Alaska
[AD-A165556] N86-26787

SLIDING
Calculation of sliding interfaces of two-dimensional unsteady flow
[DE86-005003] N86-26591

SLOTS
Electromagnetic penetration through a slot into a rectangular waveguide
[AD-A164590] N86-26508

Analysis of a multiaccess control scheme
[AD-A165498] N86-26986

SMOKE
The muzzle flash of guns and rockets: A translation
[AD-A164593] N86-26370
Smokeless Propellants
[AGARD-CP-391] N86-26468

SMOKE ABATEMENT
Evaluation of charged fog for smoke clearing shipboard fires
[AD-A165551] N86-26300

SNOW COVER
Three-level energy balance climate model with topography, explicit radiative transfer, and explicit sea ice and snow mass budgets
[PB86-181799] N86-26638

SOBOLEV SPACE
Regularity estimates up to the boundary for elliptic systems of difference equations
[NASA-CR-178107] N86-26989

SODIUM
Reaction dynamics of electronically excited alkali atoms with simpler molecules
[DE85-014538] N86-27080
Electrical measurements on alpha-quartz crystals
[AD-A164793] N86-27096

SODIUM SULFUR BATTERIES
Sodium-sulfur battery development, phase VB
[DE86-003484] N86-26701

SOFTWARE ENGINEERING
International Ultraviolet Explorer Observatory operations
[NASA-CR-177873] N86-26347
Spectrum orbit utilization program technical manual SOUP5 Version 3.8
[NASA-CR-174944] N86-26489
The Berkeley Serendip Project N86-26906
Modern hardware technologies and software techniques for on-line database storage and access
[AD-A164993] N86-26924
STARS (Software Technology for Adaptable and Reliable Systems) methodology area summary. Volume 1: Organization and plans
[AD-A163270] N86-26936
STARS (Software Technology for Adaptable and Reliable Systems) methodology area summary. Volume 2: Preliminary views on the software life cycle and methodology selection
[AD-A163271] N86-26937
Methodology investigation: Multilingual Static Analysis Tool (MSAT)
[AD-A164956] N86-26952
Ada (trademark) training curriculum. Software engineering methodologies m201 teacher's workbook
[AD-A165299] N86-26954
Ada (trademark) training curriculum. Software engineering methodologies m201 teacher's guide, volume 1
[AD-A165300] N86-26955
Ada (trademark) training curriculum. Ada (registered trademark) for software managers, I201: Teacher's guide, volume 1

The implementation of a network CODASYL-DML interface for the multi-lingual database system
[AD-A164996] N86-27127

SOIL MOISTURE
Operational soil moisture prediction model
[AD-A165313] N86-26481

SOIL SCIENCE
Paleosols and the chemical evolution of the atmosphere N86-26870

SOILS
TNT RDX and HMX explosives in soils and sediments. Analysis techniques and drying losses
[AD-A163278] N86-26457
Biochemical transformations in two plant/soil systems exposed to simulated acidic precipitation
[DE86-004040] N86-26713

SOLAR ACTIVITY
SAROS: Solar Active Region Observations from Spacelab
[NASA-CR-177878] N86-27173
Observations of low-degree p-mode oscillations in 1984. Comments on techniques for spectral deconvolution
[AD-A164780] N86-27174

SOLAR ARRAYS
Indium phosphide solar cells: status and prospects for use in space
[NASA-TM-87315] N86-26520
Growth capabilities of European retractable solar arrays — space station power supplies
[ESA-CR(P)-2141] N86-26711

SOLAR CELLS
Indium phosphide solar cells: status and prospects for use in space
[NASA-TM-87315] N86-26520
Proceedings of the Flat-Plate Solar Array Project Workshop on Low-Cost Polysilicon for Terrestrial Photovoltaic Solar-Cell Applications
[NASA-CR-176816] N86-26679
Effects of impurities on silicon solar-cell performance N86-26680
Requirements for high-efficiency solar cells N86-26681
Economics of polysilicon processes N86-26683
Processes and process development in Japan N86-26689
Processes and process development N86-26690
Refining of metallurgical-grade silicon N86-26691
Solar-grade silicon prepared by carbothermic reduction of silica N86-26692
Solar silicon from directional solidification of MG silicon produced via the silicon carbide route N86-26694
Characterization of solar-grade silicon produced by the SiF4-Na process N86-26695
Silicon purification using a Cu-Si alloy source N86-26697
An analytical method for the determination of solar cell model parameters
[INPE-3852-PRE/916] N86-26698
Laser-heated CVD process for depositing thin films for low-cost solar cell applications
[DE85-016887] N86-26699
Stable, high-efficiency, CuInSe2 based polycrystalline thin-film tandem solar cells
[DE85-016893] N86-26700
Research on high-efficiency, stacked, multijunction, amorphous silicon alloy thin-film solar cells
[DE85-016875] N86-26707

SOLAR COLLECTORS
Numerical modeling of a solid particle solar central receiver
[DE86-005066] N86-26709

SOLAR CORONA
SAROS: Solar Active Region Observations from Spacelab
[NASA-CR-177878] N86-27173

SOLAR ENERGY
Solar energy and the aeronautics industry
[NASA-TM-77957] N86-26678
Testing activities at the National Battery Test Laboratory
[DE86-004057] N86-26702
Solar energy computer models directory
[DE85-006791] N86-26708

SOLAR FLUX
Solar energy and the aeronautics industry
[NASA-TM-77957] N86-26678

SOLAR MAGNETIC FIELD
Observations of low-degree p-mode oscillations in 1984. Comments on techniques for spectral deconvolution
[AD-A164780] N86-27174

SOLAR OSCILLATIONS
Observations of low-degree p-mode oscillations in 1984. Comments on techniques for spectral deconvolution
[AD-A164780] N86-27174

SOLAR PHYSICS
SAROS: Solar Active Region Observations from Spacelab
[NASA-CR-177878] N86-27173

SOLAR RADIATION
Directory of Mesoscale Solar Radiation Information Sources
[DE85-016868] N86-27175

SOLAR SYSTEM
Space station impact experiments N86-27137
How to make a comet N86-27183

SOLAR WIND
Waves and electric fields associated with the December 27, 1984, artificial comet
[AD-A163409] N86-26744

SOLAR-PUMPED LASERS
A model for the kinetics of a solar-pumped long path laser experiment
[NASA-TM-87668] N86-26616

SOLENOID VALVES
The analysis, design and performance of a 1.25 inch diameter pneumatic actuator
[AD-A165297] N86-26635

SOLID LUBRICANTS
High-temperature lubrication systems for ring/liner applications in advanced heat engines
[AD-A164955] N86-26446

SOLID PHASES
Solid-phase equilibria in the Au-Ga-Sb, Au-In-As, and Au-In-Sb ternaries
[AD-A165469] N86-27099

SOLID PROPELLANT COMBUSTION
The reduction of exhaust signature in solid propellant rocket motors N86-26474
Gas analysis for the investigation of the combustion of double-base propellants and HMX N86-26478

SOLID PROPELLANT ROCKET ENGINES
Minuteman 3, stage 3 surveillance
[AD-A164840] N86-26351

SOLID PROPELLANTS
Propergol combustion based on octogenesis N86-26470
Measurements of distributed combustion N86-26479

SOLID ROCKET PROPELLANTS
Crack propagation and branching in burning solid propellants and ignition of nitramine-based composite propellants
[AD-A164630] N86-26481

SOLID STATE PHYSICS
Quasi-particle spectrum of the Hubbard model
[INPE-3869-PRE/927] N86-27053

SOLIDIFICATION
Surface film effects on drop tube undercooling studies
[NASA-TM-86547] N86-26410
Energy deposition, heat flow and rapid solidification during laser and electron beam irradiation of materials
[DE86-002240] N86-26588
A metallurgical route to solar-grade silicon N86-26693

SOLIDS
A fundamental mathematical theory for thermal explosions in rigid solids and in gases
[AD-A164692] N86-26396
Surface construction from planar contours
[AD-A164862] N86-26950

SOLUTIONS
Adsorption and condensation of amino acids and nucleotides with soluble mineral salts N86-26869

SOLVATION
Molecular jet study of solvation of pyrazine by small hydrocarbons
[AD-A164583] N86-26393
Studies of negative ion reactions: Solvated ions and strong acids
[AD-A165484] N86-26404

SOLVENTS
Molecular microenvironments: Solvent interactions with nucleic acid bases and ions N86-26872

SONOBUOYS
The use of form, fit, and function in the acquisition of major weapon systems
[AD-A165700] N86-27114

SOUND FIELDS
Infinite elements for two-dimensional fluid-structure interaction problems
[AD-A164749] N86-26582

SOUND PROPAGATION
Experiments on sound propagation over sloped bottoms
[AD-A163431] N86-27044

SOUND TRANSMISSION
Experiments on sound propagation over sloped bottoms
[AD-A163431] N86-27044

SOUND WAVES

Colossus revisited: A review and extension of the Marsh-Schulkin shallow water transmission loss model (1962)
[AD-A164586] N86-27046

A synopsis of research on subbottom effects on underwater acoustic propagation
[AD-A165420] N86-27048

SOUND WAVES

A comparative analysis of whispered and normally phonated speech using an LPC-10 vocoder
[AD-A163307] N86-26504

Experiments on sound propagation over sloped bottoms
[AD-A163431] N86-27044

X-ray generated ultrasound
[AD-A164581] N86-27045

A synopsis of research on subbottom effects on underwater acoustic propagation
[AD-A165420] N86-27048

Acoustic normal modes using the propagator matrix technique for a stratified ocean overlaying an inhomogeneous anisotropic porous bed
[AD-A165436] N86-27049

SOUNDING

Impulse radar sounding of level first-year sea ice from an icebreaker
[AD-A163229] N86-26671

SOUNDING ROCKETS

Detectors for measuring energetic charged particles in rockets N86-26729

SPACE CHARGE

Study of charge and polarization distribution in polymers
[AD-A164833] N86-26441

Ionization induced instability in an electron collecting sheath
[AD-A165330] N86-26538

Whistler-mode radiation from the Spacelab 2 electron beam
[AD-A163367] N86-27076

SPACE COLONIES

Using the IRAS data to search in the asteroid belt for any potential evidence of galactic colonization N86-26908

SPACE COOLING (BUILDINGS)

Heat pump strategy at the Nevada Test Site
[DE85-013889] N86-26589

SPACE ENVIRONMENT SIMULATION

Variable energy, high flux, ground-state atomic oxygen source
[NASA-CASE-NPO-16640-1-CU] N86-27055

SPACE EXPLORATION

Space Station Planetology Experiments (SSPEX)
[NASA-CP-2424] N86-27136

SPACE HEATING (BUILDINGS)

Heat pump strategy at the Nevada Test Site
[DE85-013889] N86-26589

SPACE LABORATORIES

Advanced heating facilities. Development of demonstration models — microgravity experiment sample heating
[ERNO-671-AHF/2] N86-26710

SPACE MAINTENANCE

Orbit Transfer Rocket Engine Technology Program: Advanced engine study, task D.1/D.3
[NASA-CR-175084] N86-26369

SPACE PERCEPTION

Night vision support devices: Human engineering integration N86-26808

Interaction of image characteristics of stereoscopic forms during depth perception
[AD-A164895] N86-26831

SPACE PLASMAS

In situ measurements of the plasma bulk velocity near the Io flux tube
[NASA-CR-176810] N86-27075

SPACE PROCESSING

Advanced heating facilities. Development of demonstration models — microgravity experiment sample heating
[ERNO-671-AHF/2] N86-26710

SPACE SHUTTLE MAIN ENGINE

Seam tracking performance of a Coaxial Weld Vision System and pulsed welding
[NASA-CR-178816] N86-26627

SPACE SHUTTLE PAYLOADS

Definition study of a coordinated group of experiments to measure and monitor the in situ plasma and electromagnetic environment of a polar orbiting space shuttle
[AD-A164561] N86-26353

Interactions measurement payload for shuttle (IMPS) definition phase study
[NASA-CR-177291] N86-26354

Monoball energy transfer: Test report
[NASA-CR-176812] N86-26551

Cosmic dust collection with a sub-satellite tethered to a space station N86-27146

Nucleation experiments in a microgravity environment N86-27158

Ultraviolet spectroscopy of meteoric debris: In situ calibration experiments from Earth orbit N86-27159

SPACE SHUTTLES

Upgrade of weather forecast support to shuttle operations
[AD-A164967] N86-26781

SPACE STATION PROPULSION

Theoretical study on the effect of the design of small (milli-Newton) thruster jets on molecular contamination for the space station
[NASA-CR-177263] N86-26358

SPACE STATIONS

Dynamic characteristics of power-tower space stations with 15-foot truss bays
[NASA-TM-87884] N86-26357

New techniques for the detection and capture of micrometeoroids N86-26862

Optical model calculations of heavy-ion target fragmentation
[NASA-TM-87692] N86-27063

Nucleation experiments in a microgravity environment N86-27158

SPACEBORNE ASTRONOMY

International Ultraviolet Explorer Observatory operations
[NASA-CR-177873] N86-26347

SPACEBORNE EXPERIMENTS

Sediment-transport (wind) experiments in zero-gravity N86-27138

Report on opportunities and/or techniques for high-caliber experimental research (other) proposals for SSPEX N86-27140

A planetary ultra hypervelocity impact mechanics and shock wave science facility N86-27141

Proposed Earth based cratering experiments at low G in hard vacuum N86-27142

Low-gravity impact experiments: Progress toward a facility definition N86-27145

Cosmic dust collection with a sub-satellite tethered to a space station N86-27146

Space station science lab module N86-27147

Electrical conductivity of carbonaceous chondrites and electric heating of meteorite parent bodies N86-27148

The orbit properties of colliding co-orbiting bodies N86-27149

Small linear wind tunnel saltation experiments: Some experiences N86-27150

Impact experimentation and the microgravity environment: An overview N86-27151

Exobiology experiment concepts for space station N86-27152

Sediment-transport experiments in zero-gravity N86-27153

Design and calibration of the carousel wind tunnel N86-27154

A magnetospheric simulation at the space station N86-27155

Electrostatic aggregation of finely-comminuted geological materials N86-27156

Nucleation experiments in a microgravity environment N86-27158

Impacts of free-floating objects: Unique space station experiments N86-27162

Aeolian processes aboard a space station: Saltation and particle trajectory analysis N86-27165

A system for conducting igneous petrology experiments under controlled redox conditions in reduced gravity N86-27166

New techniques for the detection and capture of micrometeoroids N86-27167

Mapping experiment with space station N86-27168

SPACEBORNE TELESCOPES

Observational exobiology N86-26850

SPACECRAFT COMMUNICATION

Study of Navsat control segment characteristics. Part 1: Elements of a control segment concept — space station power supplies
[NLR-TR-84066-L-PT-1] N86-26361

Simulation of an aircraft flying through a ground station to satellite link
[NASA-CR-176845] N86-26487

SPACECRAFT COMPONENTS

Reliability prediction for spacecraft
[AD-A164747] N86-26359

SPACECRAFT CONSTRUCTION MATERIALS

Oxidation and emittance of superalloys in heat shield applications
[NASA-TP-2578] N86-26412

Oxidation protecting coatings for polymers
[NASA-CASE-LEW-14072-3] N86-26434

SPACECRAFT CONTAMINATION

Theoretical study on the effect of the design of small (milli-Newton) thruster jets on molecular contamination for the space station
[NASA-CR-177263] N86-26358

SPACECRAFT CONTROL

Propulsion apparatus and method using boil-off gas from a cryogenic liquid
[NASA-CASE-MFS-25946-1] N86-26368

SPACECRAFT DOCKING

Index of aerospace mechanisms symposia proceedings 1-19
[NASA-TM-88205] N86-26850

SPACECRAFT GUIDANCE

A lateral guidance algorithm to reduce the post-aerobraking burn requirements for a lift-modulated orbital transfer vehicle
[NASA-CR-177295] N86-26932

SPACECRAFT INSTRUMENTS

Calibration of the ISEE plasma composition experiment
[NASA-TM-86542] N86-26348

Interactions measurement payload for shuttle (IMPS) definition phase study
[NASA-CR-177291] N86-26354

The response function of modulated grid Faraday cup plasma instruments
[NASA-CR-177312] N86-27076

SPACECRAFT MANEUVERS

Attitude estimation and control of maneuvering spacecraft — graph theory
[NLR-MP-84036-U] N86-26366

SPACECRAFT MODELS

Mathematical models of flexible spacecraft dynamics: A survey of order reduction approaches — aircraft tracking
[NLR-MP-85004-U] N86-26367

SPACECRAFT POWER SUPPLIES

Growth capabilities of European retractable solar arrays — space station power supplies
[ESA-CR(P)-2141] N86-26711

SPACECRAFT PROPULSION

Smokeless Propellants
[AGARD-CP-391] N86-26488

SPACECRAFT REENTRY

Self-adaptive difference method for the effective solution of computationally complex problems of boundary layer theory
[NASA-TM-88440] N86-26549

SPACECRAFT RELIABILITY

Interactions measurement payload for shuttle (IMPS) definition phase study
[NASA-CR-177291] N86-26354

Reliability prediction for spacecraft
[AD-A164747] N86-26359

SPALLATION

High strain rate material behavior
[AD-A165214] N86-26659

SPATIAL DISTRIBUTION

The effects on rotor nonuniform inflow harmonic content of uneven circumferential distribution of jet engine inlet guide vanes
[AD-A164629] N86-26291

SPATIAL RESOLUTION

Polarization modulated ellipsometry
[NASA-CR-177264] N86-26599

Interaction of image characteristics of stereoscopic forms during depth perception
[AD-A164895] N86-26831

SPECIFICATIONS

The formal specification of an abstract database: Design and implementation
[AD-A164865] N86-27124

SPECIMENS

Two compliance expressions for arbitrary locations across a crack in a CT (Compact Type) specimen
[AD-A163369] N86-26658

SPECTRAL BANDS

Grating interferometric sensors
[AD-A165593] N86-26609

SPECTRAL EMISSION

Vertical modes and energetics of gravitational and rotational modes in a multilevel global spectral model
[PB86-160165] N86-26777

Observational exobiology N86-26850

SPECTRAL ENERGY DISTRIBUTION

A review of maximum entropy spectral analysis and applications to Fourier Spectroscopy
[AD-A164698] N86-27011

SPECTRAL METHODS

Spectral methods in fluid dynamics
[NASA-CR-178103] N86-26550

Advances in numerical and applied mathematics
[NASA-CR-178076] N86-26552

A spectral multidomain method for the solution of hyperbolic systems N86-26557

Effect of stochastic perturbations on a spectral model of atmospheric circulation — mathematical model
[CWI-AM-R8515] N86-26751
A spectral multidomain method for the solution of hyperbolic systems
[NASA-CR-178105] N86-26990

SPECTROGRAPHS
A comparative analysis of whispered and normally phonated speech using an LPC-10 vocoder
[AD-A163307] N86-26504

SPECTROMETERS
Ion Mobility Drift Spectrometer (IMDS) as a flight analytical instrument technique N86-26861
Stanford Hardware Development Program N86-26910

SPECTRORADIOMETERS
Visual and spectroradiometric performance criteria for Night Vision Goggles (NVG) compatible aircraft interior lighting N86-26807

SPECTROSCOPY
Alexandrite lasers: State of technology and applications
[DE86-003666] N86-26611
Spectroscopy of surface adsorbed molecules (scanning tunneling microscopy)
[DE86-004508] N86-27087

SPECTRUM ANALYSIS
Molecular jet study of solvation of pyrazine by small hydrocarbons
[AD-A164583] N86-26393
The organic aerosols of Titan N86-26852
Ion Mobility Drift Spectrometer (IMDS) as a flight analytical instrument technique N86-26861
New techniques for the detection and capture of micrometeoroids N86-26862
Goldstone field test activities: Target search N86-26911
JPL's role in the SETI program N86-26913
Quasi-particle spectrum of the Hubbard model
[INPE-3869-PRE/927] N86-27053

SPEECH
A comparative analysis of whispered and normally phonated speech using an LPC-10 vocoder
[AD-A163307] N86-26504

SPEECH RECOGNITION
A comparison of voice and keyboard data entry for a helicopter navigation task
[AD-A163245] N86-26501

SPHERICAL COORDINATES
A computer code for three-dimensional incompressible flows using nonorthogonal body-fitted coordinate systems
[NASA-CR-178818] N86-26544

SPHERICAL PLASMAS
Features of spherical torus plasmas
[DE86-004642] N86-27030

SPILLING
A review of methods to track oil in arctic waters
[AD-A164679] N86-26716

SPINEL
Effect of magnetostriction on remanent magnetization
[AD-A165450] N86-27041

SPLINE FUNCTIONS
History matching by spline approximation and regularization in single-phase areal reservoirs
[NASA-CR-178087] N86-26664
Time domain filtering of two-dimensional fluorescence data
[AD-A164954] N86-27013

SPRAYERS
Proceedings of the Second Annual Heat Engines Contractors Meeting
[DE85-006596] N86-26705

STABILITY
Investigation of structure-permeability relationships of silicone polymer membranes
[PB86-157179] N86-26406
Effects of rapidly pulsed ion bombardment on microstructure and phase stability in a Ti-modified stainless steel
[DE86-004790] N86-26424
Stability analysis of intermediate boundary conditions in approximate factorization schemes N86-26554
Mechanical face seal dynamics
[AD-A164978] N86-26633
Stable, high-efficiency, CuInSe2 based polycrystalline thin-film tandem solar cells
[DE85-016893] N86-26700

STABILIZATION
Kinetic stabilization of field-reversed configurations
[DE86-003655] N86-27039

STABILIZERS (AGENTS)
Stability of nitrocellulose propellants assessed via thermal decomposition and alteration of the stabilizer composition N86-26471

STAGE SEPARATION
Index of aerospace mechanisms symposia proceedings 1-19
[NASA-TM-86206] N86-26650

STAINLESS STEELS
Effects of rapidly pulsed ion bombardment on microstructure and phase stability in a Ti-modified stainless steel
[DE86-004790] N86-26424
Effects of cavitation on high-cycle fatigue life
[DE86-001814] N86-26641

STANDARDS
Standard reference data publications, 1964-1984
[PB86-155587] N86-26409
Computers and data transmission equipment. Alphanumeric codes
[AD-A164794] N86-26923

STARS
STARS (Software Technology for Adaptable and Reliable Systems) methodology area summary. Volume 1: Organization and plans
[AD-A163270] N86-26936

STARTING
Evaluation of TWT (Traveling Wave Tube) cathode impregnant manufacturing procedures
[AD-A163360] N86-26526

STATE ESTIMATION
Control, state estimation and parameter identification of nonlinear distributed parameter systems using fixed point techniques: A survey
[INPE-3855-PRE/919] N86-26991
The ordinary least squares estimation for the General-Link Linear Models, with applications
[AD-A163599] N86-26996

STATE VECTORS
The ordinary least squares estimation for the General-Link Linear Models, with applications
[AD-A163599] N86-26996

STATIC TESTS
Minuteman 3, stage 3 surveillance
[AD-A164840] N86-26351
Safety testing of missile and rocket systems employing manned launch stations
[AD-A165395] N86-26372

STATISTICAL ANALYSIS
Investigation of blade vibration T55-L-11C compressor stages 1 and 2
[AR-004-046] N86-26337
International Ultraviolet Explorer Observatory operations
[NASA-CR-177873] N86-26347
Analysis of orbital satellite storage
[AD-A164971] N86-26360
The fossil record of evolution: Data on diversification and extinction N86-26902
Demonstration of a statistical method for isolating timesharing components
[AD-A165417] N86-26926
Convexity of elliptically contoured distributions with applications
[AD-A163389] N86-27003

STATISTICAL DECISION THEORY
Development of a testbed for multisensor distributed decision algorithms
[AD-A164487] N86-26601

STATISTICAL DISTRIBUTIONS
Relative - humidity parameterization of the Navy Aerosol Model (NAM)
[AD-A163209] N86-26759
On the likelihood ratio test for a change point in a sequence of independent exponentially distributed random variables — semisubmersible platform
[CWI-MS-R8507] N86-27019

STATISTICAL MECHANICS
Algorithms for supercomputers
[DE86-004480] N86-26930

STATISTICAL TESTS
Measures of imbalance for unbalanced models
[AD-A164638] N86-27008
On the likelihood ratio test for a change point in a sequence of independent exponentially distributed random variables — semisubmersible platform
[CWI-MS-R8507] N86-27019

STATOR BLADES
Advanced propulsor design studies
[AD-A164963] N86-26634

STEADY FLOW
Multigrid method for a vortex breakdown simulation
[NASA-CR-178106] N86-26547

STEADY STATE
Convergence to steady state of solutions of Burgers' equation N86-26553
Multiple steady states for characteristic initial value problems N86-26555

STEAM
Comparison of high temperature steam oxidation behavior of Zircaloy-4 versus austenitic and ferritic steels under light water reactor safety aspects — software issues
[KFK-3994] N86-26439

STEELS
Slow strain rate testing of high strength low-alloy steels: A technique for assessing the degree of hydrogen embrittlement produced by plating processes, paint strippers and other aircraft maintenance chemicals
[AR-004-060] N86-26411
The effects of steel profile and cleanliness on coating performance
[AD-A164788] N86-26443
High strain rate material behavior
[AD-A165214] N86-26659

STEERING
Driving performance the day after use of loprazolam, flunitrazepam and placebo
[VK-83-04] N86-26626
The effects of the antidepressants oxaprotiline, mianserin, amitryptiline and doxepin upon actual driving performance
[VK-83-05] N86-26627
Flurazepam HCL's residual (hangover) effects upon actual driving performance
[VK-83-02] N86-26634

STELLAR WINDS
Theoretical study of the X-ray emission from astrophysical shock waves
[NASA-CR-177318] N86-27176

STELLARATORS
Fusion reactor physics and technology studies
[DE86-004527] N86-27064

STEREOSCOPIC VISION
Field-sequential color stereoscopy with liquid crystal spectacles — aircraft tracking
[NLR-MP-84081-U] N86-27071

STEREOSCOPY
Interaction of image characteristics of stereoscopic forms during depth perception
[AD-A164895] N86-26831

STIFFNESS MATRIX
Buckling behavior of Rene 41 tubular panels for a hypersonic aircraft wing
[NASA-TM-86798] N86-26653
Acoustic normal modes using the propagator matrix technique for a stratified ocean overlaying an inhomogeneous anisotropic porous bed
[AD-A165436] N86-27049

STIRRING
Planar oscillatory stirring apparatus
[NASA-CASE-MFS-26002-1-CU] N86-26598

STOCHASTIC PROCESSES
Numerical simulation of turbulent flames using vortex methods
[AD-A164060] N86-26390
Model comparison in vertical crustal motion estimation using leveling data
[PB86-175551] N86-26753
A nonparametric statistical approach to the validation of computer simulation models
[AD-A163376] N86-26944
The fractal geometry of nature; its mathematical basis and application to computer graphics
[AD-A165185] N86-27014
Stochastic mechanics and the Kepler problem — plasma diagnostics
[REPT-70] N86-27034
Stochastic realization problems motivated by economic modeling — vibration analysis
[CWI-OS-R8507] N86-27037
On roads with no overtaking — stochastic traffic models
[CWI-MS-R8508] N86-27135

STOICHIOMETRY
Ion transport across synthetic and biological membranes: Ionophore-mediated transport
[AD-A163269] N86-27057
Microscopic control of semiconductor interface reactivity
[AD-A164560] N86-27093

STOKES LAW OF RADIATION
Cars diagnostics of high pressure combustion. 2. Measurements of NO, H2O and high pressure flames
[AD-A164610] N86-26396

STOPPING
Some tests to assess the effect of crack stoppers on the fatigue life of center-notched specimens — semisubmersible platform
[NLR-TR-84051-U] N86-26662

STORAGE STABILITY
Stability of nitrocellulose propellants assessed via thermal decomposition and alteration of the stabilizer composition N86-26471

STRAIN ENERGY METHODS
Criterion for mixed mode fracture in composite bonded joints
[NASA-CR-178112] N86-26380
STRAIN GAGES
Field-induced crystallization in highly plasticized poly(vinylidene fluoride) films
[AD-A164384] N86-26442
Conceptual development of strain-gage signal interpretation system for jet engine applications
[AD-A165489] N86-26608
STRAIN HARDENING
Crystal plasticity analysis of large-strain shear
[DE86-005061] N86-26660
STRAIN RATE
Slow strain rate testing of high strength low-alloy steels: A technique for assessing the degree of hydrogen embrittlement produced by plating processes, paint strippers and other aircraft maintenance chemicals
[AR-004-060] N86-26411
High strain rate material behavior
[AD-A165214] N86-26659
STRATEGY
The C-17: An attempt at increased airlift versatility
[AD-A164822] N86-26280
A personalized and prescriptive decision aid for choice from a database of options
[AD-A165396] N86-27129
STRATIFICATION
Acoustic normal modes using the propagator matrix technique for a stratified ocean overlaying an inhomogeneous anisotropic porous bed
[AD-A165436] N86-27049
STRATIGRAPHY
Investigation of subsurface exploration methods for prevailing geologic conditions in South Carolina
[PB86-167087] N86-26752
STRATOSPHERE
Studies of negative ion reactions: Solvated ions and strong acids
[AD-A165484] N86-26404
Rocket techniques for measurement of ozone and related neutral minor constituents N86-26727
The neutral/ion chemistry of sodium in the stratosphere and mesosphere
[AD-A164636] N86-26747
The role of the oceans in the atmospheric cycle of carbonyl sulfide N86-26796
STREAMS
HEC-5Q: System water quality modeling
[AD-A164832] N86-26717
STRESS (PHYSIOLOGY)
A lightweight impermeable suit for chemical protection in warm conditions: A preliminary look at the concept
[AD-A164687] N86-26839
STRESS CONCENTRATION
Boundary force method for analyzing two-dimensional cracked bodies
[NASA-TM-87725] N86-26647
STRESS CORROSION CRACKING
The delayed fracture of aluminum alloys
[AD-A165203] N86-26422
Applications of current measurement over corroding metallic surfaces
[DE86-001174] N86-26425
STRESS CYCLES
Data tabulations and analysis of diurnal sea surface temperature variability observed at LOTUS (long-term upper ocean study)
[AD-A165406] N86-26790
STRESS FUNCTIONS
Boundary force method for analyzing two-dimensional cracked bodies
[NASA-TM-87725] N86-26647
STRESS INTENSITY FACTORS
Boundary force method for analyzing two-dimensional cracked bodies
[NASA-TM-87725] N86-26647
The crack problem in a reinforced cylindrical shell
[NASA-CR-176686] N86-26648
Line spring model and its applications to part-through crack problems in plates and shells
[NASA-CR-176688] N86-26649
On the solution of integral equations with strongly singular kernels
[NASA-CR-176687] N86-26968
STRESS MEASUREMENT
Data tabulations and analysis of diurnal sea surface temperature variability observed at LOTUS (long-term upper ocean study)
[AD-A165406] N86-26790
STRESS-STRAIN RELATIONSHIPS
Thermal expansion of elastic-plastic composite materials
[AD-A164910] N86-26383
Comparative study of nondestructive pavement testing, WES (Waterways Experiment Station) NDT (nondestructive tests) methodologies
[AD-A163379] N86-26480
Recent research in nonlinear analysis of beams N86-26646
High strain rate material behavior
[AD-A165214] N86-26659
STRESSES
Update on the structural design of the Sandia 34-M vertical axis wind turbine
[DE86-004217] N86-26704
Design and production of damage-resistant tray pack containers
[AD-A164595] N86-26837
Stability and properties of compositionally modulated films
[AD-A164574] N86-27094
STRIP TRANSMISSION LINES
Analysis of an aperture coupled microstrip antenna
[AD-A165263] N86-26537
STRONG INTERACTIONS (FIELD THEORY)
Theoretical elementary particle studies
[DE86-001165] N86-27054
STRONGLY COUPLED PLASMAS
Fluid-Electrolyte-Mineral interrelations as affecting work performance
[AD-A165325] N86-26799
STRUCTURAL ANALYSIS
Amorphous silicon spatial light modulator
[AD-D012168] N86-26528
Improved designs for isocon cameras in HERTR systems
[AD-A164527] N86-26602
CADS: A Computer Aided Design System. Volume 2. User's guide
[AD-A163258] N86-26935
STRUCTURAL BASINS
Objective analysis of tidal fields in the Atlantic and Indian Oceans
[NASA-TM-87773] N86-26782
STRUCTURAL DESIGN
Nickel-hydrogen separator development
[NASA-TM-87332] N86-26677
Effects of impurities on silicon solar-cell performance N86-26680
Update on the structural design of the Sandia 34-M vertical axis wind turbine
[DE86-004217] N86-26704
A lumped parameter mathematical model for simulation of subsonic wind tunnels
[NASA-TM-87324] N86-27036
STRUCTURAL DESIGN CRITERIA
Pressure systems energy release protection (gas pressurized systems)
[NASA-CR-178090] N86-26626
Requirements for high-efficiency solar cells N86-26661
Space station science lab module N86-27147
STRUCTURAL ENGINEERING
On substructuring algorithms and solution techniques for the numerical approximation of partial differential equations N86-26558
STRUCTURAL FAILURE
Probabilistic analysis of nonlinear structures subjected to transient loads. Part 1
[AD-A163235] N86-26655
STRUCTURAL PROPERTIES (GEOLOGY)
Thematic mapper research in the Earth sciences: Tectonic evaluation of the Nubian Shield of northeastern Sudan/southeastern Egypt using thematic mapper imagery
[NASA-CR-177311] N86-26740
STRUCTURAL VIBRATION
A computational transonic flutter boundary tracking procedure
[NASA-TM-87706] N86-26284
SUBLIMATION
Theory of the reaction surface with freezing Lewis Number not equal to 1 and its application in the oxidation-sublimation coupling process
[AD-A163213] N86-27104
SUBMINIATURIZATION
Micro-heads-up display for enhancement of night vision goggle operations N86-26809
SUBSONIC FLOW
Viscid/inviscid interaction analysis of subsonic turbulent trailing-edge flows
[AD-A165207] N86-26292
Application of a computational model for vortex generators in subsonic internal flows
[NASA-TM-87327] N86-26545
Pressure probe and hot-film probe responses to acoustic excitation in mean flow
[NASA-TP-2561] N86-27043
SUBSONIC WIND TUNNELS
A lumped parameter mathematical model for simulation of subsonic wind tunnels
[NASA-TM-87324] N86-27036
SUBSTRATES
Photoelectrochemical reduction of carbon dioxide
[PB86-157864] N86-26406
Influence of deposition variables on LPCVD tungsten films deposited by the WF6/Si reduction
[DE86-003727] N86-26431
Paint removal process
[AD-D012167] N86-26436
Hillock formation on (100) GaAs
[AD-A163308] N86-27090
Experimental determination of the electronic structure of small metal particles
[AD-A163406] N86-27091
SUDAN
Thematic mapper research in the Earth sciences: Tectonic evaluation of the Nubian Shield of northeastern Sudan/southeastern Egypt using thematic mapper imagery
[NASA-CR-177311] N86-26740
SUITS
A lightweight impermeable suit for chemical protection in warm conditions: A preliminary look at the concept
[AD-A164687] N86-26839
SULFIDES
The role of the oceans in the atmospheric cycle of carbonyl sulfide N86-26796
SULFUR
Role of hydrogen, sulfur and other impurities in intergranular fracture in iron
[DE86-001884] N86-26427
SULFURIC ACID
Acid-catalyzed degradation of Poly(2-Butyl-1,3,6-Trioxocane)
[AD-A165327] N86-26452
SUMMARIES
Ada (trade name) compiler validation summary report: Verdix Ada Compiler, VAda-010-0101, Version V03.04 for VAX-11/750, using UNIX 4.2 BSD
[AD-A163363] N86-26943
SUMMER
Genesis of major dust storms in West Africa during the summer of 1974
[AD-A165457] N86-26783
SUNGLASSES
Effects of broad-banded eye protection on dark adaptation N86-26817
SUNRISE
Tidal and lunar data for Point Mugu, San Nicholas Island, and the Barking Sands Area during 1986
[AD-A163249] N86-26784
SUNSET
Tidal and lunar data for Point Mugu, San Nicholas Island, and the Barking Sands Area during 1986
[AD-A163249] N86-26784
SUPERCOMPUTERS
Network file storage system
[DE86-000779] N86-26916
Algorithms for supercomputers
[DE86-004480] N86-26930
The design and implementation of cost-effective algorithms for direct solution of banded linear systems on the vector processor system 32 supercomputer
[NASA-CR-176861] N86-26992
FASTRUN: A high performance computing device for molecular mechanics using a pipeline architecture
[DE86-004355] N86-27061
Plasma physics modeling and the Cray-2 multiprocessor
[DE86-004239] N86-27072
SUPERCONDUCTIVITY
Field theoretic investigations on particle physics and cosmology
[DE86-004516] N86-27106
SUPERCONDUCTORS
Development of high field superconductors for fusion energy applications
[DE86-004834] N86-27103
SUPERHIGH FREQUENCIES
Methods of obtaining offshore wind direction and sea-state data from X-band aircraft SAR (Synthetic Aperture Radar) imagery of coastal waters
[AD-A165352] N86-26517
Electron induced conductivity of Al2O3 as pertaining to thermionic integrated circuits
[AD-A165589] N86-26539
Techniques for the automated observation of clouds
[AD-A165573] N86-26775
SUPERLATTICES
Pressure-dependent magneto-optic measurements in strained-layer superlattices at low temperatures
[DE86-004604] N86-27088

Optical imaging of dislocations in strained-layer superlattices and lattice-mismatched epilayers
[DE86-004620] N86-27102

SUPERNOVAE
Theoretical study of the X-ray emission from astrophysical shock waves
[NASA-CR-177318] N86-27176

SUPERSATURATION
The role of the oceans in the atmospheric cycle of carbonyl sulfide N86-26796

SUPPORT SYSTEMS
Independent research and independent exploratory development FY 85
[AD-A163432] N86-27111

SUPPRESSORS
The muzzle flash of guns and rockets: A translation
[AD-A164593] N86-26370

SURFACE CRACKS
Two compliance expressions for arbitrary locations across a crack in a CT (Compact Type) specimen
[AD-A163369] N86-26658

SURFACE DEFECTS
Hillock formation on (100) GaAs
[AD-A163308] N86-27090

SURFACE DIFFUSION
Microscopic control of semiconductor interface reactivity
[AD-A164560] N86-27093

SURFACE FINISHING
The use of ion implantation for materials processing
[AD-A165432] N86-27059

SURFACE LAYERS
Surface film effects on drop tube undercooling studies
[NASA-TM-86547] N86-26410
Hardness of ion implanted ceramics
[DE86-004771] N86-26432
Formation of surface layers of icosahedral Al(Mn)
[DE86-004606] N86-26433
Comparative study of nondestructive pavement testing, WES (Waterways Experiment Station) NDT (nondestructive tests) methodologies
[AD-A163379] N86-26480
Data tabulations and analysis of diurnal sea surface temperature variability observed at LOTUS (long-term upper ocean study)
[AD-A165406] N86-26790
Hillock formation on (100) GaAs
[AD-A163308] N86-27090

SURFACE PROPERTIES
Investigation and development of advanced surface microanalysis techniques and methods
[AD-A163616] N86-26389
The negligible effect of non-Gaussian surface deviations in large MM-Lambda reflectors' aperture efficiency and the performance of Itapetinga 45-ft antenna at Lambda = 3.3 MM
[INPE-3837-PRE/908] N86-26488
Mass loading of the Earth's magnetosphere by micron size lunar ejecta. 1: Ejecta production and orbital dynamics in cislunar space N86-27143

SURFACE REACTIONS
Surface film effects on drop tube undercooling studies
[NASA-TM-86547] N86-26410
Resonance fluorescence of a two-level atom near a rough metal surface
[AD-A163219] N86-27056
Microscopic control of semiconductor interface reactivity
[AD-A164560] N86-27093

SURFACE ROUGHNESS
Resonance fluorescence of a two-level atom near a rough metal surface
[AD-A163219] N86-27056

SURFACE TEMPERATURE
Three-level energy balance climate model with topography, explicit radiative transfer, and explicit sea ice and snow mass budgets
[PB86-181799] N86-26638

SURFACE TO SURFACE MISSILES
Minuteman 3, stage 3 surveillance
[AD-A164840] N86-26351

SURFACE WATER
An evaluation of the capability of the surface condition analyzer (SCAN) sensors to measure runway water depth
[AD-A164719] N86-26603
Maryland Water Resources Research Center, fiscal year 1984 program report
[PB86-133253] N86-26721

SURFACE WAVES
Joint services electronics program
[AD-A164916] N86-26532

SURFACTANTS
Apparent viscosity measurements of surfactant foam in porous media
[DE86-000260] N86-26454

SURGES
Summary of investigations of engine response to distorted inlet conditions
[NASA-TM-87317] N86-26336
A fundamental mathematical theory for thermal explosions in rigid solids and in gases
[AD-A164692] N86-26396

SURVEYS
Advanced propulsion systems and alternative fuels for non-highway transportation. An assessment of unique and priority research and development opportunities. Volume 3. A compendium of research and development
[DE86-002975] N86-26456

SURVIVAL EQUIPMENT
Development and evaluation of a prototype life preserver
[AD-A163224] N86-26297

SWEPT FORWARD WINGS
X-29A technology demonstrator flight test program overview
[NASA-TM-86809] N86-26328

SWEPTBACK WINGS
Buckling behavior of Rene 41 tubular panels for a hypersonic aircraft wing
[NASA-TM-86798] N86-26653

SYMBIOSIS
Microbial contributions to the Precambrian Earth N86-26599

SYMBOLS
Components of verbal intelligence
[AD-A163359] N86-26828

SYNCHRONISM
Process synchronization and data communication between processes in real time local area networks
[AD-A164860] N86-26511
A paradigm for reliable clock synchronization
[AD-A164819] N86-27040

SYNCHROTRONS
Three-dimensional numerical simulations of FELs by transverse mode spectral method
[AD-A163297] N86-26503

SYNOPTIC METEOROLOGY
Remote sensing and oceanographic equipment technology: Some present systems and future needs, revised
[PB86-156502] N86-26791

SYNTAX
Top-down parsing syntax error recovery
[AD-A164859] N86-26949
Ada (trademark) training curriculum. Software engineering methodologies m201 teacher's workbook
[AD-A165299] N86-26954

SYNTHESIS (CHEMISTRY)
Stereoselective formation of a 2 prime (3 prime)-aminoacyl ester of a nucleotide
[NASA-CR-176830] N86-26373
Ethynyl-containing aromatic polyamide resins
[AD-D012169] N86-26437
Ethynyl-containing aromatic monomers
[AD-D012170] N86-26438
Biodeuterated materials: High-temperature lubricants from algae
[AD-A164913] N86-26445
Structure/property studies of a heterocyclic conductive polymer
[AD-A164959] N86-26447
Research in energetic compounds
[AD-A164901] N86-26462
Economics of polysilicon process: A view from Japan N86-26682
Economics of polysilicon processes N86-26683
Development of the silane process for the production of low-cost polysilicon N86-26685
Solar-grade silicon prepared by carbothermic reduction of silica N86-26692
A silane-based polysilicon process N86-26696
Investigation of porous polymer gas chromatographic packings for atmospheric analysis of extraterrestrial bodies N86-26858
Energy yields in the prebiotic synthesis of hydrogen cyanide and formaldehyde N86-26863
Synthesis and analysis in studies of chemical evolution N86-26864
Isotopic characterisation of prebiotic synthesis of organic material N86-26865
Models of glycolysis: Glyceraldehyde as a source of energy and monomers for prebiotic condensation reactions N86-26876

SYNTHETIC APERTURE RADAR
Methods of obtaining offshore wind direction and sea-state data from X-band aircraft SAR (Synthetic Aperture Radar) imagery of coastal waters
[AD-A165552] N86-26517
Synthetic Aperture Radar (SAR) product simulation — ESA programs
[ESA-CR(P)-2149] N86-26518

SYNTHETIC FUELS
Investigation into alternative fuel rating techniques
[DE86-004277] N86-26467

SYNTHETIC METALS
Application of conductive polymer technology to the production of a novel multilayer capacitor
[AD-A165212] N86-26450

SYNTHETIC RESINS
Application of conductive polymer technology to the production of a novel multilayer capacitor
[AD-A165212] N86-26450

SYSTEM FAILURES
Failures in advanced flight control systems of future transport aircraft — semisubmersible platform
[NLR-TR-84108-U] N86-26343

SYSTEMS ANALYSIS
Mathematical models of flexible spacecraft dynamics: A survey of order reduction approaches — aircraft tracking
[NLR-MP-85004-U] N86-26367
Sequential testing and confidence intervals for the MTBF (meantime between failures) of systems having exponential distribution of the interfailure times
[AD-A165189] N86-26640
A personalized and prescriptive decision aid for choice from a database of options
[AD-A165396] N86-27129

SYSTEMS ENGINEERING
Cockpit automation requirements derived from mission functions data N86-26318
Digitally controlled programmable active filters
[AD-A164999] N86-26534
Heat pump strategy at the Nevada Test Site
[DE85-013669] N86-26589
STARS (Software Technology for Adaptable and Reliable Systems) methodology area summary. Volume 1: Organization and plans
[AD-A163270] N86-26936
STARS (Software Technology for Adaptable and Reliable Systems) methodology area summary. Volume 2: Preliminary views on the software life cycle and methodology selection
[AD-A163271] N86-26937
User's manual for the prototype ADA (trademark) Compiler Evaluation Capability (ACEC), version 1
[AD-A163272] N86-26938
Methodology investigation: Multilingual Static Analysis Tool (MSAT)
[AD-A164956] N86-26952
Ada (trademark) training curriculum. Instructor's course s500 methodology modules
[AD-A165349] N86-26967
The design and analysis of a network interface for the multi-lingual database system
[AD-A164756] N86-27121

SYSTEMS MANAGEMENT
ADA (trademark) training curriculum. Instructor's course s500 management modules
[AD-A165347] N86-26965
Ada (Trademark) training curriculum: Ada orientation for managers t101 teacher's guide
[AD-A165351] N86-26969
Software documentation on the URDB modifications to incorporate information collected in Post-DSCS and UHF studies
[AD-A165451] N86-26973

T

TABLES (DATA)
Tables for correcting airfoil data obtained in the Langley 0.3-meter transonic cryogenic tunnel for sidewall boundary-layer effects
[NASA-TM-87723] N86-26280
Tidal and lunar data for Point Mugu, San Nicholas Island, and the Barking Sands Pmec during 1986
[AD-A163249] N86-26784

TAIWAN
Processes and process development N86-26690

TANKS (COMBAT VEHICLES)
Residual stress measurements on M1 tank weldments
[AD-A163330] N86-26657

TARGET ACQUISITION
A cost-effective night attack system for ground attack aircraft N86-26317
Aquila remotely piloted vehicle: Recent developments and alternatives
[AD-A164597] N86-26333

TARGET RECOGNITION
Aquila remotely piloted vehicle: Recent developments and alternatives
[AD-A164597] N86-26333
Flight simulator: Comparison of resolution thresholds for two light valve video projectors
[AD-A164577] N86-26344

Grating interferometric sensors
[AD-A165593] N86-26609

TARGETS
Damage prediction of projectile penetration process based on energy dissipation rate
[AD-A163268] N86-26658
A nonparametric statistical approach to the validation of computer simulation models
[AD-A163376] N86-26944
Estimates of circular error probabilities
[AD-A163257] N86-27028

TECHNOLOGY ASSESSMENT
A multiindex multitemporal approach to map crops in the early growing season: An application to two Italian irrigation districts: East Sesia and Grande Bonifiga Ferrarese — flue gases
[ICW-1611] N86-26674
Growth capabilities of European retractable solar arrays — space station power supplies
[ESA-CR(P)-2141] N86-26711
Report of the West Germany federal government on research
[ESA-86-96940] N86-27116

TECHNOLOGY TRANSFER
Research on enhancing the utilization of digital multispectral data and geographic information systems in global habitability studies
[NASA-CR-177294] N86-26669
Technology transfer at DARPA: The Defense Advanced Research Projects Agency. Executive summary
[AD-A164503] N86-27110
United States technology transfer to Peru and Venezuela
[AD-A164995] N86-27133

TECHNOLOGY UTILIZATION
Analyzing the cost effectiveness of using flight simulators in the Israeli Air Force
[AD-A164864] N86-26346
Proceedings of the 1985 Annual DTIC Users Conference
[AD-A166250] N86-27118

TECTONICS
Plate motions and deformations from geologic and geodetic data
[NASA-CR-177299] N86-26741

TELECOMMUNICATION
Defense Communications Agency cost and planning factors manual, change 2
[AD-A163319] N86-26505
Use of LAN (Local Area Network) technology in DSCS (Defense Satellite Communication System) Earth terminals
[AD-A165496] N86-26515

TELEGRAPH SYSTEMS
Data transmission systems
[AD-A163778] N86-26490

TELEOPERATORS
Index of aerospace mechanisms symposia proceedings 1-19
[NASA-TM-88205] N86-26650
Baseline experiments in teleoperator control
[NASA-TP-2547] N86-26836

TELESCOPES
The negligible effect of non-Gaussian surface deviations in large MM-Lambda reflectors' aperture efficiency and the performance of Itapetinga 45-ft antenna at Lambda = 3.3 MM
[INPE-3837-PRE/908] N86-26488

TEMPERATURE
Model validation research: Comparison of simulated and observed climate patterns for the past 18,000 years
[DE86-004631] N86-26776
Entropy-driven loss of gas-phase Group 5 species from GOLD/3-5 compound semiconductor systems
[AD-A165584] N86-27100

TEMPERATURE EFFECTS
Environmental effects on the static and fatigue strength of graphite/epoxy structures
[AR-004-044] N86-26378
Impingement of liquid fuel sprays on heated walls
[AD-A165422] N86-26465
Improved designs for isocon cameras in HERTR systems
[AD-A164627] N86-26602
Testing activities at the National Battery Test Laboratory
[DE86-004057] N86-26702

TEMPERATURE MEASUREMENT
Alexandrite lasers: State of technology and applications
[DE86-003666] N86-26611
Influence of the Yukon River on the Bering Sea
[NASA-CR-177310] N86-26783

TEMPERATURE PROBES
Ionization induced instability in an electron collecting sheath
[AD-A165330] N86-26538

TEMPERATURE PROFILES
Plume characteristics of single-stream and dual-flow conventional and inverted-profile nozzles at equal thrust
[NASA-TM-87323] N86-26295
Vertical modes and energetics of gravitational and rotational modes in a multilevel global spectral model
[PB86-160165] N86-26777

TEMPLATES
Clay energetics in chemical evolution N86-26867
Adsorption and condensation of amino acids and nucleotides with soluble mineral salts N86-26869
Cooperation of catalysts and templates N86-26871
Molecular replication N86-26874
Stereoselective aminoacylation of RNA N86-26875

TENSILE PROPERTIES
Silicon carbide whiskers for composites: Growth and properties
[DE86-000798] N86-26375

TENSILE STRENGTH
Heat treatment for supersilloy
[NASA-CASE-LEW-14262-1] N86-26414

TERMINAL BALLISTICS
Pressure systems energy release protection (gas pressurized systems)
[NASA-CR-178090] N86-26626
Damage prediction of projectile penetration process based on energy dissipation rate
[AD-A163268] N86-26658

TERMS
The geonames processing system synopsis
[AD-A163366] N86-27120

TERNARY SYSTEMS
The effects of arsine pressure on the compositions, carrier concentrations, mobilities and growth rates of epitaxial layers of Ga(x)In(1-x)As prepared by the VPE (Vapor-Phase Epitaxy)-hydride technique
[AD-A165278] N86-27097
Transient transport in binary and ternary semiconductors
[AD-A165484] N86-27098
Solid-phase equilibria in the Au-Ga-Sb, Au-In-As, and Au-In-Sb ternaries
[AD-A165489] N86-27099

TERRAIN
Applications of digital terrain data in flight operations N86-26324

TERRAIN ANALYSIS
The fractal geometry of nature; its mathematical basis and application to computer graphics
[AD-A165185] N86-27014

TERRAIN FOLLOWING AIRCRAFT
A new technique for terrain following/terrain avoidance guidance command generation N86-26325

TEST FACILITIES
The effects of steel profile and cleanliness on coating performance
[AD-A164788] N86-26443

TEST FIRING
Safety testing of missile and rocket systems employing manned launch stations
[AD-A165395] N86-26372

TETHERED SATELLITES
Cosmic dust collection with a sub-satellite tethered to a space station N86-27146
Low gravity facilities for space station planetology experiments N86-27160

TETHERING
Report on opportunities and/or techniques for high-caliber experimental research (other) proposals for SSPEX N86-27140
A magnetospheric simulation at the space station N86-27155
Impacts of free-floating objects: Unique space station experiments N86-27162

TETRAZOLES
Structural chemistry of energetic compounds
[AD-A164813] N86-26397

TEXTBOOKS
The role of elaborations in instructional texts: Learning to use the appropriate procedure at the appropriate time
[AD-A165211] N86-26833

TEXTURES
Methods of obtaining offshore wind direction and sea-state data from X-band aircraft SAR (Synthetic Aperture Radar) imagery of coastal waters
[AD-A165552] N86-26517

THEMATIC MAPPING
Synthetic Aperture Radar (SAR) product simulation — ESA programs
[ESA-CR(P)-2149] N86-26518
A proposal for a project entitled Assessment of Forest Resources in Uruguay submitted to the United Nations Industrial Development Organization (UNIDO)
[INPE-3828-NTE/255] N86-26666
A multiindex multitemporal approach to map crops in the early growing season: An application to two Italian irrigation districts: East Sesia and Grande Bonifiga Ferrarese — flue gases
[ICW-1611] N86-26674
Research, investigations and technical developments: National mapping program, 1983-1984
[PB86-166097] N86-26675

THEOREM PROVING
Program derivation through transformations: The evolution of list-copying algorithms — turing machines
[CWI-CS-R8520-REV] N86-26980

THERMAL CONDUCTIVITY
Monoball energy transfer: Test report
[NASA-CR-178812] N86-26551

THERMAL DECOMPOSITION
Propergol combustion based on octogenesis N86-26470
Stability of nitrocellulose propellants assessed via thermal decomposition and alteration of the stabilizer composition N86-26471

THERMAL DEGRADATION
Stability of nitrocellulose propellants assessed via thermal decomposition and alteration of the stabilizer composition N86-26471

THERMAL DIFFUSION
Burning stability of double base propellants N86-26472

THERMAL ENVIRONMENTS
Aircraft nuclear survivability methods
[AD-A163218] N86-26332
Cars diagnostics of high pressure combustion. 2. Measurements of NO, H2O and high pressure flames
[AD-A164610] N86-26395

THERMAL EXPANSION
Thermal expansion of elastic-plastic composite materials
[AD-A164910] N86-26383

THERMAL FATIGUE
Low-cycle thermal fatigue
[NASA-TM-87225] N86-26651

THERMAL INSULATION
Thermal response tests of candidate insulation systems for the chlorine tank car
[AD-A165293] N86-26451

THERMAL PROTECTION
Development and evaluation of a prototype life preserver
[AD-A163224] N86-26297
Propulsion apparatus and method using boil-off gas from a cryogenic liquid
[NASA-CASE-MFS-25946-1] N86-26388
A lightweight impermeable suit for chemical protection in warm conditions: A preliminary look at the concept
[AD-A164687] N86-26839

THERMAL STABILITY
Investigation of structure-permeability relationships of silicone polymer membranes
[PB86-157179] N86-26406
Stability of nitrocellulose propellants assessed via thermal decomposition and alteration of the stabilizer composition N86-26471

THERMAL STRESSES
Low-cycle thermal fatigue
[NASA-TM-87225] N86-26651

THERMIONIC CATHODES
Monolithic cathodes
[AD-A163282] N86-26523

THERMIONIC EMISSION
Electron induced conductivity of Al2O3 as pertaining to thermionic integrated circuits
[AD-A165589] N86-26539

THERMODYNAMIC COUPLING
A physical model and conservation equation for dynamic solid-liquid behavior
[AD-A165295] N86-26586

THERMODYNAMIC EFFICIENCY
Preliminary evaluation of a compound cycle engine for shipboard gensets
[NASA-CR-179451] N86-26829

THERMODYNAMIC PROPERTIES
Thermodynamic evaluation of transonic compressor rotors using the finite volume approach
[NASA-CR-176840] N86-26548
Improved designs for isocon cameras in HERTR systems
[AD-A164627] N86-26602
Changes in the ocean mixed layer following extraordinary atmospheric forcing
[AD-A164703] N86-26786

Entropy-driven loss of gas-phase Group 5 species from GOLD/3-5 compound semiconductor systems
[AD-A165584] N86-27100

THERMODYNAMICS
Kinematics, composition and thermodynamics of the mesopause, turbopause, region of the atmosphere (between 80 and 120 km) related to the Aerocassisted Orbit Transfer Vehicle (AOTV) operations
[NASA-TM-86545] N86-26735
Stability and properties of compositionally modulated films
[AD-A164574] N86-27094

THERMOELASTICITY
Thermal expansion of elastic-plastic composite materials
[AD-A164910] N86-26383

THERMOREGULATION
Individual parameters in thermoregulatory control; a review — plasma diagnostics
[IZF-1985-26] N86-26801

THERMOSETTING RESINS
Ethynyl-containing aromatic polyamide resins
[AD-D012169] N86-26437

THERMOSPHERE
Thermospheric models: A short review on the basic assumptions
[INPE-3823-PRE/899] N86-26738

THESES
Compilation of abstracts of theses submitted by candidates for degrees
[AD-A164968] N86-27126

THICK FILMS
Application of conductive polymer technology to the production of a novel multilayer capacitor
[AD-A165212] N86-26450

THICKNESS
Measure of displacement around holes in composite plates subjected to quasi-static compression
[NASA-CR-3969] N86-26377

THIN FILMS
Character of silver lining
[DE86-001585] N86-26423
Unusual contaminant in JP-4 fuel delivered to Fort Campbell, Fort Knox, and Tennessee Army National Guard
[AD-A163399] N86-26480
Effect of liquid composition on enhanced flow due to surface shear in the contact line region: Constant vapor pressure boundary condition
[AD-A165545] N86-26587
Polarization modulated ellipsometry
[NASA-CR-177264] N86-26599
Transient conductance measurements and heat-flow analysis of pulsed-laser-induced melting of aluminum thin films
[DE86-003928] N86-26613
Laser-heated CVD process for depositing thin films for low-cost solar cell applications
[DE85-016887] N86-26699
Stable, high-efficiency, CuInSe2 based polycrystalline thin-film tandem solar cells
[DE85-016893] N86-26700
A brillouin light scattering study of magnetic excitations
[AD-A164716] N86-27070
Experimental determination of the electronic structure of small metal particles
[AD-A163406] N86-27091
Stability and properties of compositionally modulated films
[AD-A164574] N86-27094
Entropy-driven loss of gas-phase Group 5 species from GOLD/3-5 compound semiconductor systems
[AD-A165584] N86-27100
Amorphization and recrystallization processes in monocrystalline beta silicon carbide thin films
[DE86-004797] N86-27101

THIOLS
Evolution of thiol protective systems in prokaryotes
N86-26896

THOMSON SCATTERING
Assessment of the possible use of the KE 1 Thomson scattering collection optics for an additional lidar system — plasma diagnostics
[IPF-85-1] N86-27085

THREAT EVALUATION
What USAF aircraft should be the Wild Weasel of the 1990's?: An assessment of the F-4G, the F-15WW, and F-16WW
[AD-A164727] N86-26279

THREE DIMENSIONAL BODIES
Surface construction from planar contours
[AD-A164862] N86-26950

THREE DIMENSIONAL BOUNDARY LAYER
Three-dimensional separation and vortical wakes over a prolate spheroid
[AD-A164781] N86-26583

THREE DIMENSIONAL FLOW
A computer code for three-dimensional incompressible flows using nonorthogonal body-fitted coordinate systems
[NASA-CR-178818] N86-26544
Transverse vorticity measurements using an array of four hot-wire probes
[NASA-CR-178098] N86-27042

THROATS
Multiple steady states for characteristic initial value problems N86-26555

THRUST
Calculations of burning surfaces of propellant grain with embedded metal wires and of internal ballistics of such motor
[AD-A163361] N86-26458
Advanced propulsor design studies
[AD-A164963] N86-26634

THRUST VECTOR CONTROL
Aircraft performance optimization with thrust vector control
[AD-A165388] N86-26334

THUNDERSTORMS
Weather radar studies
[AD-A165221] N86-26762
Severe thunderstorm cases of 1985
[PB86-174125] N86-26781

TIDES
Objective analysis of tidal fields in the Atlantic and Indian Oceans
[NASA-TM-87773] N86-26782
Tidal and lunar data for Point Mugu, San Nicholas Island, and the Barking Sands Area during 1966
[AD-A163249] N86-26784
Directory of research publications
[AD-A164875] N86-27125

TIMBER INVENTORY
A proposal for a project entitled Assessment of Forest Resources in Uruguay submitted to the United Nations Industrial Development Organization (UNIDO)
[INPE-3828-NTE/255] N86-26666

TIME
A paradigm for reliable clock synchronization
[AD-A164819] N86-27040

TIME DEPENDENCE
Modelling of a cold gas jet system for satellite attitude control
[INPE-3853-PRE/917] N86-26356
Compaction with automatic jog introduction
[AD-A163436] N86-26527
Calculation of sliding interfaces of two-dimensional unsteady flow
[DE86-005003] N86-26591
Theoretical study of the X-ray emission from astrophysical shock waves
[NASA-CR-177318] N86-27176

TIME DIVISION MULTIPLE ACCESS
Analysis of a multiaccess control scheme
[AD-A165498] N86-26986

TIME FUNCTIONS
Development, growth and time — biological model
[CWI-CS-R8516] N86-26795
Verifying temporal properties without using temporal logic
[AD-A164820] N86-26948

TIME LAG
Method for determining the time delay of the pitot-static tubing system of aircraft — semisubmersible platform
[NLR-TR-83075-U] N86-26335
A synopsis of research on subbottom effects on underwater acoustic propagation
[AD-A165420] N86-27048

TIME MARCHING
A computational transonic flutter boundary tracking procedure
[NASA-TM-87708] N86-26284
Thermodynamic evaluation of transonic compressor rotors using the finite volume approach
[NASA-CR-176840] N86-26546

TIME MEASUREMENT
Further work on POPSAT. Volume 1: Executive summary — space station power supplies
[ESA-CR(P)-2148-VOL-1] N86-26364
Further work on POPSAT. Volume 2: Technical results — space station power supplies
[ESA-CR(P)-2148-VOL-2] N86-26365

TIME SERIES ANALYSIS
Solid sorbent air sampler
[NASA-CASE-MSC-20653-1] N86-26595
Verifying temporal properties without using temporal logic
[AD-A164820] N86-26948
The mathematical structure of error correction models
[AD-A163344] N86-27001
Properties of batch means from stationary ARMA (Autoregressive moving average) time series
[AD-A165187] N86-27033
Stochastic realization problems motivated by economic modeling — vibration analysis
[CWI-OS-R8507] N86-27037
Transverse vorticity measurements using an array of four hot-wire probes
[NASA-CR-178098] N86-27042

TIME SHARING
Network file storage system
[DE86-000779] N86-26916
Demonstration of a statistical method for isolating timesharing components
[AD-A165417] N86-26926

TISSUES (BIOLOGY)
Mechanism of electromagnetic energy effects on the nervous system: Voltage-clamp study
[AD-A164853] N86-26798
Ion transport across synthetic and biological membranes: Ionophore-mediated transport
[AD-A163269] N86-27057

TITAN
The organic aerosols of Titan N86-26852
The D to H ratio on Titan and the planets: Implications for origin and evolution of planetary atmospheres N86-26853
Measurements of physical properties of model Titan atmospheres N86-26854
Experimental basis for a Titan probe organic analysis N86-26855
A gas chromatograph experiment for a Titan entry probe N86-26856

TITANIUM
Advanced materials research status and requirements. Volume 1: Technical summary
[AD-A165338] N86-26385
Advanced materials research status and requirements. Volume 2, appendix: Material properties data review
[AD-A165339] N86-26386

TOKAMAK DEVICES
Electron Bernstein wave current drive in the start-up phase of a tokamak discharge
[INPE-3868-PRE/926] N86-27074
Features of spherical torus plasmas
[DE86-004642] N86-27080

TOLERANCES (MECHANICS)
Investigation of blade vibration T55-L-11C compressor stages 1 and 2
[AR-004-046] N86-26337
The damage tolerance of carbon fiber reinforced composites: A workshop summary
[AD-A163757] N86-26381

TOLUENE
Calculations of the geometry and binding energy of aromatic dimers: Benzene, toluene, and toluene-benzene
[AD-A164570] N86-27058

TOOLS
In-process control of machining. Phase 1: Milling
[AD-A165391] N86-26482
Contoured punch tool for removing semi-tubular rivets
[AD-D012172] N86-26631

TOPOGRAPHY
Three-level energy balance climate model with topography, explicit radiative transfer, and explicit sea ice and snow mass budgets
[PB86-181799] N86-26638
Nonlinear damage analysis: Postulate and evaluation
[NASA-CR-168171] N86-26652
An isostatic Earth model
[AD-A164608] N86-26672
Objective analysis of tidal fields in the Atlantic and Indian Oceans
[NASA-TM-87773] N86-26782
Experiments on sound propagation over sloped bottoms
[AD-A163431] N86-27044
Mapping experiment with space station N86-27168

TOROIDAL PLASMAS
Electron Bernstein wave current drive in the start-up phase of a tokamak discharge
[INPE-3868-PRE/926] N86-27074

TOROIDS
Highlights from the assembly of the helical field coils for the Advanced Toroidal Facility
[DE86-004758] N86-27081

TORQUE
The analysis, design and performance of a 1.25 inch diameter pneumatic actuator
[AD-A165297] N86-26635

TORSION
Particle dynamics for motion in a non-planar accelerator
[DE86-005303] N86-27065
TORUSES
Features of spherical torus plasmas
[DE86-004842] N86-27080
TOWERS
Dynamic characteristics of power-tower space stations with 15-foot truss bays
[NASA-TM-87684] N86-26357
TOXICITY
Maryland Water Resources Research Center, fiscal year 1984 program report
[PB86-133253] N86-26721
TRACE ELEMENTS
The production of trace gases by photochemistry and lightning in the early atmosphere N86-26851
TRACKING (POSITION)
Navstar GPS (Global Positioning System) accuracy while surveying arrays of deep ocean transponders
[AD-A163364] N86-26313
A review of methods to track oil in arctic waters
[AD-A164679] N86-26716
IRIG standard data format for interrange transmission of tracking data from computer to computer (2400 BPS synchronous EFG format 0)
[AD-A163251] N86-26982
TRACKING FILTERS
